# ATTENTION!!!

All crochet takes place on the wrong side, so the doll will come out neater, especially face (if you do not know how to crochet on the wrong side, When crocheting with the above materials, your doll will be about 14 cm. Use thicker or thinner materials if you want to change the size of the doll.

In the process of crocheting, you may be faced with the fact, that the paired parts of the doll (legs, arms) could differ in lengths or thicknesses. This is due to the fact, that on different days or even within the same day, the thread tension in your hands changes. So, I advise you to crochet two paired parts of the doll in parallel (i.e. crochet several rows of one leg, then set it aside and crochet several rows of the other leg).

In this pattern, I crochet with the so-called "check marks". This crocheting comes out less dense. There is also crocheting with "crosses", it comes out denser, but, for example, it will be very difficult to embroider a face. If you crocheted toys before and noticed that your marker always goes vertically upward without deviating along the axis, then you will need inevitably to make offset loops and change the position of some increases and decreases. This is due to the fact, that in this pattern described below, marker deviates vertically and goes up in a spiral. Also, due to the offset of the marker, some increases and decreases may be located asymmetrically relative to other increases and decreases. Therefore, this should not confuse you.

**P.S. I USE TWO SIZE OF THE SKEWER (THICK AND THIN). A THIN SKEWER IS MORE CONVENIENT FOR STUFFING SMALL PARTS. ALSO, FOR YOUR CONVENIENCE, I ADVISE YOU TO BREAK OFF THE TIPS OF BOTH SKEWERS, SO IT WILL BE EASIER TO TAMP THE STUFFING.**
