| Electronic Commerce | | | 150 |
| Training/Workforce Planning | 325 | 580 | 1,066 |
| Other Contractual Services | 1,387 | 622 | 654 |
| Supplies & Materials | 193 | 202 | 209 |
| Equipment & Furniture | 1,139 | 986 | 915 |
| Total | 53,338 | 59,562 | 64,000 |

TRAINING AND DEVELOPMENT

Question. Please specify what employee development activities have been accomplished in fiscal years 1999 and thus far in fiscal year 2000. How has FTA paid for these activities? What planned activities would be undertaken with the additional \$347,000 for employment training and development? What is the base enacted funding level for this activity?

Answer. The Department's Learning and Development, workforce planning, and flagship initiatives require the obligation of funds for a variety of training courses to be offered to all employees throughout the fiscal year. These learning and development activities keep employees abreast of new developments in their fields and enhance their knowledge and skills in the areas of transportation. Key management training includes; supervisory; leadership development, interpersonal skills, oral and written communication skills, and information technology. Listed below are employee development activities that were accomplished in fiscal year 1999 and fiscal year 2000 courses for which contracts have been awarded, or employees have completed the course:

| | <i>Amount</i> |
|--|---------------|
| Fiscal year 1999 Courses: | |
| Leadership for a Democratic Society | \$44,500 |
| Aspen Institute | 8,700 |
| Management Development Seminar | 9,150 |
| Executive Development Seminar | 6,100 |
| Presidential Management Intern Seminar | 5,325 |
| Executive Potential Seminar | 14,700 |
| Women's Executive Leadership Program | 7,300 |

| | <i>Amount</i> |
|--|---------------|
| Leadership Potential Seminar | 15,250 |
| Seminar for New Managers | 6,100 |
| Strategic Planning Through The Power of Vision | 4,000 |
| Advanced Leadership Program | 9,750 |
| Supervisory Development Program | 2,250 |
| Career Strategies Seminar For Prospective Managers | 14,400 |
| Basic Supervisory Skills | 4,100 |
| New Leaders Program | 7,980 |
| Aspiring Leaders Program | 1,995 |
| Negotiation Skills | 1,920 |
| Managing Up | 1,125 |
| General Employee Training | 154,355 |
| | <hr/> |
| Total | 319,000 |
| | <hr/> <hr/> |

Fiscal year 2000 Courses Completed to date:

| | |
|--|---------|
| Amount Leadership for a Democratic Society | 27,450 |
| Developing Customer-Focused Organizations | 3,050 |
| Leadership Potential Seminar | 18,300 |
| Management Development Seminar | 9,150 |
| Federal Budgetary Policies and Processes | 6,100 |
| Supervisory Leadership Seminar | 9,150 |
| Environmental Policy Issues | 6,100 |
| Capitol Hill Workshop | 3,580 |
| White House Workshop | 1,790 |
| Executive Potential Program | 9,800 |
| Congressional Operations Seminar | 6,650 |
| New Leaders Program | 5,985 |
| Advanced Leadership Program | 1,500 |
| Motivating Others: Bringing Out the Best in People | 7,375 |
| Effective Writing | 1,725 |
| Grammar Review | 1,800 |
| Effective Briefing Techniques | 3,300 |
| General Employee Training | 58,004 |
| | <hr/> |
| Total | 180,809 |

Fiscal year 2001 planned additional Learning and Development activities to be funded from the administrative expenses account:

| <i>Course:</i> | <i>Amount</i> |
|--|---------------|
| Transit Academy | \$4,200 |
| Leadership for a Democratic Society | 28,150 |
| Aspen Institute Executive Seminar | 6,525 |
| Developing Customer-Focused Organizations | 4,000 |
| Leadership Potential Seminar | 21,350 |
| Management Development Seminar | 9,150 |
| Federal Budgetary Policies and Processes | 6,100 |
| Supervisory Leadership Seminar | 12,200 |
| Environmental Policy Issues | 6,100 |
| Capitol Hill Workshop | 5,570 |
| White House Workshop | 2,685 |
| Women's Executive Leadership Program | 3,650 |
| Executive Potential Program | 14,700 |
| Congressional Operations Seminar | 8,550 |
| New Leaders Program | 5,990 |
| Advanced Leadership Program | 2,780 |
| Motivating Others: Bringing Out the Best in People | 7,575 |
| Presidential Management Intern Leadership Seminar | 5,700 |
| Effective Writing | 9,600 |
| Effective Briefing Techniques | 9,600 |
| Coaching Skills for Managers and Supervisors | 30,000 |
| Interpersonal Communication Skills | 20,000 |
| Conflict Intervention, etc. | 14,000 |
| Team Decision Making | 18,000 |
| Communicating With Style | 37,800 |

| | |
|------------------------------------|-------------------------|
| Managing Multiple Priorities | <i>Amount</i> 26,000 |
| Total | 319,975 |

The \$319,975 does not include the \$27,000 budgeted to support TASC training. FTA has \$575,000 included in the fiscal year 2000 base for this activity.

STAFFING

Question. How much of the proposed salaries and benefits increase (+ \$2,828,000) is associated with the pending reprogramming which includes an FTE increase from 485 to 495? (Please be sure to include any within-grade and step increase funding that is assumed to be associated with these positions.) Over how many months in fiscal year 2000 does this portion of the increase cover?

Answer. Of the \$2,828,000, \$835,000 is associated with the pending reprogramming. In fiscal year 2000, the FTA planned to hire 20 new positions throughout the fiscal year thus increasing FTE from 485 to 495. In fiscal year 2001, these positions will be fully annualized, therefore, increasing the FTE from 495 to 505. This portion of the increase covers 12 months of the fiscal year.

Question. The FTA has proposed increasing the FTE level from 495 to 505 in fiscal year 2001. Please break out these staffing increases by title, grade, and projected starting dates, including where each position will be located.

Answer. The following chart provides a break out of the proposed FTE funding increase:

FISCAL YEAR 2001 HIRING PLAN

| Office | Positions (title/grade) | EOD |
|---|---|----------|
| Office of Planning | Community Planner, GS-9/11/12 | 9/10/00 |
| Region 1 | General Engineer, GS-11/12/13 | 9/24/00 |
| Region 3 | Community Planner, GS-9/11/12 | 10/8/00 |
| Region 4 | General Engineer, GS-11/12/13 | 10/22/00 |
| Region 5 | Community Planner, GS-11/12 | 11/05/00 |
| Region 6 | Community Planner, GS-11/12 | 11/19/00 |
| Region 9 | General Engineer, GS-11/12/13 | 9/10/00 |
| Office of Program Management | General Engineer, GS-11/12/13 | 9/24/00 |
| | General Engineer, GS-11/12/13 | 10/8/00 |
| Office of Research Demo. & Innovation ... | Transportation Program Specialist, GS-12/13 | 11/05/00 |
| Total—10 New Positions | | 10 FTE |

Question. Please provide a table similar to the one found on page 478-479 of Senate hearing 106-221, detailing FTA's FTEs for fiscal years 1999, fiscal year 2000 on-board, estimated end-of-year (assuming the approval of the pending reprogramming), and 2001 proposal.

Answer. The following table provides detail of FTA's FTE through fiscal year 2001:

FEDERAL TRANSIT ADMINISTRATION FULL-TIME EQUIVALENT (FTE)

| Organization | Fiscal year | | | | |
|---|-----------------------|-----------------------|-------------------------|--------------------------|--------------------------|
| | 1998 actual FTE | 1999 actual FTE | 2000 on-board FTE | 2000 estimated FTE | 2001 requested FTE |
| Headquarters Offices: | | | | | |
| Administrator | 6 | 5 | 4 | 4 | 5 |
| Public Affairs | 11 | 12 | 12 | 12 | 12 |
| Chief Counsel | 32 | 29 | 31 | 31 | 33 |
| Budget and Policy | 46 | 49 | 50 | 52 | 53 |
| Civil Rights | 25 | 26 | 26 | 26 | 26 |
| Administration | 74 | 74 | 70 | 72 | 65 |
| Res. Demonstration and Innovation | 41 | 41 | 45 | 44 | 46 |

FEDERAL TRANSIT ADMINISTRATION FULL-TIME EQUIVALENT (FTE)—Continued

| Organization | Fiscal year | | | | |
|-----------------------------------|-----------------------|-----------------------|-------------------------|--------------------------|--------------------------|
| | 1998 actual FTE | 1999 actual FTE | 2000 on-board FTE | 2000 estimated FTE | 2001 requested FTE |
| Program Management | 57 | 55 | 58 | 59 | 60 |
| Planning | 25 | 29 | 32 | 31 | 33 |
| Subtotal Headquarters | 317 | 320 | 328 | 331 | 333 |
| Regional Offices: | | | | | |
| Region 1, Cambridge, MA | 13 | 13 | 14 | 14 | 14 |
| Region 2, New York, NY | 17 | 18 | 19 | 19 | 20 |
| Region 3, Philadelphia, PA | 20 | 20 | 21 | 20 | 21 |
| Region 4, Atlanta GA | 21 | 21 | 20 | 21 | 22 |
| Region 5, Chicago, IL | 22 | 23 | 24 | 24 | 24 |
| Region 6, Fort Worth, TX | 16 | 17 | 16 | 16 | 17 |

| Region 10, Seattle, WA | 9 | 9 | 9 | 8 | 10 |
| Subtotal Regions | 154 | 161 | 165 | 164 | 172 |
| Total FTA | 471 | 481 | 493 | 495 | 505 |

INFORMATION TECHNOLOGY

Question. Please lay out a schedule, by fiscal year and associated cost, of information technology improvements from fiscal year 1999 through the anticipated completion of the current upgrade. Break out each activity to major sub-activity levels.

Answer. The following table provides information technology improvements at the major sub-activity level:

INFORMATION TECHNOLOGY IMPROVEMENTS

[In thousands of dollars]

| Major sub-activity | Fiscal year | | |
|--|-------------|-------|------|
| | 1999 | 2000 | 2001 |
| Year 2000: Conversion & Remediation | 1,350 | | |
| Accounting Systems: DELPHI Conversion | | 200 | 100 |
| Financial Systems: DAFIS Operations | | 200 | |
| TEAM System: Application Enhancements | | 750 | 250 |
| Contractor Support (Help desk, etc.) | | 700 | |
| PDD63: Awareness/Renovation & Testing | | 300 | 250 |
| Electronic Commerce: | | | |
| Equipment & Software | 100 | 300 | |
| Operations & Expansion | | | 150 |
| Data Warehousing | | | 150 |
| DOT Bandwidth | | | 15 |
| Standardize and Secure e-mail | | | 26 |
| Telecommunications: Infrastructure Upgrades | 200 | 300 | |
| IT Equipment and Software: Software Licensing & Workstation Upgrades | 150 | | |
| IT Improvement Total | 1,800 | 2,750 | 941 |

Note: Does not include increases for inflation adjustments.

Question. On pages 33–35 of the budget justification, you describe the components of the requested \$941,000 increase for information technology. (This increase is predicated on the assumption that the pending reprogramming increase for IT in fiscal year 2000 will be approved.) Please present this list of activities in priority order, and justify why each project is necessary in fiscal year 2001.

Answer. The increase in information technology activities cuts across major governmental and departmental initiatives. All initiatives have a high importance to proceed with activity in fiscal year 2001 due either to Executive, Federal and/or Departmental mandates or flagship initiatives. In priority order they are as follows:

—*Presidential Decision Directive 63 (\$250,000).*—Federal mandate requires FTA to protect the infrastructure of Federally operated systems, and also to allow FTA to continue its partnership with departmental initiatives involving electronic commerce through mission critical systems accreditation. \$300,000 is planned for fiscal year 2000.

—*Transportation Electronic Award and Management (TEAM) (\$250,000).*—Funds will provide software, hardware and communications necessary to implement the web-enabled TEAM application. Transitioning to the internet will streamline FTA's business process by making it easier to access the federal financial assistance application process.

—*Electronic Commerce in Procurement (\$150,000).*—To provide annual lifecycle maintenance, licenses and core operations of FTA's electronic commerce program. We are planning \$400,000 in fiscal year 2000.

—*Data Warehousing (\$150,000).*—To continue the standardization of “pockets of information” so that information is accessible and sharable from a single source, eliminating redundancy of systems and information flow, and providing a more effective and efficient information sharing environment. This is a new activity in fiscal year 2001.

—*DELPHI—Accounting System Conversion (\$100,000).*—To convert and migrate the Agency's information in DAFIS to a new automated accounting system. We are planning \$200,000 in fiscal year 2000.

—*Strategic Communications—Institution of a Standard and Secure Departmental E-mail System in support of all Departmental Goals (\$26,000).*—This builds on securing information and systems and fosters a “OneDOT” approach to sharing information over a secured infrastructure, demonstrating that DOT is serious about protecting its information and maintaining the public confidence in the Department. Intermodal meetings were held, however funding is requested in fiscal year 2001.

—*Strategic Communications—Increase Bandwidth for Targeted Segments of Departmental Networks (\$15,000).*—Under the “OneDOT” approach, this funding would provide required infrastructure improvements for FTA to communicate efficiently and effectively with selected Departmental systems.

PROGRAM MANAGEMENT OVERSIGHT

Question. Please detail the authorized takedown levels (percentage and dollar amounts) for both formula and capital investment grants for fiscal years 1999, 2000, and 2001, and the amounts requested and enacted for PMO each of those fiscal years.

Answer. The following table provides a detail of FTA's Oversight takedown levels:

FEDERAL TRANSIT ADMINISTRATION FISCAL YEAR 1999–2001 OVERSIGHT BUDGET

[Dollars in thousands]

| Section/Program | Fiscal year 1999 oversight take- down | Percent of app. | Fiscal year 2000 oversight take- down | Percent of app. | Fiscal year 2001 oversight take- down | Percent of app. |
|---|---|--------------------|---|--------------------|---|--------------------|
| Formula Programs: | | | | | | |
| Alaska Railroad (Sec. 5307) | \$24,250 | 50 | \$24,250 | 50 | \$24,250 | 50 |
| Urbanized Area Formula (Sec. 5307) | 12,736,954 | 50 | 13,864,451 | 50 | 14,986,580 | 50 |
| Nonurbanized Area Formula (Sec. 5311) | 889,618 | 50 | 968,065 | 50 | 1,046,416 | 50 |
| Capital Investment Grants: | | | | | | |
| Bus and Bus Facilities (Sec. 5309) | 3,760,500 | 75 | 4,096,500 | 75 | 3,594,000 | 75 |
| Fixed Guideway Modernization (Sec. 5309) | 6,771,000 | 75 | 7,353,000 | 75 | 7,938,000 | 75 |

FEDERAL TRANSIT ADMINISTRATION FISCAL YEAR 1999–2001 OVERSIGHT BUDGET—Continued

[Dollars in thousands]

| Section/Program | Fiscal year 1999 oversight take- down | Percent of app. | Fiscal year 2000 oversight take- down | Percent of app. | Fiscal year 2001 oversight take- down | Percent of app. |
|---|---|--------------------|---|--------------------|---|--------------------|
| New Starts (Sec. 5309) | 6,771,000 | 75 | 7,353,000 | 75 | 7,938,000 | 75 |
| Total | 30,953,322 | | 33,659,266 | | 35,527,246 | |
| Amount Requested For PMO | 16,000,000 | | 18,067,000 | | 17,520,000 | |
| Actual Obligations (includes carryover) ... | 23,502,000 | | 21,887,000 | | | |

Question. Why doesn't the budget request assume the fully authorized takedown amounts for oversight activities in fiscal year 2001?

Answer. The budget request assumes the fully authorized take-down of \$35.5 million for oversight activities in fiscal year 2001. The Oversight Program increases commensurately with the increase of the Formula and Capital Investment programs. This level of funding is necessary to meet the growing demands on the Oversight Program. These funds are used to carryout our statutory oversight functions. As the New Starts project list grows more funds are required to oversee these projects. Over 61 percent of the funds are for Project Management and Financial Oversight activities. Safety Oversight is funded with 9 percent of the funds; the remaining funds support procurement and management oversight. As the FTA program grows under the guaranteed level provided in TEA–21, so will the need for oversight. Therefore, the percentage take-down from the capital portions of the FTA program for oversight activities is an appropriate means of funding these requirements.

Question. Please provide the names of contractors, their geographic location, annual and total costs of contracts, and a short description of each contract, for each PMO contract let in fiscal year 1999 and thus far in 2000.

Answer. A total of 9 Project Management Oversight Contracts were let in Fiscal year 1999 while none were awarded in fiscal year 2000. This list does not include non-PMOC activities such as Financial Management Oversight and Procurement System Reviews. The total and annual cost of the 9 contracts is provided in the attached chart.

FEDERAL TRANSIT ADMINISTRATION—PROJECT MANAGEMENT OVERSIGHT CONTRACTORS—FISCAL YEAR 1999—FISCAL YEAR 2000

| Contractor | Location | Contract amount | Fiscal year | | PMO projects monitored |
|--|-------------------------|-----------------|-------------------|-------------------|--|
| | | | 1999 expenditures | 2000 expenditures | |
| Gannett Fleming, Inc. | Camp Hill, PA | \$12,183,951 | \$1,600,000 | \$1,701,763 | Region IX Seattle. |
| Fluor Daniel, Inc. | Irvine, CA | 10,391,273 | 2,000,000 | 1,300,000 | LIRR, NYCDOT, NCTA. |
| Hill International, Inc. | Newport Beach, CA | 11,533,331 | 3,012,183 | 2,337,617 | Los Angeles Metro Rail Salt Lake City. |
| Day & Zimmerman | Philadelphia, PA | 10,810,846 | 1,934,484 | 1,665,692 | WMATA, MBTA, and Region IV. |
| Sverdrup Civil, Inc. | Maryland Heights, MO .. | 11,576,298 | 1,000,000 | 525,000 | Chicago Miami-Dade. |
| Delon Hampton and Associates, Chtd | Washington, D.C. | 12,507,225 | 1,351,582 | 1,600,000 | New Jersey Transit, Metro North RR, CONNDOT. |
| STV, Inc. | Philadelphia, PA | 13,850,585 | 3,728,466 | 1,902,469 | RTD Denver MUNI & BART. |
| Daniel, Mann, Johnson & Mendenhall | Baltimore, MD | 9,474,885 | 1,480,000 | 590,357 | Dallas & Railtran, Cleveland, and Phoenix. |
| Parsons Brinckerhoff Construction Services | Herndon, VA | 13,065,484 | | 260,000 | Little Rock Junction Bridge/ River Rail. |
| Totals | | 105,393,878 | 16,106,715 | 11,882,989 | |

Question. Please provide a table similar to that found on page 484 of Senate hearing record 106-221, indicating oversight obligations by activity broken out for fiscal years 1997, 1998, 1999, 2000 estimate, and 2001 planned.

Answer. The following table provides actual Oversight obligations for fiscal year 1997 through fiscal year 1998 and estimated for fiscal year 2000 through fiscal year 2001:

OVERSIGHT OBLIGATIONS BY ACTIVITY

[In thousands of dollars]

| | Fiscal year | | | | |
|---|----------------|------------------|------------------|------------------|------------------|
| | 1997 actual | 1998 actual | 1999 actual | 2000 estimate | 2001 planned |
| Project Management Oversight | 3,984 | 10,198 | 23,502 | 21,887 | 17,520 |
| Financial Management Oversight | 2,060 | 3,533 | 3,530 | 4,500 | 4,500 |
| Safety Oversight | 2,825 | 3,000 | 2,827 | 4,010 | 3,100 |
| Drug & Alcohol Compliance | 1,150 | 1,525 | 1,410 | 2,200 | 1,500 |
| SAMIS | 75 | (¹) | (¹) | (¹) | (¹) |
| DAMIS | 600 | (¹) | (¹) | (¹) | (¹) |
| State Rail Safety Oversight | 200 | 650 | 693 | 900 | 800 |
| Security Audits | 550 | 825 | 724 | 910 | 800 |
| Alternative Fuels | 250 | (¹) | (¹) | (¹) | (¹) |
| Procurement Oversight | 1,130 | 1,588 | 1,320 | 1,784 | 1,500 |
| Management Oversight | 13,418 | 6,216 | 5,576 | 10,456 | 8,907 |
| Civil Rights Reviews, DBE, EEO | 586 | 477 | 709 | 934 | 800 |
| ADA Civil Rights Reviews | | 485 | 951 | 963 | 850 |
| National Transit Database (NTD) | 4,308 | (¹) | (¹) | (¹) | (¹) |
| NTD Phase 3 Redesign | | | | | 1,515 |
| Triennial and State Management Re-views | 4,010 | 3,959 | 3,726 | 3,490 | 3,500 |
| Electronic Grant Making | 2,000 | | | | |
| Planning Compliance | 467 | 995 | 190 | 2,203 | 1,110 |
| Rail Control Technology | | | | 577 | 402 |
| Bus Technology | 500 | 300 | | 642 | 230 |
| Turnkey Oversight | 1,546 | (²) | (²) | (²) | (²) |
| ITS National Architecture | | | | 1,647 | 500 |
| Total Oversight | 23,417 | 24,535 | 36,755 | 42,637 | 35,527 |

¹ Funded under National Research and Technology.

² Turnkey Oversight is funded under other oversight activities.

FINANCIAL MANAGEMENT OVERSIGHT ACTIVITIES

Question. What financial management oversight (FMO) reviews were conducted in fiscal year 1999? What FMO reviews are underway or planned for fiscal year 2000? What FMO reviews are planned for fiscal year 2001?

Answer. The following FMO reviews were completed in fiscal year 1999:

Financial Capacity Assessments

Massachusetts Bay Transportation Authority
Maryland Mass Transit Administration
Dallas Area Rapid Transit
Utah Transit Authority
Santa Clara Valley Transportation Authority
Sacramento Regional Transit District

Additional Financial Assessments (New Starts Evaluations)

Austin, Texas/Northwest/North Central Corridor
Chicago, Illinois/Central Kane Corridor
Chicago, Illinois/North Central Corridor
Chicago, Illinois/Southwest Corridor
Cincinnati, Ohio/Interstate 71 Corridor
Cleveland, Ohio/Euclid Corridor Improvement Project

- Denver, Colorado/Denver Southeast Corridor
- Fort Lauderdale, Florida/Tri-County Commuter Rail
- Fort Worth, Texas/RAILTRAN Phase II
- Kansas City, Missouri/Southtown Corridor
- Las Vegas, Nevada/Las Vegas Resort Corridor Fixed Guideway
- Little Rock, Arkansas/Little Rock River Rail Project
- Memphis, Tennessee/Medical Center Rail Extension
- Miami, Florida/Miami East-West Corridor
- Miami, Florida/Miami North 27th Avenue
- Minneapolis, Minnesota/Hiawatha Avenue Corridor
- New Orleans, Louisiana/Canal Streetcar Spine
- New York, New York/Long Island Rail Road Access to Manhattan's East Side (East Side Access)
- Norfolk, Virginia/Norfolk-Virginia Beach Corridor
- Northern New Jersey/Hudson-Bergen Waterfront Light Rail Transit
- Northern New Jersey/Newark-Elizabeth Rail Link System Minimum Operable Segment-2 (MOS-2)
- Orange County, California/Orange County Transitway Project
- Orlando, Florida/Central Florida Light Rail System
- Phoenix, Arizona/Central Phoenix/East Valley Corridor
- Pittsburgh, Pennsylvania/Martin Luther King, Jr. East Busway Extension—Phase I
- Pittsburgh, Pennsylvania/Pittsburgh Stage II Light Rail Transit
- Portland, Oregon/South-North Corridor
- Raleigh, North Carolina/Regional Transit Plan Phase I Regional Rail—Durham to North Raleigh
- San Diego County, California/LOSSAN Rail Corridor
- San Diego County, California/Mid Coast Corridor
- San Diego County, California/Mission Valley East
- San Diego County, California/Oceanside-Escondido Passenger Rail Project
- San Francisco, California/Third Street Light Rail Project Phase 1
- San Juan, Puerto Rico/Minillas Extension
- Seattle, Washington/Seattle Link Light Rail
- Seattle, Washington/Seattle-Tacoma Sounder Commuter Rail
- Tampa, Florida/Tampa Bay Regional Rail System
- Washington, D.C. Metropolitan Area/Largo Metrorail Extension

Financial Management Systems Full Scope Reviews

- Vermont Agency of Transportation
- Port Authority of Allegheny County (PA)
- City of Washington (PA)
- Lehigh & Northhampton Transportation Authority
- VA Department of Rail & Public Transportation
- Borough of Pottstown (PA)
- Triangle Transit Authority
- Georgia Department of Transportation
- Greater Cleveland Regional Transit Authority
- Minnesota Department of Transportation
- Metropolitan Council (Met Council)
- Ohio-Kentucky-Indiana Regional Council
- Metro Transit
- Galveston-Island Transit
- Brazos Valley Community Action Agency
- Shreveport Transit Management, Inc.
- Lincoln Transportation System
- City & County of Honolulu
- Regional Transportation Commission of Washoe County (Reno)
- Metro (Seattle)

The FMO reviews that are planned, in process or completed in fiscal year 2000 are:

| | <i>Status</i> |
|---|---------------|
| Financial Capacity Assessments: | |
| New York Metropolitan Transportation Authority | Planned. |
| Port Authority of Allegheny County (Pittsburgh) | Planned. |
| Miami-Dade Transit Agency | Planned. |
| MARTA (Atlanta) | In Process. |
| Chicago Transit Authority | Planned. |
| Metra (Commuter Rail Division of the Chicago RTA) | Planned. |

| | <i>Status</i> |
|---|---------------|
| Metropolitan Council/Metro Transit (Minneapolis) | Planned. |
| Houston Metro | In Process. |
| Colorado DOT | Planned. |
| Regional Public Transportation Authority (Phoenix) | Planned. |
| Tri-County Metropolitan Transportation District of Oregon | In Process. |
| Central Puget Sound Regional Transit Authority | Planned. |
| Washington Metropolitan Area Transit Authority | In Process. |
| Memphis Area Transit Authority | In Process. |
| New Jersey Transit Corporation | Completed. |
| Tri-County Commuter Rail Authority | Completed. |
| Puerto Rico—Tren Urbano/Minellas Extension | Completed. |
| San Diego Metropolitan Transit Development Board | Completed. |
| Denver Regional Transportation District | Completed. |
| Bi-State Development Agency (St. Louis) | Completed. |
| Additional Financial Assessments (New Starts Evaluations): | |
| Austin, Texas/Light Rail Corridors | Completed. |

In addition, FTA continues to monitor grantees that underwent financial capacity assessments in fiscal year 1999 and prior.

FTA will determine the Financial Management Oversight program reviews to be conducted in fiscal year 2001, by August 31, 2000. Each summer, FTA goes through a Risk Assessment process that includes recommendations from regional offices. The regional offices determine the grantees' risk level and recommend the type of financial management oversight review to be conducted. Among the areas under consideration for Financial Capacity Assessments in fiscal year 2001 are: New Orleans, Oceanside, CA, Cleveland, Little Rock, Nashville, and Clark County, Nevada.

Among the potential new projects for which Financial Assessments for New Starts Evaluations would be conducted in fiscal year 2001 are: Boston North-South Rail Link, Canton-Akron-Cleveland Corridor, Denver East Corridor, Eugene-Springfield BRT, Harrisburg Corridor One, Indianapolis Northeast Corridor, Milwaukee Downtown System, New York/New Jersey Trans-Hudson Midtown, Brooklyn-Manhattan Access, Omaha Downtown Trolley System, Orlando Airport Connector, Philadelphia Cross County Metro, Philadelphia Schuylkill Valley Metro, Ogden-Provo-Orem Commuter Rail, Seattle SeaTac Airport PRT, and Tampa-St. Petersburg. FTA undertakes, minimally, an annual Financial Assessment for each New Starts project that is in either preliminary engineering or final design.

Question. You have requested a \$1,000,000 reimbursement to the DOT Inspector General for costs associated with audits and review of new fixed guideway systems. Will this reimbursement funding be provided from PMO, or from administrative funds? Why do you feel justified in requesting a lesser reimbursement level in fiscal year 2001, with an increased number of pending full funding grant agreements which may require baseline assessments or other Inspector General audits and reviews?

Answer. The \$1,000,000 reimbursement funding for the Office of Inspector General will come from the Administrative Expenses account. OIG activities were funded under Administrative Expenses in fiscal year 2000 and under the Oversight Program in fiscal year 1999. The reduction in funding for the Office of Inspector General in fiscal year 2001, is based on the expectation that there are no urgent emerging transit issues expected to be investigated. FTA has been praised by the OIG for appropriate management of projects. The \$1,000,000 a year should be sufficient to meet the audit and investigative needs of the New Starts pipeline.

Question. What are the trigger factors in determining that the Inspector General should perform a baseline audit of a full funding grant agreement project?

Answer. The OIG has indicated to FTA that there are no specific factors that trigger an audit. Departmental and Congressional inquiries are given priority. The OIG

attempts to survey projects on a continuing basis to see if any emerging issues such as large cost increases or lengthy schedule delays may indicate vulnerabilities.

JOB ACCESS AND REVERSE COMMUTE GRANTS

Question. Please provide a funding history table for the Job Access and Reverse Commute grant program, showing the guaranteed firewall TEA-21 funding level for each fiscal year in the authorization, the administration's funding request (and source of additional funds), and the enacted funding level for the program.

Answer. The following table provides a funding history table for the Job Access and Reverse Commute grant program:

JOB ACCESS AND REVERSE COMMUTE GRANTS FUNDING HISTORY

[In thousands of dollars]

| Fiscal year | Guaranteed funding | Budget request | Enacted level |
|-------------|--------------------|------------------------|-----------------------|
| 1999 | \$50,000 | ¹ \$100,000 | ¹ \$75,000 |
| 2000 | 75,000 | ² 150,000 | 75,000 |
| 2001 | 100,000 | ² 150,000 | (³) |

¹ Prior to TEA-21 Reauthorization.

² RABA funds requested as source of additional funds.

³ Pending.

Question. What is the length of availability of federal funds made available as grant awards under the Job Access and Reverse Commute program?

Answer. As authorized in TEA-21, Job Access and Reverse Commute funds are available until expended. However, FTA has urged that projects be submitted that can be quickly implemented. The fiscal year 2000 notice states that project readiness is a factor to be considered in awarding grants and that applicants must be able to implement a project preferably within six months of award, but no longer than one year after selection.

Question. Have all the fiscal year 1999 Access to Jobs funds been obligated? If not, why not?

Answer. As of March 31, 2000, FTA had obligated \$46.5 million of the \$70.8 million designated for selected projects in fiscal year 1999. This represents 125 out of 191 selected projects. Causes of delays in finalizing applications included meeting FTA standard grant requirements, final securing of matching funds, and project scope adjustments. These have all slowed applicants' progress in finalizing grant applications. It must also be recognized that approximately half of the projects involve non-traditional applicants who are dealing with the FTA grant process and requirements for the first time.

Question. To what extent will DOT obligate all fiscal year 2000 Access to Jobs funds by the end of the fiscal year? What is the timetable for selecting grantees for the discretionary program funding (roughly \$25,000,000) in fiscal year 2000? When will the FTA publish in the Federal Register its selection of Job Access and Reverse Commute awards for fiscal year 2000?

Answer. It is highly unlikely that FTA will have obligated all of the fiscal year 2000 Job Access and Reverse Commute funds by the end of the fiscal year. The national solicitation was issued on March 10, 2000 with proposals and applications due on May 9. The competitive projects are expected to be selected and announced in the Federal Register in early September. In cases where applicants submitted only proposals, such applicants will then proceed to submit final applications addressing FTA standard grant requirements. The two-step application process is designed for new proposers. Applicants receiving congressional earmarks or applicants seeking continued funding for projects awarded in fiscal year 1999 will more likely submit a full one-step application, and may be processed sooner.

Question. For the funds that it will receive in fiscal year 2001, what are the Department's time frames for evaluating and awarding additional grants?

Answer. FTA expects to solicit competitive projects within 30 days of the enactment of the fiscal year 2001 transportation appropriation for the Job Access and Reverse Commute program. Applicants will be given 120 days to submit proposals and selections will be made within 120 days thereafter.

Question. How many applications did DOT receive in the fiscal year 1999 grant cycle? How much in requested funds is represented by these applications? How

many applications did DOT receive in the fiscal year 2000 grant cycle? How much in requested funds is represented by these applications?

Answer. DOT received proposals for 266 projects in fiscal year 1999. These proposals requested a total of \$108 million. Since fiscal year 2000 proposals are due by May 9, 2000, DOT does not yet know the number of proposals that will be received.

Question. Please clarify the response on page 489 of Senate hearing 106-221 regarding the use of Job Access and Reverse Commute program funds to help individuals purchase cars.

Answer. Last year, we reported that FTA could not assist in the purchase of automobiles reserved for individuals' personal and private use. However, automobiles could be acquired by qualified public and non-profit organizations as long as they were used for ridesharing or other public transportation uses. The agency receiving the grant must have continuing control of the vehicle to ensure that the purposes of the grant are carried out in accordance to the provisions of the Act.

FTA recently reviewed this situation with regard to a specific congressional earmark in the Job Access and Reverse Commute program. FTA determined that funding loan programs to assist in the purchase of an automobile is eligible as long as the recipient agency enters into a contractual arrangement with the individual being assisted to ensure that the vehicle is tied to a public transportation purpose. FTA's determination is specific to this congressional earmark and is not intended to encourage the use of limited FTA funding for this purpose.

Question. Given the gap between transit services in smaller communities and the need for transportation for welfare-to-work programs, would the Federal Transit Administration support a new program to fund car-based initiatives where transit resources are scarce or non-existent?

Answer. Generally FTA believes that the limited funds for this program should be used to support mass transportation activities. FTA believes that there are other sources of federal funds that are more appropriate for funding car based initiatives such as the Temporary Assistance to Needy Families (TANF) funding. The TANF program is funded at \$16.5 billion annually.

USE OF TEMPORARY ASSISTANCE TO NEEDY FAMILIES (TANF) FUNDS

Question. In the fiscal year 1999 grant cycle for Job Access and Reverse Commute grants, what percentage of local matching funds was provided by Temporary Assistance to Needy Families (TANF) program funds?

