tumor-suppressive protein, including its role in breast and lung cancer. This in turn presumably results from the use of experimental systems that do not reflect the clinical scenario and frequently do not adhere to the required standards, e.g. verification of cell lines or background of genetically altered mice. The major problem in this regard is the use of established cell lines that usually are inappropriate experimental systems to address clinical problems, since in most cases they do not phenocopy the tumor of origin, have undergone genetic alterations in the course of immortalization in culture [91,92] and are maintained in highly artificial media that are highly divergent from the tumor microenvironment *in vivo*. In the case of PPAR $\beta/\delta$ , the latter aspect is highly relevant, as the presence or absence of ligands, e.g. fatty acids, directly affects transcriptional outcome and may determine whether PPAR $\beta/\delta$  acts as a repressor or activator. Even though mouse models are invaluable tools to address basic questions of tumor biology and have enabled significant advances in the field, there are serious limitations [93]. These include differences in tumor pathobiology, clonal evolution and the microenvironment, in particular in xenografted tumors. As PPAR $\beta/\delta$  seems to play a cancer-promoting role in the tumor microenvironment in syngeneic mouse models [94–96], the latter aspect is of particular relevance. In humans, this issue has not been addressed, apart from the deregulation of PPAR $\beta/\delta$  in ovarian cancer TAMs [22] alluded to above.

These considerations make it obvious that alternative and well defined model systems are required to obtain conclusive data regarding the function of PPAR $\beta/\delta$  in human cancer and to be able to assess its potential as a therapeutic target. A promising tool along these lines are primary tumor cells obtained from malignant effusions, which frequently occur in patients with advanced lung and breast cancer as pleural effusions and patients with gastrointestinal tumors or ovarian cancer as peritoneal effusions (ascites). Recent technological advances make it possible to grow primary cancer cells from effusions without crisis, for apparently unlimited population doublings and without decrease in growth rate [97,98]. Importantly, these cells retain the genomic, histopathological,

### Acknowledgements

I am grateful to Drs. Till Adhikary, Florian Finkernagel and Sabine Müller-Brüsselbach for useful discussions. Work in the authors's laboratory is funded by the Deutsche Forschungsgemeinschaft (DFG) (Mu601/17-1).

# What is Mendeley?

“Drives Researcher Productivity” with Reference Manager

The screenshot shows the Mendeley Desktop interface. On the left, there's a sidebar with 'MY LIBRARY' and 'Categories'. The main area displays a list of documents with columns for Authors, Title, Year, Published in, and Address. A detailed view of a document is shown on the right, including the title 'Improved design of stable and fast-folding model proteins', authors 'V. Abkevich, A. Gutin, E. Shakhnovich', and a list of references.

“Enables Collaboration and Knowledge Sharing” with Academic Collaboration Network

The screenshot shows a profile for David Neal, Professor of Surgical Oncology at the University of Oxford. It includes a profile picture, name, affiliation, and statistics (75 h-index, 20,924 citations). Below the profile, there are sections for 'Other IDs' (ORCID, Scopus), 'Publications' (listing 'Investigating the possible causal role of coffee consumption risk and progression using Mendelian randomization analysis'), and 'Research interests' (Precision medicine in prostate cancer, Androgen Receptor Signaling and Prostate Cancer Genetics).

“Creates personalized recommendation and insights” with Research insights

The screenshot shows the Mendeley Research Insights dashboard. It features a 'Feed' section with 'Articles suggested for you' based on recent document reading, such as 'Research productivity and impact of ASEAN countries and universities in the field of energy and fuel'. Below this, there's a 'What lies beneath the averages and significance of citation indicators in different disciplines?' section. On the right, there's a 'People suggested for you' section with profiles for Andi Anto Patak and Matthias Raß, including their affiliations and a 'Follow' button.

- Authors: R. Takachi, M. Inoue, Y. Sugawara et al.
- Journal: *Journal of Epidemiology*
- Year: 2017
- Volume: 27
- Issue: 4
- Pages: 152-162
- Abstract: BACKGROUND A series of recent reports from large-scale cohort studies involving more than 100,000 subjects reported no or only very small inverse associations between fruit and vegetable intake and overall cancer incidence, despite having sufficient power to do so. To date, however, no such data have been reported for Asian populations. OBJECTIVE To provide some indication of the net impact of fruit and vegetable consumption on overall cancer prevention, we examined these associations in a pooled analysis of large-scale cohort studies in Japanese populations. METHODS We analyzed original data from four cohort studies that...

**ARTICLE INFO**

Article history:  
 Received 14 February 2014  
 Accepted 27 April 2014

**SUMMARY**

**Objective:** The aim of this study was to investigate, using T2-mapping, the impact of functional instability in the ankle joint on the development of early cartilage damage.

**Methods:** Ethical approval for this study was provided. Thirty-six volunteers from the university sports program were divided into three groups according to their ankle status: functional ankle instability (FAI, initial ankle sprain with residual instability); ankle sprain Copers (initial sprain, without residual instability); and controls (without a history of ankle injuries). Quantitative T2-mapping magnetic resonance imaging (MRI) was performed at the beginning ('early-unloading') and at the end ('late-unloading') of the MR-examination, with a mean time span of 27 min. Zonal region-of-interest T2-mapping was performed on the talar and tibial cartilage in the deep and superficial layers. The inter-group comparisons of T2-values were analyzed using paired and unpaired *t*-tests. Statistical analysis of variance was performed.

**Results:** T2-values showed significant to highly significant differences in 11 of 12 regions throughout the groups. In early-unloading, the FAI-group showed a significant increase in quantitative T2-values in the medial, talar regions ( $P = 0.008$ ,  $P = 0.027$ ), whereas the Coper-group showed this enhancement in the central-lateral regions ( $P = 0.05$ ). Especially the comparison of early-loading to late-unloading values revealed significantly decreasing T2-values over time laterally and significantly increasing T2-values medially in the FAI-group, which were not present in the Coper- or control-group.

**Conclusion:** Functional instability causes unbalanced loading in the ankle joint, resulting in cartilage alterations as assessed by quantitative T2-mapping. This approach can visualize and localize early