Answer. TANF funds were commonly used as matching funds. DOT is in the process of gathering this information and will make it available as soon as the information is collected.

Question. What problems have been experienced by Job Access and Reverse Commute grant recipients in securing TANF and other federal funds to be used for matching purposes? How has FTA assisted grant recipients in resolving these problems?

Answer. Job access applicants have had timing problems in securing the match. When Job Access and Reverse Commute grants were announced in May 1999, some expected TANF matching funds had been reallocated to other purposes since the end of the fiscal year was fast approaching in many states. Additionally, some state human resource departments have resisted the new flexibility to use TANF funding for new service development. DOT has worked with the Department of Health and Human Services (DHHS) and the Department of Labor (DOL) to develop guidance on the use of TANF and other Federal funds. This guidance is currently being updated and will be reissued shortly.

More efforts are needed to clarify how TANF can be used for transportation purposes. FTA is working with the American Public Transportation Association (APTA), the Community Transportation Association of America (CTAA), the American Association of State Highway and Transportation Officials (AASHTO), the Association of Metropolitan Planning Organizations (AMPO) and the Association for Commuter Transportation (ACT) in implementing an aggressive technical assistance program to help applicants and grantees. FTA is planning to hold a series of technical assistance regional conferences where the use of TANF will be addressed by the Department of Health and Human Services (DHHS). This subject will be addressed additionally at a national employment transportation conference in June 2000.

Question. What problems have been experienced at the State level in making TANF dollars available? What role has FTA played with the States in resolving these problems?

Answer. As mentioned above, some state and local agencies seeking to use TANF funding have found state budget or human service offices resistant to the use of

TANF funding to develop transportation services. These agencies believe that TANF funding must be directly tied to individuals being assisted under the TANF program and want an individual-by-individual accounting of funding expenditures. New TANF guidance does not require this when TANF funds are used to pay for the start-up and operating cost of new service. DOT and DHHS are working together to clarify further to states and local human service agencies the flexibility that they have in applying TANF funds to the development of new services. FTA is also meeting with AASHTO to work together along with DHHS staff to resolve these issues.

Question. Are there advantages to using Social Services Block Grants as matching funds for the JARC program rather than TANF dollars? How could this process be improved?

Answer. At one time, there was an advantage to transferring TANF funds to Social Service Block Grants (SSBG) because SSBG funds did not impose time limits for individuals who received these funds and did not require an individual tracking system as did TANF. New TANF funding rules have largely reduced these advantages since tracking is not associated with new service development and individuals receiving TANF funding for transportation purposes alone do not trigger time limits.

FORMULA GRANTS

Question. Please provide a table displaying the state-by-state distribution of the formula program funds within each of the program categories for fiscal year 2001 (as shown on pages 490–491 of Senate hearing 106–221). Please add a column to the far right of the table that expresses each state's share of the formula grants program as a percentage of the total program.

Answer. The following table provides a state-by-state distribution of formula program funds:

FEDERAL TRANSIT ADMINISTRATION, FISCAL YEAR 2001 GUARANTEED LEVEL APPORTIONMENT FOR FORMULA PROGRAMS

[By State]

| State | Section 5307 urbanized area | Section 5311 non-urbanized area | Section 5310 elderly and persons with disabilities | Total formula programs | State per- cent of total |
|----------------------------|-----------------------------------|---------------------------------------|---|---------------------------|-----------------------------|
| Alabama | \$13,046,848 | \$4,974,114 | \$1,363,957 | \$19,384,919 | 0.59 |
| Alaska | 17,433,414 | 741,748 | 197,821 | 8,372,983 | 0.26 |
| American Samoa | | 105,722 | 52,867 | 158,589 | |
| Arizona | 33,260,503 | 2,177,536 | 1,200,201 | 36,638,240 | 1.12 |
| Arkansas | 5,119,390 | 3,976,597 | 946,967 | 10,042,954 | 0.31 |
| California | 482,887,208 | 9,705,577 | 7,477,863 | 500,070,648 | 15.27 |
| Colorado | 37,142,854 | 2,071,753 | 926,429 | 40,141,036 | 1.23 |
| Connecticut | 52,359,019 | 1,879,275 | 1,064,511 | 55,302,805 | 1.69 |
| Delaware | 6,122,420 | 468,834 | 308,825 | 6,900,079 | 0.21 |
| District of Columbia | 27,169,899 | | 306,385 | 27,476,284 | 0.84 |
| Florida | 146,712,613 | 6,239,173 | 5,039,527 | 157,991,313 | 4.83 |
| Georgia | 51,231,289 | 7,272,683 | 1,774,590 | 60,278,562 | 1.84 |
| Guam | | 300,966 | 134,536 | 435,502 | 0.01 |
| Hawaii | 25,780,183 | 816,248 | 398,306 | 26,994,737 | 0.82 |
| Idaho | 3,072,028 | 1,646,756 | 408,081 | 5,126,865 | 0.16 |
| Illinois | 206,007,568 | 6,672,281 | 3,250,600 | 215,930,449 | 6.59 |
| Indiana | 32,873,659 | 6,445,272 | 1,695,963 | 41,014,894 | 1.25 |
| Iowa | 9,360,438 | 4,145,662 | 1,019,530 | 14,525,630 | 0.44 |
| Kansas | 7,996,681 | 3,297,743 | 851,478 | 12,145,902 | 0.37 |
| Kentucky | 17,131,642 | 5,443,854 | 1,306,330 | 23,881,826 | 0.73 |
| Louisiana | 27,667,179 | 4,502,461 | 1,310,621 | 33,480,261 | 1.02 |
| Maine | 2,203,751 | 2,172,613 | 515,251 | 4,891,615 | 0.15 |
| Maryland | 75,972,090 | 2,712,403 | 1,316,914 | 80,001,407 | 2.44 |
| Massachusetts | 115,219,238 | 2,906,872 | 1,905,644 | 120,031,754 | 3.67 |
| Michigan | 62,637,557 | 7,872,306 | 2,778,229 | 73,288,092 | 2.24 |
| Minnesota | 29,392,604 | 4,530,057 | 1,335,764 | 35,258,425 | 1.08 |
| Mississippi | 4,618,496 | 4,420,748 | 919,424 | 9,958,668 | 0.30 |

FEDERAL TRANSIT ADMINISTRATION, FISCAL YEAR 2001 GUARANTEED LEVEL APPORTIONMENT FOR
FORMULA PROGRAMS—Continued

[By State]

| State | Section 5307 urbanized area | Section 5311 non-urbanized area | Section 5310 elderly and persons with disabilities | Total formula programs | State per- cent of total |
|--|-----------------------------------|---------------------------------------|---|---------------------------|-----------------------------|

| Grand Total | | | | 3,345,000,000 | |

¹ Includes \$4,825,700 for the Alaska Railroad improvements to passenger operations.

USE OF FUNDING FOR DUES AND TRAVEL

Question. Can Section 5307 or Section 5309 funds be used by grantees to:

- pay dues to the American Public Transportation Association,
- pay for transit conference registration fees, or travel thereto,
- pay for consultants, lobbyists, or other representatives who attempt to affect national or state legislation?

Answer. The following gives a brief explanation of Section 5307 and 5309 eligibility requirements:

- Under Section 5309, funds may be used for capital expenses but may not be expended by grantees for association dues, conference fees or travel, nor to pay for consultants or lobbyist activities.
- Section 5307 funds to urbanized areas over 200,000 may not be used for association fees, conference fees or travel, nor may it be used to pay for consultants or lobbyist activities.
- Section 5307 funds to urbanized areas under 200,000 in population and may be used for operating expenses. Thus:
 - (1) grantees can use Section 5307 funds to pay dues to the American Public Transportation Association. In accordance with OMB Circular A-87, APTA dues are an eligible expense.
 - FTA allows payment of 85 percent of such dues from Section 5307 funds.
 - The other 15 percent of such dues were determined by an audit to be an ineligible expense because they were used exclusively for lobbying; and
 - (2) Grantees may use Section 5307 funds to pay for transit conference registration fees or travel thereto.
- Neither Section 5307 nor Section 5309 funds may be used to pay for consultants, lobbyists or other representatives who attempt to affect national or state legislation.

CLEAN FUELS FORMULA PROGRAM

Question. Of the bus and bus related projects identified in the fiscal year 2000 appropriations act, which specific projects would have been eligible for funding under the clean fuels formula program? (Please arrange this list by state, and note the amount provided for each project in the appropriations bill.)

Answer. We cannot identify the specific projects in fiscal year 2000 that would have been eligible for the Clean Fuels Formula program. Based on fiscal year 1999 data, where Clean Fuel Formula program funds were earmarked under the Capital Investment bus category. The following bus purchases (40', 35', 30', and less than 30' bus) were purchased under the Section 5309 Bus program. The following chart shows the majority were clean fueled:

| Bus propulsion | Buses purchased | Percentage |
|------------------------|-----------------|------------|
| Diesel | 851 | 78.1 |
| Gasoline | 73 | 6.7 |
| CNG/LNG/LPG | 147 | 13.5 |
| Methanol/Ethanol | | |
| Electric | 11 | 1.0 |
| Other | 7 | 0.6 |
| Total | 1,089 | 100.0 |

Since clean diesel fuel buses are eligible under the clean fuels formula program, conceivably any projects for the purchase of clean diesel buses could also qualify. However, under the clean fuels formula program formula, only 35 percent of the clean fuel formula funds may be used for clean diesel buses. Therefore, under the clean fuels formula program, each clean diesel project may have received a lower funding level than through earmarking of bus capital funds.

OVER-THE-ROAD BUS ACCESSIBILITY PROGRAM

Question. The transit cooperative research program (TCRP) has performed an analysis of the over-the-road bus accessibility program, which includes data on the total capital needs of operators, compliance deadlines, and the current matching fund requirements. A report on this analysis was due to the House and Senate Appropriations Committees by March 1, 2000. Has the report been completed? If so, please provide a copy of the executive summary of the report for the record. If not, please summarize the findings of this analysis.

Answer. Neither the report nor the findings of the analysis have been completed. Data that will form the basis of the analysis is being collected and it is expected that the report will be submitted to the House and Senate Appropriations Committees by May 31, 2000.

Question. Beginning in October 2000, Class I over-the-road bus companies are required by the Americans with Disabilities Act (ADA) to purchase lift-equipped

buses, or to install a wheelchair lift in any new buses which they purchase. The entire fleet of buses owned by these companies must be accessible by 2012. What is the TEA-21 guaranteed funding level for the over-the-road bus accessibility program for each year of the authorization? Are there any other federal funding programs under which these privately-owned companies could apply for assistance in meeting this mandate?

Answer. The Over-The-Road Bus Accessibility Program is the only federal funding program under which the privately owned companies can apply for assistance in meeting the mandate. The guaranteed funding levels (in millions) for the over-the-road bus accessibility program for each year of the authorization are:

OVER-THE-ROAD BUS ACCESSIBILITY PROGRAM GUARANTEED FUNDING LEVELS

[In millions of dollars]

| Fiscal year | Intercity fixed-route | All others (e.g. charter and tour) | Total |
|-------------|-----------------------|------------------------------------|--------|
| 1999 | \$2.00 | | \$2.00 |
| 2000 | 2.00 | \$1.70 | 3.70 |
| 2001 | 3.00 | 1.70 | 4.70 |
| 2002 | 5.20 | 1.70 | 6.95 |
| 2003 | 5.30 | 1.70 | 6.95 |
| Total | 17.50 | 6.80 | 24.30 |

Question. Please provide a list of each award made in fiscal year 1999, the recipient, the amount of the award and the purpose of the award. When are the fiscal year 2000 grant awards expected.

Answer. Ten projects were selected for funding in fiscal year 1999. The projects, purposes and Federal dollar amounts are listed in the table below. Grant applications were then completed and are being processed by FTA. One grant was awarded for \$1.1 million in fiscal year 1999. The fiscal year 2000 project selections should be announced by FTA in July 2000.

FEDERAL TRANSIT ADMINISTRATION—OVER-THE-ROAD BUS FISCAL YEAR 1999 AWARDS

| Region | Agency | No. of lifts on new vehicles | Cost of lifts on new vehicles | No. of retrofits | Cost of retrofits | Training | Total | Funds obligated in fiscal year 1999 |
|--------------|---|------------------------------|-------------------------------|------------------|-------------------|----------------|------------------|-------------------------------------|
| 1 | Peter Pan Bus Lines, Springfield, MA | 1 | \$17,000 | | | \$84,000 | \$101,000 | |
| 2 | Shortline (Hudson Transit Bus), Mahwah, NJ | | | 6 | \$120,000 | 30,000 | 150,000 | |
| 2 | Adirondack Transit Lines, Kingston, NY | | | 6 | 120,000 | 30,000 | 150,000 | |
| 3 | Capitol Bus (Capitol Trailways of PA) Harrisburg, PA | 6 | 92,293 | | | 10,000 | 102,293 | |
| 3 | Carl R. Beiber Tourways, Kutztown, PA | 4 | 60,000 | 3 | 60,000 | 10,000 | 130,000 | |
| 3 | Frank Martz Coach, Wilkes Barre, PA | 3 | 45,000 | | | 9,454 | 54,545 | |
| 5 | Jefferson Lines, Minneapolis, MN | 7 | 95,280 | | | 12,000 | 107,280 | |
| 5 | Peoria Charter Coach, Peoria, IL | | | 1 | 16,000 | 1,250 | 17,250 | |
| 6 | Greyhound, Ft. Worth, TX | 58 | 1,015,000 | | | 41,707 | 1,056,707 | \$1,056,707 |
| 7 | Burlington Trailways, West Burlington, IA | 6 | 81,000 | | | 10,000 | 91,000 | |
| 10 | Northwest Stage, Spokane, WA | 2 | 29,925 | | | | 29,925 | |
| Total | | 87 | 1,435,498 | 16 | 316,000 | 238,411 | 1,990,000 | 1,056,707 |

METROPOLITAN AND STATEWIDE PLANNING

Question. Please provide a table displaying the formula apportionments to States and MPOs for the fiscal year 2000 and fiscal year 2001 Metropolitan and State Planning Funds.

Answer. Funds for the MPOs, the Metropolitan Planning program, are apportioned by formula to the states for state distribution (by state formulas) to the MPOs. The table below shows the actual apportionment to the States for fiscal year 2000 for the Metropolitan and for the State Planning programs. The fiscal year 2001 apportionments are based on the guaranteed funding level for these programs for fiscal year 2001.

| State | Section 5303 | | Section 5313(b) | |
|----------------------|---------------------------------------|-------------------------------------|---------------------------------------|-------------------------------------|
| | Metropolitan planning | | Statewide planning | |
| | Actual apportionment fiscal year 2000 | Guaranteed funding fiscal year 2001 | Actual apportionment fiscal year 2000 | Guaranteed funding fiscal year 2001 |
| Alabama | \$434,813 | \$456,460 | \$113,592 | \$119,192 |
| Alaska | 198,569 | 208,454 | 51,875 | 54,432 |
| Arizona | 790,795 | 830,166 | 163,970 | 172,054 |
| Arkansas | 198,569 | 208,454 | 51,875 | 54,432 |
| California | 8,463,459 | 8,884,840 | 1,572,168 | 1,649,677 |
| Colorado | 645,896 | 678,052 | 146,797 | 154,034 |
| Connecticut | 580,320 | 609,211 | 151,605 | 159,078 |
| Delaware | 198,569 | 208,454 | 51,875 | 54,432 |
| District/Col | 267,707 | 281,035 | 51,875 | 54,432 |
| Florida | 2,706,938 | 2,841,705 | 628,325 | 659,300 |
| Georgia | 958,264 | 1,005,971 | 201,301 | 211,224 |
| Hawaii | 198,569 | 208,454 | 51,875 | 54,432 |
| Idaho | 198,569 | 208,454 | 51,875 | 54,432 |
| Illinois | 2,900,719 | 3,045,133 | 523,440 | 549,244 |
| Indiana | 704,204 | 739,263 | 166,235 | 174,430 |
| Iowa | 222,764 | 233,854 | 58,196 | 61,064 |
| Kansas | 257,521 | 270,342 | 62,884 | 65,984 |
| Kentucky | 308,461 | 323,818 | 78,828 | 82,714 |
| Louisiana | 533,037 | 559,575 | 137,549 | 144,329 |
| Maine | 198,569 | 208,454 | 51,875 | 54,432 |
| Maryland | 1,152,512 | 1,209,890 | 221,105 | 232,005 |
| Massachusetts | 1,405,704 | 1,475,688 | 292,035 | 306,431 |
| Michigan | 1,810,929 | 1,901,088 | 358,838 | 376,528 |
| Minnesota | 735,337 | 771,946 | 146,372 | 153,588 |
| Mississippi | 198,569 | 208,454 | 51,875 | 54,432 |
| Missouri | 813,010 | 853,487 | 171,795 | 180,264 |
| Montana | 198,569 | 208,454 | 51,875 | 54,432 |
| Nebraska | 198,569 | 208,454 | 51,875 | 54,432 |
| Nevada | 215,306 | 226,025 | 56,247 | 59,020 |
| New Hampshire | 198,569 | 208,454 | 51,875 | 54,432 |
| New Jersey | 2,461,011 | 2,583,534 | 409,281 | 429,457 |
| New Mexico | 198,569 | 208,454 | 51,875 | 54,432 |
| New York | 4,997,493 | 5,246,297 | 871,467 | 914,428 |
| North Carolina | 593,830 | 623,394 | 155,134 | 162,782 |
| North Dakota | 198,569 | 208,454 | 51,875 | 54,432 |

TRANSIT PLANNING AND RESEARCH

Question. Please provide a list by activity and amount of the earmarks contained in TEA-21 that must be administered under the FTA's transit planning and research account in fiscal year 2001. Are there any TEA-21 project earmarks under the national research and technology program for fiscal year 2001?

Answer.

Earmarks Contained in TEA-21 Administered under the FTA's Transit Planning and Research Account in Fiscal Year 2001

[In thousands of dollars]

| <i>Activity</i> | <i>Fiscal year 2001 Amount</i> |
|--|--------------------------------|
| Metropolitan Planning | 52,114 |
| Statewide Planning and Research | 10,886 |
| Transit Cooperative Research Program | 8,250 |
| National Transit Institute | 4,000 |
| Rural Transit Assistance Program | 5,250 |
| National Research and Technology | 29,500 |
| SEPTA Advanced Propulsion Control | ¹ [3,000] |
| Project ACTION | ¹ [3,000] |

¹ These projects are earmarked in TEA-21.

The SEPTA Advanced Propulsion Control project and Project ACTION must be administered under the national research and technology program for fiscal year 2001.

Question. If FTA had a constrained budget for the national research and technology program, how would the agency allocate non-TEA-21 mandated programs with a discretionary allowance of \$12,000,000?

Answer. FTA has requested \$23,500,000 for non-TEA-21 mandated programs in fiscal year 2001. If only \$12,000,000 were made available for use at FTA's discretion, we would allocate it to the following non-TEA-21 programs, as follows:

[In thousands of dollars]

| Program | Fiscal year 2001 request | Constrained level |
|--|--------------------------|-------------------|
| 9.2. National Transit Database | 2,500 | 2,500 |
| 1.5.1. Safety & Security Training (includes Transportation Safety Institute) | 1,300 | 1,300 |
| 1.1.1. Grade Crossing Safety | 750 | 750 |
| 1.5.5.2. SAMIS | 400 | 400 |
| 1.5.5.3. Drug and Alcohol Testing Information System (DAMIS) | 1,000 | 1,000 |
| 1.5.6. Safety & Security Clearinghouse and Web Site | 200 | 200 |
| 1.5.13. Transit Accident Causal Factors | 300 | 300 |
| 1.4. Implementation of FTA Safety Task Force Recommendations | 1,000 | 1,000 |
| 1.5.10. Joint Use/Safety Certification | 200 | 200 |

1140

[In thousands of dollars]

| Program | Fiscal year 2001 request | Constrained level |
|---|-----------------------------|----------------------|
| 1.5.2. Safety & Security Training Course Development | 200 | 200 |
| 1.5.3. Drug and Alcohol Testing: Updated guidelines and newsletters | 250 | 250 |
| 1.5.12. Safety & Security Preparedness Planning and Drills | 200 | 200 |
| 1.5.11. Safety Awareness Outreach | 200 | 200 |
| 1.5.9. Fire Materials Testing | 100 | 100 |
| 4.6. National Rural Transportation Assistance Program | 750 | 750 |
| 5.2. FTA Internet Website | 200 | 200 |
| 4.1. Job Access Support and Study | 250 | 250 |
| 7.5. Financial Planning | 200 | 200 |
| 3.3.4. BRT Project Administration | 600 | 600 |
| 6.1. Transit Conditions, Performance and Needs | 200 | 200 |
| 7.2. New Starts Planning and Project Development | 550 | 550 |
| 3.3.2. BRT Data Collection & Analysis | 500 | 500 |
| 2.5.1.3. Transit Construction Roundtable | 80 | 80 |
| 6.3. Innovative Financing | 200 | 70 |
| Subtotal | 12,130 | 12,000 |
| 7.1. Transportation Planning and Programming | 750 | |
| 3.3.1. BRT Design & Operational Parameters, Impacts | 300 | |
| 8.1. Support for Title VI/Environmental Justice | 400 | |
| 6.5. Nationwide Personal Transportation Survey | 500 | |
| 7.3. Land Use and Environmental Planning | 200 | |
| 3.3.6. BRT: Professional Development Workshops—Design, Vehicle Systems, Services, System | 200 | |
| 9.3. Program Evaluation and Strategic Planning (GPRA) | 200 | |
| 7.4. Planning Methods | 500 | |
| 3.3.3. BRT Systems Integration Workshop | 250 | |
| 6.4. Global Climate Change | 500 | |
| 3.3.5. BRT: Technology Transfer | 200 | |
| 6.2. Benefits of Transit | 100 | |
| 3.3.7. BRT: Lessons Learned Workshop | 150 | |
| 5.3. Documentation and TRB Support | 200 | |
| 5.1. Computer Automation | 400 | |
| 2.5.1.1. Turnkey Demonstration Program | 400 | |
| 2.1.1. Advanced Technology Buses: Small Heavy-Duty Bus and Advanced Bus Technologies | 1,820 | |
| 2.4.1. Rail Communications-Based Subsystem Deployment | 1,000 | |
| 8.2. Garrett A. Morgan Trans. Tech. Program | 200 | |
| 10.1. International Mass Transportation Program: Technical Assistance and Training | 500 | |
| 2.3.1. Hybrid Propulsion System Development and Deployment | 2,000 | |
| 9.1. National Transit GIS | 200 | |
| 5.4. Small Business Innovative Research | 400 | |
| Total | 23,500 | 12,000 |

NATIONAL RESEARCH EARMARKS

Question. Please explain the difference between enacted funding levels for congressionally designated national planning and research projects in Public Law 106-69 and the fiscal year 2000 funding levels displayed for these projects in the 2001 budget justification.

Answer. Section 301(a) of the fiscal year 2000 Consolidated Appropriations Act (Public Law 106-113) rescinded discretionary budget authority Government-wide. To accommodate the reduced budget authority, FTA reduced funding levels for congressionally designated national planning and research projects, other than those dealing with Safety and Security, by 1.15 percent.

Question. For each of the congressionally designated programs and projects in the fiscal year 2000 appropriations bill under “Transit Planning and Research”, please note when the grant, contract, or cooperative agreement was released and note who the official grantee agency or entity is in each case.

Answer. The official recipient for each project and release dates are indicated in the following table.

| Programs and activities | Fiscal year 2000 amount | Release date | Official recipient |
|---|-------------------------|------------------------|--|
| Transit Cooperative Research Program | \$8,250,000 | Not yet released | National Academy of Sciences/TRB. |
| National Transit Institute | 4,000,000 | Not yet released | Rutgers University |
| National Research and Technology: | | | |
| Zinc-air battery bus technology demonstration | 988,492 | Not yet released | Electric Fuel Corporation. |
| Washoe County, Nevada transit technology | 1,235,616 | Not yet released | Regional Transportation Commission of Washoe County. |
| Massachusetts Bay Transportation Authority advanced electric transit buses and related infrastructure | 1,482,739 | Not yet released | Massachusetts Bay Transportation Authority. |
| Palm Springs, California fuel cell buses | 988,492 | 4/5/2000 | SunLine Transit. |
| Gloucester, Massachusetts intermodal technology center | 1,482,739 | Not yet released | Massachusetts Bay Transportation Authority. |
| Southeastern Pennsylvania Transportation Authority advanced propulsion control system | 2,965,477 | Not yet released | Southeastern Pennsylvania Transportation Authority. |
| Project ACTION | 2,965,477 | 4/10/2000 | Easter Seals Project Action. |
| Advanced transportation and alternative fuel technology consortium (CALSTART) | 3,212,600 | 4/6/2000 | Westart-CALSTART, Inc. |
| Hennepin County community transportation, Minnesota | 988,492 | Not yet released | Hennepin County Regional Railroad Authority |
| Electric vehicle information sharing and technology transfer program | 741,369 | Not yet released | Chattanooga Area Transit Authority. |
| Portland, Maine independent transportation network | 494,246 | 2/29/2000 | Independent Transportation Network. |
| Wheeling, WV mobility study | 247,124 | Not yet released | Ohio Valley Regional Transportation Authority. |
| International program | 988,492 | Not yet released | To be determined. |
| Transit Safety and Security Training | 1,200,000 | 3/13/2000 | Transportation Safety Institute. |
| Safety and security programs | 4,250,000 | Not yet released | Various recipients. |
| Santa Barbara Electric Transit Institute | 494,246 | Not yet released | Santa Barbara Electric Transit Institute. |
| Pittsfield economic development authority electric bus program | 1,334,465 | Not yet released | Pittsfield Economic Development Authority. |
| Citizens for modern transit, Missouri | 296,548 | Not yet released | East-West Gateway Coordinating Council. |

Question. Why is FTA requesting bill language that provides \$750,000 from the national research and technology program to the Rural Transportation Assistance Program, which already has a guaranteed funding level of \$5,250,000?

Answer. Rural Transportation Assistance Program (RTAP) includes \$5.25 million in guaranteed funding distributed by formula. In addition, historically FTA has funded a national component of \$750,000 from National Research funding. The \$5.25 million is apportioned to all states using the Nonurbanized Area Formula Grants program formula. The \$750,000 was used to fund the national portion of RTAP that supports rural operators by providing technical assistance and training. In fiscal year 2000, the available funding that was unearmarked in the National Research Program was insufficient to permit funding of the national portion of RTAP. Thus, FTA set aside 10 percent of the RTAP program funding to fund the national component of the program at a reduced level of \$525 thousand. The result was that both the grant and national portions were reduced. Our proposal for bill language is intended to ensure that both portions of RTAP, crucial to rural public transportation, are funded at historic and statutory required levels.

SAFETY AND SECURITY ACTIVITIES

Question. The FTA has requested a total of \$6,100,000 for safety and security activities and products in fiscal year 2001. Please reproduce the funding breakout table on page 150 of the justification, noting the priority order of each of the 13 activities planned for fiscal year 2001.

Answer. The table listing the priority of the fiscal year 2001 safety and security activities follows.

[Dollars in thousands]

| Program: FTA 1 Safety and Security | Fiscal year 2001 amount | Priority order |
|--|-------------------------------|-------------------|
| Key Activities and Products | | |
| 1. Safety and Security: | | |
| A. Technology | 1,750 | |
| 1.1 Railroad Grade Crossing Safety: | | |
| 1.1.1. Grade Crossing Safety: Operational test and evaluation | 750 | 2 |
| 1.4 Implementation of FTA Safety Task Force Recommendations | 1,000 | 7 |
| B. Training and Technical Assistance | 4,350 | |
| 1.5.1. Safety & Security Training (includes Transportation Safety Institute) | 1,300 | 1 |
| 1.5.2. Safety & Security Training Course Development | 200 | 9 |
| 1.5.3. Drug and Alcohol Testing: Updated guidelines and newsletters | 250 | 10 |
| 1.5.5.2 SAMIS | 400 | 3 |
| 1.5.5.3. Drug and Alcohol Testing Information System (DAMIS) | 1,000 | 4 |
| 1.5.6. Safety & Security Clearinghouse and Web Site | 200 | 5 |
| 1.5.9 Fire Materials Testing | 100 | 13 |
| 1.5.10 Joint Use/Safety Certification | 200 | 8 |
| 1.5.11 Safety Awareness Outreach | 200 | 12 |
| 1.5.12 Safety & Security Preparedness Planning and Drills | 200 | 11 |
| 1.5.13. Transit Accident Causal Factors | 300 | 6 |
| Total Budget Authority | 6,100 | |

Question. Of the activities requested within the safety and security area, which are directly supported by or in response to NTSB recommendations?

Answer. In fiscal year 2001, FTA will undertake implementation of recommendations resulting from the congressionally mandated review of the National Transit Database and its component safety and security data. The NTSB's recommendations regarding the development of accident causal data will be addressed as part of that activity. In addition, NTSB's recommendations concerning materials toxicity and flammability will be addressed in phase II of a project to improve fire safety standards for interior materials of transit vehicles.

RAILROAD GRADE CROSSING ACTIVITIES

Question. How is FTA's railroad grade crossing technology demonstration and evaluation program coordinated with similar efforts by the Federal Railroad Administration? Please list technologies that have been tested or deployed by this program in the past two years, and those technologies that FTA intends to explore with the fiscal year 2001 funding.

Answer. The FTA coordinates its grade crossing activities through the USDOT Highway Rail Grade Crossing Team, an intermodal team of professionals from the FTA, FHWA, FMCSA, FRA, and NHTSA that was formed as the Department's response to the tragic grade crossing accident in Fox River Grove, Illinois, in the early 1990's. This team meets periodically to discuss and share information on innovative grade crossing technologies and outreach initiatives to enhance safety along the Nation's highway grade crossings. The following table lists grade crossing technologies that have been evaluated during the past two years.

| Project No. and title | Abstract | Grantee and/or consultants |
|---|---|---|
| MA-03-7001, Four Quadrant Gated Grade Crossing. | Evaluate design and operational standards/safety enhancements for commuter rail grade crossings. Demonstrate use of four quadrant gates with vehicle detection system at commuter rail grade crossing.. | Massachusetts Bay Area Transportation Authority. |
| MD-26-7024, Second Train Coming Warning Sign. | Develop & evaluate use of active 2nd train warning sign for motorists at light rail grade crossings. The warning sign will alert motorists who are stopped at the crossing that a second high-speed train is coming from the opposite direction.. | Mass Transportation Administration, Baltimore, MD. |
| CA-26-7017 Second Train Coming Warning Sign. | Develop & evaluate use of graphic 2nd train sign for pedestrians at rail grade crossings. This project is in conjunction with MD-26-7024, and will include field study of an active warning sign.. | Los Angeles County Metropolitan Transportation Authority. |
| CA-26-7010, Assessment of Left Turn Crossing Gates for LRT. | Field test and technical studies to investigate left turn railroad crossing gated for light rail transit (LRT) grade crossings. Field test to include evaluation of track area vehicle detection systems.. | Los Angeles County Metropolitan Transportation Authority. |

In fiscal year 2001, the FTA intends to explore the integration of advanced intelligent transportation system (ITS) technologies at highway-rail intersections (HRI) along light rail and rapid rail lines. A USDOT ITS-HRI team has been convened and is developing strategies for deployment of advanced grade crossing safety technologies. The FTA has also identified a number of potential projects for fiscal year 2001.

—*Train Approach Warning at Stations.*—Sacramento Regional Transit District: Since the light rail system began operation in 1986 there have been 32 collisions between pedestrians and light rail vehicles. Nineteen of the incidents have occurred in the immediate vicinity of light rail stations. Almost all of these incidents have involved persons whose judgement was impaired by drugs, alcohol, physical disability, emotional disability, or developmental disability. The diminished ability to quickly detect or avoid harm cannot entirely be ruled out as causal factors in these incidents. The announcement of the approach of a train may provide the additional information necessary for people to recognize the hazard or extra time to move out of the path of travel. This project will involve the installation of visual and audible warning devices in the station areas that would activate in advance of the train warning. They need to be easily accessed and understood by the disabled community. These devices will utilize Train to Wayside communication to prompt the station announcement.

—*Advanced Four Quadrant Gate Detection with In-Cab Alert Systems.*—LACMTA: This project will consist of a four quadrant gate system with vehicle detection and an in-cab alert system that would inform the train operator if a motorist was stopped or stalled on the tracks at the Greenleaf Boulevard crossing in the City of Compton, California. Most recently, there was a tragic collision at this crossing that resulted in six fatalities. Although the crossing is equipped with photo enforcement camera equipment, it is clear that additional improvements are needed if collisions are to be eliminated at this crossing. Upon receiving an alarm in the cab with a vehicle stopped on the tracks, the operator would start braking and slowing the train with the intent of avoiding a collision. The in-cab alert system would be particularly beneficial for crossings where the visibility for train operators is limited because of curves in the track geometry, obstructions at crossings, bad weather conditions, and operations at night or at

crossings where there is insufficient street lighting. This project has elements that duplicate the Los Angeles County Transportation Authority's (LACMTA) four quadrant gate project currently under evaluation and other four quadrant gate projects being done elsewhere. However, it is significantly different because of the in-cab alert system being proposed plus differences in the street geometry and traffic conditions at the Greenleaf Boulevard crossing.

—*Magnetic Pedestrian Gates.*—Los Angeles County Transportation Authority (LACMTA): A second proposed project, targeted only for pedestrians, is the installation and evaluation of a magnetic pedestrian gate. Recently, the Metro Blue Line has experienced a high number of pedestrian related accidents. Most of these accidents have occurred in the corridor where LRTs operate at speeds of up to 55MPH and share the corridor with the Union Pacific freight railroad. This system when installed at the demonstration location will provide a positive barrier to control pedestrian traffic across the tracks. As a train approaches the crossing, an alarm will sound followed by the gate closing to prevent pedestrians from crossing the tracks, and at the same time open an escape path allowing pedestrians already in the track area to safely exit. Once the train passes the crossing, the gate will automatically open giving access to the pedestrian walkway. This type of a system has the potential of being more effective than passive and even active warning signs because it requires a conscious effort on the part of pedestrians to ignore and circumvent the gate.

The resurgence of light rail transit and popularity of commuter railroads across the United States brings concerns related to highway-rail intersection safety that are shared by safety professionals and planners. As more and more transit agencies begin new operations and reenergize existing systems in mixed traffic corridors, the issue of how to safely commingle the different transportation modes becomes important and requires urgent attention. Although the behavior of some motorists and pedestrians at grade crossings is incomprehensible, transit agencies are implementing measures that go above and beyond industry standards to reduce the number of accidents and fatalities that occur at rail crossings. The projects briefly described above have the potential of reducing these types of accidents thus decreasing the number of injuries and fatalities and meeting the FTA and USDOT strategic goals on safety.

Question. The Committee is aware of FTA's and FRA's joint work on developing agency policy on shared use of the general railway system by conventional railroads and transit systems. Please outline the status of this policy's development, summarize the principle issues and questions, and describe how the requested funds would be spent.

Answer. There has been extensive discussion in the transit industry with regard to the construction and operation of light rail transit systems on railroad rights-of-way. This concept of "shared use" or "shared corridor" involves use of an owner railroad's land as differentiated from "shared track" in which instance transit vehicles are operated on a portion of the general railroad system.

The safety concerns relevant to transit vehicles operating on exclusive tracks but adjacent and parallel to railroad tracks are minimal compared to shared track operations in which circumstance it is necessary to maintain absolute physical separation between vastly disparate vehicles (railroad locomotives and freight cars versus light weight, streetcar-like rail transit vehicles).

The principal, and perhaps singular, safety concern in shared corridor is the possibility of a derailment which might result in the intrusion of a railroad train, or transit vehicle, into the path of a dissimilar train or vehicle. This circumstance is best addressed through appropriate design of the transit alignment to minimize, if not eliminate, the probability of any derailment intrusion.

To that end, FTA is directing that our Project Management Oversight process assures that, insofar as shared corridor is concerned, risk assessment and hazard analysis is performed and that the preliminary engineering effort results in designs which are acceptable to the transit agency, the owner railroad and the State Safety Oversight agency. FTA is proposing to amend its State Safety Oversight rule to require state oversight at the preliminary engineering stage, and thereafter, of rail fixed guideway transit projects.

The public comment period for the FTA/FRA Statement of Joint Policy and FRA's Statement of Agency Policy ended on February 17th. FTA is currently reviewing comments on the Statement of Joint Policy and expects that a final version will be released in the next few months.

Conclusions drawn from the public comments will, along with other agency considerations, determine the course that FTA will undertake in implementing this policy. The funds requested will be used to provide technical assistance to transit agencies planning joint trackage and shared corridor use. Compliance guidelines are now

being developed for these situations. FTA will assist with and encourage coordination between local planning organizations, transit agencies and their engineering consultants, involved owner railroads and the FTA's project management oversight contractors and field engineering staff.

Additionally, FTA intends to undertake studies of signaling and operational practices to enhance the safety of joint trackage operations and design standards for intrusion detection or prevention in shared corridor situations.

EQUIPMENT AND INFRASTRUCTURE ACTIVITIES

Question. The FTA has requested a total of \$8,300,000 for equipment and infrastructure activities in fiscal year 2001. Please reproduce the funding breakout table on page 157 of the justification, noting the priority order of each of the 6 activities planned for fiscal year 2001. Are any of these projects earmarked in TEA-21?

Answer. Below is the funding breakout table noting the priority order of each of the 6 activities planned for fiscal year 2001. Of these activities the SEPTA Advanced Propulsion Control System project is earmarked in TEA-21.

[Dollars in thousands]

| Program: FTA 5 Research and Technology Program Support | Program Schedule | | | Priority |
|--|------------------|---------|---------|----------|
| | Fiscal year | | | |
| | 1999 | 2000 | 2001 | |
| Key activities and products | | | | |
| 2. Equipment & Infrastructure: | | | | |
| 2.1. Bus Technology Development | \$6,000 | \$9,243 | \$3,820 | |
| 2.1.1. Advanced Technology Buses: Small Heavy-Duty Bus and Advanced Bus Technologies | | | 1,820 | 3 |
| 2.2.2. Palm Springs, CA Fuel Cell Buses | 1,000 | 989 | | |
| 2.3.1. Hybrid Propulsion System Development and Deployment | | | 2,000 | 5 |
| 2.3.1. Santa Barbara Electric Transportation Institute | 500 | 494 | | |
| 2.3.2. Advanced Transit Systems & Electric Vehicle Program CALSTART | 1,500 | 3,213 | | |
| 2.3.3. MBTA Advanced Electric Transit Buses & Related Infrastructure | 1,500 | 1,483 | | |
| 2.3.4. Zinc Air Battery Research | 1,500 | 989 | | |
| 2.3.5. Electric Vehicle Information Sharing and Technology Transfer Program .. | | 741 | | |
| 2.3.6. Electric Vehicle Information Sharing and Technology Transfer Program .. | | 1,334 | | |
| 2.4. Rail Equipment and Systems | 3,750 | 4,449 | 4,480 | |
| 2.4.1. Rail Communications-Based Subsystem Deployment | | | 1,000 | 4 |
| 2.4.2. SEPTA Advanced Propulsion Control System | 2,000 | 2,966 | 3,000 | 6 |
| 2.4.3. Gloucester, MA Intermodal Technology Center | 1,500 | 1,483 | | |
| 2.4.4. Vegetation Control on Rail Rights-of-Way Survey | 250 | | | |
| 2.5.1.1. Turnkey Demonstration Program | | | 400 | 2 |
| 2.5.1.3. Transit Construction Roundtable | | | 80 | 1 |
| Total Budget Authority | 9,750 | 13,692 | 8,300 | |

Question. Is FTA on track to complete the turnkey demonstration program in fiscal year 2001? What activities will be supported with the \$400,000 requested in fiscal year 2001?

Answer. FTA will continue project monitoring and evaluation activities through 2003. Two of the five turnkey demonstration projects are completed, and the Hudson-Bergen Light Rail Line will open in April of 2000. The remaining two projects will become operational in 2002 (Tren Urbano) and 2003 (BART extension to San Francisco International Airport).

Since each of the three active Turnkey Demonstration Projects exceed \$1 billion in construction funds, there is justification to gain technical knowledge outside the normal oversight process. This includes monitoring, data collection, reporting, and evaluation. A minimum level of contracted technical analysis effort for these tasks is estimated at one professional person-year per year of the projects' implementation schedule, plus a subsequent year for the evaluation of systems operation in the cases of the San Juan and New Jersey projects. Therefore the Turnkey Demonstration Program will require about \$400,000 annually for documentation and evaluation. In addition, the Turnkey Demonstration Program requires funds to conduct special studies on key issues of concern to FTA and a related industry workshop. One example of an outstanding issue is the level of engineering that must be completed before a turnkey contract is awarded.

Question. How will FTA's rail communication-based subsystem deployment program be coordinated with similar efforts by the Federal Railroad Administration? Who are the participants in the Joint Partnership Program?

Answer. Regarding coordination with the Federal Railroad Administration (FRA), the FTA expects, as part of the rail communication-based subsystem deployment program, to coordinate technology development and deployment activities with FRA through joint meetings, program reviews, and by leveraging similar FRA research, development, and deployment efforts. The Transit Cooperative Research Program (TCRP) is one mechanism currently used by FTA to coordinate with similar efforts by FRA. For example, FTA is participating in TCRP Project D-7—Joint Rail Transit Related Research with the Association of American Railroad's Transportation Technology Center, Inc. (TTCI). This project will benefit the transit industry by leveraging research already being performed by the FRA at the TTCI in the areas of broken rail detection, transit switch design evaluation, rail welding techniques, and wheel/rail friction control techniques. FTA has identified broken rail detection as one of the key areas where further technology development is necessary for the widespread deployment of Communication-based Train Control (CBTC) technology. FTA will continue to seek other mechanisms to use in order to fully coordinate with FRA.

Regarding participants in the Joint Partnership Program (JPP), FTA received thirty-one applications in response to a Federal Register solicitation dated October 2, 1998. One of the highly ranked applications was submitted by a team of Harmon Industries and the San Francisco Bay Area Rapid Transit District (BART). The application proposed to develop technology in several key areas in order to facilitate the widespread deployment of CBTC technology. These areas are: broken rail detection using alternate technologies, silent train detection, accurate programmed stop/train position technology development, remote interface development, and development of advanced control algorithms.

FTA intends to use the fiscal year 2001 funding to develop and deploy advanced broken rail detection technology. In addition to BART and Harmon, team members would include: Penn State University, Sandia National Laboratory, Lawrence Livermore National Laboratory, and the Texas Transportation Institute.

Question. What is the current status and cost to complete the Georgetown University fuel cell bus program?

Answer. In 1997, the Federal Transit Administration (FTA) program was scaled back to develop only two fuel cell buses, one with a phosphoric acid fuel cell (PAFC) and one with a proton exchange membrane fuel cell (PEMFC). This was a prudent decision at the time since it was not clear which technology might better satisfy the transit bus marketplace.

The PAFC bus development is complete. The fuel cell power plant was fabricated, tested and integrated into a 40-foot Nova BUS platform. Lockheed Martin Control Systems (LMCS) provided the power and propulsion system (the same design that is being used on the hybrid-electric buses in New York City). Emission testing of this vehicle will take place in the spring of 2000, and the FTA plans to schedule a congressional demonstration of the PAFC transit bus shortly thereafter.

The FTA has structured a Memorandum of Agreement (MOA) with Georgetown University (GU) to define the total program, schedule, end products and funding requirements for the Fuel Cell Transit Bus Program. It also includes the Intermodal Fuel Cell Transit Bus Maintenance Facility so that the total Fuel Cell Transit Bus Program activities are defined in a single document. The Fuel Cell Transit Bus Program contains the following elements:

- A total of eight fuel cell transit buses (includes the two currently completing development)
- Fuel cell power plants provided by up to two fuel cell vendors
- Remaining six fuel cell transit buses to be developed will be non-hybrid (no batteries—200 kW fuel cell power plants)
- Testing and training at GU and at various transit agencies in cooperation with the FTA.

The cost to complete the fuel cell transit bus program beyond the \$51 million in funding provided through fiscal year 2000 is \$20.8 million.

Currently, all endeavors for transportation are now dedicated to the PEMFC technology. This is being driven by industry support for adapting PEMFC for automotive application. Fuel cell bus power plants will scale the automotive fuel cells to bus requirements by coupling the smaller units to increase power. FTA's first PEMFC bus employs two DaimlerChrysler 50 kW automotive power plants to achieve the 100 kW power level.

On a positive note, incorporating automotive technology should greatly reduce the production cost of future bus fuel cells since production levels will be much higher to meet the automotive demand.

One key lesson learned to date is that combining fuel cell and battery technology into a hybrid configuration cannot meet the commercial goals established for this program. Such buses are too heavy and complex to satisfy the industry needs. Larger fuel cell power plants are mandatory. Automotive power plants are now sized at 60 kW. A non-hybrid 40-foot transit bus requires approximately 200 kW of power. Although additional fuel cell stacks can be combined, non-recurring engineering is needed to develop a responsive fuel processor to convert the liquid methanol into the hydrogen-rich gas to feed the stacks.

There is interest within the Department of Defense to investigate the use of fuel cells for Army land vehicle applications. The Tank Automotive Command's National Automotive Center (NAC) funded a concept study on the applicability of PEMFC power plants for various types of Army trucks. The power levels of these vehicles are close to the fuel cell power plants (200 kW) being developed for the next PEMFC bus. The ability to operate on liquid fuel is paramount for military applications although eventually a logistic military fuel (diesel or JP-8) would have to be used. The NAC may be willing to participate in the next fuel cell bus development to gain familiarity with the control schemes and operation of this class of vehicle.

The 100 kW PEMFC power plant has been fabricated, tested and integrated into a 40-foot Nova BUS platform. To our knowledge, this is the largest PEMFC in the world that can operate on liquid fuel. In January 2000, the bus was on exhibit just outside a hearing held by the California Air Resources Board (CARB) to consider stringent new emission standards for urban buses. At this time, the PEMFC power plant is being tested for compatibility with other bus subsystems. Following that, the bus will be sent to LMCS to fine-tune the electric drive train. A public debut is planned for the American Public Transportation Association Bus Technology Conference in Houston in May 2000.

The fuel cell power plants and the propulsion system are designed to be integrated into any bus platform once the design and development process is completed. The issue is a commitment from a fuel cell manufacturer to manufacture and mass-produce the fuel cell transit buses.

Two key factors are involved. First, the demand for fuel cell transit buses will not exist until the transit agencies are assured that the technology is viable and the buses meet the transit industry requirements. This is the very reason that the MOA was structured to produce sufficient vehicles to address this critical issue.

The current fuel cell vendors for the FTA program are XCELLSiS (Daimler Chrysler majority owner) and International Fuel Cells (division of United Technologies Corporation). Both are investing millions of dollars to bring a fuel cell power plant to the automotive marketplace. Daimler Chrysler is committed to producing a commercial fuel cell bus by 2004. The FTA Fuel Cell Transit Bus Program will incorporate multiple automotive fuel cell power plants to meet the transit industry power requirements. Thus, bus power plants can be built with the automotive economies of scale for production hardware. However, it is still vital to develop and integrate these larger fuel cell power plants into actual transit buses to address scale-up and control issues, as well as to demonstrate resulting performance to the transit community.

The projected acquisition costs of a fuel cell transit bus have yet to be established but there are approaches to make realistic estimates. First, it must be recognized that the rather small transit bus market (3,000–4,000 vehicles per year) will not generate economies of scale sufficient to drive cost reduction. Assuming that fuel cell buses capture 10 percent of the transit bus market (a reasonable assumption where transit agencies in air quality non-attainment areas may see this technology as absolutely essential to meeting Federal or local guidelines), then production numbers would be approximately 400 fuel cell transit buses per year. This may seem a very small number, but it is eight times more than the annual production rate of utility fuel cell power plants.

The Partnership for a New Generation of Vehicles (PNGV) has established a cost goal of approximately \$50 per kW in automotive production quantities. This would be cost competitive with current internal combustion engines. If the fuel cell can be produced for \$500 per kW (ten times greater than the PNGV goal), then a 200 kW power plant would cost about \$100,000. The electric drive train costs may add another \$40,000 to the total bus cost. The current diesel engine/transmission combination costs about \$65,000. If those cost projections were attained, the acquisition cost premium of a fuel cell bus would be \$75,000. Thus a fuel cell bus would cost \$325,000 versus approximately \$250,000 for a typical diesel bus.

The transit industry is buying thousands of Compressed Natural Gas (CNG) transit buses to meet air quality standards. The CNG buses cost about \$320,000 and do not come close to the environmental benefits of the fuel cell bus. It should be noted that DaimlerChrysler expects manufacturing costs of fuel cell power plants to be less than those of internal combustion engines based upon the manufacturing processes involved. If true, the fuel cell bus acquisition cost could approach that of today's diesel bus.

Question. What transit agencies are currently testing or have given firm commitments to acquire the Georgetown University fuel cell/hybrid electric buses?

Answer. There is insufficient experience to date with fuel cell transit buses to convince any transit agency of the technology readiness, operational benefits, or vehicle performance needed for practical fleet implementation. Additional vehicles, demonstrations and evaluations are absolutely essential to meet this objective. Several agencies, including Chicago Transit Authority and SunLine Transit Agency in Palm Springs, have expressed interest in the technology. They are waiting to see the result of the non-hybrid (200 kW) fuel cell transit bus development, the vehicle upon which procurement decisions can be made. Towards that end, the Memorandum of Agreement with Georgetown University established a Transit Review Committee (TRC) comprised of interested transit agencies to review the Fuel Cell Transit Bus Program. The objective of this review committee is to ensure that fuel cell buses, maintenance and training satisfy the operational requirements of the transit industry. Recommendations of the TRC will help guide the Fuel Cell Transit Bus Program. The TRC meets twice a year in conjunction with the APTA Annual Meeting and the Bus Technology Conference.

BUS RAPID TRANSIT

Question. What is the total amount allocated to bus rapid transit activities in fiscal years 1999, 2000, and planned for fiscal year 2001? What are the out-year costs associated with this program?

Answer. The table below indicates funds allocated to the BRT program in fiscal year 1999, fiscal year 2000, and planned for fiscal year 2001.

| Activity | Fiscal year | | |
|--|-------------|-------|-----------|
| | 1999 | 2000 | 2001 |
| BRT Design and Operational Parameters, Impacts | \$150,000 | | \$300,000 |
| BRT Data Collection & Analysis | 250,000 | | 500,000 |
| BRT Systems Integration Workshop | 200,000 | | 250,000 |
| BRT Project Administration | 500,000 | | 600,000 |
| BRT Technology Transfer | 100,000 | | 200,000 |
| BRT Professional Development | 200,000 | | 200,000 |
| BRT Lessons Learned Workshop | 100,000 | | 150,000 |

Technology transfer of lessons learned and professional development will continue to dominate the out-year costs through 2004. BRT projects initially implemented in 2002 and 2003 will need to be monitored and evaluated at least through 2004. As experience is gathered from these projects and the important lessons learned are identified, this information will be disseminated through BRT seminars, workshops and reports. For example, BRT Professional Development will be enhanced through knowledge gained regarding the cost and performance of specific subsystem elements suitable for integration into a cohesive BRT system. Findings from BRT demonstration projects and cross-cutting documentation that compares multiple projects and draws general conclusions will encourage replication of the BRT concept at other sites. These information sources can be developed only after a BRT project is implemented and operational. The lessons learned from BRT projects implemented in 2002 and 2003 won't be fully documented until 2004.

Question. Were BRT demonstration projects selected and announced in 1999? Please list the selected agencies, and provide a brief description of each BRT project and its associated schedule and budget. What federal funding options are available to these projects? If the projects have received discretionary federal funding in the past two years, please note the amount of funding, when it was appropriated, and the type of funding.

Answer. In 1999 seventeen sites were selected to participate in FTA's BRT Program. Ten agencies were selected as demonstration sites, and another seven agencies whose BRT projects were still in the concept or early planning phase, were se-

lected as other members of a BRT Consortium. These projects could be funded through the New Starts Program, the Bus Discretionary Program or the Formula Program.

Of the ten demonstration sites the Eugene-Springfield, Oregon site has received Capital Investment Sec. 5309 Bus funding of \$4.4 million and \$4.3 million in fiscal year 1999 and fiscal year 2000, respectively. In addition, the Dulles Corridor, Virginia site has also received Capital Investment, Sec. 5309 New Starts funding of \$16.9 million and \$24.5 million in fiscal year 1999 and fiscal year 2000, respectively.

Descriptions of the ten demonstration sites follow:

Boston, MA.—The Massachusetts Bay Transportation Authority's 3.8-mile "Silver Line" on Washington Street will run to and through downtown to the South Boston Piers and Logan Airport.

Status: Section A is expected to be completed in December 2002. Section B is expected to be in construction this spring. Section C is in the initial design phase with an expected completion date of December 2008.

Charlotte, NC.—The City of Charlotte's Independence Corridor will add to its exclusive busway in the median of Independence Boulevard. This project potentially could be 13.5 miles long.

Status: The project is viewed as an element of a countywide, five-corridor rapid transit system that should promote land use objectives in addition to providing travel time savings. The approach is to plan the entire corridor project with the Phase II busway project being defined as part of the Major Investment Study (MIS) for the Independence Boulevard transit corridor. The MIS process is currently underway. A consultant team of both land-use and transportation experts has been selected to prepare the MIS for the 13.5-mile corridor. Contract negotiations are expected to be completed and work in the corridor begun.

Cleveland, OH.—The Greater Cleveland Regional Transportation Authority proposes to rebuild a 5.0-mile section of Euclid Avenue to provide for exclusive transit lanes and a beautified avenue with landscaping and transit shelters.

Status: Currently, the Euclid Corridor BRT is proceeding with the preliminary engineering effort. It is expected that the project will enter Final Design in July 2000 and begin construction in mid-2002. Opening day for the Euclid Corridor BRT is scheduled to occur in 2005. The environmental review process is being conducted in conjunction with the preliminary engineering effort and an environmental finding is expected to be issued in May 2000.

Dulles Corridor, VA.—The Virginia Department of Rail and Public Transportation proposes BRT as an intermediate phase to the extension of Metrorail in this 22-mile corridor. BRT would operate mainly on the Dulles Airport Access Road stopping at median stations which would be converted to rail stations.

Eugene-Springfield, OR.—The Lane Transit District proposes to implement BRT in a variety of exclusive lane configurations on a 10-mile pilot corridor in Eugene and Springfield.

Status: Lane Transit District is pursuing an east-west pilot corridor in Eugene-Springfield. The pilot corridor has been divided into three phases for planning, engineering and public involvement efforts. Phase 1 will operate between downtown Eugene and downtown Springfield. Project planning and preliminary engineering for Phase 1 has been completed, and environmental review is currently underway. Final approval of Phase 1 is anticipated by late summer 2000, and construction is scheduled for completion in late 2001 or 2002. Phase 2 extends west from downtown Eugene approximately 3 miles. Preliminary engineering has begun for Phase 2 of the project, with environmental review to follow late in 2000. Operation of Phase 2 is planned for 2003. Phase 3 extends east from downtown Springfield to Thurston Station, a major park and ride facility. Planning and engineering work for the final phase of the pilot corridor is expected to begin in 2001, and be operational within 3 years.

Hartford-New Britain, CT.—The Connecticut Department of Transportation has proposed a nine-mile, 12-station exclusive busway to be built on active and inactive rail right of way.

Status: Currently the project is in the Environmental Impact Study (EIS) phase. The EIS is being prepared to evaluate the environmental, social and financial impacts of the busway. Through the EIS the appropriate environmental approvals will be obtained. Also, the EIS is being used as the informational tool to educate and gain the support of the public.

Honolulu, HI.—The City and County of Honolulu has proposed a 12.6-mile system called "CityExpress!" with limited bus stops through the primary transportation corridor, using HOV lanes on Hawaii's H-1 freeway and downtown exclusive lane.

Status: CityExpress! started service in March 1999, initially between the Kalihi Transit Center and the University of Hawaii. The first day's ridership through this

6.8 mile route was about 1,300. In August 1999, CityExpress! expanded service to Pearlridge, adding an additional 6.0-miles to the route. Total travel time between Pearlridge and the University of Hawaii was formerly approximately one hour and twenty minutes; CityExpress! reduced this to forty-five minutes. Average daily ridership grew from 2,463 in March 1999 to 5,238 in December 1999. Daily weekday ridership generally exceeds 6,000. The average monthly ridership in Phase I was 83,500 and increased in Phase II to 126,500.

CityExpress! operates Monday through Saturday between 5:30 a.m. and 9:30 p.m. providing 8- to 10-minute headways between the Kalihi Transit Center and the University of Hawaii. Between Pearlridge and the Kalihi Transit Center, the service operates with 15- to 20-minute headways. A traveler information system will be installed at selected CityExpress! bus stops within the next few months. Signal prioritization capability is being installed aboard CityExpress! buses and will operate at five intersections along the route. Route map "Spinners" are being installed at CityExpress! bus stops to provide additional route information. Future phases will see CityExpress! expand beyond Pearlridge.

Miami, FL.—Metro-Dade Transportation Authority (MDTA) will extend its existing 8-mile, 15-station busway another eleven miles to Florida City, adding 22 new stations.

Status: A Notice to Proceed has been issued to a consultant for a work order on the "Busway/Grade Separation Analysis for the Bus Rapid Transit Demonstration Project". The analysis will include a study of three alternatives: an elevated structure, a depressed by-pass, and at-grade with warning devices and signals, as well as the selection of an intersection within Phase I of the project as the location for the selected alternative to be implemented. Regarding the South Miami-Dade Busway Extension to Florida City, the Florida Department of Transportation is continuing with right-of-way acquisition for Segment I. MDTA is working with Florida DOT and the County's Public Works Department on traffic signal issues critical to maintaining essential features of a BRT system, and a consultant has been assigned the task of preparing a Project Management Plan.

San Juan, Puerto Rico.—The Puerto Rico Highways and Transportation Authority (PRHTA) will operate fast shuttle service on a new 2.5-mile Rio Hondo connector linking the Bayamon Tren Urbano Station and the Rio Hondo Tren Urbano Plaza.

Status: PRHTA is working on Phase I of its work plan for development of Tren Urbano Plaza/Bus Rapid Transit. The purpose of the Phase I effort is to develop the plaza/BRT concept up to the beginning of final design. Phase I efforts include demand analysis, traffic engineering, operations planning, environmental impact assessment and permitting, land acquisition, and preliminary engineering. Current work is directed at refining the concept design for the plaza facility, operations planning for privatized operations of the bus service and plaza facilities, and traffic engineering for bus rapid transit operations.

Santa Clara County, CA.—The Santa Clara County Valley Transportation Authority (VTA) will improve operations on its 27-mile-long Line 22 in six cities: San Jose, Santa Clara, Sunnyvale, Mountain View, Palo Alto and Los Altos.

Status: Design is near completion on the first queue jump lanes (to be constructed on El Camino Real in Palo Alto and Los Altos). VTA is negotiating procurement of up to 40 articulated buses, to be delivered in the next 2 to 3 years, and working with Caltrans regarding the signal priority research project and other elements of research funded through the University of California, Berkeley. VTA is also beginning the definition of ITS elements specific to its fiscal year 2000 ITS earmarked project. This may include signal priority implementation and real-time information displays at bus stops.

Question. Please update last year's summary of the results of FTA's bus rapid transit research thus far. Have you developed preliminary scoping of the concept data, including cost per mile, land use parameters, efficiency measurements, and cost of operation?

Answer. The Bus Rapid Transit (BRT) program is progressing essentially as we described in last year's summary. These projects will require several years to implement. Data will then be collected on their operation so that conclusions can be drawn about their effectiveness and efficiency. The ten demonstration sites are at various stages of final planning or initial construction. The seven other Consortium members are moving toward defining and choosing alternative BRT configurations and initial planning.

Since last year, the focus has been on strengthening the Consortium as the primary means of sharing information and experience relating to BRT activities among its members and initiating BRT research sponsored by the Transit Cooperative Research Program (TCRP). There have been two successful workshops focusing on specific BRT issues for Consortium members. The first involved BRT Vehicle issues and

the second focused on BRT image and marketing. At the second workshop, research results were presented on internal and external design of buses and the relationship between buses and support facilities (stops, stations and terminals).

Workshops on BRT operational and infrastructure issues and fare collection are planned for this year. These workshops have attracted other cities that are interested in BRT and have resulted in several requests to join the Consortium.

Because these BRT projects have not entered the operational stage data pertaining to costs per mile for construction, land use impacts, costs of operation etc. are not yet available. The TCRP project will document current practice with BRT as has occurred in Curitiba, Brazil; Ottawa, Ontario; Orlando, Florida; and Pittsburgh, Pennsylvania.

RESEARCH AND TECHNOLOGY SUPPORT

Question. The FTA has requested a total of \$1,200,000 for information management and technology activities in fiscal year 2001. Please reproduce the funding breakout table on page 178 of the justification, noting the priority order of each of the 4 activities planned for fiscal year 2001.

Answer. The following chart provides a funding breakout for information management and technology activities:

[Dollars in thousands]

| Program: FTA 5 research and technology program support | Priority | Program schedule | | |
|--|------------------------------|------------------|-------|-------|
| | | Fiscal year | | |
| | | 1999 | 2000 | 2001 |
| Key activities and products | | | | |
| 5.1. Computer Animation | 3 | | | \$400 |
| 5.2. Multi-Media Information: FTA Website | 1 | | \$100 | 200 |
| 5.3. Documentation and TRB Support | 2 | | | 200 |
| 5.4. Small Business Innovation Research | N/A (Statutory Program) | | | 400 |
| 5.5. Technical Direction & Documentation of Research & Technology Projects | High | | | |
| Total Budget Authority | | | 100 | 1,200 |

Although funds were not specifically requested for Key Activity 5.5, because they will be set aside as part of any project funded, it has a very high priority.

METROPOLITAN/RURAL POLICY DEVELOPMENT ACTIVITIES

Question. The FTA has requested a total of \$1,500,000 for metropolitan/rural policy development activities in fiscal year 2001. Please reproduce the funding breakout table on page 182 of the justification, noting the priority order of each of the 5 activities planned for fiscal year 2001.

Answer. The following table lists the metropolitan/rural policy development activities for fiscal year 2001.

[Dollars in thousands]

| Program: FTA 6 Metropolitan/rural policy development | Priority | Program schedule | | |
|--|----------|------------------|-------|------|
| | | Fiscal year | | |
| | | 1999 | 2000 | 2001 |
| Key activities and products | | | | |
| 6. Metropolitan/Rural Policy Development: | | | | |
| 6.1. Transit Conditions, Performance and Needs | | \$300 | \$200 | 1 |
| 6.2. Benefits of Transit | | | 100 | 5 |
| 6.3. Innovative Financing | | 100 | 200 | 2 |
| 6.4. Global Climate Change | | | 500 | 4 |
| 6.5. Nationwide Personal Transportation Survey | | | 500 | 3 |

(Dollars in thousands)

| Program: FTA 6 Metropolitan/rural policy development | Program schedule | | | Priority |
|--|------------------|-------|-------|----------|
| | Fiscal year | | | |
| | 1999 | 2000 | 2001 | |
| 6.8. City of Branson, Congestion Study | 450 | | | |
| Total Budget Authority | 850 | | 1,500 | |

Question. Please update the Committee on the status of the fiscal year 1999 grant for the City of Branson, Missouri congestion study. Was this funding applied for and released?

Answer. The Missouri Department of Transportation submitted a grant application in February, 2000. The grant award is expected to be made in the third quarter of fiscal year 2000.

Question. What statutory requirement motivates the request for \$500,000 to collect and analyze transit use and performance data related to global climate change?

Answer. There is no statutory requirement that directly links global climate change data with transit use and performance. However, 49 U.S.C. Sections 5301(b)(7) and 5301(e) establish the goals of improving energy efficiency and preserving the environment, and Section 5335(a) requires the Secretary to maintain a reporting system using uniform categories. While the categories that currently exist are useful for reporting basic levels of transit use in specific urbanized areas, they are not easily used to assess the impacts of varying levels of transit use, by mode, on local or regional emissions and accumulations of pollutants. These pollutants will differ according to vehicle type, fuel type, vehicle energy efficiency, occupancy level, and type of service (local vs. express).

The requested funding level would help to determine whether uniform categories of information could be developed to measure this effect and whether the resulting data could be incorporated with transportation models in use within the Department and in various urban areas around the country, to measure the effectiveness of transportation investments in reducing one or more environmental emissions, including emissions that may influence the global climate.

Question. Could the Bureau of Transportation Statistics assist FTA in data collection and management related to the Nationwide Personal Transportation Survey?

Answer. There is every reason to expect the Bureau of Transportation Statistics (BTS) to exercise increasing leadership in the collection and management of Nationwide Personal Transportation Surveys (NPTS). However, notwithstanding the importance of BTS, it is essential that FTA, along with the other transportation modes, provide independent financial and technical support for NPTS, so that their distinct data needs and priorities are effectively incorporated into the NPTS design and implementation.

Historically, FTA has used the Nationwide Personal Transportation Survey (NPTS) to examine the role of transit for households and cities. For many years, the NPTS data has enabled FTA to report on transit's share of travel in large and small cities, among demographic groups, and in different geographic regions. More recently, FTA has used NPTS data to measure the value of transit benefits in market niches not adroitly served by privately owned vehicles. This use of NPTS is demonstrated in a book supplied to the Committee in late 1999: Policy and Planning as Public Choice: Mass Transit in the United States, (1999) by D. Lewis and F.L. Williams. Unfortunately, as discussed below, a sharply increased effort will be necessary in the near future to maintain data comparable in quality to earlier NPTSs. Without the increased effort, FTA's ability to monitor transit's markets will be severely compromised.

Under Dr. Ashish Sen's leadership, the Bureau of Transportation Statistics (BTS) has greatly increased its financial support for and leadership in the NPTS process. BTS is poised to serve as the principal leader for the modernization of methods to gather and manage personal transportation data. Dr. Sen has voiced serious concern over the erosion of telephone survey validity by decreasing response rates, mostly due to intensive telemarketing efforts in recent years. Dr. Sen has also observed that decision makers are requesting more frequent and more quickly accessible travel data. FTA shares these concerns and FTA expects to work with BTS, FHWA, and other NPTS partners to develop more efficient and timely techniques to collect personal transportation data.

Initially, innovative data collection could be comparatively expensive to learn, design, put into place, and integrate. Smart cards, geographic information systems, global positioning networks, highway telemetry, and satellite photography offer promising new ways unobtrusively to gather personal travel data while respecting the privacy of individuals and businesses. Once established, these technologies would be relatively inexpensive to maintain, upgrade, and operate.

With the active support of FTA and other agencies within and outside the Department, no organization is better positioned or better able to lead and coordinate such a transformation than BTS. But, again, experience teaches that an independent financial and technical contribution by FTA and each other mode is the most effective means to ensure the continued usefulness of NPTS.

PLANNING AND PROGRAM DEVELOPMENT ACTIVITIES

Question. The FTA has requested a total of \$2,200,000 for planning and program development activities in fiscal year 2001. Please reproduce the funding breakout table on page 186 of the justification, noting the priority order of each of the five activities planned for fiscal year 2001.

Answer. The following table lists the planning and program development activities for fiscal year 2001:

[Dollars in thousands]

| Program: FTA 7 planning and project development program | Program schedule | | | Priority |
|--|------------------|------------|--------------|--------------|
| | Fiscal year | | | |
| | 1999 | 2000 | 2001 | |
| Key activities and products | | | | |
| 7. Planning and Project Development: | | | | |
| 7.1 Transportation Planning and Programming | | \$750 | | 3 |
| 7.2. New Starts Planning and Project Development | \$450 | | 550 | 2 |
| 7.3. Land Use and Environmental Planning | | | 200 | 4 |
| 7.4. Planning Methods | | | 500 | 5 |
| 7.5. Financial Planning | | | 200 | 1 |
| 7.7. Citizens for Modern Transit | | \$297 | | |
| 7.8. Wheeling, West Virginia Mobility Study | | 247 | | |
| 7.9. Skagit County, WA, North Sound Connecting Communities Project | 50 | | | |
| 7.10. Desert Air Quality Comprehensive Analysis, Las Vegas, NV | 1,000 | | | |
| 7.11. Seattle, WA Livable City | 200 | | | |
| Total Budget Authority | 1,700 | 544 | 2,200 | |

Question. Please update the Committee on the status of each of the three community planing and analysis projects included in the fiscal year 1999 appropriations bill: (1) Skagit County, Washington North Sound connecting communities; (2) Desert air quality comprehensive analysis, Las Vegas, Nevada; and (3) Seattle, Washington livable city. Have these grants been released? Are follow-on costs required or anticipated?