**GENERAL NOTES** B I U

Ankle stability vs other joints

**PRIVATE ANNOTATIONS**

Qingyong Woon 1m ago

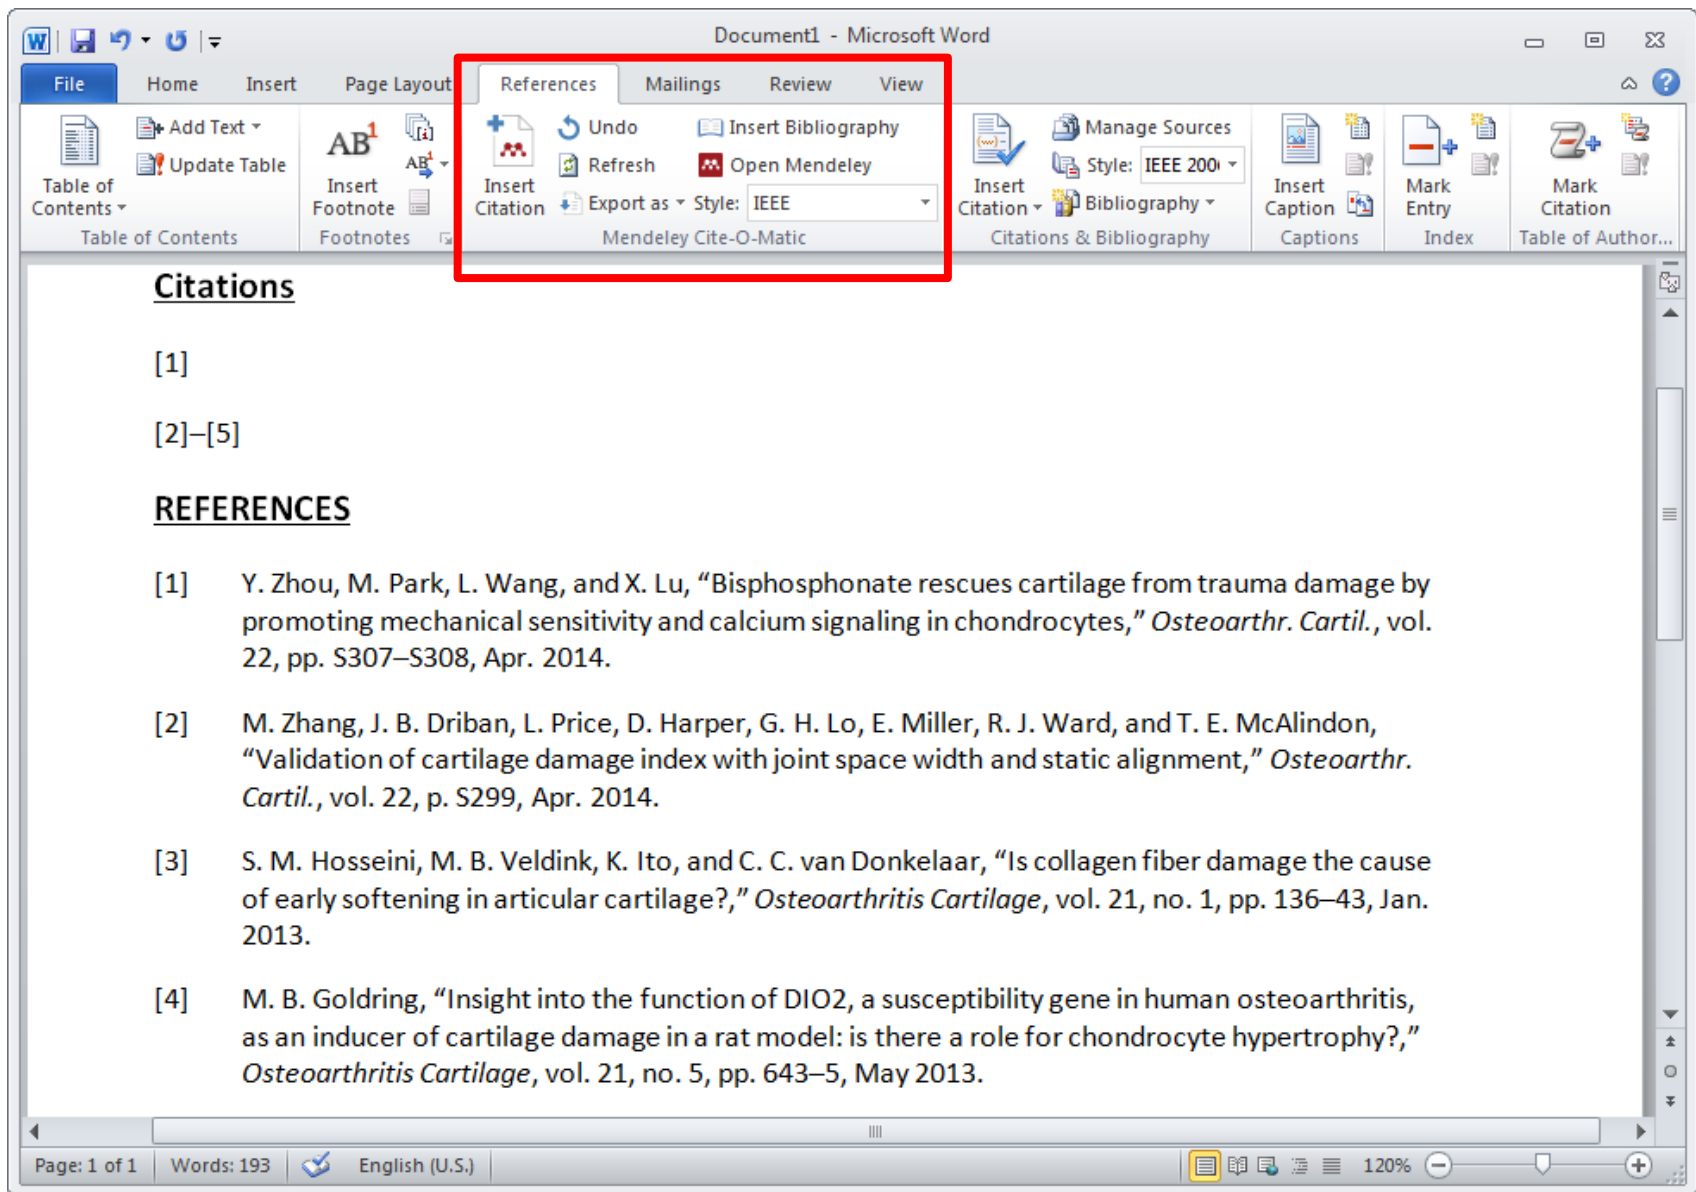

Ankle stability proves to be a very important element to prevent spine injuries as it acts as a base to carry the body weight of individual. It also has an important function which is to improve posture of individual. Ankle injuries are often the most frustrating injury as compared to other joints because it is the most frequent used joint.

Qingyong Woon Just now

Ankle stability proves to be a very important element to prevent spine injuries as it acts as a base to carry the body weight of individual. It also has an important function which is to improve posture of individual. Ankle injuries are often the most frustrating injury as compared to other joints because it is the most frequent used joint

**iSCBS** INTERNATIONAL SOCIETY FOR COMPUTATIONAL BIOLOGY

**Overview**

The Regional Student Group (RSG) program is a network of student groups affiliated with the International Society of Computational Biology Student Council. While each RSG is encouraged to act independently and address the local needs of its regional student membership, a significant amount of effort is also invested in coordinating affiliation of these groups with the international student body, which provides long-term direction and facilitates communication between groups. Participating in a global student network provides students with an opportunity to network and connect with others around the globe. By sharing experiences within the network, students gain cultural insights and awareness of regional differences in scientific research and industry. In this article, we provide an overview of the tasks, however, these groups do not need to be started from scratch. There will inevitably be a number of groups of students that meet regularly scattered around the globe, which could benefit from being connected through a larger network. The effort lies in identifying and uniting these groups. The best way to identify a multiple groups are already in existence is to split students at international meetings and meetings. In our experience, Student Council continues to identify student groups in the field of computational biology that can benefit from being part of the global RSG network. However, the network needs to be created from scratch, we recommend starting with a number of "seed" groups. Two or three groups in different areas around the world will provide a start to form a new network. In either case, it is important from the start to have a mechanism to unify the groups. Ideally, affiliation with a larger, established, non-student parent body is the best way to attract groups to be part of the network. In our case, this is the International Society for Computational Biology, which provides a global network of operational procedures, and provides stu-