Answer. All three projects were released (awarded) in fiscal year 1999. No additional follow-on costs are required or anticipated. The project in Skagit County, Washington North Sound and connecting communities, is intended to study a cross-border seamless transportation system. A seamless system will improve the environment and air quality, reduce freight movement delays, and enhance domestic and international tourism through the Two-Nation vacation initiative.

The Desert air quality comprehensive analysis, Las Vegas, Nevada, is research on specific air pollution problems existing in the Las Vegas Metropolitan area. This will be a broad-scope study conducted by the Desert Research Institute, an affiliate of the University and Community College System of Nevada.

The Seattle, Washington Livable City project, will provide near-term Improvements in travel times and reliability to transit users thus encouraging higher ridership and reducing service costs. The City of Seattle and King County Metro will cooperate in implementing speed and reliability improvements.

PERFORMANCE AND REVIEW/EVALUATION

Question. The FTA has requested a total of \$2,900,000 for performance and review/evaluation in fiscal year, of which \$2,500,000 is for the congressionally mandated National Transit Database program. The fiscal year 2000 conference report directed FTA to work with the National Academy of Sciences to design a new transit data base, comprised of operational and performance measures and financial data necessary to fulfill FTA's statutory responsibilities in distributing formula grants, while providing meaningful data for state and local governments, transit industry personnel, and academic institutions. Consultation with the American Public Transportation Association in developing the new data base was encouraged. Please summarize the progress to date on developing this new data base model, which is to be submitted to the Appropriations Committees and the General Services Administration by May 31, 2000. Will the congressionally directed deadline be met? Will FTA be able to utilize the new design in the fiscal year 2001 cycle of federal grantee reports?

Answer. The FTA is on schedule to deliver a report to Congress on a new, revised National Transit Database (NTD) for the 21st Century by May 31, 2000. If funding is made available, the FTA is planning to restructure and test the new NTD in time to work on report year 2001 data.

FTA is making progress on developing a new, revised NTD. FTA conducted and completed three outreach-listening sessions with transit professionals across the nation. These sessions were held in Chicago, San Francisco, and Washington, DC. The Washington, DC session focused on transit safety data. In addition, FTA met individually with transit agencies and safety groups. A national FAX number and an Internet web site were established to receive comments for those unable to attend the outreach sessions.

FTA has worked closely with the Transportation Research Board of the National Academy of Sciences (TRB/NAS). The TRB has formed a committee to review our findings and recommendations. FTA met with the TRB committee on April 10. In addition, FTA met with the APTA committee, comprised of general managers and safety directors to review the NTD and proposed changes. A report on recommendations to revise the NTD (phase I of the project) is expected to be transmitted to Congress by the end of May 2000.

FTA will summarize and synthesize the comments and recommendations given to the FTA. All forms, procedures, and data elements will be evaluated. FTA's goal is to improve the usefulness of the NTD to transit without adding to the burden of reporting agencies. By the end of April, FTA will have received TRB and APTA comments and will prepare a draft report to Congress, completing Phase I of our action plan.

After submitting the report to Congress, and receiving comments on that report from Congress, GSA, TRB and others, FTA will incorporate these changes in the database forms, definitions, procedures, circulars, and database structure. At the end of fiscal year 2000, FTA plans to complete Phase II of the action plan, developing a prototype of the final revised NTD. Phase III is to program the revised NTD which will have a relational database. In fiscal year 2001, FTA has requested \$1.5 million to program the new NTD and load the NTD data into a new relational database program. Completion of Phase III is expected to take much of fiscal year 2001. In fiscal year 2002, FTA will test an operational, new, revised NTD on report year 2001 data.

FTA'S URBAN MAGLEV AND ADVANCED TECHNOLOGY PILOT PROGRAM

Question. Federal Highway Administration funds are authorized within the highway trust fund firewall for two urban magnetic levitation technology programs to be administered by the Federal Transit Administration. The two statutory provisions providing the program's funding are Section 1218 of TEA-21, which authorizes a total of \$5 million over the life of the authorization to research and develop low speed superconductive maglev technology; and Section 3015(c) of TEA-21, which authorizes \$5 million per year for the 6 years to carry out a broad maglev technology development program. The FTA published a notice in the January 29, 1999 Federal Register soliciting applications for this program, stating that the agency, "anticipates multiple awards resulting from this solicitation." How many proposals were received by FTA before the March 1999 deadline? Of these applicants, how many projects have received awards? Please list the recipients and amounts.

Answer. Eight (8) proposals were received by the March 1999 deadline. To date, one project has received an award. Fiscal year 1998 and fiscal year 1999 funding from Section 3015(c) was allocated to this project, a total of \$7,968,586. General Atomics Corporation (GA) will lead a team to develop maglev technology for the pur-

pose of providing a solution to urban and regional transportation problems. In addition to GA, the team is comprised of: Macklin Engineering, Hall Industries, Booz-Allen & Hamilton, Western Pennsylvania Maglev Development Corporation, Union Switch & Signal, Port Authority of Allegheny County, Sargent Electric Company, Mr. Richard Portis (DBE), P.J. Dick, Argonne National Laboratory, Carnegie Mellon University, Massachusetts Institute of Technology, and the Pennsylvania Department of Transportation.

Question. To date, have all the authorized fiscal year 1998, 1999, and 2000 funds been transferred from FHWA to FTA (both from the Section 3015(c) and 1218 programs)? Have all the available fiscal year 1998, 1999, and 2000 funds been awarded? If not, please elaborate on the reasons for the delay.

Answer. For the Section 3015(c) program, fiscal years 1998, 1999, and 2000 funds from 3015(c) have been transferred from FHWA to FTA. As stated above, fiscal year 1998 and 1999 funding has been awarded. Fiscal year 2000 funding was only recently transferred to FTA and has not yet been awarded. Fiscal year 2000 funding for the Advanced Technology Pilot Project will be used to fund cooperative agreements with one or more project groups to develop advanced magnetic levitation technology. The Federal Register Notice articulates the goals and objectives for the Advanced Technology Pilot Project and the Urban Maglev Program in general. FTA will again use this as a guide when considering awards during fiscal year 2000 to additional project groups. (Five other groups submitted "technically competitive" proposals in response to FTA's January 29, 1999 Federal Register Notice).

For the Section 1218 program, FTA recently received \$1,742,000 from FHWA. FTA is currently working on an agreement with the Department of Energy to obligate \$1,000,000 for SERAPHIM, a motor technology being developed by Sandia National Laboratory in New Mexico. For the additional funding (\$742,000), FTA will again consider one or more of the groups that submitted proposals to FTA for Low Speed Maglev technology development.

Question. Please detail all Congressional input, both legislative and non-legislative, in the grant decision making process. Please include copies of all legislative direction or Congressional correspondence that influenced awards under this program.

Answer. Legislative guidance:

(1) The Transportation Equity Act for the 21st Century (TEA-21) has been the legislative guide to FTA for developing the Urban Maglev Program. In Section 3015(c), TEA-21 created a low speed magnetic levitation technology development project titled the Advanced Technology Pilot Project. This project authorizes the Department of Transportation to support further development of magnetic levitation technologies to demonstrate energy efficiency, congestion mitigation and safety benefits. The FTA Urban Magnetic Levitation Transit Technology Development Program (Urban Maglev Program) was then initiated through a January 29, 1999 Federal Register Notice to carry out this project as well as a similar low speed Maglev project created by TEA-21 and codified at 23 U.S.C. Section 322(i), entitled the Low Speed Project. The Low Speed Project is similar to the Section 3015(c) project except that funding is specifically for the development of superconductive technology. The Urban Maglev Program combines these two statutory provisions into a single program to include both superconductive and non-superconductive maglev technologies.

(2) fiscal year 2000 Conference Report that accompanied the appropriations bill for the Department of Transportation and Related Agencies for the fiscal year 2000 (Report 106-355) also provided guidance. This Report directed DOT to make available \$1,000,000 from Section 322(h)(1)(B)(i) [the 1218 program] for the development of the Segmented Rail Phased Induction Electric Magnetic Motor (SERAPHIM).

Non-Legislative Guidance:

(1) Letter dated July 12, 1999 from the United States House of Representatives Committee on Transportation and Infrastructure communicating the Committee's intent for the 3015(c) program.

(2) Letter dated December 3, 1999, from the United States Senate Committee on Appropriations, which underscored the intent of the Committee to make available \$1,000,000 from the 1218 program for SERAPHIM.

CONGRESS OF THE UNITED STATES,
COMMITTEE ON TRANSPORTATION AND INFRASTRUCTURE,
HOUSE OF REPRESENTATIVES,
Washington, DC, July 12, 1999.

Hon. GORDON J. LINTON,
Administrator, Federal Transit Administration,
Washington, DC.

DEAR ADMINISTRATOR LINTON: We are writing to clarify the intent of the advanced technology pilot project specified in Section 3015(c) of the Transportation Equity Act

for the 21st Century (Public Law 105-178). Section 3015(c) provides funding for low-speed magnetic levitation (MAGLEV) technology for public transportation purposes in urban areas to demonstrate energy efficiency, congestion mitigation, and safety benefits.

This provision was included in the House-passed version of TEA 21 in direct response to the Pittsburgh Airborne Shuttle System (PASS) low-speed MAGLEV project, which to our knowledge, was the only low-speed MAGLEV project seeking federal assistance at the time. In fact, House Committee Report 105-467 Part 1, accompanying the House-passed version of TEA 21, referred to the project, recognizing that \$1 million was provided in the fiscal year 1998 DOT appropriations bill to support "low-speed magnetic levitation technology in Pittsburgh, Pennsylvania through the Allegheny County Port Authority" (page 204). In the conference committee on TEA 21, the Senate receded to the House on Section 3015(c), with the addition of new language clarifying the application of Davis Bacon labor provisions.

It was, and continues to be, our expectation that these funds will be made available to the Pittsburgh project. Congress clearly intended that the energy efficiency, congestion mitigation and safety benefits of the technology be demonstrated through the application of the technology. This cannot be achieved by spreading the funding over numerous projects. Concentrating the funding on one project, deploying one system and measuring its effects, is the only way to satisfy Congressional intent with respect to the advanced technology pilot project specified in Section 3015(c).

We look forward to working with you and the Department on this matter in the near future.

Sincerely,

BUD SHUSTER,

Chairman, Committee on Transportation and Infrastructure.

JAMES L. OBERSTAR,

Ranking Democrat, Committee on Transportation and Infrastructure.

THOMAS PETRI,

Chairman, Subcommittee on Ground Transportation.

NICK RAHALL, II,

Ranking Democrat, Subcommittee on Subcommittee on Ground Transportation.

U.S. SENATE,
COMMITTEE ON APPROPRIATIONS,
Washington, DC, December 3, 1999.

Hon. RODNEY E. SLATER,
Secretary, U.S. Department of Transportation,
Washington, DC.

DEAR MR. SECRETARY: We are writing to clarify a provision in the Conference Report accompanying the recently-enacted appropriations bill for the Department of Transportation and Related Agencies for the fiscal year ending September 30, 2000 (H.R. 2084, Report 106-355). In the fiscal year 2000 conference report, under the Magnetic Levitation Transportation Technology Deployment Program, the Conferees specified funding for the low-speed magnetic levitation program, which is authorized under Section 322, subsection (h)(1)(B)(i) of the Transportation Equity Act for the 21st Century (TEA-21). You will note that \$1 million was designated in the report for the development of the Segmented Rail Phased Induction Electric Magnetic Motor (SERAPHIM). TEA-21 designated under the above-referenced subsection that a total of \$5 million shall be available for ". . . the Secretary to make grants for the research and development of low-speed superconductivity magnetic levitation technology for public transportation purposes in urban areas . . ." Notwithstanding any other requirements of Section 322, subsection (h)(1)(B)(i), it was the intent of the Conferees that the SERAPHIM technology be an eligible project under this section. Additionally, it was the intent of the conferees that the authorized set-aside for the low-speed magnetic levitation program be fully funded over the life of the TEA-21 authorization. It is the understanding of the Appropriations Committees that this program has not yet received any funding, and therefore any available funds under the Magnetic Levitation Transportation Technology Deployment Program which are not otherwise Congressionally directed should be made available for the low-speed magnetic levitation program. We respectfully request that you proceed to allocate the funds already designated for SERAPHIM, and that you give full consideration to the Colorado Intermountain Fixed Guideway Authority's application for the Federal Transit Administration's low-speed magnetic levitation technology

program, as directed in the statement of managers language. If you have any questions, please do not hesitate to contact our Subcommittee staff.

Sincerely,

RICHARD C. SHELBY,
Chairman, Senate Subcommittee on Transportation, Appropriations.
 FRANK R. WOLF,
Chairman, House Subcommittee on Transportation, Appropriations.

CAPITAL INVESTMENT GRANTS UNOBLIGATED FUNDS

Question. Please provide a list of any unobligated contract authority funds that have remained on the books for more than three years (that is, funds appropriated or authorized in or prior to fiscal year 1997).

Answer. Unobligated contract authority funds that have remained on the books for more than three years include \$1.3 million in Section 5309, Fixed Guideway Modernization which will be redistributed by formula. Also, unobligated is \$11.7 million in Section 5309, New Starts funds for projects that have been extended by legislative action. An example is the New Orleans Canal Street Corridor Project, the Virginia Railway Express, and the Hartford, CT—Griffin Line Project.

Question. Please provide a list of recoveries by program/project and amount made in fiscal year 1999 and estimated for fiscal year 2000. Please describe how funds can be “recovered”, and the process for reallocating these funds.

Answer. A list of recoveries by program for fiscal year ending September 30, 1999 is provided below. We estimate a similar distribution of recoveries as they become available in fiscal year 2000.

Funds can be recovered when a project is closed or whenever there is a mutual agreement between the grantee and FTA that funds are no longer needed for a project. Recoveries for Section 5309 Bus and New Starts projects that were previously earmarked are reprogrammed after notification to and approval of the House and Senate Committees on Appropriations. Recoveries that are formularized and have not lapsed remain available to the urbanized area in which they were recovered. Recoveries that have become lapsed and were formularized remain with that section and are reapportioned to all areas according to legislative formula.

Department of Transportation, Federal Transit Administration, Recovery Activities

| <i>Program</i> | <i>Fiscal year 1999</i> |
|---|-------------------------|
| Capital Investment Grants: | |
| Sec. 5309, Capital Program, Bus | \$1,482,126 |
| Sec. 5309, Capital Program, New Starts | 18,905,850 |
| Sec. 5309, Capital Program, Fixed Guideway Modernization | 29,777 |
| Sec. 5309, Capital Program, Rail Mod. | 602,357 |
| Sec. 5309, Capital Program, Oversight | 3,693,679 |
| Sec. 5309, Capital Program, Technology Introduction | 296,091 |
| Sec. 5303, Special Studies | 43,458 |
| Sec. 5313, State Planning and Research | 967 |
| Sec. 5314, National Planning and Research | 15 |
| Sec. 5307, Urbanized Area, 9(B) | 534,633 |
| Sec. 5310, Elderly and Persons with Disabilities | 105,639 |
| Sec. 5311, RTAP | 404 |
| | |
| Total, Capital Investment Grants | 25,694,996 |

Question. Transit new starts and bus and bus facilities funds are subject to the “three-year rule”, wherein earmarked appropriated funds not obligated after three fiscal years are available to be reprogrammed. Please provide two tables—a new starts table and a bus table—showing the updated obligation status of all projects whose funding has expired or will expire at the end of fiscal year 2000. Please note whether applications are in, what issues remain to be resolved, and whether it is the agency’s opinion whether the project will be obligated before the end of the fiscal year.

Answer. The following tables lists the transit new starts and bus and bus facilities funds:

CAPITAL PROGRAM—BUS AND BUS RELATED—STATUS OF FISCAL YEAR 1998 UNOBLIGATED EARMARKS AS OF MARCH 31, 2000

| REG. | AREA | PROJECT NO. | PROJECT DESCRIPTION | AVAILABLE FUNDING | OBLIGATION STATUS (DATE) | FEDERAL DOLLARS OBLIGATED | UNOBLIGATED |
|------|---|---------------|--|-------------------|--------------------------|---------------------------|-------------|
| 1 | NEW HAVEN, CT IN FINAL PROCESSING; APPROVAL EXPECTED IN FISCAL YEAR 2000. | CT-03-0109-01 | BUS GARAGE/MAINTENANCE FACILITY, FISCAL YEAR 1998 APPROP. EARMARK. | \$1,172,636 | | | \$1,172,636 |

STATE BY STATE BREAKOUT OF FEDERAL TRANSIT FUNDS

Question. For fiscal year 2001, please prepare a table that includes all firewall formula program funds, new starts funds as included in the administration's budget, and TEA-21 (Section 3031) earmarked bus funds, breaking out the funding distribution by state and category. Show a total at the bottom, and note what percentage of that total is represented by each state's subtotal.

Answer. For the Formula program and Capital Investments New Starts and Bus and Bus Facilities earmarks, the following table lists the fiscal year 2001 funding distribution by state and category:

FEDERAL TRANSIT ADMINISTRATION FISCAL YEAR 2001 GUARANTEED LEVEL APPORTIONMENTS/ALLOCATIONS BY STATE

| State | Section 5307 urbanized area | Section 5311 non-urbanized area | Section 5310 el- derly & persons with disabilities | Section 5309 new starts | Section 5309 fixed guideway modernization | Section 5309 bus allocation | Metropolitan planning section 5303 | State planning section 5313 | RTAP section 5311 | State total selected FTA programs |
|----------------------------|-----------------------------------|---------------------------------------|--|----------------------------|---|--------------------------------|--|--------------------------------|----------------------|--|

¹ Includes \$4,825,700 for the Alaska Railroad.

² Amount for Alaska/Hawaii Ferries distributed one-half to Alaska and one-half to Hawaii.

³ Includes \$4,850,000 for the Fuel Cell Bus activities (excluding Oversight the total is \$4,813,625).

⁴ Includes \$3,000,000 for Bus Testing (excluding Oversight the total is \$2,977,500).

⁵ Includes \$15,000,000 for transit service for the Mississippi Delta Region.

Question. For fiscal year 2000 enacted, please prepare a table that includes all firewall formula program funds, new starts funds as earmarked in the fiscal year 2000 Transportation Appropriations bill (before project management oversight is subtracted), and all earmarked bus funds (before project management oversight is subtracted), breaking out the funding distribution by state and category. Show a total at the bottom, and note what percentage of that total is represented by each state's subtotal.

Answer. For the Formula Grants and Capital Investments New Starts and Bus and Bus Facilities earmarks, the following table lists the fiscal year 2000 apportionments and allocations by state:

FEDERAL TRANSIT ADMINISTRATION FISCAL YEAR 2000 APPORTIONMENT FOR FORMULA PROGRAMS (BY STATE)

| State | Sections 5303 & 5313(b) metropolitan and state planning | Section 5307 urbanized area | Section 5311 non-urbanized area | Section 5310 elderly and persons with disabilities | Section 5309 new starts | Section 5309 fixed guideway modernization | Section 5309 bus allocation | State total selected FTA programs | State percent of total |
|----------------------|---|-----------------------------|---------------------------------|--|-------------------------|---|-----------------------------|-----------------------------------|------------------------|

¹ Includes \$4,849,950 in funds appropriated for the Alaska Railroad improvements to passenger operations.

² Includes \$4,589,012 in reapportioned recoveries.

³ Includes \$72,481 in reapportioned recoveries.

⁴ Includes \$39,614 in reapportioned recoveries.

⁵ Includes a reduction of \$11,197,429 as part of Public Law 106-113.

⁶ Includes \$1,199,750 of reallocated bus funds as part of Public Law 106-69; and a net reduction of \$6,206,385 as part of Public Law 106-113.

ELIGIBILITY ISSUES

Question. Please provide a list of any of the fiscal year 2000 bus and bus facilities projects or new starts grantees who have encountered problems with having grants released because the project name listed in the appropriations legislation does not precisely match the description of the project forwarded by the grantee in their application.

Answer. The bus and bus facilities projects and new start grantees who have encountered problems because the project name listed in the appropriations legislation does not precisely match the description of the project forwarded by the grantee are listed below:

- Fiscal year 2000 New Starts Earmark: AK Girdwood, Alaska Commuter Rail Project (\$9,810,787) Desired Change: AK Special Olympics, South Anchorage double track, North Anchorage Commuter rail service and track improvements
- Fiscal year 2000 Bus Earmark: AK Whittier Intermodal facility and pedestrian overpass (\$1,133,165) Desired Change: AK Whittier Intermodal facility and pedestrian underpass
- Fiscal year 2000 Bus Earmark: AL Baldwin Rural Area Transportation System buses (\$981,096) Desired Change: AL Baldwin Rural Area Transportation System vehicles, amenities and equipment
- Fiscal year 2000 Bus Earmark: Huntsville Space and Rocket Center intermodal center (\$3,433,833) Desired Change: Huntsville Space and Rocket Center Intermodal Centers, vehicles and facilities
- Fiscal year 2000 Bus Earmark: MA Swampscott, buses (\$63,772) Desired Change: MA Saugus, buses
- Fiscal year 2000 Bus Earmark: MI Michigan statewide buses (\$22,074,625) Desired Change: MI Michigan statewide buses and bus facilities

BUS AND BUS-RELATED FACILITIES

Question. Are there any fiscal year 2001 bus and bus facilities earmarks in TEA-21? If so, please list the projects and locations, and the amount which is designated in TEA-21.

Answer. There are three fiscal year 2001 TEA-21 bus and bus facilities earmarks.

| Project | Location | TEA-21 amount |
|------------------------------------|-----------------------------|---------------|
| Cleans Fuels Formula Program | | \$50,000,000 |
| Fuel Cell Bus | Georgetown University | 4,850,000 |
| Bus Testing Facility | Altoona, Pennsylvania | 3,000,000 |

Question. FTA has requested that \$50,000,000 of the fiscal year 2001 bus and bus facilities funds be made available in Los Angeles to implement the Bus Consent Decree issued by the Special Master. How much in Section 5307 formula funds has the LACMTA received in fiscal years 1999 and 2000, and will be receiving in fiscal year 2001? Can't these funds be used to comply with the Bus Consent Decree?

Answer. In fiscal years 1999 and 2000, the LACMTA received \$137 million and \$91 million, respectively, in Section 5307 formula funds. It is projected that in fiscal year 2001, LACMTA will receive \$96 million in Section 5307 funds.

The \$50 million requested could help the LACMTA accelerate the purchase of 2,095 buses under its Accelerated Bus Procurement Program. The MTA has options on current procurements, which it could exercise immediately rather than wait a year or two when additional funds are projected to be available. Under its 5-year capital program, MTA (the programming agency for Los Angeles County) has chosen to apply fiscal year 2000 and 2001 Section 5307 funds to the capitalized preventive maintenance program and to capital improvements to bus facilities. New buses for these years will be purchased with other sources of federal funds, including CMAQ and STP. The MTA believes that this is the most efficient use of its federal funding.

Question. Please specify all eligible activities for the \$35,000,000 in bus and bus facilities funds requested for the 2002 Winter Olympic and Paralympic Games.

Answer. Capital Investment Bus category funds can be used for any eligible purpose under U.S.C. Section 5309, including planning, bus lease or purchase, park-and-ride facilities, maintenance facilities and preventive maintenance expenses. Operational costs would not be eligible. The Salt Lake Organizing Committee (SLOC) recently submitted preliminary information outlining funding needs in fiscal year 2001 for the 2002 Winter Olympic Games. Funding is proposed as follows:

[In millions of dollars]

| | |
|-----------------------------------|----|
| Planning | 2 |
| Venue Loading and Unloading | 5 |
| Transit Bus | 8 |
| Bus Maintenance Facilities | 2 |
| Park-and-Ride | 18 |
| | 18 |
| Total | 35 |

Question. Please provide a complete summary of all federal transit funding provided in support of the 1996 Olympics in Atlanta, Georgia.

Answer. The following table provides a summary of FTA funding for the 1996 Olympics in Atlanta Georgia:

SUMMARY OF FTA FUNDS: 1996 OLYMPIC AND PARALYMPIC GAMES

| Project Number | Grantee | Obligation Date | Description | Local share | Percent | Federal share | Percent |
|--|---------|-----------------|--|-------------|---------|---------------|---------|
| FTA FUNDED PROJECTS SPECIFICALLY FOR THE 1996 ATLANTA OLYMPIC GAMES | | | | | | | |
| GA-90-X094 | MARTA | 7/25/95 | Operating Assistance: delivery, preparation, maintenance, fuel, tire lease, insurance, clean up, and return of 1600 buses. | | | \$10,400,000 | 100 |
| FTA FUNDED PROJECTS SPECIFICALLY FOR THE 1996 ATLANTA PARALYMPIC GAMES | | | | | | | |
| GA-90-X094 | MARTA | 7/25/95 | Operating Assistance: Paralympic transit expenses | | | 4,350,000 | 100 |
| | | | Planning Assistance: Prepare Paralympic's operations plan | | | 250,000 | 100 |
| GA-90-X090 | ARC | 3/14/95 | Planning Assistance: Paralympics transportation planning | | | 1,000,000 | 100 |
| Total | | | | | | 5,600,000 | 100 |
| FTA FUNDED PROJECTS ACCELERATED IN SUPPORT OF THE 1996 ATLANTA OLYMPIC GAMES | | | | | | | |
| GA-03-0036 | MARTA | 9/30/91 | Capital Assistance: North Line Rail Ext./ Medical Center to Dunwoody. | 23,125,000 | 20 | 92,500,000 | 80 |
| GA-03-0050 | MARTA | 12/08/94 | Capital Assistance: AUC/MARTA Pedestrian Walkways | 750,000 | 20 | 3,000,000 | 80 |
| GA-03-0053 | MARTA | 7/25/95 | Capital Assistance: MARTA ITS Project | 3,325,000 | 20 | 13,300,000 | 80 |
| Total | | | | 27,200,000 | 20 | 108,800,000 | 80 |

Question. What states have traditionally submitted a consolidated statewide bus and bus facilities grant request to FTA?

Answer. Alabama, Illinois, Iowa,, Louisiana, Maine, Maryland, Michigan, Missouri, New Hampshire, North Carolina, Ohio, Oklahoma, Rhode Island, Texas, Vermont, West Virginia, and Wisconsin have traditionally submitted a consolidated statewide bus and bus facilities request to FTA.

NEW STARTS

Question. Please provide a table broken out alphabetically by state that shows all new start projects that received appropriated federal funds in fiscal year 2000, with a federal funding history for each project back to the first year of federal funding, and total for each project.

Answer. The table below contains the information requested for all New Starts projects that received appropriated federal funds in fiscal year 2000.

FEDERAL TRANSIT ADMINISTRATION—CAPITAL NEW STARTS—DISPOSITION OF EARMARKS

| State | Project location and description | Annual Earmarks | | | | | | | | | | | Total earmarks | | |
|-------|---|-----------------|---------|--------|--------|-------------------|---------|--------|--------|-------|-------|---------|----------------|---------|-------|
| | | Fiscal year | | | | | | | | | | | | | |

¹ This column reflects the FY 93 Reallocated Earmarks.

Question. Please provide a table detailing by existing FFGA the amount of the FFGA, the actual amounts received through fiscal year 2000, the schedule 6 amounts through fiscal year 2000, any shortfalls or overages to date, the fiscal year 2000 enacted level, the fiscal year 2001 schedule 6 amount, the amount of shortfall included in the fiscal year 2001 budget, and total fiscal year 2001 budget request.

Answer. The following table lists the existing FFGA's and any shortfalls or overages:

FEDERAL TRANSIT ADMINISTRATION, EXISTING FFGAs SECTION 5309 NEW STARTS

| Geographic location | Section 5309 FFGA amount | Total appropriated fiscal year 2000 & prior | Total attachment 6 fiscal year 2000 & prior | Cummulative shortfall fiscal year 2000 & prior | Fiscal year | | | | | Shortfall included in fiscal year 2001 budget request |
|--|--------------------------|---|---|--|--------------------|-------------------|--------------------------|----------------------|-------------------|---|
| | | | | | 2000 enacted level | 2000 attachment 6 | 2000 shortfalls/overages | 2001 proposed budget | 2001 attachment 6 | |
| Existing FFGAs: | | | | | | | | | | |
| CA—Los Angeles-North Hollywood (FFGA) | \$681,037,000 | \$581,819,469 | \$621,747,443 | (\$39,927,974) | \$49,053,936 | \$50,000,000 | (\$946,064) | \$50,000,000 | \$50,000,000 | |

| Total—existing FFGAs | 5,441,858,115 | 3,274,861,427 | 3,173,155,677 | (313,824,464) | 615,626,877 | 713,459,528 | (109,375,050) | 639,293,010 | 569,913,527 | (69,379,483) |

Question. Please prepare a table that provides by project the capital cost, federal share (dollars and percentage), and local share (dollars and percentage) for each FFGA, those projects proposed for FFGAs in the budget request, and the fifty remaining projects that are furthest along in the planning and preliminary engineering process. Use estimates where necessary.

Answer. The table below contains the information requested on New Starts projects. It is based on the project sponsors requests for FTA funds made during the submission of Section 5309 New Starts criteria for the fiscal year 2001 Annual Report on New Starts as of November 1999. Thus, the federal and local share of project costs may be revised subject to negotiations of proposed Full Funding Grant Agreements. The table provides information regarding 33 additional projects rather than the 50 since the information requested is only available for projects approved for final design or preliminary engineering.

FTA FFGA STATUS

| City/Project | Overall project rating | Total Project Cost | Section 5309 new starts share requested | New starts share percent of total project cost | Other federal funds proposed | Federal funds percent of the total project cost | Non-federal share of project cost | Non-federal percent of total project cost |
|--|------------------------|--------------------|---|--|------------------------------|---|-----------------------------------|---|
| Existing full funding grant agreements: | | | | | | | | |

¹These projects are not rated based upon the exemption granted to projects where the anticipated Section 5309 New Starts share of the total estimated Capital Cost is below \$25 million.

Question. Please detail by fiscal year and project how the FTA plans to allocate the \$10,400,000 provided for Alaska or Hawaii projects. Include in your answer the total cost and the local/federal share of each project (in both dollar and percentage).

Answer. The amount available for Alaska and Hawaii projects is \$10,203,219, after applying the government-reduction required by the fiscal year 2000 Consolidated Appropriations Act, and the oversight take-down. FTA plans to allocate the funds equally (50/50) between the two states as was done in fiscal year 1999. If an allocated amount remains unobligated by either state at the end of the period of fund availability—the year of appropriation plus two years—then funds may be re-allocated to the other state. To date, no funds have been obligated by either state.

Applications from the State of Alaska have been received for a total project cost amount of \$13.5 million (\$10.8 million or 80 percent Federal share) to date. The applicant, in light of New Starts and other legislative requirements, is currently revising its applications.

Question. What is the “lifespan” of a Record of Decision? Does it lapse, or need to be renewed if a project does not go forward after a length of time?

Answer. An environmental Record of Decision (ROD) does not have a lifespan; however, the final Environmental Impact Statement (EIS) upon which a ROD is grounded does. If, after release of the final EIS, there is a lull of three or more years in major project activities such as final design, major work on land or vehicle acquisition, substantial site preparation or other construction activities, then, prior to any new FTA approvals or grants for the project, the final EIS must be re-evaluated. The purpose of this reevaluation is to determine whether there have been changes in the project, in the affected communities or in the affected natural environment, or changes in relevant laws and regulations such that the project would cause new, significant impacts not evaluated in the final EIS. If new, significant impacts are not found, the original ROD stands. This reevaluation and the resulting conclusions must be done in writing. If new, significant impacts are found, then a supplemental environmental review would have to be conducted to reconsider the earlier decisions on the project itself, on the project design, and on the mitigation of adverse impacts. The new environmental review would have to be documented in a supplemental EIS and a new or revised ROD.

Question. What new starts projects does FTA anticipate will be requesting an amended full funding grant agreement during the balance of this calendar year?

Answer. FTA anticipates requests for amendments to the following FFGAs in calendar year 2000:

- BART—Extension to San Francisco Airport—The Amendment will delete rail cars and add maintenance facility improvements. There is no increase in the Section 5309 share of the project.
- South Boston Piers Transitway—The Amendment will add formula funds to the project to cover cost increases. There is no increase in the Section 5309 share of the project.
- Houston—Regional Bus Plan—The Amendment will delete some bus projects and add other new bus projects. There is no increase in the Section 5309 share of the project.

Question. Please list those current FFGA projects which have undergone significant change in scope or cost increases beyond and above the original project scope and baseline cost estimate. Please provide a brief summary of the project’s description, current status, reason for cost increases or scope changes, and pending issues.

Answer. The following FFGA projects have undergone significant scope change:

- New Jersey Transit Corporation (NJT) Hudson-Bergen Waterfront Light Rail Transit System first Minimum Operable Segment (MOS-1).*—The New Jersey Corporation Hudson-Bergen Waterfront Light Rail Transit System Minimum Operable Segment (MOS-1) is a 9.3 miles, 16-station light rail system from 34th Street in Bayonne on the south to Hoboken Terminal on the north. Opening April 15, 2000, on schedule and under budget, is Phase A, from Exchange Place south to 34th Street in Bayonne and West Side Avenue in Jersey City. Phase B, covering the last 2.0 miles between Exchange Place and Hoboken Terminal is in construction and will open for revenue service in April 2002. Because of Hoboken community preference, the alignment changed in 1997 from the East Side to the West Side of Hoboken (Phase B) necessitating further environmental work and delaying construction on the last two miles of the project. No issues are pending and there is no increase in the Federal share of the project.
- Bay Area Rapid Transit District (BART) Extension to San Francisco Airport.*—The Bay Area Rapid Transit District (BART) Extension to San Francisco Airport project consists of 8.7 miles double track (6.0 miles is subway, 1.5 miles at grade and 1.2 miles elevated), 3000 parking spaces and transfer to Caltrain

commuter rail at Millbrae, 1,000 parking spaces at San Bruno and 1,330 parking spaces at South San Francisco. Construction of the airport extension is about 50 percent complete. Project cost increases resulted from: 1) cost increases for material and labor because of a booming local economy and heavy competition for materials and labor; 2) rising real estate costs and difficulty in negotiating settlements with 7 local cemeteries; and 3) an increase in financing costs stemming from shortfall in Federal appropriations scheduled in Full Funding Grant Agreement. The proposed scope change consists of substituting a \$70 million shop and yard improvement program in place of the originally planned acquisition of twenty-eight (28) vehicles. This substitution will change the Revenue Operation Date (ROD) from September 1, 2001 to July 1, 2002, with an overall project completion date of January 31, 2003. The financing arrangements for the project will increase the local funding by \$316 million, for a revised budget of \$1,483 million and establish a new Capital Reserve Account (CAPRA) capable of providing up to \$27 million of local funds for any future potential cost increases. No issues are pending and there is no increase in the Federal share of the project.

- Tren Urbano*.—This corridor is a 17-kilometer (10+ miles) fixed guideway transit system that includes 16 stations. The project construction is 62.5 percent complete as of March 2000. The FFGA was modified on July 19, 1999 to amend the scope and the special terms and conditions and to recognize the increase in total project cost from \$1,250.3 million to \$1,653.6 million. The modification authorized the use of urban area formula and flexible funds for the project (\$141 million formula funds and \$259.9 million flexible funds); extended the revenue operation date until May 31, 2002; and referenced the standard terms and conditions applicable to this project. The reason for the cost increases was largely due to contract bid over the costs estimates, the addition of two stations and increased construction management fees. Pending issues include several Quality Assurance/Quality Control items and the Settlement and Forbearance Agreement for Centro Médico and there is no increase in the Federal share of the project.
- South Boston Piers Transitway*.—This project is a 1-mile underground transit tunnel from the existing South Station to the World Trade Center. Three underground Transitway stations are at South Station, the new Federal Courthouse/Fan Pier, and the World Trade Center will provide connections to the existing Red Line as well as commuter and inter-city rail and bus services. The operating vehicle is a 60-foot, dual-powered, trackless electric trolley/diesel articulated bus.
- An important feature of the Transitway Project is that the underground alignment in the vicinity of South Station as well as the World Trade Center area is coincident with the \$13.1 billion Central Artery/Tunnel (CA/T) Project that is currently in construction. This approach provides significant savings and reduced disruption for the local community. The project is in final design and construction. To date, six of the nine construction contracts are underway, including the work associated with the three joint CA/T contracts. Bids for vehicle procurement were received in September 1999. The MBTA expects a vehicle procurement award in late April 2000. The three remaining construction contracts are to be advertised and awarded by the MBTA by the second quarter of 2001, and have an estimated value of approximately \$60 million. To date, \$231 million has been expended.
- The baseline estimate for the full funding grant agreement in 1993 dollars was estimated to be \$413 million, and an original revenue operation date of December 31, 2000. The MBTA has submitted a “recovery plan” in January 1999 and a draft “Restated Project Budget, Scope of Work, and Schedule” in March 2000. These documents indicate the project budget has increased to \$601 million and the revised revenue operation date is December 31, 2003. The FTA has requested and received a “Finance Plan” in late February 2000. A review by FTA, GAO and the OIG is ongoing; however, there is no increase in the Federal share of the project.
- Although the project scope has not changed, the MBTA has managed to enhance the level of service that this project will provide when revenue service begins in 2003. In lieu of transit service from South Station to the World Trade Center, the Transitway project will provide for enhanced service with the integration of Massport’s Airport Intermodal Transit Connector project. This will result in service from South Station to Logan Airport via the CA/T’s Ted Williams Tunnel.
- Also, as a result of a “Restated Project Budget, Scope of Work, and Schedule”, coupled with three CA/T joint construction contracts, prevalent area bidding

market conditions, impacts of encountering differing site conditions and complications during design, the budget has now grown to \$601 million.

- The outstanding issues are both technical and procedural. Technically the project depends on the successful completion of the CA/T joint construction contracts, as well as the sophisticated work associated with constructing a tunnel under existing historic structures. Procedural issues include completion of the review and acceptance of the MBTA's Finance Plan for this project and the finalization of the amended FFGA.
- Los Angeles MTA.*—The Los Angeles Metro Transit Authority Red Line Project was planned, programmed and constructed in phases through a series of “minimum operable segments” (MOSs). The 4.4 mile, 5 station segment of MOS-1 opened for revenue service in January 1993. A 2.1 mile, three station segment of MOS-2 opened along Wilshire Boulevard in July 1996. An additional 4.6 mile, 5 station segment in MOS-2 opened along Vermont Avenue & Hollywood Boulevard in June 1999. The 6.3 mile North Hollywood segment of MOS-3 is currently under construction.
- Currently Segments 1 and 2 are in operation carrying approximately 60,000 passengers per day. The Segment 3, North Hollywood Extension is in the system test and start-up phase with some surface construction work remaining at the station locations. Revenue operations for this extension are currently anticipated in the June/July 2000 timeframe, well in advance of the December 2000 FFGA date.
- The original MOS-3 consists of three extensions, North Hollywood, East Side and Mid City, all funded under a single FFGA and each planned with separate revenue operations dates. The East Side and Mid City extensions as originally planned have been indefinitely suspended and those corridors are the subject of ongoing alternative alignment studies. As a result of LACMTA's financial condition, the FTA took action to segregate the Segment 3 scope, schedule and budget in the three distinct project elements. This action has resulted in the establishment of a Revised and Restated FFGA for the North Hollywood Extension. Like action for the remaining two project elements is pending LACMTA's ongoing corridor studies and project re-evaluations. This may ultimately result in three separate FFGAs pending MTA's ability to demonstrate financial and technical capacity; however, there is no increase in the Federal share of the project.
- The MTA has undertaken a series of regional transit alternatives analysis studies addressing the reformulation of the East Side, Mid City and other transit Corridors. On February 24, 2000, the MTA Board addressed the results of the studies to date for the East Side Corridor. The Board voted to continue and narrow the study of an alignment for the East Side that begins at Union Station and terminates at the intersection of Beverly and Atlantic Boulevard. This alignment includes a section of tunnel through the Boyle Heights area between First and Boyle and First and Lorena streets. In the February meeting, the Board also directed the continuation of studies in the other corridors. Further action addressing the studies was taken at the March 2000 Board meeting, modifying the 'Exposition Right-Of-Way' alignment to be studied for the Mid City/West Side corridor. This alignment is in addition to the alignment designated at the February Board meeting.
- The Bus Consent Decree was established in October 1996 to resolve a law suit brought by the 'Bus Riders Union'. The Decree requires that the bus loading along heavily traveled corridors be reduced in three steps. Initially the loading was to be reduced to a factor of 1.35 (in other words no more than 35 percent of the seated capacity of the bus could be standees) by December 1997. Defining the exact methodology for determination of compliance has been the subject of several hearings before the 'Special Master' identified in the Decree and the Federal Court. The second step is to achieve a load factor of 1.25 by June 2000. The third step requires that the MTA achieve a load factor of 1.2 by June 2001.
- As a result of the interpretation of the load factor requirements, the Special Master ordered the MTA to procure 532 additional buses over the 2,095 it had already planned to purchase. MTA petitioned the Special Master for relief. In May 1999 the Special Master reduced the requirement to 481 additional buses. The MTA has further appealed to the 9th Circuit Court, which has issued a 'stay' of the lower Court's order while it considers the MTA's appeal. The hearing process is anticipated to continue through the June 2000 timeframe.

Question. What triggers a baseline financial review of a new starts full funding grant agreement by Inspector General?

Answer. The OIG has indicated to FTA that there are no specific factors that trigger an audit. Departmental and congressional inquiries are given priority. The OIG attempts to survey projects on a continuing basis to see if any emerging issues such as large cost increases or lengthy schedule delays may indicate vulnerabilities.

Question. Please list all current, pending or anticipated full funding grant agreement projects (those expected to be signed by the end of fiscal year 2001, and included in the administration's budget request). Please also note whether or not each project has a record of decision, when the ROD was approved, and if no ROD, when the ROD is anticipated. Note the date the FFGA was approved, or if pending or anticipated, what approximate date FTA believes the FFGA will be approved. Note the project total cost estimate, the federal share, the local share, and a summary of the most recent project evaluation.

Answer. The following table lists all current, pending or anticipated FFGAs expected to be signed by the end of fiscal year 2001:

CURRENT FFGAs AND PROPOSED FFGAs

| Project | ROD approval date actual/anticipated | FFGA approval date or anticipated 60 day letter to congress | Project total cost estimate | Requested federal 5309 share | Non-5309 federal share | Local share | Project evaluation |
|---|--------------------------------------|---|-----------------------------|------------------------------|------------------------|-------------|---------------------|
| Under FFGA: | | | | | | | |
| Atlanta—North Springs | | 20-Dec-94 | \$463.18 | \$370.54 | | \$92.64 | |
| Los Angeles—North Hollywood | | 14-May-93 | 2,781.09 | 1,416.49 | \$377.15 | 987.45 | |
| Boston—Piers—MOS-2 (So. Sta. to Wo. Tr.) | | 5-Nov-94 | 413.40 | 330.73 | | 82.67 | |
| Portland—Westside/Hillsboro extension | | 29-Sep-92 | 963.72 | 630.07 | 74.00 | 259.65 | |
| Houston—Regional Bus Plan | | 30-Dec-94 | 625.00 | 500.00 | | 125.00 | |
| MARC—Commuter Rail Improvements | | 19-Jun-95 | 131.56 | 105.26 | | 26.31 | |
| Salt Lake City—South LRT | | 2-Aug-95 | 312.49 | 243.99 | 4.00 | 64.50 | |
| San Juan—Tren Urbano | | 19-Jul-99 | 1,653.00 | 307.40 | 400.90 | 944.70 | |
| Denver SW Corridor LRT | | 9-May-96 | 176.32 | 120.00 | 18.88 | 37.44 | |
| SF Area—San Jose Tasman West LRT | | 2-Jul-96 | 325.00 | 182.75 | 57.94 | 84.31 | |
| St. Louis St. Clair MetroLink Extension [Phase IIa] | | 17-Oct-96 | 339.20 | 252.41 | | 86.79 | |
| NJ Urban Core—Hudson-Bergen LRT | | 15-Oct-96 | 992.14 | 604.09 | 281.65 | 106.40 | |
| Sacramento LRT Extension | | 20-Jun-97 | 222.00 | 113.19 | | 108.81 | |
| SF Area—BART Airport Extension | | 30-Jun-97 | 1,510.20 | 750.00 | | 760.20 | |
| Dallas—North Central LRT Extension | | 6-Oct-99 | 517.20 | 333.00 | | 184.20 | Recommended. |
| Subtotal—under FFGA | 11,425.50 | 6,259.92 | 1,214.52 | 3,951.07 | | | |
| Fiscal year 2000 proposed FFGAs: | | | | | | | |
| San Diego—Mission Valley East LRT Extension | Aug. 1998 | 17-Mar-00 ¹ | 431.00 | 330.00 | 13.70 | 87.30 | Highly Recommended. |
| Newark Rail Link (MOS-1) | Nov. 1998 | May 2000 | 207.70 | 142.00 | 25.30 | 40.40 | Highly Recommended. |
| Fort Lauderdale—Tri-Rail Commuter Rail Upgrade | Nov. 1999 | 23-Feb-00 ¹ | 327.00 | 110.50 | 91.41 | 125.09 | Recommended. |

¹Submitted to Congress.

NEW STARTS EVALUATION CRITERIA

Question. How has FTA's application of the TEA-21 new starts project evaluation criteria been modified over the last year? Please discuss any changes in how the evaluation process is performed and how the resulting ratings translate into a funding recommendation from the FTA, or in recommendation to proceed to a full funding grant agreement.

Answer. FTA's application of the New Starts criteria has not been significantly modified over the last year. As was done last year, FTA analyzes the information submitted by project sponsors and assigns a rating of high, medium-high, medium, low-medium, or low to each of the individual project justification criteria and to the measures for local financial commitment. These criteria/measure-specific ratings are then combined into summary project justification and finance ratings. These summary ratings are in turn used to determine overall project ratings according to the following decision rule:

- Highly Recommended.*—Projects must be rated at least medium-high for both finance and project justification;
- Recommended.*—Projects must be rated at least medium for both finance and project justification;
- Not Recommended.*—Projects not rated at least medium in both finance and justification will be rated as not recommended.

These ratings serve as inputs to Federal budget decisions, but do not in and of themselves translate directly into a funding recommendation or commitment. Rather, FTA must also consider (1) the readiness of projects to enter into full funding grant agreements (FFGAs), and (2) the amount of commitment authority available on an annual basis, and where that commitment is allocated. It is these considerations which have been modified and enhanced since last year, as described below:

1. FTA's "project readiness" screen reflects project sponsor's technical capability to construct the project (as required by both ISTEA and TEA-21), and ensures that projects proposed for an FFGA will be ready to enter into such an agreement during the fiscal year for which it is proposed. FTA used such a screen for development of the fiscal year 2000 budget; however, the fiscal year 2001 screen has been enhanced to reflect key project development milestones and issues:

- the anticipated dates for a Record of Decision (ROD) or Finding of No Significant Impact (FONSI) for each project (thus signifying the completion of all Federally-required environmental work); and
- the date that the project sponsor could adequately demonstrate its technical capability to be approved by FTA to advance into final design. Specifically, FTA considered the anticipated date for a Record of Decision (ROD) or Finding of No Significant Impact (FONSI) for each project (thus signifying the completion of all Federally-required environmental work); approval of a project's management plan (PMP); and acceptance of a fleet management plan, and
- the identification of all other outstanding issues and concerns—and actions to be taken by the project sponsor to resolve them—before FTA will enter into an FFGA on the project. Such concerns may include reaching an acceptable level of design to finalize project costs; securing any uncommitted local funding; and addressing all outstanding right-of-way and real estate issues.

For the fiscal year 2001 budget, FTA used its project management oversight resources to carefully review the reasonableness of project development schedules, and established an earlier readiness threshold of summer 2000 to be in final design than for fiscal year 2000 (ROD/FONSI by October 1999). This readiness threshold is consistent with guidance in the Conference Report accompanying the fiscal year 2000 Department of Transportation Appropriations Act. The result of this enhanced readiness review is that FTA is much more confident that all outstanding local issues will have been adequately addressed for each project prior to execution of an FFGA.

2. FTA also considers the overall level of New Starts funding made available in metropolitan areas and states. FTA is hesitant to administer multiple concurrent FFGAs to a single grantee or in a single region, as FTA wants to ensure that a grantee is not be overburdened by multiple commitments and has the financial resources and technical capacity to carry out a project.

Question. Please prepare a table indicating the projects that are likely to be ready for FFGAs in the near term (fiscal years 2000 through 2003). Include current stage of project development, project description, estimated record of decision date, and estimated federal share.

Answer. Nineteen projects are likely to be ready for FFGAs in the near term. These include the 15 projects (pending and recommended FFGAs) in the President's fiscal year 2001 budget request and 4 additional projects expected to be ready in fiscal year 2002. The table follows:

PENDING, RECOMMENDED, AND POSSIBLE FUTURE FULL FUNDING GRANT AGREEMENTS

| Project | Stage | Actual or estimated record of decision date | Requested section 5309 funding | Description |
|--|--------------------|---|--------------------------------|---|
| San Diego—Mission Valley East LRT Extension | FD | Aug. 1998 | \$329,958,000 | A 5.9-mile, 4-station light rail extension of existing Blue Line, from east of I-15 to La Mesa, where it will connect to existing Orange Line; includes elevated, at-grade, and tunnel portions; includes 2 park and ride lots and a new access road. |
| Newark Rail Link (MOS-1) | FD | Nov. 1998 | 141,950,000 | A 1-mile light rail extension of existing Newark City Subway to be built mostly at-grade from Newark's Penn Sta. to Newark's Broad St. Sta.; will add 4 stations to existing 11-station system; MOS-1 is first segment of a proposed 8.8-mile, 15-station extension from downtown Newark to downtown Elizabeth, with a stop at Newark International Airport; will connect two major rail lines that serve downtown Newark with light rail service. |
| Fort Lauderdale—Tri Rail Commuter Rail Upgrade | Completed PE | Nov. 1999 ¹ | 110,500,000 | Will double-track 44.31 miles of 71.1-mile commuter rail corridor (26.79 miles of double-tracking included in Segments 1-4; includes construction/replacement of bridges and modification/renovation of stations to accommodate second mainline track, right-of-way and easement acquisitions, design/construction of new maintenance and layover facility, and revenue rolling stock acquisition; includes safety improvements on entire 71.7 mile corridor. |
| Hudson-Bergen MOS-2 | FD | Oct. 1996 | 721,600,000 | A 6.1-mile, 7-station extension connecting 3 intermodal transfer sites and 2 park and ride lots; will be constructed in 3 phases: 5.1-miles extending north from Hoboken Terminal through the Weehawken Tunnel below Bergenline Ave. to an at-grade station at Tonnelle Ave. in Jersey City, the tunnel itself, and a 1-mile southerly extension from 34th St. to 21st St. in Bayonne; the second of 3 minimum operable segments of a \$2 billion, 20.1-mile, 30-station LRT. |
| Portland—Interstate MAX LRT Extension | FD | Jan. 2000 | 257,500,000 | A 5.6-mile, 10-station extension of the Metropolitan Area Express (MAX) light rail system, connecting Portland's CBD with the regional Exposition Center in north Portland; will connect with existing 33-mile East/West MAX line at Rose Quarter Sta. |
| Seattle—Central Link LRT MOS-1 | FD | Jan. 2000 | 500,000,000 | A 7.2-mile, 10-station light rail transit project (Link LRT) running southeast from NE 45th St. to South Lander St., operating through the 1.6-mile Downtown Seattle Transit Tunnel; first minimum operable segment of a 23.5-mile, 23-station LRT system running north to south from Northgate, through downtown Seattle, Southeast Seattle and the cities of Tukwila and SeaTac; LRT is one element of a \$3.914 billion regional transit plan. |
| Chicago—Douglas Branch Reconstruction | Completed PE | May 2000 | 320,100,000 | Complete reconstruction of 6.6-mile, 11-station Douglas Branch of Blue Line, extending from Cermack Avenue to a point just west of downtown Chicago; addresses high maintenance and operating costs resulting from age-related deterioration since segments on line opened from 1896 to 1910, with upgrades made through mid-80s. |

PENDING, RECOMMENDED, AND POSSIBLE FUTURE FULL FUNDING GRANT AGREEMENTS—Continued

| Project | Stage | Actual or estimated record of decision date | Requested section 5309 funding | Description |
|--|--------------------|---|--------------------------------|--|
| Pittsburgh Stage II LRT Reconstruction | FD | Feb. 1996 ¹ | 100,200,000 | First segment of second phase of reconstruction of old 25-mile trolley lines to modern LRT standards; includes reconstruction of 6.3 miles on both the Overbrook Line and a portion of the Library Line, construction of 2,400 park-and-ride spaces, and purchase of 28 LRT vehicles. |
| Memphis—Medical Center Extension | PE | Apr. 2000 ¹ | 55,300,000 | A 2.5-mile, 6-station light rail extension to the Main St. Trolley/Riverfront Loop village rail system, expanding service from the CBD east to the Medical Center area; will be designed to accommodate light rail vehicles but vintage rail cars will be used until proposed regional LRT line is implemented and fleet of modern LRT vehicles is acquired. |
| Salt Lake City—CBD to University LRT | FD | Dec. 1999 | 84,600,000 | A 2.5-mile, 4-station light rail extension in eastern Salt Lake City, from the downtown area to Rice-Eccles Stadium on the University of Utah campus; will connect with existing 15-mile North/South LRT line at Main Street. |
| Minneapolis—Hiawatha Corridor LRT | Completed PE | Apr. 2000 | 274,300,000 | An 11.5 mile, 15-station light rail line linking downtown Minneapolis, the Minneapolis-St. Paul International Airport, and the Mall of America in Bloomington; will operate along the corridor following Hiawatha Avenue and Trunk Highway 55; will tunnel under runways and taxiways for .8 miles. |
| Denver—Southeast Corridor LRT | Completed PE | Mar. 2000 | 525,000,000 | A 19.4-mile, 14-station double-tracked light rail line between downtown Denver and Lincoln Ave. in Douglas Cnty. along I-25, with a spur along I-225 to Parker Rd. in Arapahoe Cnty.; will operate over an exclusive right-of-way and connect with existing Central Corridor LRT in downtown Denver and Southwest LRT currently under construction; part of a multimodal program of highway and transit improvements. |
| Baltimore—Central LRT Double-Tracking | FD | Summer 2000 | 120,000,000 | Will double-track 8 single-track sections totaling 9.4 miles of 29-mile Central Corridor Light Rail Line, all of which are almost entirely in existing right-of-way and located between Timonium and Cromwell Station/Glen Burnie; includes construction of second station platforms at 4 stations, bridge and crossing improvements, bi-directional signal system with traffic signal preemption on Howard St., and catenary and other equipment and systems. |
| Washington, DC/MD—Largo Extension | Completed PE | Feb. 2000 | 260,300,000 | A 3.1-mile, 2-station extension of the Blue Line from Addison Rd. to Largo Town Center in Prince George's Cnty., MD; Maryland Mass Transit Administration managed project through PE, WMATA will undertake final design/construction and operate as an integral part of regional Metrorail system. |

| | | | | |
|---|-------------|------------------------------|-------------|--|
| Chicago—Metra Southwest Corridor Commuter Rail ... | PE | Summer 2000 | 103,860,000 | An 11-mile, 2-station extension to South West commuter rail line, a 29-mile line providing service from Orland Park, IL to downtown Chicago; extends from existing station at 179th St. in Orland Park southwest to Manhattan, IL; includes 3 miles of double-tracking, parking facilities, track/signal/station improvements, expansion of 2 existing rail yards, construction of third rail yard, rehab of bridges, purchase of 2 diesel locomotives and 13 bi-level passenger cars, and relocation of downtown Chicago terminal from Union Sta. to LaSalle St. Sta. |
| San Diego—Oceanside-Escondido Rail Project | PE | Mar. 1997 ¹ | 152,100,000 | A 23.7-mile, 15-station rail transit line using diesel multiple unit rail vehicles; 22 miles in on existing freight railroad corridor running east from Oceanside through Vista and San Marcos to Escondido; includes 1.7 miles of new right-of-way to serve campus of California Statue University San Marcos. |
| Chicago CTA—Ravenswood Line Expansion | PE | Aug. 2000 ¹ | 245,500,000 | Station expansions and tracking improvements to increase capacity on the 9.3-mile, 19-station Ravenswood Line (AKA Brown Line); built between 1900 and 1907, line extends from Ravenswood on the north side of Chicago, past Wrigley Field to the downtown Loop. |
| Miami—South Miami-Dade Busway Extension | PE/FD | Aug. 2000 ¹ | 61,300,000 | An 11.5-mile, 12-station busway extension to existing 8.3-mile South Busway; will run along US Route 1, between Cutler Ridge Mall near SW 200 St. and Florida City; final design on 5-mile portion is underway and remaining 6.5-mile segment is in preliminary engineering. |
| Cleveland—Euclid Corridor Improvement Project | PE | Aug. 2000 ¹ | 135,000,000 | A 9.8-mile transit corridor along Euclid Ave. from Public Square in downtown Cleveland east to University Circle; includes creation of a 2.43-mile exclusive bus rapid transit segment (BRT), improvements to two streets, and creation of a Transit Zone with exclusive transit lanes on two streets; BRT will be served by 60-foot electric trolleybuses with doors on both sides of bus. |

¹ Fining of no significant impact instead of ROD.
PE—Preliminary Engineering.
FD—Final Design.

TIFIA LOANS

Question. Please list any new starts projects or other transit grantees that received TIFIA loans in fiscal years 1999 and 2000, and the amount of each loan. What are the terms of these loans? What transit projects currently have pending applications for the next round of TIFIA loans?

Answer. To date, only two transit projects have been approved to receive credit assistance through TIFIA. The Washington Metropolitan Area Transit Authority (WMATA) received a \$600 million guarantee on a loan made by Lehman Commercial Paper, Inc. The guarantee allows WMATA to advance several major contracts for its capital improvement program. The Puerto Rico Highway and Transportation Authority (PRHTA), is currently negotiating a \$300 million loan for the Tren Urbano, Phase I (a FFGA project). The purpose of the loan is to assure timely completion of the project and to lower the capital cost of the local matching funds. The next phase (FY-2000) of the TIFIA program has not been announced to date, so there are no pending applications. However, FTA has received expressions of interest from major transit projects in New York, New Jersey, and California.

LOS ANGELES TRANSIT PROJECTS

Question. On February 24, 2000, Los Angeles County MTA (LACMTA) Board selected and approved locally preferred alternatives for the Eastside, Mid City/Westside, and San Fernando Valley corridors of the Los Angeles Metro project. Please describe each of the three corridor project alternatives that were selected, and summarize the current level of completion, federal funding received thus far, estimated total project cost, federal share, local match percentage and amount, and estimated construction/completion schedule for each.

Answer. The LACMTA Board selected bus rapid transit (BRT) options for the Mid City and San Fernando Valley corridors and approved further consideration of BRT and Light Rail Transit (LRT) in the Eastside corridor. The next step is for the Board to formally identify the Locally Preferred Alternatives (LPA) in accordance with FTA's major investment requirements. The following excerpt from the Board meeting provides additional description of the corridor alternatives:

—*Eastside.*—Light Rail Transit (LRT) from Union Station to Atlantic via First Street with the specific choice of tunneling through Boyle Heights from 1st and Boyle to 1st and Lorena, then transitioning to Third Street and proceeding east via Third Street/Beverly Boulevard to Atlantic, with the policy direction from the Board that the preferred mode of transportation would be light rail.

—*Mid-City/Westside.*—Bus Rapid Transit (BRT) on Wilshire Boulevard from Vermont Avenue to downtown Santa Monica, with consideration of minimal operable segments to San Vicente Boulevard (east of La Cienega), Santa Monica Boulevard and San Vicente Boulevard (west of I-405), including a study of a busway route

—*San Fernando Valley.*—Bus Rapid Transit (BRT) along the Burbank-Chandler right-of-way from the North Hollywood Red Line Station to Warner Center, with consideration of a minimal operable segment between Woodman Avenue and Balboa Boulevard with rapid bus connections at each end. With completion of the Regional Alternatives Analysis and identification of LPA's, LACMTA can request FTA approval to enter Preliminary Engineering and develop the Draft and Final Environmental Impacts. A Section 5309 grant of \$11.9 million was provided to MTA to support the planning effort for the reformulated Mid City and East Side projects.

The capital funding plan adopted by the MTA Board at its February 24 meeting is displayed below. As the projects are yet to be defined, no schedule for their completion has been developed and the Total Cost figures should be viewed as very rough order estimates.

PRELIMINARY CAPITAL FUNDING PLAN EXCERPT FROM 2/24/00 MTA BOARD MEETING MINUTES

[In millions of dollars]

| Corridor | Total cost in fiscal year 2004 dollars | Federal FFGA | SB45 ¹ | Local | New state |
|-----------------|--|--------------|-------------------|-------|-----------|
| East Side | 704 | 352 | 116 | | 236 |
| Mid-City | 590 | 295 | 44 | | 251 |

PRELIMINARY CAPITAL FUNDING PLAN EXCERPT FROM 2/24/00 MTA BOARD MEETING MINUTES—
Continued

[In millions of dollars]

| Corridor | Total cost in fiscal year 2004 dollars | Federal FFGA | SB45 ¹ | Local | New state |
|---------------------------|---|-----------------|-------------------|------------|------------|
| San Fernando Valley | 291 | | | \$146 | 145 |
| Total | 1585 | 647 | 160 | 146 | 632 |

¹ State SB45 funds in the amount of \$116 million for the East Side and \$44 million for Mid City reserved by prior Board action will be applied to those corridors.

LOS ANGELES TRANSIT PROJECTS

Question. Does the total combined federal cost of the selected panel of projects for Eastside, Mid City/Westside, and San Fernando Valley match the remaining amount of federal contingent commitment authority for Los Angeles Metro?

Answer. Los Angeles MTA has not selected a panel of projects therefore the federal cost estimate of the projects for Eastside, Mid City/Westside, and San Fernando Valley is not known at this time.

Question. What is FTA's official position on the remaining federal contingent commitment authority for Los Angeles Metro? What is the amount, excluding those funds associated with the North Hollywood FFGA?

Answer. All "contingent" commitments made during ISTEA were no longer "contingent" once the FTA new starts program was re-authorized by TEA-21. Thus, in principle, all the Full Funding Grant Agreements transacted during ISTEA that included "contingent" commitments will be honored with the 49 U.S.C. § 5309 new starts commitment authority currently available under TEA-21.

Insofar as the Mid-City and Eastside corridors of Los Angeles MOS-3, however, former FTA Administrator Linton wrote to LACMTA on October 28, 1999, stating "As you know, we advised you on July 15, 1999 that FTA no longer had a Federal commitment in either the Eastside or Mid-City corridors because both corridors lacked active projects." The letter further stated that FTA would consider the prior Federal commitment as an "other factor" in evaluating the identified projects once the LACMTA identified viable projects in those corridors but the projects will have to go through the rating process and be evaluated against competing uses of the funds. There remains \$647.11 million of the original commitment to the projects that has not been appropriated.

ST. LOUIS METROLINK PROJECT

Question. Please update the Committee on what steps FTA and the project sponsors for the proposed St. Clair extension to Scott Air Force Base are taking to address concerns raised by the House and Senate Appropriations Committees and the Senate Banking Committee.

Answer. FTA is continuing to work with the Bi-State Development Agency to provide further evidence of the benefits of the project, including anticipated economic development at and around the proposed Scott-Shiloh station. Acting Administrator Fernandez and the Inspector General Ken Meade met with local officials on April 20 to further discuss how the Committee's concerns can be satisfactorily addressed.

SALT LAKE CITY TRANSIT PROJECTS

Question. Please list all the Salt Lake Organizing Committee requests for funding in fiscal year 2001. Which of these projects have been requested in the administration's budget?

Answer. The Department and FTA are supporting up to \$50 million in Federal Transit funding to assist mass transportation for the 2002 Winter Olympics and Paralympics in Salt Lake City. The fiscal year 2000 Departmental Appropriations Act provided approximately \$15 million for Olympics and Paralympics transportation activities, thus, the administration's budget is requesting \$35 million in appropriations under the Section 5309 Bus and Bus Facilities program, consistent with the limit on the Department's and FTA's support for the games. The administration's budget does not request funding for particular projects, per se, but recently, in response to our request, the Salt Lake Organizing Committee submitted prelimi-

nary information outlining its Federal transit funding requests for fiscal year 2001 for the 2002 Winter Olympics and Paralympics, as follows:

[In millions of dollars]

| | |
|-----------------------------------|-----------|
| Planning | 2 |
| Venue Loading and Unloading | 5 |
| Transit Bus | 8 |
| Bus Maintenance Facilities | 2 |
| Park-and-Ride | 18 |
| Total | 35 |

TREN URBANO

Question. Please prepare a table showing the annual sources and uses of funds to pay for the capital costs of Tren Urbano at the current \$1,676,000,000 cost to complete. Identify the specific amounts and sources of local and federal funding (Section 3, FHWA flex funding, block grant transfers, or other federal) planned to complete the current construction program, on an annual basis.

Answer. The table showing the annual sources and uses of funds to pay for the capital costs of Tren Urbano at the current \$1,676,000,000 cost to complete is below.

[In millions of dollars]

| | Section 5309 | Section 5307 | FHWA | Total Federal | State | Total |
|---------------------|-----------------|-----------------|--------------|------------------|--------------|----------------|
| 1996 | 7.4 | 20.8 | | 28.2 | 8.4 | 36.6 |
| 1997 | 6.1 | 20.2 | | 26.3 | 87.2 | 113.5 |
| 1998 | 15.0 | 20.0 | 31.7 | 66.7 | 268.3 | 335.0 |
| 1999 | 19.8 | 20.0 | 108.2 | 148.0 | 180.9 | 328.9 |
| 2000 | 82.0 | 20.0 | 40.0 | 142.0 | 199.8 | 341.8 |
| 2001 | 118.0 | 20.0 | 40.0 | 178.0 | 153.7 | 331.7 |
| 2002 | 59.1 | 20.0 | 40.0 | 119.1 | 47.0 | 166.1 |
| Subtotal | 307.4 | 141.0 | 259.9 | 708.3 | 945.3 | 1,653.6 |
| Prior to FFGA | | 5.0 | | 5.0 | 17.0 | 22.0 |
| Total | 307.4 | 146.0 | 259.9 | 713.3 | 962.3 | 1,675.6 |

Question. Please prepare a table showing the annual sources and uses of funds to pay for the capital costs of the Minillas extension of Tren Urbano. Identify the specific amounts and sources of local and federal funding (Section 3, FHWA flex funding, block grant transfers, or other federal) planned to complete the current construction program, on an annual basis.

Answer. Per Financial Plan dated August 1999, the PRHTA proposed to pay for the capital costs associated with Minillas from two sources: (1) Puerto Rico Highway and Transportation Authority (PRHTA) funds, including the proceeds of PRHTA bonds and short-term borrowing; and (2) FTA capital program funds (80 percent).

| Fiscal year | Section 5309 | Local share | Total |
|---------------------|-----------------|-------------|--------------|
| 1999 | | \$1.2 | \$1.2 |
| 2000 | \$10.8 | 0.7 | 11.5 |
| 2001 | 57.8 | 14.5 | 72.3 |
| 2002 | 62.9 | 15.7 | 78.6 |
| 2003 | 70.4 | 17.6 | 88.0 |
| 2004 | 110.8 | 27.7 | 138.5 |
| 2005 | 69.9 | 17.5 | 87.4 |
| Totals | 382.6 | 94.9 | 477.5 |

SAN FRANCISCO BART

Question. What is the current schedule for completion of the BART extension to the San Francisco Airport? When will revenue service on this extension begin? How is the schedule for the on-airport project, which is being constructed with airport revenues, coordinated with the larger transit extension schedule?