# Private group to share Full Text Articles & Private Discussions

The screenshot shows the Mendeley Web Library interface. The browser address bar displays 'https://www.mendeley.com/library/'. The navigation menu includes 'Feed', 'Library', 'Suggest', 'Stats', 'Groups', 'Data', 'Careers', and a user profile for 'Qingyong'. On the left sidebar, the 'GROUPS' section is expanded, and the 'Private group' is highlighted with a red box. The main content area shows a list of articles, with the second article, 'Medicine 2.0: Social Networking, Collaboration, Participation, Apomediation, and Openness' by Eysenbach G, highlighted in blue. A red box also highlights the first three rows of the article list. The right sidebar shows the details for the selected article, including its DOI (10.2196/jmir.1030), ISSN (1438-8871), and a download link.

# Highlights and make notes together with group members

The screenshot displays the Mendeley Desktop application interface. The main window shows a document titled "On including travel tim...". The document content includes a section titled "1. Introduction" and two paragraphs of text. The first paragraph discusses the valuation of travel time reliability (VOR) and its inclusion in cost-benefit analyses (CBA). The second paragraph discusses the impact of travel time unreliability on travel time costs and the benefits of reducing unreliability. A notes sidebar on the right side of the window shows a list of notes from various users, including Qingyong Woon and Alexis Qin, with dates ranging from 2015 to 2016. A yellow sticky note is also visible over the text in the main window.

**1. Introduction**

The valuation of travel time reliability (also called: value of variability, VOR) has been receiving considerable attention in recent years, in freight and especially in passenger transport. The main motivation behind this focus on the VOR lies in the desire to include travel time variability in cost-benefit analyses (CBA) of transport projects and policies. But for inclusion of variability in CBA, not only VORs are needed, but also models/methods that predict the impact of infrastructure projects and other transport policies on travel time variability as well as models/methods that predict the likely behavioural responses of travellers, shippers and carriers to changes in travel time variability (as part of the transport models that are used to provide the transport inputs to the CBA).

It has been widely recognised that travellers do not only take travel time into account, but also travel time reliability. In the presence of travel time unreliability, travellers typically allow more time (headstart) for their trips in order to reduce the possibility of arriving late at their destination. Reducing the unreliability (in other words, increasing the travel time reliability) means that this extra time allowance could be decreased or avoided completely, presenting a clear user benefit. It has been argued that travel time unreliability costs are of about the same magnitude as travel time costs. Therefore, in project appraisal there may not only be user benefits in terms of time savings, but also in terms of travel time unreliability. By

# Stay up to date and personalized recommendation

# Visibility are enhanced through power of Mendeley Feed and Suggest

## Feed

*Stay up to date with the latest updates in your research network*

## Suggest

*Proactively and personalize recommendation of papers and people*

The screenshot shows the Mendeley Feed interface. At the top, there are navigation tabs: Feed, Library, Suggest, Stats, Groups, Data, Careers, Search, and a user profile for Qingyong. The main content area is titled 'All news' and includes a sidebar with categories like 'New publications', 'Groups', and 'Advisors in China'. The feed itself shows several updates: 'People suggested for you' featuring Andi Anto Patak and Matthias Raß; an 'Attach documents' section with a 'Share your thoughts...' prompt; and a notification from Stacy Konkiel about new connections. At the bottom, there are interaction options: Like, Comment, and Share.

The screenshot shows the Mendeley Suggest interface. It features a navigation bar with tabs for Feed, Library, Suggest, Stats, Groups, Data, Careers, Search, and a user profile for Qingyong. The main content is divided into two columns. The left column, 'Articles for you', lists three article recommendations based on the user's library, including 'PRECICE intramedullary limb lengthening system.' and 'Two cases of thrombocytopenic purpura at onset of Zika virus infection'. The right column, 'People to follow', lists several individuals such as Sacha Boucherie, Steven Narod, Philipp Harter, Spencer de Groot, Marc Reinig, and Andi Anto Patak, each with a 'Follow' button.

# Benefits to researchers

## Reference Management

- Mendeley an **easy to use** & **powerful** reference manager

## Profile

- Stats to evaluate your impact to **improve your research performance**
- Easy Profile creation for **global visibility** and research performance evaluation e.g. for funding submission and evaluation for career advancement

## Sharing and Collaboration

- Public group for **improving global visibility** of researcher
- Private group for **sharing full text articles** and private discussions
- Group mentoring

## What can you do now?

- Create an Mendeley account