Answer. The overall completion of the Bay Area Rapid Transit District (BART) extension to the San Francisco Airport which includes the maintenance shop modifications is January 2003. The current Revenue Operation Date (ROD) for service on the 8.7 mile subway extension to the San Francisco Airport is July 1, 2002. The work at the airport station, which is being constructed with airport revenues, is 82 percent complete which is ahead of the schedule for the larger transit extension.

Question. Has all right-of-way acquisition been completed for the Colma to Millbrae BART extension?

Answer. Approximately 95 percent of the right-of way has been acquired and the remaining acquisitions are not critical to the current schedule.

Question. What is the current estimate of the cost to complete the BART extension to the San Francisco Airport? How does this estimate compare to the original estimate at the time the FFGA was negotiated? Please identify by major cost activity or element what accounts for the increases in cost?

Answer. The current estimate for the Bay Area Rapid Transit District (BART) Extension to the San Francisco Airport is \$1,483 million. The original Cost Estimate in the Full Funding Grant Agreement was \$1,167 million. The cost increase of \$316 million resulted from various factors:

| <i>Activity or element</i> | <i>Increase</i> |
|---|-----------------|
| Construction increased due to competitive factors, greater than budgeted escalation, omission of some scope from cost estimates and a premium for the risks associated with design-build implementation | 146 |
| Third party contracts increased due to additional oversight of the design-build contractors, more services required to purchase real estate than anticipated and an early start on public relations efforts | 63 |
| Force account costs increased due to re-evaluation of the cost of work to be performed | 7 |
| Right-of-way increased due to greater than anticipated real estate escalation and unanticipated utility relocation costs | 65 |
| Finance costs increased due to lower than anticipated federal appropriations | 19 |
| Project administration increased due to extending project and support staff through the revenue date and extending core project staff through claims and contract closeout | 16 |
| Total | 316 |

GENERAL PROVISIONS

Question. Section 331 of Public Law 106-69 transferred funds made available under that Act and any prior year unobligated funds for the Charleston, South Carolina Monobeam Corridor project to the transit planning and research account. Please describe the Monobeam Corridor project; outline the project's funding history, including what funds presently remain unobligated; and explain why this project is more appropriately funded in the transit planning and research account than in the capital investment grants account.

Answer. The City of Charleston ("City"), South Carolina teamed up with FUTREX, Inc. to develop and conduct a full scale demonstration of FUTREX's System 21 Monobeam, elevated rail transit technology on a segment of about 1.2 miles of track and four vehicles. FUTREX anticipates that capital cost of the system would be in the range of one-half to one-third of competing transit technologies. Some of the advantages claimed of the system are its low footprint and modular light weight design while being capable of providing two-way, bi-directional operation on one slender elevated triangular guideway at passenger-carrying capacities exceeding 20,000 passengers per hour per direction. The full scale demonstration is estimated to cost about \$35 million, which the partnership expects to raise from public and private sources. When fully developed, the City intends to use System 21 to link major employment, commercial and population centers in the greater Charleston area such as the Charleston International Airport, a new intermodal transportation center, the coliseum/convention center complex, various commercial

complexes and hotels, and the Charleston Visitor and Regional Transportation center.

In fiscal year 1998, Congress earmarked \$1.5 million for Charleston, SC Monobeam rail project. The conference agreement provided the \$1.5 million for conceptual planning and engineering, and related work for a full-scale demonstration monobeam rail line in the Charleston, South Carolina area. The available funding of \$1,495,150 has been obligated with Futrex, Inc. providing \$403,431 (approximately 21 percent match) as local share. Prior to the earmark, FUTREX and the City built a one-quarter scale model of the system with partial funding of \$1,250,000 from the Economic Development Administration of the U.S. Department of Commerce.

In fiscal year 1999, Congress earmarked \$2.2 million (\$2,183,615 available after setting aside 0.75 percent for oversight). Obligation of this increment is pending.

Charleston Area Regional Transportation Authority (CARTA), the recipient of federal transit funds for the City of Charleston, and FUTREX are proposing to use the fiscal year 1999 earmark for the purpose of completing approximately 45,000 hours of final design and engineering of System 21 monobeam vehicles. Provided there are sufficient funds available upon completion of final design and engineering, the Monobeam Partnership will commission the fabrication of at least one of the four vehicles required for the demonstration of a 1.25-mile System 21 Prototype installation in Charleston. Futrex will provide a minimum of fifty percent local match for a total project budget of \$4.4 million for the vehicle initiative.

For fiscal year 2000, Congress earmarked \$2,500,000 (\$2,452,697 available take-down of 0.75 percent for oversight and a reduction of 1.15 percent per the Consolidated Appropriations Act for fiscal year 2000). Obligation of fiscal year 2000 funds is awaiting development of the project scope of work.

Funding the Monobeam under the Transit Planning and Research Account would minimize Federal requirements as compared to those required under the New Starts program.

Question. Section 323 of Public Law 106-69 permanently amended TEA-21 to provide that Vermont and Oklahoma are authorized to use transit formula grants for capital improvements to, and operating assistance for, intercity passenger rail service. Have either of these States applied transit formula funds for intercity passenger rail purposes in fiscal years 1998, 1999, or 2000?

Answer. Vermont used \$668,000 of formula funds in fiscal year 1999 and plans to use additional formula funds in fiscal year 2000 for intercity passenger rail purposes. To date, Oklahoma has not used formula funds for intercity passenger rail service.

Question. Please explain what the effect of the proposed new general provision section 327 in the budget request, regarding tribal governments, will be.

Answer. This General Provision is requested as part of the Job Access and Reverse Commute program set-aside for Indian Tribes. This change in Section 3037 of TEA-21 will allow tribal entities to apply for job access grants directly without being sponsored by the State. This will allow them sovereignty in receiving job access funds.

Question. Please explain what the effect of the proposed new general provision section 328, regarding technical direction and documentation of research and technology projects, will be.

Answer. The effect will be that sufficient funds will be set aside from every project to enable FTA to exercise responsible stewardship over project implementation and to ensure that the results are fully documented and shared with the transit community. Currently, that expense is negotiated with the grantee. This method is not always successful, depending on the flexibility of the grantee's internal budget. In the case where the grantee is not willing to set aside third party project review and reporting funds, the project may or may not be reviewed depending on the availability of project managers in FTA headquarters or regional offices and will likely not be documented in a report. This provision will require all grantees to make provisions for an outside review along with full documentation of the project. This process follows the requirements outlined in the Government Performance and Results Act (GPRA) mandating fully documented project planning, implementation, and review.

QUESTIONS SUBMITTED TO THE RESEARCH AND SPECIAL PROGRAMS ADMINISTRATION

QUESTIONS SUBMITTED BY SENATOR RICHARD C. SHELBY

NEW POSITIONS

Question. Please prioritize all the new positions requested for RSPA, including positions for Pipeline Safety.

Answer. The positions are identified as follows: (Funding for all new positions are requested at one-half of a FTE for fiscal year 2001.)

- Five positions, Office of Emergency Transportation. First position for a Regional Emergency Transportation Manager
- Second position for a Operations Chief
- Third position for a National Security Planner
- Fourth position for a National and International Disaster Specialist
- Fifth position for a Mitigation and Recovery Specialist
- Four positions, Office of Pipeline Safety. All four positions are for Inspectors to inspect new construction and to distribute greater volume of inspector time to damage prevention.
- Two positions, Office of Research and Technology. Both positions support the University Marine Transportation Grants Program.

HAZARDOUS MATERIALS SAFETY PROGRAM PERFORMANCE

Question. Please prepare a table indicating various measures of both the overall performance and the impacts of your program, showing statistical trends for each of the last ten years. Please include data on the number of serious releases (or an equivalent measure), fatalities, injuries, costs, compliance measures, etc.

Answer. The following table is provided:

| Year | Total incidents | Serious ¹ incidents | Fatalities | Injuries | Damages |
|------------|-----------------|--------------------------------|------------|----------|--------------|
| 1990 | 8,879 | 402 | 8 | 423 | \$32,353,276 |
| 1991 | 9,110 | 405 | 10 | 439 | 38,350,611 |
| 1992 | 9,310 | 376 | 16 | 604 | 35,164,057 |
| 1993 | 12,830 | 358 | 15 | 627 | 22,801,551 |
| 1994 | 16,087 | 427 | 11 | 577 | 44,185,413 |
| 1995 | 14,743 | 408 | 7 | 400 | 30,903,281 |
| 1996 | 13,950 | 466 | 120 | 1,175 | 46,849,243 |
| 1997 | 13,995 | 422 | 12 | 225 | 33,393,764 |
| 1998 | 15,349 | 432 | 13 | 198 | 45,796,084 |
| 1999 | 16,977 | 365 | 9 | 483 | 31,443,336 |

¹ RSPA defines a serious hazardous materials incident as one that involves a fatality or major injury due to a hazardous material, closure of a major transportation artery or facility or evacuation of six or more persons due to the presence of a hazardous material, or a vehicle accident or derailment resulting in the release of a hazardous material.

PERSONNEL ISSUES AND OPERATING EXPENSES

Question. What steps have been taken to comply with the staffing level that was approved by the conferees in fiscal year 2000? What is your current FTE strength? Why does the budget justification reflect a funding level of ½ work year per position for the annualization of fiscal year 2000 new positions?

Answer. The Office of Hazardous Materials Safety (OHMS) and the Research and Special Programs Administration's (RSPA) personnel office worked to recruit suitable candidates for all current and anticipated vacancies. Enacted appropriations for fiscal year 2000 gave OHMS a full-time permanent (FTP) position ceiling of 129 and full-time equivalent (FTE) funding for 125.5 positions. We currently are funding 121 FTE on board and are actively recruiting to fill the remaining positions, including new regional technical assistance positions and recent attrition vacancies. OHMS' new positions were requested and funded at one-half FTE each to reflect hiring no sooner than April of this fiscal year. Funding new positions for one-half of the first fiscal year is typically requested and enacted to allow time to fulfill administrative requirements (e.g., construction of work space, development of position descriptions and standards) for selecting highly qualified people.

Question. Please provide a table showing the authorized number of inspectors for each of the last three fiscal years, and the actual number of inspectors on-board during those periods.

Answer. The following table shows the authorized number of inspectors and the actual number of inspectors on-board for the last three years.

| Fiscal year | Authorized | On-board |
|-------------|------------|----------|
| 1997 | 37 | 36 |
| 1998 | 37 | 34 |
| 1999 | 37 | 37 |

Question. For each of the key offices under the Associate Administrator for Hazardous Materials Safety, please prepare a breakout of the number of personnel assigned to each office for each of the last three fiscal years, the grade level, and number of current vacancies.

Answer. The following table summarizes the on-board staff count, grade levels, and current vacancies in OHMS for the last three years.

| Office | Fiscal year | | | | | |
|---|--------------------------------|---|--------------------------------|---|--------------------------------|---|
| | 1998—as of 4/15/98 | | 1999—as of 4/5/99 | | 2000—as of 4/5/00 | |
| | No. of positions/ vacancies | Grade levels | No. of positions/ vacancies | Grade levels | No. of positions/ vacancies | Grade levels |
| Associate Administrator & Int'l Standards | 6/1 | 2-SES 1-15 1-14 1-13 1-7 | 6/0 | 2-SES 1-15 1-14 1-13 1-8 | 6/1 | 1-SES 1-15 1-14 1-13 1-8 1-7 |
| Standards | 20/1 | 2-15 5-14 2-13 4-12 3-11 3-7 1-6 | 19/3 | 2-15 5-14 3-13 4-12 1-11 1-9 2-7 1-6 | 17/2 | 2-15 3-14 3-13 4-12 2-9 2-7 1-6 |

| Totals | 117/12 | | 117/12 | | 122 ¹ /10 | |

¹ Includes 2 positions for student employees working part time.

INFORMATION SYSTEMS

Question. Is intrastate incident data now being reflected in your hazardous materials information system analyses? If so, what is the value of this information and how is it being disseminated to the states and local governments that might benefit from this resource?

Answer. RSPA has received an increased number of reports concerning intrastate shipments—2,512 in 1999, compared with 2,031 in 1997. We expect this number to continue to grow as more intrastate carriers become aware of the reporting requirement.

The addition of intrastate incident data will enhance RSPA's ability to increase safety. We expect that the new reports may reveal risks specific to intrastate hazardous materials shipments. These new data will be used to design new outreach, enforcement, and rulemaking activities.

State and local government agencies have several alternatives in accessing RSPA's hazardous materials incident data. Those agencies can request data directly from RSPA. In 1999, 51 state and local government agencies requested incident data from RSPA, compared to 20 agencies in 1998. They can also establish accounts with RSPA, and access the incident data directly. Currently, 63 state and local government agencies (from 27 different states) have direct access to the HMIS. Lastly, state and local government agencies can access summarized incident data through the Hazmat Web page on the Internet. These data are updated monthly and are available to all Internet users.

RESEARCH AND ANALYSIS

Question. What was accomplished with the additional funds provided in fiscal year 1999 for research to address regulatory issues involving propane gas services?

Answer. In support of a negotiated rulemaking (HM-225A), RSPA contracted with the Volpe Center to provide technical assistance to the Office of Hazardous Materials Safety (OHMS) during the development of new regulations governing the transportation and unloading of liquefied compressed gases. This support addressed issues related to automatic controls that minimize product discharge during hose rupture of MC 330 and MC 331 vehicles (HM-225A). A computer model was developed to determine whether pressure or flow sensing devices installed to detect hose failure would always detect significant changes in pressure or flow rate due to a hose failure. Results were documented in a report entitled "Analyses Investigating Hose/Pipe Shear Failures on Propane Bob-Tail Delivery Trucks". In addition, Volpe provided general technical assistance during the negotiated rulemaking process. The Argonne National Laboratory and the University of Illinois also applied the HMIS database to model cargo tank motor vehicle accident scenarios and to estimate average fatalities and injuries associated with the transportation of liquified compressed gases over extended periods of time using computer simulations. This work was a key component to risk analyses performed by RSPA in support of the rulemaking.

RSPA is continuing to work with the Volpe Center, and the regulated industry to monitor the development and testing of emergency discharge control technology during the two-year implementation period authorized in the final rule issued under HM-225A.

INSPECTION AND ENFORCEMENT PROGRAM

Question. What has RSPA done, in conjunction with Federal Motor Carrier Safety Administration, to develop an electronic intrastate database to determine the effec-

tiveness and impacts of HM-200? What is RSPA's technical and financial involvement? What is the status of that project? Are funds requested for that activity in fiscal year 2001? What is the status of this intrastate database?

Answer. We have worked with FMCSA as it develops an intrastate database intended to support an enforcement strategy and to determine the effectiveness of HM-200 in contributing to a reduction in highway-related incidents involving the intrastate transportation of hazardous materials. RSPA staff have participated in meetings addressing the planning of the new database to ensure cross-compatibility with other hazardous materials data sources. RSPA has not provided funds for this effort and is not requesting funding for the project in fiscal year 2001.

Question. Please calculate the average settlement percentage [amount of civil penalties collected for valid claims divided by the amount of civil penalties originally assessed for valid claims] for those hazmat cases. Please provide data comparable to those provided last year.

Answer:

| | 1997 ¹ | 1998 ¹ | 1999 ¹ |
|----------------------------|-------------------|-------------------|-------------------|
| Penalties Proposed | \$1,613,295 | \$2,053,196 | \$2,152,534 |
| Penalties Collected | \$1,167,154 | \$1,412,593 | \$1,512,323 |
| Percentage Collected | 72 | 69 | 70 |

¹ Does not include tickets.

| | 1997 | 1998 | 1999 |
|--------------------------------------|-----------|-----------|-----------|
| Ticket Proposed | \$183,075 | \$301,343 | \$342,204 |
| Penalties Ticket Collected | \$179,925 | \$300,602 | \$340,897 |
| Penalties Percentage Collected | 98 | 99.8 | 99.6 |

Question. Please discuss improvements in your training and outreach program since last year. How were the new positions that were approved last year used? How will they be used in the future? With the new positions that were just approved, why is it necessary to contract for part-time staff support for each of the five regional offices?

Answer. In fiscal year 1999 RSPA enhanced its training and outreach efforts by partnering with state drivers license issuing offices to promote compliance by providing informational materials and technical assistance. We also increased cooperative efforts with State Emergency Response Commissions and Local Emergency Planning Committees, the primary beneficiaries of the HMEP grants program, and developed multi-modal information packages and field compliance guides to educate entities on areas of high risk and noncompliance. We increased industry awareness of human error as a major cause of incidents.

RSPA is currently advertising to fill the new fiscal year 2000 technical assistance positions. RSPA will target high visibility activities aimed toward industry, labor unions and employee organizations and associations through partnering to develop training materials and aids. RSPA will specifically target hazmat operations through national and local industry associations. Our broad based approach will assure the widest possible coverage of this critical information. Over 50 percent of the new materials developed will be targeted at areas of noncompliance, high risk, and new regulatory requirements.

The new positions in each regional office are targeted for specific training and technical assistance activities and will not replace the support staff necessary to provide continuing administrative and clerical support to the offices.

Question. Please present data on the number of times that each of your inspectors working in the regional offices conducted joint inspections or provided training for state officials.

Answer. In 1999, RSPA hazardous materials inspectors conducted 57 inspections with state agencies, some of which were joint inspections with other Federal inspectors and/or included training of state inspectors. RSPA also made 21 presentations to state agencies, some of which included inspector training, and held nine meetings with state inspectors on enforcement issues.

SAFE FOOD TRANSPORTATION

Question. What did OHMS do since last year to implement any aspect of the SFTA?

Answer. RSPA conducted limited monitoring of United States Department of Agriculture (USDA) and Food and Drug Administration (FDA) activities and consulted with USDA and FDA staff. RSPA provided expertise on hazardous materials and other transportation safety issues in support of USDA and FDA safety activities.

Question. What activities do you anticipate for fiscal year 2001 and for the rest of fiscal year 2000?

Answer. RSPA will continue the limited monitoring and support of United States Department of Agriculture (USDA) and Food and Drug Administration (FDA) activities.

SHIPPER AND CARRIER REGISTRATION

Question. Please display the total registration fees collected for each of the last five fiscal years by the shipper and carrier registration program, broken out by emergency response activities and administrative costs. How much do you expect to collect during fiscal year 2000 and during fiscal year 2001?

Answer.

EMERGENCY PREPAREDNESS FUNDS RECEIPTS

[In millions of dollars]

| Registration year | Processing fee receipts | Grants program receipts | Total receipts |
|-------------------|-------------------------|-------------------------|----------------|
| 1995 | \$1.426 | \$6.873 | \$8.299 |
| 1996 | 1.419 | 6.910 | 8.329 |
| 1997 | 1.527 | 7.372 | 8.899 |
| 1998 | 1.650 | 7.970 | 9.620 |
| 1999 | 1.582 | 7.635 | 9.218 |
| 2000 (est.) | 1.200 | 14.300 | 15.500 |
| 2001 (est.) | 1.200 | 14.300 | 15.500 |

Question. Please describe the shipper and carrier registration program's industry technical assistance and customer assistance program.

Answer. RSPA continues to enhance its support to the regulated community to assist in meeting the registration requirements. RSPA provides materials and detailed instructions on program requirements. We maintain two customer assistance centers to provide direct assistance via telephone. We are now developing an Internet-based registration process, to offer on-line registration with credit card payment capability.

Question. Please outline the registration fee assessment, collection, and grant disbursement cycle.

Answer. In May of each year RSPA mails registration information and application forms to companies that have previously registered and companies whose names have recently been added to the FMCSA motor carrier and shipper census or who have recently been named as a carrier or shipper on a hazardous materials incident report. Between May and September of each year, approximately 85 percent of the companies that will register for the year submit the application and payment. Late in September of each year RSPA makes grant allocations, distributing the funds available to state and Indian tribal governments for their use in the following fiscal year.

Question. In April 1998, the DOT Inspector General published a management advisory on the hazardous materials registration program which found that RSPA does not collect the full amount of potential registration fees. Please discuss your response to the IG report and how its recommendations were implemented. Please submit data indicating the amount collected before and after the IG's recommendations were implemented. How much of the increase from user fees can be attributed to improved registration fee collection that was initiated, in response to the recommendations? Since last year, what new strategies have you tried to increase the amount of collected fees?

Answer. RSPA implemented the IG's recommendations by mailing registration information to companies identified as carriers or shippers of hazardous materials in the Office of Motor Carriers' census of motor carriers and shippers. We also increased the number of follow-up mailings to companies that had registered in the past. These efforts identified approximately 1,000 new registrants and raised an additional \$500,000, including collections for prior years. The increased number of registrants has been maintained for the 1999-2000 registration year. On March 22,

1999, the IG determined that our actions were timely and appropriate and reported the recommendations as resolved and closed. We have continued the increased follow-up mailings.

We also amended the registration requirements as recommended by the IG. A final rule establishing a two-tiered registration fee schedule and expanding the requirements to all shippers and carriers of placarded shipments of hazardous materials, with a limited exception for farmers, was published on February 14, 2000, which becomes effective with the 2000–2001 registration year. As a result of these changes, RSPA expects that 45,000 companies will register for the 2000–2001 registration year. As part of the program planned to inform the public of the expanded registration requirement, RSPA plans to mail information packets to approximately 100,000 companies.

RESEARCH AND DEVELOPMENT

Question. What are the major advances that have resulted from your R&D program during each of the last three years? How has this information been reflected in improvements in your program?

Answer. In 1999, RSPA completed a threat assessment of the vulnerabilities of transporting hazardous materials in aircraft cargo compartments in compliance and non-compliance situations, and identified chemicals and substances that pose the greatest hazards in this environment. Key recommendations have been incorporated into the ONE DOT Flagship Initiative on Hazardous Materials /Incidents—a high profile initiative consisting of 6 action areas with 16 specific activities. The activities include: defining and encouraging industry actions and developing rulemaking to increase awareness and compliance with hazardous materials requirements in air transportation, and examining the feasibility of using new non-invasive screening technologies to detect undeclared hazardous materials. RSPA and the FAA are working together to implement these tasks in accordance with established milestones.

The “National Transportation Risk Assessment for Selected Hazardous Materials” is in final draft and is currently undergoing peer review. This multi-year research effort more accurately characterizes the spectrum of risks involved in the transportation of hazardous materials in comparison to historical data. Results of the study will provide a better sense and understanding of hazardous material transportation risk.

In fiscal year 1999, RSPA initiated development of a “Guidance Manual for Explosives Classification” to provide explanatory and advisory information pertaining to all sections of the hazardous materials regulations dealing with classification of new explosive substances and articles. The manual will be used internally and externally as a reference and training document for RSPA employees and explosives laboratories approved by RSPA involved in the examination, recommendation, and technical review of new explosives and articles.

As a result of two severe accidents and a National Transportation Safety Board recommendation, RSPA is completing a multi-phase study on how to increase accident survivability of front heads on MC–331 cargo tank motor vehicles. Results are being used to suggest improvements in design for heads and secondary heads. Prototype designs are slated for manufacture and testing during the final phase of this project, which will be completed in fiscal year 2000. Successful demonstrations will aid RSPA in rulemaking to reduce the risk associated with severe accidents involving MC–330 and MC–331 Cargo Tank Motor Vehicles.

In support of publication of the Year 2000 Emergency Response Guidebook (ERG2000), RSPA sponsored critical research aimed at identifying greater numbers of water-reactive chemicals and applying statistical methodology to predict initial isolation and protective action distances. In addition, research and improved methodologies permitted continued refinement of recommended actions based on spill size as well as updating of initial isolation zones and health criteria.

RSPA initiated research in fiscal year 2000 to develop methods and procedures to implement non-destructive testing (NDT) for DOT specification metallic and composite pressure vessels. The new NDT methods will detect fatigue cracking and stress corrosion cracking as well as wall thinning in a pressure vessel. This reduces environmental impact, potential contamination, out-of-service time, and possibilities of corrosion, compared to older hydrostatic test methods.

To promote and expand the use of risk assessment techniques and risk management approaches, RSPA initiated a study of the applicability of Hazard Analysis and Critical Control Points (HACCP) or similar methodologies to the transportation of hazardous materials. We anticipate this research will lead to voluntary “best-

practices” or guidelines for understanding and managing risks by all the parties involved in hazardous materials transportation.

Research related to regulatory issues involving propane and other liquified compressed gases are addressed under a separate question.

The enforcement program has conducted an aggressive package testing program, targeting packages which it believes do not comply with UN standards and thus present a risk to public safety. Through enforcement, interaction with manufacturers, and dialogue with industry, RSPA believes that it is enhancing the safety of UN performance-oriented packaging standards used in the transportation of hazardous materials.

A report entitled, “Exploration of GPS to Enhance the Safe Transport of Hazardous Materials,” was completed in fiscal year 1998 and provided information on using GPS as a safety tool to aid emergency response to hazmat incidents. While current deployment was seen as practical on a company-by-company basis, federally mandated installment or publicly deployed facilities were not.

“Identification of Factors For Selecting Modes and Routes For Shipping High-Level Radioactive Waste and Spent Nuclear Fuel,” was also published in fiscal year 1998. Its compilation of risk data and industry transport practices improved our risk management and industry knowledge.

In fiscal year 1999, consistent with a TRB recommendation that the Department periodically examine information technology’s potential to improve hazmat incident management, we completed an assessment of current technology deployment within the emergency response community to support efforts at facilitating safer, more efficient emergency response. A report detailing the results of that research, “Information Technology and Emergency Response: Current Applications” will be published in fiscal year 2000.

An examination of the flows of US international hazmat traffic was also undertaken in fiscal year 1999 with a report published in fiscal year 2000 entitled, “Hazardous Materials in U.S. Foreign Trade.” This research has identified potential risks in these particular hazmat markets.

A study of the operating practices, traffic volumes and modal shares of diagnostic specimens processed in the U.S. is scheduled to be completed in fiscal year 2000. Findings from this effort will help evaluate proposed regulations affecting the safe transport of infectious diagnostic substances from hospitals, clinics, and other health industry establishments to laboratory facilities that test the specimens.

RESEARCH AND TECHNOLOGY STRATEGIC GOALS

Question. What has RSPA done since last year to implement the provision of TEA-21 that requires strategic planning to design a national surface transportation research and technology agenda? What is the effectiveness and value of these efforts? What impacts have recent federal and DOT strategic planning efforts for surface transportation research and technology had on decisions about cross-cutting and modal research projects and how they are performed?

Answer. In May 1999 the Secretary and the President’s Science Advisor jointly announced the Department’s first Transportation Research and Development Plan. This document was developed in part to respond to a requirement in Section 5108 of TEA-21. It was developed through an interagency strategic planning process, focused in DOT by the Department’s Research and Technology Coordinating Council.

On an interagency basis, the President’s National Science and Technology Council establishes overall directions and priorities for transportation research through documents like its National Transportation Science and Technology Strategy and related implementation plans. Within the Department, the DOT R&D Plan then links conduct of such important R&T to the achievement of DOT’s overall Strategic Goals. The DOT R&D Plan has quickly become a resource used by DOT’s modal R&T planners in developing their own programs and budgets. This process has been used again to generate an updated DOT Transportation R&D Plan (second edition), which is undergoing final DOT reviews.

The second edition of the DOT Transportation R&D Plan (1) has a five year and longer time horizon for the partnerships, research, education, and technology transfer activities it discusses; (2) includes extensive and detailed coverage of DOT modal programs, developed with their involvement; and (3) includes a full chapter developed with AASHTO on state transportation research initiatives. Its safety elements have been the subject of a recent National Research Council/Transportation Research Board panel review which focused on DOT research that supports its safety goal. We expect the panel’s findings in May 2000. This and subsequent texts are to be provided to the Congress as supplements to the Department’s R&D budget requests. Most importantly, the text specifically links R&D priorities—emphasis

areas—to accomplishment of DOT Strategic goals. As a result, research activities have become more focused and are more definitively linked to desired outcomes.

The process has been accepted well by the various DOT participants. In fact, based on their view of the effectiveness of the process, the Federal Aviation Administration is modeling the approach they are taking to develop their next five-year research plan on that used for the DOT Transportation R&D Plan.

The process of preparing the Plan, in conjunction with the directions provided each year by OMB/OSTP Interagency R&D Priorities guidance, and the NSTC interagency process, has heightened awareness of related activities and promoted collaborative research efforts on an intermodal and interagency basis. These efforts include: (1) National Highway Research and Technology Partnership Initiative; (2) Intelligent Vehicle Initiative; (3) the NHTSA Advanced Technology Program; (4) the Interagency Initiative on Marine Fuel Cells; (5) the DOT initiative on human-centered systems; (6) the Advanced Vehicle Technologies Program; (7) the Commercial Remote Sensing Program; (8) the Transportation Infrastructure Assurance R&D Program; and (9) University Marine Transportation Grants Program. In the longer term, an initiative on nanotechnology applications is under discussion.

Question. Please list by contract and amount how comparable funds provided in fiscal year 1999 and in fiscal year 2000 under the activity R&D Planning and Management were used or will be used.

Answer. RSPA obligated and plans to obligate funds for activities under R&D Planning and Management as follows:

| Activity | Fiscal year | |
|---|-------------|-----------|
| | 1999 | 2000 |
| Strategic Planning: | | |
| S&T Strategy | \$50,000 | |
| Peer/Merit Review | 150,000 | \$200,000 |
| Transportation Technology Plan | 100,000 | 100,000 |
| Private-public Partnership Outreach | 350,000 | 175,000 |
| Strategic Research Plan | 100,000 | 100,000 |
| Enabling Research Outreach | 150,000 | 100,000 |
| DOT R&D Plan | 150,000 | 150,000 |
| International S&T Assessments | 100,000 | 100,000 |
| Sustainability | 100,000 | 100,000 |
| Subtotal | 1,250,000 | 1,050,000 |
| Research and Technology Coordination and Facilitation: | | |
| Performance Measurement | 50,000 | 50,000 |
| Innovation Partnerships | 50,000 | 50,000 |
| National Research Council (GUIRR) | 125,000 | 125,000 |
| TRB Annual Fee | 50,000 | 50,000 |
| International S&T (e.g., NAFTA,US-EU) | 150,000 | 150,000 |
| DOT R&D Tracking System | 100,000 | 200,000 |
| DOT Technology Sharing/Transfer | 100,000 | 100,000 |
| Homepages | 210,000 | 210,000 |
| Subtotal | 835,000 | 955,000 |
| Intermodal and multimodal Research and Education: Small Business Innovative Research | | |
| | 150,000 | 100,000 |
| Total | 2,235,000 | 2,105,000 |

Question. Please list by contract and amount how similar funds requested for fiscal year 2001 will be used, being certain to list for each topic specified on pages 119–124 its associated funding amount.

Answer. RSPA plans to obligate funds for activities under R&D Planning and Management in fiscal year 2001 as follows:

| <i>Activity</i> | <i>Fiscal year 2001</i> |
|---|-------------------------|
| Strategic Planning: | |
| Strategy | \$200,000 |
| Peer/Merit Review | 200,000 |
| Transportation Technology Plan | 100,000 |
| Private-public Partnership Outreach | 180,000 |
| Strategic Research Plan | 100,000 |
| Enabling Research Outreach | 100,000 |
| DOT R&D Plan | 150,000 |
| International S&T Assessments | 100,000 |
| Sustainability | 100,000 |
| Subtotal | 1,230,000 |
| Research and Technology Coordination and Facilitation: | |
| Performance Measurement | 50,000 |
| Innovation Partnerships | 50,000 |
| National Research Council (GUIRR) | 135,000 |
| TRB Annual Fee | 60,000 |
| International S&T (e.g., NAFTA,US-EU) | 100,000 |
| DOT R&D Tracking System | 200,000 |
| DOT Technology Sharing/Transfer | 100,000 |
| Homepages | 210,000 |
| Subtotal | 905,000 |
| Intermodal and multimodal Research and Education: Small Business In- | |
| novative Research | 100,000 |
| Total | 2,235,000 |

Question. Please break out separately funding for any conferences, meetings, outreach activities, international scanning activities, or panel discussions sponsored by RSPA using funds appropriated under the research and technology subaccount for fiscal years 1999 and 2000.

Answer. RSPA obligated and plans to obligate funds to support conferences, meetings, outreach, international scanning activities, and panel discussions as follows:

| | <i>Fiscal year</i> | |
|---|--------------------|-----------|
| | 1999 | 2000 |
| National Research Council/Transportation Research Board Workshops | \$100,000 | \$150,000 |
| Public-private Partnerships and Enabling Research Outreach | 450,000 | 250,000 |
| Civil Engineering Research Foundation Workshops | 50,000 | 50,000 |
| International Scanning | 100,000 | 100,000 |
| Total | 700,000 | 550,000 |

Question. Please give specific examples of key needs in cross-cutting or intermodal research that you plan to fund in fiscal year 2001. Could a portion of the human-centered systems operator fatigue management research proposed for fiscal year 2001 be conducted under this subaccount?

Answer. There are several key areas in which we plan to engage in cross-cutting or intermodal research:

- Human-centered systems
- Transportation infrastructure assurance, including aviation safety/security
- Advanced vehicle technologies
- Marine fuel cells (Small Business Innovation Research (SBIR) Support)
- University Transportation Research and Marine Transportation Research

RSPA does not use the R&D planning and management funds for direct research, other than SBIR. Direct R&D can be found in separate line items within our budget.

Each of the cross-cutting areas above has been underscored as national research priorities in several interagency documents, including the NSTC National Transportation Science and Technology Strategy, Transportation Technology Plan, and Transportation Strategic Research Plan.

The operator fatigue management activities are a subset of the human-centered systems research program. The human-centered systems research program is a critical part of the Department's cross-cutting research agenda. The results of that research agenda serve as a multimodal base of knowledge from which all DOT administrations will be able to profit in reducing loss of life and property from transportation incidents.

Meeting the objectives of all of these research initiatives will require all the resources requested for these activities in the fiscal year 2001 budget request. This work will be critical to the Department's ability to support transportation goals of safety, mobility and security, while contributing to the reduction of adverse, transportation-related environmental impacts.

Question. Did RSPA or OST obtain any funding in either fiscal year 1999 or 2000 from FHWA's surface transportation research and development account for any purpose? If so, please specify the use and amount of any funding received.

Answer. The FHWA provided funding to RSPA to support the implementation of Section 5108 of the Transportation Equity Act for the 21st Century. Specifically, FHWA provided \$200,000 in fiscal year 1999 and \$250,000 in fiscal year 2000 to help accomplish the following:

- (1) Develop the second and third edition of the DOT R&D Plan (\$200,000);
- (2) Conduct a National Research Council review of the DOT R&D Plan and transportation R&D strategic planning process (\$150,000); and
- (3) Support the development of Performance Plans and Performance Reports (\$100,000).

Question. Please provide an explanation of how funds requested for administrative expenses are used.

Answer. We plan to use funds requested for administrative expenses as shown below:

| <i>Administrative Expenses</i> | <i>Fiscal year 2001 (Estimated Obligations)</i> |
|--------------------------------|---|
| Training | \$8,000 |
| Printing | 59,000 |
| Supplies & Materials | 9,000 |
| Equipment | 17,000 |
| Travel | 15,000 |
| Total | 108,000 |

Question. Please list each of the recommendations of the TRB committee that reviews your work and RSPA's response.

Answer. The National Research Council/Transportation Research Board Committee on the Federal Transportation R&D Strategic Planning Process has conducted five major reviews to date of the Federal transportation R&D strategic planning process for the National Science and Technology Council Committee on Technology and its Subcommittee on Transportation R&D. Each has been documented in a separate letter report. Four have focused on interagency issues:

- The Strategic Planning Process itself (9/97)
- Technology Partnerships (9/98)
- Enabling Research (11/98)
- The Partnership for Infrastructure Renewal in Transportation, and Medium-/Heavy-duty Vehicle Research (9/99)

The fifth review is the first to focus specifically on DOT programs, in this case those supporting the DOT Strategic Goal of enhancing Safety. The letter report from that review is attached for your information.

The recommendations from the studies to date have been used to focus process improvements. For example, the first interagency review recommended integrating top-down and bottom-up planning, establishing research priorities, recognizing directions in non-Federally funded research, using the iterative nature of the planning process to refine directions, linking research plans with an end-state vision, and linking R&D planning with budget guidance. The new DOT R&D Plan, now in final preparation, reflects many of these guidelines. DOT will continue to incorporate insights from the reviews as research planning continues.

NATIONAL ACADEMY OF SCIENCES,
Washington, DC, March 28, 2000.

The Honorable RODNEY E. SLATER,
*Secretary of Transportation,
U.S. Department of Transportation, Washington, DC.*

DEAR MR. SLATER: At the request of Dr. Fenton Carey, Chairman of the Research and Technology Coordination Council of the U.S. Department of Transportation (DOT), the National Research Council (NRC), acting through the Transportation Research Board (TRB), convened the Committee for Review of the National Transportation Science and Technology Strategy (see Attachment 1 for a list of the committee members). The committee is charged with fulfilling the congressional request in the Transportation Equity Act for the 21st Century (TEA-21) to review and comment on DOT's Strategic Plan, Performance Plan, and Program Performance Report (required under the Government Performance and Results Act [GPRA]) with respect to surface transportation research and technology (R&T) development.

While Congress specified "surface transportation research and technology development" in its request, DOT asked that all modes be included in the committee's task; thus the committee has not limited its scope to surface transportation. Moreover, although many of the issues and questions addressed by the committee apply to the above documents in a general way, in some cases it was necessary to perform a more focused analysis of specific strategic goals and how R&T supports them. In particular, at the request of DOT staff, the committee performed such a focused analysis on the safety goal. The selection of safety as a focus area reflects this goal's high level of importance to society and to the Department. At the same time, the committee believes that its observations on the safety elements of the documents are valid for the other goal areas as well since DOT has applied the same structure and process for all of its strategic goals.

The committee carried out its task by reviewing DOT's GPRA documents and the first edition of the Department's Research and Development Plan (R&D Plan), dated May 1999, as well as by holding a meeting in Washington, D.C., on February 3-4, 2000. During the open session of the meeting, the committee heard from Eugene Conti (Assistant Secretary for Transportation Policy, DOT) and Fenton Carey (Associate Administrator for Research, Technology and Analysis, DOT Research and Special Programs Administration [RSPA]) about the Department's strategic planning efforts and how its R&T activities support the achievement of its strategic goals. In addition, brief presentations were made by research managers from several DOT operating administrations.

BACKGROUND

Transportation makes essential contributions to the nation's economy and quality of life. New knowledge and innovative technologies derived from research have played a critical role in supporting and enhancing those contributions, and in helping to mitigate some of transportation's less desirable impacts with regard to safety and the environment. Now more than ever, R&T offers promise for enhancing the performance of the transportation system. However, resources for research are limited. Strategic planning and analysis are required to direct these resources to their most beneficial uses.

During the last several years, DOT has made considerable progress in developing a strategic planning process for transportation R&T at the levels of both the Department and the federal government. Coordinating bodies at both levels—DOT's Research and Technology Coordinating Council (RTCC) and the National Science and Technology Council's (NSTC) Subcommittee on Transportation R&D, respectively—have been established or reinvigorated. Several partnership initiatives, involving federal agencies, the private sector, and state and local governments, have been undertaken to advance research in promising areas. Support for the role of R&T in enhancing transportation has been exhibited consistently at the highest level of the Department. It is the committee's hope that in the years to come, the strategic value of R&T will continue to be accorded significant visibility, backed by adequate institutional authority within the Office of the Secretary.

This NRC committee—which has undergone a number of transformations since TRB coordinated the DOT-sponsored Forum on Transportation R&D in 1995—has been privileged to participate in and witness the progress made to date. From 1997 through 1999, the committee reviewed elements of the NSTC's strategic planning process, and that effort will continue. The committee's new task—focusing on DOT's use of R&T to support its Strategic Plan—well complements the NSTC review. The two tasks promise to be mutually reinforcing in a way that should enhance the quality and usefulness of both reviews.

The remainder of this report contains the results of the committee's review of DOT's GPRA documents and R&D Plan. It begins with general observations regarding GPRA, research, and DOT's efforts to present its R&T program within the GPRA framework. This is followed by a description of the approach used by the committee to conduct its review. The committee's recommendations are then presented, arranged according to major topics relevant to research management. Attachment 2 contains the committee's more detailed findings, arranged according to the questions that guided its review.

GENERAL OBSERVATIONS

Since GPRA was passed in 1993, some questions have been raised about its applicability to the research activities of government agencies. Because the process required by GPRA is based on a 5-year strategic planning horizon, concern exists within the committee that GPRA constrains, and perhaps prohibits, the long-term thinking and planning that should characterize the federal role in research. This concern is particularly relevant for basic research, but even successes from highly applied research (the type sponsored by DOT) can require years before achieving widespread implementation. Nevertheless, the committee believes that if issues related to GPRA's short planning horizon are overcome, the requirement to align activities with strategic goals and to apply some form of performance measurement is entirely appropriate for R&T and a salutary discipline for agencies entrusted with the public good.¹

The fact that R&T is an overarching corporate management strategy for DOT represents a strategic decision or policy to use R&T to advance the Department's goals. The documents reviewed by the committee comprise DOT's initial attempt to plan and portray its R&T activities under GPRA. Summarizing and presenting a large quantity of information about very diverse activities in a succinct way is a difficult task. There is a risk of oversimplifying a highly complex activity—transportation research—in trying to facilitate the reader's assimilation of the vast array of R&T that can contribute to the system's improved performance. Overall, the Department has made a commendable effort to accomplish this task. The main flaw of the current R&D Plan is that it does not fully articulate DOT's many important R&T activities and how they serve attainment of the Department's strategic goals. The committee understands that improvements are already being made in this regard for the next version of the R&D Plan.

REVIEW APPROACH

As noted earlier, the congressional request that gave rise to this review requires that the NRC examine DOT's GPRA documents "with respect to surface transportation research and technology development" (TEA-21, Section 5108 "§ 508(c)(3)"). The committee reviewed the following specific GPRA documents:

- U.S. Department of Transportation Strategic Plan 1997–2002
- U.S. Department of Transportation 1999 Performance Plan
- U.S. Department of Transportation 2000 Performance Plan
- U.S. Department of Transportation 2001 Performance Plan and 1999 Performance Report

In addition, TEA-21 (Section 5108 "§ 508(c)(1)") requires DOT to develop an "integrated surface transportation research and technology development strategic plan." Since this document—the R&D Plan (first edition, May 1999)—is intended to present more detail about the role of R&T in meeting DOT's strategic goals, it was included in the committee's review as well.

To perform its review, the committee began by assessing the R&D Plan with regard to the contents required by TEA-21 (Section 5108 "§ 508(c)(2)"). In addition, the committee posed several questions based on the required contents of GPRA documents. Both the TEA-21 requirements and these additional questions are used to structure the committee's more detailed findings in Attachment 2.

KEY RECOMMENDATIONS

The committee believes the R&D Plan should articulate explicit R&T priorities, the methodology used to determine those priorities, and how each priority is reflected in the Department's budget. The committee formulated two key rec-

¹ For more detailed treatment of the importance of evaluating research activities and the need to use appropriate measures of performance for different types of research, see *Evaluating Federal Research Programs: Research and the Government Performance and Results Act*, Committee on Science, Engineering, and Public Policy, National Academy Press, Washington, D.C., 1999.

ommendations for improving the R&D Plan, as well as the other documents reviewed, in this regard.

Recommendation 1: Alignment of R&T with Strategic Plan

R&T priorities and activities should be tied more explicitly to the Department's strategic and performance goals,² and their relationship to these goals should be articulated more clearly.

The overall strategy of the Department with respect to R&T mirrors the NSTC strategy, the main elements of which are strategic planning, partnership initiatives, enabling research, and training and education. It is not always clear from the GPRA documents, or the R&D Plan, however, exactly how R&T supports the Department's strategic goals. R&T activities—those listed in the GPRA documents as well as the partnership initiatives and enabling research in the R&D Plan—should be tied clearly to the Department's strategic goals through articulation of their relationship to the performance goals associated with each strategic goal. While it may not be appropriate for the Strategic Plan or the Performance Plans to include such explanations, it would be appropriate for the R&D Plan to do so.

The R&D Plan should be organized primarily in accordance with DOT strategic and performance goals, rather than the partnership initiatives and enabling research of NSTC. However, the committee supports the use of the NSTC categories as a way of reflecting the overall R&T corporate management strategy and demonstrating that DOT's R&T activities are consistent with the multidepartment cooperative perspective of the NSTC framework.

R&T is often many steps removed from the outcome goals in the Strategic Plan, and the GPRA documents cover so many DOT activities that they cannot provide detailed rationales for specific R&T activities. The R&D Plan should show how the R&T activities are driven (directly or indirectly, in the short or the long term) by the goals of the Strategic Plan.

Recommendation 2: Resources

The R&D Plan should include the funding budgeted for specific R&T activities and performance goals, since budgets are a tangible reflection of the real priorities of an agency.

The R&D Plan contains no discussion of resource needs for R&T. Funding devoted to specific R&T activities and performance goals should be specified so the level of R&T effort toward each goal can be ascertained. As mentioned in Recommendation 4, below, funding should also be characterized according to the types of R&T activities so that the mission focus of DOT will be more apparent from its R&T investments.

Funding is not the only resource need. Human capital is just as critical, particularly in the area of R&T. It is necessary to have people who can discover new knowledge and develop and use new technologies. The R&D Plan does not address the human resource needs of DOT to support specific R&T efforts. Without the proper knowledge base within DOT and its partner organizations, the promise of R&T will not be realized.

OTHER RECOMMENDATIONS

In addition to the key recommendations presented above, the committee formulated the following more specific recommendations.

Recommendation 3: Criteria and Methodologies for Program Development

DOT should employ rational criteria and methodologies in prioritizing and budgeting for its R&T programs and should include these criteria and methods in the R&D Plan.

The documents reviewed do not indicate what criteria and systematic methodologies, if any, were used in determining the R&T activities to be carried out by the Department. Alignment with strategic goals is necessary, but not sufficient, since it is possible to identify many more activities that are related to the goals than can be undertaken with the limited resources available. As recommended in the committee's previous letter report of September 3, 1999, the practices of technology scan-

²DOT's Strategic Plan contains five "strategic goals." Each of these goals is further broken down into "performance goals," which reflect the specific ways in which the operating administrations will contribute to the strategic goals. The Department's annual Performance Plans and Performance Reports are focused primarily on the performance goals, which may evolve over time as they are met or as other ways to achieve the strategic goals are deemed more effective. Attachment 3 lists the strategic and performance goals for safety, taken from DOT's fiscal year 2000 Performance Plan.

ning³ and technology mapping⁴ are useful initial R&T activities. In addition, in the safety area in particular, risk analysis based on careful analysis of statistical data can help identify the most promising approaches.

Various criteria and methods can be used to prioritize R&T activities. The committee would like to suggest that in preparing future versions of the R&D Plan, DOT consider adopting a methodology such as that presented by the Federal Railroad Administration (FRA) during the committee's meeting. A description and diagram depicting FRA's methodology are presented in Attachment 4. While the method was developed specifically to prioritize rail safety R&D, it is a good example of a rational approach that could be adapted to broader research prioritization efforts. The practice of focused and transparent priority setting would help increase the credibility of DOT's R&T programs by ensuring responsible and competent use of the public funds entrusted to the Department.

Recommendation 4: Types of R&T Activities Undertaken

The documents should clearly explain DOT's role in transportation R&T by identifying where its R&T activities are most appropriately focused and demonstrating that its investments are, in fact, in areas not likely to be covered by other agencies or the private sector.

The documents express a greater emphasis on "technology" than on "research." For instance, the Research and Development Corporate Management Strategy of the 1999 Performance Plan was revised for the 2000 Performance Plan. Language referring directly to alignment and harnessing of research and to building of intellectual capital was deleted. At the same time, language focused on innovation—"capacity to transform new technologies, concepts, and ideas rapidly into new products, processes and services . . ."—was added (see pages 5–6 of the revisions to the final DOT fiscal year 2000 Performance Plan). Since DOT's specific role in transportation R&T is not explained in the documents, the reason for placing more emphasis on innovation than on research is unclear.

It might be helpful, as the Department of Defense has done, to employ a taxonomy for distinguishing longer-term or more advanced research, shorter-term applied research, development, testing and evaluation, and implementation support. Then DOT could articulate which portions of the R&T spectrum are most clearly associated with its role and indicate its level of investment in each, taking into consideration possible variations among the operating administrations, in this regard. The issue of agency roles and missions is addressed further under Recommendation 5 below.

Recommendation 5: Public-Sector Organizational Roles and Coordination

The roles of various public-sector participants (other federal agencies, DOT operating administrations, state and local governments) and the mechanisms for coordinating their participation should be described in the R&D Plan. The R&T activities DOT has chosen to pursue should reflect these coordination efforts.

Although required in TEA–21, there is no general discussion in the R&D Plan of the missions of the various federal departments and agencies, their (presumably) complementary responsibilities, the consequent differences in their roles in R&T, and the potential for interaction and synergy. For instance, in 1997, approximately \$5.1 billion⁵ was invested by federal agencies in transportation-related R&D, of which DOT accounted for about 8 percent. The R&D Plan should explain how DOT's efforts fit with those of other agencies; which agencies, given their missions, focus more on specific portions of the R&T spectrum; and what is provided by DOT efforts that is not covered by the other agencies.

The R&D Plan also contains no overall discussion of the roles of each operating administration within DOT over the next 5 years, as required by TEA–21. For instance, given that 94 percent of fatalities in transportation are highway-related, it would be appropriate to point out the primary role of particular operating administrations (Federal Highway Administration [FHWA], National Highway Traffic Safety Administration [NHTSA], and Federal Motor Carrier Safety Administration [FMCSA]; and FRA in the case of crashes involving highway-rail grade crossings) in reducing transportation fatalities.

³Technology scanning is a review of research in a variety of areas that could be applied to a subject of interest.

⁴Technology mapping is a careful analysis that indicates those points in specific systems that offer the highest leveraging potential so the research to be undertaken can be directed toward critical problems.

⁵National Science and Technology Council, Transportation Strategic Research Plan, Washington, D.C., May 1999.

There is also no discussion of state and local R&T activities in the plan. In particular, there is no acknowledgment of the role of these agencies as owners and operators of important parts of the transportation system and as major investors in research, and therefore as critical partners in the prioritization and conduct of research and the development and implementation of new technologies.

Regarding coordination, the R&D Plan refers to the RTCC at the DOT-wide level, and to the NSTC Subcommittee on Transportation R&D and its strategic planning documents at the federal government-wide level. The committee applauds the RTCC and DOT's interaction with the NSTC subcommittee; clearly, however, coordination does not take place through the mere existence of committees and documents, but through their impacts on priorities, budgets, and activities. The connection between the committees and the operational realities of DOT's R&T programs is not evident.

Recommendation 6: Outreach

The R&D Plan should be developed with input from the public, private, and academic sectors. The methods of obtaining this input and results of the outreach should be documented in the plan itself.

TEA-21 requires that DOT obtain comments on the R&D Plan from outside sources and include responses to significant comments in the plan itself. While comments from this NRC committee could not be included since the committee first met after the initial version of the R&D Plan had been published, it is not evident from the plan that DOT solicited any comments from outside sources. Even though significant outreach may not have been possible for this version of the plan, the plan could have described the nature and extent of outreach to be conducted for future editions. The plan would benefit from the input of stakeholders in the public, private, and academic sectors.

Recommendation 7: Performance Measurement

Performance measurement of DOT's R&T activities should extend beyond theoretical discussion. Specific measures, methods of applying them and analyzing the results, and the actions to be taken in response should be specified in the R&D Plan.

Chapter V of the R&D Plan, "Measuring Success," provides a general discussion of GPRA and performance measurement, but does not indicate how the general theory has been applied to DOT's R&T programs. A list of impact-based performance measures is included in Table V-2, but these differ from the performance goals and indicators in the Department's Strategic Plan and Performance Plans. Since R&T activities are often far removed in time and in the chain of causality from the ultimate outcomes expressed in DOT's strategic goals, it may be necessary to establish intermediate goals for R&T activities. It should be made clear, however, how achievement of these intermediate goals will bring the Department closer to achievement of its ultimate goals.

The Strategic Plan indicates that the Department will measure the impact of R&T on transportation system performance through benchmarking efforts. However, this activity is not mentioned in the Performance Plans. Instead, benchmarking efforts aimed at measuring the performance of DOT R&T facilities are proposed. It is not clear that an assessment of R&T facilities will serve as an assessment of R&T results.

CONCLUDING REMARKS

These recommendations focus on a small number of the important issues surrounding the implementation of GPRA to research and technology activities. In future years, the committee may choose to address other issues, such as human resource requirements and the need to balance planning and flexibility.

The committee is pleased to have had the opportunity to provide feedback on DOT's efforts to use R&T to advance national transportation goals, and hopes that its comments and recommendations will prove useful. The committee looks forward to continued participation in the Department's strategic planning efforts.

Sincerely,

JOSEPH SUSSMAN,
*Chair, Committee for Review of the National Transportation Science and
Technology Strategy.*

DETAILED ASSESSMENT OF DOCUMENTS

Questions Guiding Assessment

To conduct its review, the committee began by assessing the R&D Plan with regard to the contents required for this plan in TEA-21 (Section 5108 "§ 508(c)(2)"). These required elements are as follows:

(A) an identification of the general goals and objectives of the Department for surface transportation research and technology development;

(B) a description of the roles of the Department and other Federal agencies in achieving the goals identified under subparagraph (A), in order to avoid unnecessary duplication of effort;

(C) a description of the overall strategy of the Department, and the role of each of the operating administrations of the Department, in carrying out the plan over the next 5 years, including a description of procedures for coordination of the efforts of the operating administrations of the Department and other Federal agencies;

(D) an assessment of how State and local research and technology development activities are contributing to the achievement of the goals identified under subparagraph (A);

(E) details of the surface transportation research and technology development programs of the Department, including performance goals, resources needed to achieve those goals, and performance indicators as described in [GPRA—see Tab 1, Section 1115(a)], for the next 5 years for each area of research and technology development;

(F) significant comments on the plan obtained from outside sources; and

(G) responses to significant comments obtained from the National Research Council and other advisory bodies, and a description of any corrective actions taken pursuant to such comments.

The committee also developed additional questions derived from the requirements found in GPRA. These questions are as follows:

(1) Do the Strategic Plan and Performance Plans include R&T as contributors to achieving strategic goals?

(2) If so, is the R&T related to the goals and is the relationship clearly explained in the documents?

(3) Does the Performance Report or the R&D Plan include: (a) A summary of results of previous fiscal years' R&T? (b) An analysis of the relationship between R&T results and DOT's strategic goals? (c) A description of the methodology used for assessing results? (d) A description of significant changes in the R&T undertaken com-

pared with what was included in that year's plan (planned R&T that was not performed and why, unplanned R&T that was performed and why)?

(4) How are the following processes handled: (a) Gathering input from stakeholders and incorporating it into the plan and report; (b) Mechanisms for coordination and cooperation among public and/or private entities; and (c) Tracking of progress on R&T activities.

Detailed findings

The committee's detailed findings based on the TEA-21 requirements and the additional questions listed on the previous page are in italics below.

Conformity of the R&D Plan to the requirements specified in TEA-21, Section 5108 "§ 508(c)(2)":

(A) an identification of the general goals and objectives of the Department for surface transportation research and technology development

"The goals and objectives of the DOT Strategic Plan are stated in the R&D Plan. However, the "impact-based performance measures" stated in Chapter V of the R&D Plan differ from the performance goals in DOT's Strategic Plan and Performance Plans. For instance, in the area of safety, the R&D Plan includes reference to motorcycle related fatalities and injuries and child occupant fatalities, which are not mentioned in DOT's performance goals. Conversely, the R&D Plan does not mention other DOT safety performance goals, such as those related to seat belt use and large-truck fatalities and injuries, or any of the safety performance measures in nonhighway modes."

(B) a description of the roles of the Department and other Federal agencies in achieving the goals identified under subparagraph (A), in order to avoid unnecessary duplication of effort

"The R&D Plan lists other (non-DOT) federal agencies involved with each of the partnership initiatives (Chapter III). A few specific interagency activities are mentioned in the descriptions of the initiatives. Under "Enabling Research" (Chapter IV) there are a few references to joint activities with other agencies, but there is no discussion of related research that is not under DOT sponsorship. There is no general discussion of the various missions of the different agencies, their (presumably) complementary responsibilities, the consequent differences in their roles in R&T, and the potential for interaction and synergy. Chapter II mentions the NSTC Subcommittee on Transportation R&D as a mechanism for coordinating federal transportation R&D; however, the only effort of this committee that is mentioned is the production of a strategic plan. It is not clear how actual coordination of federal activities is to take place.

"Also, regarding roles, there is more focus on "technology" than on "research" (see p. 6 of the 2000 Performance Plan, for example), which is considered more the classic federal role. On the other hand, the distinction between the technology partnership initiatives and the enabling research is not well explained."

(C) a description of the overall strategy of the Department, and the role of each of the operating administrations of the Department, in carrying out the plan over the next 5 years, including a description of procedures for coordination of the efforts of the operating administrations of the Department and other Federal agencies

"DOT's overall strategy with respect to R&T mirrors the NSTC Strategy, the main elements of which are strategic planning, partnership initiatives, enabling research, and training and education. It is not always clear from the GPRA documents or the R&D Plan, however, exactly how R&T supports the Department's strategic goals.

"The efforts of the operating administrations are coordinated through DOT's Research and Technology Coordinating Council, which is mentioned in Chapter II. No further description of coordination procedures is offered. The operating administrations involved in each partnership initiative are listed under the initiative, and many of the research activities of the operating administrations are described under enabling research. There is no overall discussion of the roles of each administration over the next 5 years. (For instance, it would be appropriate to point out the primary role of FHWA, NHTSA, and FMCSA in reducing transportation fatalities, given that 94 percent of these fatalities are highway related. Other operating administrations may have stronger roles in supporting other strategic goal areas.)"

(D) an assessment of how State and local research and technology development activities are contributing to the achievement of the goals identified under subparagraph (A)

“There is no discussion of state and local R&T activities in the document. Even under the section “Issues as Seen by the Stakeholders” there is no direct reference to state DOTs. Under “Paving the Way for R&D Implementation” there is a brief reference to “state, tribal, county, and city government agencies,” but no acknowledgment of the role of these agencies as owners and operators of important parts of the transportation system, and therefore as critical partners in the conduct of research and the development and implementation of new technologies.”

(E) details of the surface transportation research and technology development programs of the Department, including performance goals, resources needed to achieve those goals, and performance indicators as described in [GPRA—see Tab 1, Section 1115(a)], for the next 5 years for each area of research and technology development

“Chapter V, “Measuring Success,” provides a general discussion of GPRA and performance measurement, but this discussion is not applied concretely to DOT’s R&T programs. A list of impact-based performance measures is included in Table V–2, but these differ from the performance goals and indicators in the Department’s Strategic Plan and Performance Plans. It may be necessary to establish intermediate goals for R&T activities, but it should be clear how accomplishment of these intermediate goals will bring the Department closer to achievement of its ultimate goals. The goals in the R&D Plan are not clearly associated with the specific R&T activities described in the plan; that is, it is not clear which enabling research or partnership initiatives are aimed at each performance goal and how they are expected to contribute to achieving that goal. There is no discussion of resource needs. The only reference to time frame appears to be the categorization of enabling research as near-term (5 years or less) or long-term (more than 5 years).”

(F) significant comments on the plan obtained from outside sources

“Understandably, there are no comments from the NRC committee since the committee met for the first time in February 2000. However, there are also no comments from other outside sources.”

(G) responses to significant comments obtained from the National Research Council and other advisory bodies, and a description of any corrective actions taken pursuant to such comments

“Again, it was not possible for responses to the NRC committee to be included, but if other outside sources were consulted, their comments should have received responses. If none were consulted, such consultation should take place before the next version of the plan is published.”

Assessment of GPRA documents and the R&D Plan with respect to the committee-developed questions derived from the requirements found in GPRA:

(1) Do the Strategic Plan and Performance Plans include R&T as contributors to achieving strategic goals?

“The Strategic Plan and Performance Plans include R&T among the activities DOT will undertake to achieve its goals. In fact, R&T is identified as an overall management strategy for the Department. The 1999 Performance Plan presents additional R&T activities under each strategic goal area, categorizing them by mode. The 2000 Performance Plan aligns R&T more directly with performance goals under each strategic goal area. There is little mention of research in the 2001 Performance Plan. Many of the activities for 2001 are the same as or similar to those in the 1999 Performance Plan. There is no explanation of how the activities in each year differ.”

(2) If so, is the R&T related to the goals and is the relationship clearly explained in the documents?

“The specific R&T activities in the Strategic Plan appear to be merely illustrative since they clearly do not represent all the R&T activities of the Department. It is not clear whether these examples are the most closely related to DOT’s strategic goals.

“The format used in the 2000 Performance Plan gives a better sense of how R&T supports the goals of the Department and appears to have led

to a better categorization of the R&T activities. For instance, in the 1999 Performance Plan, the Partnership for a New Generation of Vehicles and testing of intelligent transportation systems (ITS)/commercial vehicle operator technologies at border crossings are categorized under highway safety. While these activities may have safety implications, they are more directly focused on the Human and Natural Environment and Economic Growth and Trade goals, respectively, which is where they are categorized in the 2000 Performance Plan.

“The relationship between specific R&T activities and the performance goals is not explained in the Performance Plans; however, it is probably not reasonable to expect such explanation without these plans becoming overly long. A more detailed explanation of how R&T activities support DOT goals would more appropriately be included in the Department’s R&D Plan.

“In the R&D Plan, the descriptions of the partnership initiatives provide better explanations, in some cases, of the need for the technologies involved than is found in the Performance Plans. However, while the partnership initiatives are correlated with the strategic goals, they are not clearly linked to the performance goals, which focus on more specific outcomes. For instance, many of the partnership initiatives and enabling research efforts are directed toward “safety,” but it is difficult to tell whether they are oriented strategically to address the issues and problems whose resolution offers the most promise for reducing specific kinds of fatalities and injuries. Therefore, the rationale for the R&T focus is not always clear.”

(3) Does the Performance Report or the R&D Plan include: (a) A summary of results of previous fiscal years’ R&T?

“Such a summary is not included in either document.”

(b) An analysis of the relationship between R&T results and DOT’s strategic goals?

“Since the results of R&T are not included in the plan, such an analysis is also not included.”

(c) A description of the methodology used for assessing results?

“The R&D Plan addresses performance measurement somewhat theoretically, but does not apply it to specific R&T activities. The Strategic Plan (p. 64) indicates that DOT will measure the impact of R&T on transportation system performance through benchmarking efforts. This particular activity is not mentioned in the 1999 Performance Plan, although that plan does indicate that DOT will consider using International Organization for Standardization (ISO) 9000 certification and Malcolm Baldrige or President’s Quality Award criteria to perform baseline assessments of the performance of DOT R&T facilities. The 2000 Performance Plan indicates that this baseline assessment will be completed in fiscal year 2000. However, it appears that the criteria to be used had still not been chosen when the plan was written since the three mentioned above are still listed as possible criteria, and a fourth (Software Engineering Institute’s Capability Maturity Model certification) is added. Also, it is not clear that an assessment of R&T facilities will encompass an assessment of R&T results. The reports do not assess the contributions of DOT R&T to the achievement of goals and performance measures relative to the contribution of other DOT actions and programs. Although not explicitly called for in TEA–21 or GPRA, DOT may wish to include this type of assessment in its benchmarking efforts.”

(d) A description of significant changes in the R&T undertaken compared with what was included in that year’s plan (planned R&T that was not performed and why not, unplanned R&T that was performed and why)?

“This description does not appear to be provided in any of the documents.”

(4) How are the following processes handled: (a) Gathering input from stakeholders and incorporating it into the plan and report

“Answered under (F), above.”

(b) Mechanisms for coordination and cooperation among public and/or private entities

“Coordination among modal administrations is addressed under (C), above. Coordination among federal departments is addressed under (B),

above. The R&D Plan also lists nonfederal entities that are (or could be) involved in particular partnership initiatives. Coordination with these entities is not discussed.”

(c) Tracking of progress on R&T activities

“There is no progress tracking in the R&D Plan. Since this is the first plan of its kind under the GPRA regime, it may be more reasonable to expect progress tracking in later versions of the document.”

Additional Specific Comments About R&D Plan

In reviewing the R&D Plan, the committee identified some additional specific areas in which the plan could be improved. Some of these are matters of format, structure, or editing. Others refer more to the substance of the plan. Addressing these observations should help create a document that better reflects the transportation R&T enterprise and is more understandable to the reader.

CHAPTER III: PARTNERSHIP INITIATIVES AND TECHNOLOGY SHARING

The partnership initiatives are ordered differently in the text and in the tables of Chapter III. This makes it somewhat difficult to compare the two.

It might be clearer to list DOT programs (pp. III–33 to III–43) directly under the corresponding partnership initiatives (pp. III–3 to III–25) so that it would be easier to see how they are related.

The Next Generation Vehicle initiative is referred to by different names in various parts of the document. Consistent use of one name would be clearer.

Descriptions of partnership initiatives and how they are related to the strategic goals are not consistent. For instance, PNGV is included under Next Generation Surface and Marine Transportation Vehicles on page III–9 and under the Intelligent Vehicle Initiative on page III–34. Safety is indicated as a primary DOT strategic goal for the Monitoring, Maintenance, and Rapid Renewal of the Physical Infrastructure initiative, but does not figure significantly in the descriptions of this initiative on pages III–19 to III–20 and III–39 to III–41. Next Generation Global Air Transportation is said to support Mobility and Economic Growth and Trade on p. III–30, but the description of the initiative on p. III–35 suggests a significant contribution to Human and Natural Environment.

CHAPTER IV: ENABLING RESEARCH

The distinction between short-term and long-term in this chapter is interesting, but somewhat confusing. Much of the research characterized as long-term appears to be aimed at about the same time horizon as some of the partnership initiatives, which might be expected to be more short-term in nature. Where is the truly long-term, high-risk, “enabling” research being done?

CHAPTER VI: IMPLEMENTATION ISSUES AND INCENTIVES

The discussion of “user stakeholder” issues generally emphasizes user obstacles to implementation, such as liability, economic, and privacy concerns. This section should also include the opportunities for implementation and the motivations users may have to support implementation.

The chapter goes into some detail on implementation of a few specific technologies (free flight and ITS technologies). It might make more sense to include these discussions under the appropriate partnership initiatives or enabling research areas and reserve this chapter for analysis of overarching issues in the implementation of R&T, such as institutional, procurement, educational, and liability issues, which tend to arise in many technology areas.

The section on “Paving the Way for R&D Implementation” focuses solely on procurement reform. Though this is a critical implementation issue to address, it is not the only one. Studies have identified various factors that appear to be associated with successful implementation of R&T. For example, implementation is more successful when users are involved with the research from the beginning (a good argument for partnerships) and when there are champions at different levels of an organization. This chapter could address some of these factors.

ATTACHMENT 3

DOT STRATEGIC AND PERFORMANCE GOALS FOR SAFETY

These goals are taken from the U.S. Department of Transportation Performance Plan for fiscal year 2000.

DOT has strategic goals in five areas: Safety; Mobility; Economic Growth and Trade; Human and Natural Environment; and National Security.

The strategic goal for safety is: "Promote the public health and safety by working toward the elimination of transportation-related deaths, injuries, and property damage."

The performance goals contributing to the achievement of the strategic goal for safety are:

Highway Fatality and Injury Rates.—Reduce the rate of highway-related fatalities per 100 million vehicle miles traveled (VMT) from 1.7 in 1996 to 1.5 in 2000. Reduce the rate for injuries from 141 in 1996 to 124 per 100 million VMT in 2000.

Alcohol-Related Highway Fatalities.—Reduce the percentage of highway fatalities that are alcohol-related to less than 35 percent in 2000, from a 1996 baseline of 40.9 percent.

Seat Belt Use.—Increase seat belt usage nationwide to 85 percent by 2000 and 90 percent by 2005. Usage in 1997 was 69 percent.

Large Truck-Related Fatality and Injury Rates.—Reduce the rate of fatalities involving large trucks per 100 million truck VMT from 2.8 in 1997 to 2.5 in 2000. Reduce the rate of injuries involving large trucks per 100 million truck VMT from 69.3 in 1997 to 64.4 in 2000.

Air Carrier Fatal Accident Rate.—Reduce the fatal aviation accident rate for commercial air carriers from a 1994–1996 baseline of 0.037 fatal accident per 100,000 flight hours. The 2000 target is 0.033 per 1,000,000—with the reduction to be achieved in 6 key areas outlined in the Safer Skies Agenda.

General Aviation Fatal Accident Rate.—Reduce the general aviation fatal accident rate from a 1994–96 average of 1.67 per 100,000 flight hours to (specific target to be developed).

Runway Incursions.—Reduce the number of runway incursions to a level 15 percent below a 1997 baseline of 318 incursions. The fiscal year 2000 target is at or below 270 incursions.

Operational Errors and Deviations (Air Traffic).—Reduce the rate of operational errors and deviations by 10 percent from the 1994 baselines of 0.54 errors and 0.11 deviations per 100,000 facility activities. The 2000 target rates are 0.486 for errors and 0.097 for deviations.

Recreational Boating Fatalities.—Reduce recreational boating fatalities to 720 (or fewer) fatalities in 2000. The 1997 baseline is 819 fatalities.

Maritime Search and Rescue.—Save at least 93 percent of all mariners, and at least 80 percent of all property, reported in imminent danger.

Passenger Vessel Safety.—Reduce the number of high-risk passenger vessel casualties to 47 per 1,000 vessels in 2000. The 1996 baseline is 48 per 1,000.

Rail Crash and Fatality Rates.—Reduce the rate of rail-related crashes from 3.91 per million train-miles in 1995 to 3.32 (or less) in 2000. Reduce the rate of rail-related fatalities from 1.71 per million train-miles in 1995 to 1.54 (or less) in 2000.

Rail Grade-Crossing Crash Rate.—Reduce the rate of grade-crossing crashes from 2.85 per the product of (million train-miles times trillion highway VMT) in 1995 to 2.14 (or less) in 2000.

Rail Trespasser Fatality Rate.—Reduce the rate of rail-related trespasser fatalities from 2.81 per the product of (million train-miles times billion U.S. population) in 1995 to 2.53 (or less) in 2000.

Transit Fatality and Injury Rates.—Reduce the transit fatality rate from 0.52 fatalities per 100 million passenger-miles-traveled in 1996 to 0.50 (or less) in 2000. Reduce the injury rate from 127 per 100 million passenger-miles-traveled in 1996 to 122 (or less) in 2000.

Pipeline Failures.—Decrease the number of natural gas transmission pipeline failures from 4,933 in 1994 to 4,451 in 2000.

Hazardous Material Incidents.—Reduce the number of serious hazardous materials incidents in transportation to 411 or fewer in 2000 from a peak of 464 in 1996.

ATTACHMENT 4

FRA R&D PROJECT DEVELOPMENT AND SELECTION PROCESS⁶

Currently, the FRA R&D program is developing a structured process to document the method by which FRA R&D management identifies research areas and selects specific R&D projects for funding. FRA R&D management currently uses such a process when identifying projects for funding and submitting budget requests. How-

⁶This material was provided by the Federal Railroad Administration Office of Research and Development.

ever, the current effort is intended to provide documentation of the process so it is visible to all FRA R&D stakeholders. FRA R&D is developing this structured approach with guidance from the Transportation Research Board (TRB) Committee for Review of the FRA R&D Program. Most recently, the FRA R&D presented the proposed approach to the TRB Committee during November 1999 and the Committee recommended the FRA R&D program employ the approach in fiscal year 2002 budget submissions.

The structured approach for FRA R&D project development and selection is presented below. The approach consists of five logical steps which, initially, will be applied to the entire R&D program. Subsequently, as new information becomes available about sources of harm, the logical steps may be followed for specific types of harm to add to the list of potential R&D projects.

STEP 1: REVIEW OF RAIL INDUSTRY HISTORICAL AND POTENTIAL HARM

The first step in the FRA R&D project development and selection process is a review of recent rail industry harm data and an estimation of causes of potential for harm. Historical harm data is compiled in FRA rail accident databases and accident investigation reports. Potential for future harm can be understood by reviewing rail industry operating trends with expert knowledge of how railroad accidents occur.

The four relevant databases which hold historical rail incident data are the FRA's Rail Accident/Incident Reporting System (RAIRS), Highway-Rail Grade Crossing Accident/Incident Database, Railroad Injury and Illness Summary Database, and RSPA's Hazardous Materials Incident Database. The information in these databases is very detailed in terms of circumstances that contribute to accidents. However, these databases, typically, do not address specific causes of the harm that results from railroad accidents or incidents.

Detailed accident reports from the NTSB and the FRA are the most important source of information, compiled by experts, about accident circumstances that contribute to harm. While detailed investigations are undertaken for relatively few railroad accidents, the most serious accidents, in terms of harm, have been intensively investigated and much can be learned through review of these reports.

Finally, since accident databases and accident reports can only reflect historical accident causes and circumstances, meaningful countermeasures to prevent harm must also address railroad industry operational trends. In this way countermeasures may be developed to address causes for harm that are not reflected in the historical databases.

STEP 2: CONDUCT FAILURE ANALYSIS

For a given accident cause or factor contributing to harm, fault-tree logic is applied to identify specific items to be addressed by countermeasures. These specific items represent points along the accident chain-of-events at which the accident, or subsequent harm, or both, could have been prevented. Countermeasures are proposed with the goal of breaking the accident or harm chain-of-events at the points identified. These countermeasures are proposed with an understanding of current regulatory and industry practices for the relevant area of rail operations. Examples of types of countermeasures proposed include: Regulation; Industry standards and best practices; Equipment and infrastructure improvements; Enforcement; and Education.

STEP 3: SURVEY GOVERNMENT AND INDUSTRY COUNTERMEASURES AND R&D REQUIREMENTS

Once specific countermeasures are identified, FRA R&D will review current and potential industry and government countermeasures to identify areas of opportunity for R&D. That is, FRA R&D will identify countermeasures that would be enabled by R&D. For example, a potential operating rule may need research into the train speed regimes at which a type of train control system affords safe operation.

STEP 4: DEVELOP AND RATE INDIVIDUAL PROJECTS

For each countermeasure that may be aided by R&D, one or more R&D project summaries are developed to describe projects that provide information to enable the countermeasures. The project summaries are structured descriptions of projects that will be used to compare and select projects during R&D program development. Project summaries address expected outputs and outcomes, project costs and durations, as well as implementation issues for project results. Based on the project summaries, projects are then rated according to objective criteria for expected contribution to safety and likelihood of success. For a given program area, these project rat-

ings are plotted in two-dimensions (likelihood of success versus contribution to safety) to provide a high-level comparison tool for the project selection process.

STEP 5: SELECT PROJECTS AND ASSIGN TO PROGRAM AREAS

The last step in the FRA R&D program development process entails selecting projects for each program area based on the two-dimensional plots and project summaries. The goal is to select the best research opportunities available to obtain the best return on investment possible from the FRA R&D budget. That is, the most highly rated projects, regardless of program area, are selected until the desired overall funding request level is reached. Once the list of funded projects is completed, each project is assigned to one of the FRA R&D program areas. The FRA R&D budget request, for each program area, is the sum of the funding required for each of the selected projects in the program area.

Question. Assuming no increase in funds for fiscal year 2001, what could be done to initiate research on transportation infrastructure assurance and fatigue management?

Answer. The Administration has no alternative proposal to fund the two critical, multi-modal research areas of transportation infrastructure assurance and human-centered systems.

The funding requested in RSPA's budget for these two areas of research is intended not to substitute for other operating administrations' resources, but to build on and leverage these resources as well as investments made by other Federal agencies, the states and the private sector.

Question. Please describe in detail why funds are spent on international science and technology assessment. Who receives those funds and what is done with the results of this investment?

Answer. To ensure that the United States maintains its technological lead in an ever-increasing global environment, it is essential to understand the priorities and research activities of competitor nations. International corporations, travel and telecommunications, and the number of foreign students in institutions of higher learning all over the globe are growing at a unprecedented rate. As a result, both the practice and the propagation of transportation research have attained global proportions.

RSPA released a National Science and Technology Council document entitled Comparison of International Transportation R&D: Expenditures and Priorities in September 1999. It documents research in the seven countries that undertake the vast majority of transportation R&D around the world today. The document was developed at the DOT Volpe Center, with inputs from the United Nations Economic Commission for Europe, the Organization for European Cooperation and Development, the National Academy of Sciences, and similar groups. The document is a key resource in establishing research priorities, as well as areas for productive collaboration. It is available on the Internet at <http://www.volpe.dot.gov/resref/strtrplns/nstc/citrdep/index.html>.

A second edition of this report is currently under development covering the next tier of countries active in transportation R&D. They are: Argentina, Brazil, Mexico, Australia, China, India, South Korea, Netherlands, Spain, Sweden, and Switzerland.

In addition, the U.S. Library of Congress is assisting RSPA in developing an International Transportation Research and Technology Information base with information on current and future transportation R&T developments in other developed nations. Such a database will help ensure that Federal investment in transportation R&T is coordinated for efficient use of Federal funds, focused on identified critical projects, and limited to areas in which major public benefits can be achieved through cost-shared Federal research.

Question. Please provide a discussion of the value and uses of products obtained from research planning and management projects in fiscal year 1999 or 2000. Please indicate which projects are ongoing (into 2001), or have been completed.

Answer. As pointed out by the first NRC/TRB review of the Federal Transportation Research and Development Strategic Planning Process, this process helps leadership within the Department and across the Federal Government define transportation priorities and identify key R&D initiatives. The plans that have been developed as a result of this process focus our attention on the priorities and provide the framework for solving national transportation problems through R&D.

All of RSPA's planning and management projects undertaken in fiscal year 1999 and fiscal year 2000 are ongoing and will continue in fiscal year 2001. Plans are revised as new knowledge is obtained, visions are refined and goals are adjusted.

The variety of research planning materials that have been developed under this activity have already had the following effects:

- Promoted collaborative research (e.g., aviation R&D, fuel cells)
- Promoted consideration of longer-term research (e.g., nanotechnology)
- Raised the consciousness of senior DOT leadership of R&D as a tool to achieve Departmental goals and solve transportation problems (e.g., R&T is a corporate management strategy for DOT)
- More explicitly linked research to accomplishment of Departmental goals (e.g., 2001 Performance Plan and 1999 Performance Report)
- Created a better-focused agenda of research activities and priorities (e.g., DOT Transportation R&D Plan (Second Edition))
- Identified new opportunities for co-operative implementation (e.g., Transportation Infrastructure Assurance R&D, Human-centered Systems, Advanced Vehicle Technologies Program)
- More effectively involved non-Federal participants (industry, State/local government, academia) in support and conduct of research (e.g., Intelligent Vehicle Initiative, ITS Deployment, National Highway R&T Partnership Initiative, National R&D Plan on Aviation Safety, Security, Efficiency and Environmental Compatibility)

TRANSPORTATION INFRASTRUCTURE ASSURANCE R&D

Question. Please identify all ongoing research in all DOT modes that identifies and/or addresses transportation infrastructure and security vulnerabilities. What levels of funding were appropriated for these programs in fiscal years 1999 and 2000 and what levels are requested for fiscal year 2001?

Answer. The following is a list of research in all DOT operating administrations that address transportation infrastructure and security vulnerabilities and the corresponding levels of funding.

| DOT Administration | Activity | Fiscal year | |
|--------------------|-----------------------------------|--------------|--------------|
| | | 1999 | 2000 |
| FAA | Explosive/Weapons Detection | \$41,700,000 | \$37,605,000 |
| FAA | Airport Security | 2,708,000 | 2,385,000 |
| FAA | Human Factors | 5,282,000 | 5,256,000 |

In addition, the Federal Transit Administration has carried out limited investigations to improve personal security and property protection at transit facilities leveraging DOD funds in fiscal year 1999 and fiscal year 2000.

The following is a breakdown of all DOT operating administrations' funding requests for fiscal year 2001 to support the Transportation Infrastructure Assurance Research and Development Program:

| DOT Administration | Activity | Fiscal year 2001 funding |
|--------------------|---|--------------------------|
| FAA | Passenger/Cargo Security and Intrusion Detection | \$54,900,000 |
| RSPA | Chemical and Biological Agent Detection, Intermodal Terminal Security, and Human Factors. | 3,400,000 |

These activities are described in a "DOT Transportation Infrastructure Assurance R&D Plan" published in September 1999 which aligns R&D investments with the missions and responsibilities of each organization. The Transportation Infrastructure Assurance R&D Program is intended to integrate all DOT efforts.

UNIVERSITY MARINE TRANSPORTATION RESEARCH

Question. Please identify all ongoing research at MARAD, Coast Guard, and RSPA that addresses marine transportation mobility, safety, environmental protection and security. What levels of funding were appropriated for these programs in fiscal years 1999 and 2000 and what levels are requested for fiscal year 2001?

Answer. The levels of funding for research related to marine transportation mobility, safety, environmental protection and security within MARAD, Coast Guard and RSPA are as follows:

| DOT Administration | Activity | Fiscal year | | |
|--------------------|---|-------------|-------------|-----------|
| | | 1999 | 2000 | 2001 |
| MARAD | N/A | | | |
| Coast Guard | Improve Search & Rescue Capability | \$875,000 | \$1,162,000 | \$457,000 |
| Coast Guard | Waterways Safety & Management and Aids to Navigation. | 2,116,000 | 1,444,000 | 1,196,000 |
| Coast Guard | Marine Safety | 3,198,000 | 3,108,000 | 5,448,000 |
| Coast Guard | Interagency Ship Structure Committee | 289,000 | 159,000 | 381,000 |
| Coast Guard | Marine Environmental Protection | 1,694,000 | 2,263,000 | 1,142,000 |
| Coast Guard | Comprehensive Law Enforcement | 1,129,000 | 3,213,000 | 4,422,000 |
| Coast Guard | Technology Investment | 4,350,000 | 3,746,000 | 3,991,000 |
| RSPA | University Marine Transportation Research. | | | 2,500,000 |

HUMAN-CENTERED SYSTEMS RESEARCH PROGRAM

Question. Please identify all ongoing human-centered systems research at the Department of Transportation, within each modal administration and interagency program. What levels of funding were appropriated for these programs in fiscal years 1999 and 2000 and what levels are requested for fiscal year 2001?

Answer. The Department's Operating Administrations have engaged in modal-specific human factors research and development activities. They promulgate their results, typically in the form of safety regulations, to their specific transportation sector.

DOT did not receive appropriated funds for human-centered systems research in fiscal year 1999 or fiscal year 2000. In fiscal year 2001, RSPA has requested \$3,000,000 to support this One-DOT effort. FAA, NHTSA, FMCSA, FHWA, FRA, FTA and USCG also recognize the critical importance of this effort in terms of its potential to reduce fatalities and property loss due to human error. They are willing to contribute funding for this effort in fiscal year 2000.

ADVANCED VEHICLE TECHNOLOGIES PROGRAM

Question. What is the status and accomplishments to date of the advanced vehicle technologies program?

Answer. The Advanced Vehicle Technologies Program (AVP), which is entering its second year, represents a successful transition and shift in emphasis of the Electric Vehicle and Hybrid Electric Vehicle (EV/HEV) program managed by the Defense Advanced Research Projects Agency (DARPA) from fiscal year 1993 through fiscal year 1998. AVP builds on the momentum achieved from investment by DARPA and private-public partners (a total of over \$250 million from 1993–1998) for advancing medium and heavy electric and hybrid-electric vehicle and infrastructure technologies. The partners have provided at least an equal cost share with the Government to accelerate the development and deployment of advanced vehicle, component and infrastructure technologies into the market place. The DARPA partnership initiated over 300 projects with 450 companies and helped develop:

- Hybrid electric transmissions
- Auxiliary power units and motors
- Advanced battery and charger systems, and controllers
- Flywheels to augment batteries
- Advanced materials to reduce weight.

Since management under DOT beginning in fiscal year 1999, program directions have been announced for fiscal year 1999, fiscal year 2000 and fiscal year 2001–2003. In response to the fiscal year 1999 solicitation, 26 projects were awarded to consortia in fiscal year 1999. These important projects are underway and well ahead of schedule in great part due to the AVP's fast-tracked public and private partnership and the use of "other transactions" agreements. Project selection for fiscal year 2000 and fiscal year 2001 is nearing completion. Funding for fiscal year 2001 projects will be awarded upon enactment of the fiscal year 2001 appropriations.

Question. Please outline the makeup of the seven national consortia, and describe the types of technologies each consortia are developing.

Answer. The seven quasi-regional consortia consist of over 500 private companies, universities, laboratories and state and local governments. The membership of the consortia fluctuates on a periodic basis.

(1) WestStart—CALSTART is developing the following types of technologies: a fuel cell auxiliary power unit for over-the-road trucks; an electric propulsion system for medium- and heavy-duty vehicles; a hybrid electric transit bus with flywheel power management; an all-purpose electric airport tow tractor; and electrochemical capacitors using carbon lead-oxide electrodes.

(2) ELECTRICORE is developing the following types of technologies: a 600–900 Volt test system for heavy duty hybrid electric vehicles; passenger trams with installed microturbines; and advanced silicon carbide power electronics.

(3) The Hawaii Electric Vehicle Demonstration Project is developing the following types of technologies: electric vehicle charging infrastructure; a zero-emission 100 passenger electric tram for airports; and a battery cycle life prediction tool.

(4) The Mid-Atlantic Regional Consortium for Advanced Vehicles is developing the following types of technologies: an unmanned hybrid electric high mobility multi-purpose wheeled vehicle; a nickel-hydrogen segmented battery for hybrid electric military vehicles, commercial trucks, and buses; an optimized compression ignition engine generator system for heavy-duty hybrid electric vehicles; an integrated simulation and testing system for electric vehicle batteries; smaller, better inverters with polymer multi-layer capacitors; and a refined and tested hybrid electric Bradley Fighting Vehicle demonstrator.

(5) The Northeast Advanced Vehicle Consortium is developing the following types of technologies: a sustainable energy system for a national recreation area; a heavy-duty hybrid electric vehicle emission test certification protocol; a battery-electric-dominant heavy-duty hybrid electric school bus; and jet vapor deposition for catalyzing fuel cell membranes.

(6) The Southern Coalition for Advanced Transportation is developing the following types of technologies: a utility industry trouble truck and mobile power source; an improved hybrid electric high mobility multi-purpose wheeled vehicle; and advanced components that have been demonstrated on the Advanced Technology Transit Bus.

(7) Sacramento Electric Transportation Consortium is developing the following types of technologies: a nickel metal hydride battery System for an electric bus; and a plastic lithium ion hybrid electric vehicle battery.

Question. How is the program managed? Is there a strategic plan? If so, has it ever been published?

Answer. The Research and Special Programs Administration (RSPA) manages the AVP in cooperation with other DOT operating administrations and Federal agencies, including the Departments of Defense and Energy. The Electric Vehicle and Hybrid Electric Vehicle Program (EV/HEV), from which the AVP was derived, was managed by the Defense Advanced Research Projects Agency (DARPA) using seven geographically dispersed regional consortia representing private industry and other non-Federal organizations. The consortia were competitively selected to organize industry teams to develop innovative technology solutions, enhance competition, provide a decentralized management structure, and accelerate technology development and national deployment.

The AVP continues to rely on this management approach and structure as well as the use of innovative procurement mechanisms, such as “other transactions” to accelerate the development and deployment of technologies. In response to an annual program announcement, projects are selected through a process of proposal, submission, review, and acceptance. Each proposal is reviewed jointly by DOT and, as appropriate, other agencies.

RSPA recently completed a strategic plan for DOT medium- and heavy-duty vehicle R&D. This plan, which covers the AVP, responds not only to a Congressional mandate but documents the early stages of what will be an ongoing strategic planning process specific to medium- and heavy-duty vehicle R&D. Copies will be provided to the Committee upon completion of the printing process, which should occur soon.

Question. Did the Department of Defense and the Department of Energy contribute any funds to this partnership in fiscal year 2000?

Answer. Neither the Department of Defense nor the Department of Energy contributed any funds to this partnership in fiscal year 2000.

Question. Is any Department of Defense or Department of Energy funding requested for the AVTP program in the fiscal year 2001 budget request? If so, how much is requested in each budget, and from what agencies and accounts?

Answer. Neither the Department of Defense nor the Department of Energy requested fiscal year 2001 funding for the AVP.

UNIVERSITY TRANSPORTATION CENTERS GRANTS PROGRAM

Question. Specify what you have done since last year to improve the effectiveness of the University Transportation Centers program.

Answer. The following activities have been accomplished since last year to improve program effectiveness:

- established a new UTC grant requirement that requires a DOT representative to participate in each UTC's research selection process to promote the accomplishment of DOT goals and objectives, as well as to facilitate information exchange;
- held an open competition for the ten regional UTC grants to ensure that the grants were awarded to the best applicants;
- instituted baseline measures and annual performance indicators for each UTC, in accordance with the Government Performance and Results Act; and
- began holding site visits at the TEA-21 UTCs with multimodal DOT teams assessing and evaluating each center's work.

Question. Please display the University Transportation Centers (UTC) budget for fiscal years 1999, 2000, and 2001. Include funding sources, amounts released in grants (by TEA-21 institution groupings), and administrative and evaluation costs.

Answer. The following tables are provided. They do not include funding for three RSPA FTE funded from the Highway Trust Fund.

| Funding sources | Fiscal year | | |
|---|--------------------------|---------------------------------|--------------------|
| | 1999 | 2000 (estimate) ¹ | 2001 (estimate) |
| FTA R&D Appropriations | ² \$5,940,000 | \$1,200,000 | \$1,200,000 |
| Transit Account of the Highway Trust Fund | | 4,800,000 | 4,800,000 |
| Highway Account of the Highway Trust Fund | 22,640,000 | 23,670,000 | 23,670,000 |
| Total Program Funding | 28,580,000 | 29,670,000 | 29,670,000 |

¹ Reimbursable Agreements have not yet been executed with FTA and FHWA.

² FTA did not indicate how much came from which source.

| Costs ¹ | Fiscal year | | |
|-------------------------------------|-------------------|--------------------|--------------------|
| | 1999 | 2000 (estimate) | 2001 (estimate) |
| Group A | \$8,744,360 | \$8,622,900 | \$8,622,900 |
| Group B | 2,097,600 | 3,449,160 | 3,449,160 |
| Group C | 6,528,500 | 6,527,026 | 6,527,026 |
| Group D | 10,992,000 | 10,898,320 | 10,898,320 |
| Administration and Evaluation | 217,540 | 172,594 | 172,594 |
| Total | 28,580,000 | 29,670,000 | 29,670,000 |

¹ This table indicates the fiscal year of the funding awarded and not the year in which the grants were made.

Question. Please list all of the universities now receiving funds authorized in TEA-21 and the amounts provided to each university in fiscal years 1999, 2000, and anticipated for fiscal year 2001.

Answer. The following table is provided:

| Name of recipient | Fiscal year | | | |
|------------------------------|-----------------|----------------------|---------------------------------|---------------------------------|
| | 1999 authorized | 1999 awarded | 2000-2001 authorized (per year) | 2000-2001 est. award (per year) |
| Alabama, U. of | \$750,000 | \$655,500 | \$750,000 | \$646,718 |
| Arkansas, U. of | 750,000 | 655,500 | 750,000 | 646,718 |
| Assumption College | 300,000 | 262,200 | 500,000 | 431,145 |
| California, U. of | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |
| Central Florida, U. of | 300,000 | 262,200 | 500,000 | 431,145 |
| City U. of NY | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |

| Name of recipient | Fiscal year | | | |
|------------------------------|-----------------|----------------------|---------------------------------|---------------------------------|
| | 1999 authorized | 1999 awarded | 2000–2001 authorized (per year) | 2000–2001 est. award (per year) |
| Denver, U. of | 300,000 | 262,200 | 500,000 | 431,145 |
| George Mason U. | 2,000,000 | 1,748,000 | 2,000,000 | 1,724,580 |
| Idaho, U. of | 750,000 | 655,500 | 750,000 | 646,718 |
| Iowa State U. | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |
| Marshall U. | 2,000,000 | 1,748,000 | 2,000,000 | 1,724,580 |
| MIT | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |

| Rutgers U. | 300,000 | 262,200 | 500,000 | 431,145 |
| San Jose State U. | 750,000 | 655,500 | 750,000 | 646,718 |
| So. Carolina State U. | 300,000 | 262,200 | 500,000 | 431,145 |
| South Florida, U. of | 750,000 | 655,500 | 750,000 | 646,718 |
| Southern Calif., U. of | 300,000 | 262,200 | 500,000 | 431,145 |
| Tenn., U. of | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |
| Texas A&M U. | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |
| Wash., U. of | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |
| Wisc., U. of | 1,000,000 | ¹ 890,000 | 1,000,000 | 862,290 |

¹ Amount includes \$874,436 of fiscal year 1999 funds and \$15,564 of unobligated fiscal year 1997 UTC Program funds. The fiscal year 1997 funds were used to increase the grants to the amount that had been publicized in the UTC Program competition as expected to be available that year.

Question. For each university which has received grants from the UTC program in fiscal years 1999 or 2000, please specify what research programs are supported, and describe what the Department is doing to integrate the research activities conducted by each center or university with the Department's own research.

Answer. To date, UTC grants awarded under TEA-21 have involved funding from fiscal years 1998 and 1999. Because UTC grants have historically been awarded at the end of the fiscal year, no fiscal year 2000 funding has yet been awarded. The 10 UTCs in Group A, the so-called Regional UTCs, were selected by competition in 1999 and thus have received only one year's funding.

All UTCs are empowered to select their research projects, but they must do so through a process that includes peers and other experts in the field, including at least one employee from the U.S. Department of Transportation (DOT). In addition to considering each proposal's technical completeness and feasibility, a UTC's selection process must include multiple additional rating factors, not least of which is the project's relevance to the UTC's chosen theme and to the Department of Transportation's strategic goals. Participation by DOT staff ensures a two-way conduit for information about on-going research between DOT and the university.

All UTCs are now required to post a brief project description for each research project on the UTC's respective web sites. These descriptions are to be provided in HTML format and are to use standard Transportation Research Board keywords. All final reports on research conducted with UTC funding, after required peer review, must be published on the UTC's web site in the same manner. This innovation in the program will greatly facilitate access to new and ongoing research by DOT researchers and planners. In addition, RSPA posts all DOT-sponsored university research on its website located at <http://utc.dot.gov>. The Internet makes possible direct interaction between academic researchers and outside experts.

All but one of the 33 UTCs have completed the strategic plan that is required as their first activity under the grant. In that plan, the UTC proposes and DOT approves a theme for its center that helps to focus its research program. The 33 UTCs have the following themes:

| UTC Location | Center Theme |
|---|--|
| Assumption College | Transportation and Environmental Education for the Twenty-First Century. |
| City College of New York | Planning and Management of Regional Transportation Systems. |
| George Mason University | Deployment of Intelligent Transportation Systems. |
| Iowa State University | Sustainable Transportation Asset Management. |
| Marshall University | Transportation and Economic Development in Mountain Regions. |
| Massachusetts Institute of Technology | Strategic Management of Transportation Systems. |
| Montana State University | Rural Travel & Transportation. |
| Morgan State University | Transportation: A Key to Human and Economic Development. |
| New Jersey Institute of Technology | Productivity Increases through Transportation Improvements. |
| North Carolina A&T State University | Urban Transit Performance in Small and Rural Areas. |
| North Carolina State University | Transportation and the Environment. |
| North Dakota State University | Rural and Intermodal Transportation. |
| Northwestern University | Infrastructure Technology. |
| Pennsylvania State University | Advanced Technologies in Transportation Operations and Management. |
| Purdue University | Safe, Quiet and Durable Highways. |
| Rutgers University | Transportation Infrastructure of High Volume Systems. |
| San Jose State University | Policy Guidance of Transportation Management Systems. |
| South Carolina State University | Professional Capacity Building in Transportation. |
| Texas A&M University | Transportation Solutions to Enhance Prosperity and the Quality of Life. |
| University of Alabama | Management and Safety of Transportation Systems. |
| University of Arkansas | Improving the Quality of Rural Life through Transportation. |
| University of California | Transportation Systems Analysis and Policy. |
| University of Central Florida | Advanced Transportation Systems Simulation. |
| University of Denver | Intermodal Transportation: Assessment, Planning, and Design. |
| University of Idaho | Advanced Transportation Technology. |
| University of Minnesota | Human-Centered Transportation Technology. |
| University of Missouri-Rolla | Advanced Materials & Non-destructive Testing Technologies. |
| University of Rhode Island | Intermodal Transportation and Advanced Transportation Infrastructure. |
| University of South Florida | Transit and Alternative Forms of Urban Transportation. |
| University of Southern California | Metropolitan Transportation. |
| University of Tennessee | Transportation Safety. |
| University of Washington | Transportation Operations and Planning. |
| University of Wisconsin | Optimization of Transportation Investment and Operations. |

Question. How much of the fiscal year 1999 and 2000 monies will be allocated to any other DOT budget, and how much will be contracted to the partners?

Answer. Of the funds authorized in TEA-21 and allocated by FHWA and FTA, \$63,100 in fiscal year 1999 and an estimated \$64,750 in fiscal year 2000 was retained by FHWA, and \$60,000 in fiscal year 1999 and an estimated \$60,000 in fiscal year 2000 was retained by FTA for administrative expenses. Additionally, RSPA will be receiving approximately \$300,000 from FHWA (Highway Trust Fund) for three FTEs to manage the UTC program.

Question. Please detail the agreements now in hand for industry matching funds for this program. For each project funded during fiscal year 1999 and 2000 show the amount of federal funding and any non-federal cost sharing received.

Answer. As required by TEA-21, each UTC must supply a dollar-for-dollar match for the federal funds awarded. Match must be from non-federal government sources, with the exception of three specified sources: (1) State Planning & Research funds; (2) LTAP; and (3) FHWA's technology deployment program. Each UTC is respon-

sible for securing matching funds as a requirement of its grant. In the financial status portion of its required annual progress report, each UTC must demonstrate that the matching funds have been obtained and expended in accordance with grant guidelines. However, in compliance with the Office of Management and Budget rules for federal grants, RSPA does not require the UTCs to supply information on federal vs. non-federal match for each individual activity conducted under their grants (as hundreds of research projects and dozens of educational activities are conducted under UTC grants each year, this would be considered overly burdensome under federal grant regulations).

Question. Which types of technologies are being pursued in this program?

Answer. TEA-21 requires the UTCs to conduct combined programs of research, education, and technology transfer under a strategic plan that is completed as the first activity under each grant. In order to promote innovation and originality among the centers, and to build most efficiently on the grantee universities' existing or proposed areas of expertise, the strategic plan allows the UTC to propose its own theme for DOT approval. DOT ensures that each UTC has a unique theme that relates to key national issues.

Once a UTC has chosen its theme, that theme provides a common focus for the center's activities. The following is a list of each UTC's theme:

| UTC Location | Center Theme |
|---|--|
| Assumption College | Transportation and Environmental Education for the Twenty-First Century. |
| City College of New York | Planning and Management of Regional Transportation Systems. |
| George Mason University | Deployment of Intelligent Transportation Systems. |
| Iowa State University | Sustainable Transportation Asset Management. |
| Marshall University | Transportation and Economic Development in Mountain Regions. |
| Massachusetts Institute of Technology | Strategic Management of Transportation Systems. |
| Montana State University | Rural Travel & Transportation. |
| Morgan State University | Transportation: A Key to Human and Economic Development. |
| New Jersey Institute of Technology | Productivity Increases through Transportation Improvements. |
| North Carolina A&T State University | Urban Transit Performance in Small and Rural Areas. |
| North Carolina State University | Transportation and the Environment. |
| North Dakota State University | Rural and Intermodal Transportation. |
| Northwestern University | Infrastructure Technology. |
| Pennsylvania State University | Advanced Technologies in Transportation Operations and Management. |
| Purdue University | Safe, Quiet and Durable Highways. |
| Rutgers University | Transportation Infrastructure of High Volume Systems. |
| San Jose State University | Policy Guidance of Transportation Management Systems. |
| South Carolina State University | Professional Capacity Building in Transportation. |
| Texas A&M University | Transportation Solutions to Enhance Prosperity and the Quality of Life. |
| University of Alabama | Management and Safety of Transportation Systems. |
| University of Arkansas | Improving the Quality of Rural Life through Transportation. |
| University of California | Transportation Systems Analysis and Policy. |
| University of Central Florida | Advanced Transportation Systems Simulation. |
| University of Denver | Intermodal Transportation: Assessment, Planning, and Design. |
| University of Idaho | Advanced Transportation Technology. |
| University of Minnesota | Human-Centered Transportation Technology. |
| University of Missouri-Rolla | Advanced Materials & Non-destructive Testing Technologies. |
| University of Rhode Island | Intermodal Transportation and Advanced Transportation Infrastructure. |
| University of South Florida | Transit and Alternative Forms of Urban Transportation. |
| University of Southern California | Metropolitan Transportation. |
| University of Tennessee | Transportation Safety. |
| University of Washington | Transportation Operations and Planning. |
| University of Wisconsin | Optimization of Transportation Investment and Operations. |

Question. Please summarize the nature and amount of the research contracts that you awarded thus far during fiscal year 1999 and fiscal year 2000.

Answer. The UTC program does not award research contracts. In accordance with TEA-21, 33 universities received multi-year UTC grants in fiscal year 1998, which extend through fiscal years 1999, 2000, and 2001. Under its grant, each university is required to conduct a multimodal program of transportation education, research, and technology transfer. In fiscal year 1999, RSPA awarded \$28.36 million in federal funds to the 33 UTCs; in fiscal year 2000, RSPA will award up to \$33.25 million as designated by TEA-21, less any reduction due to the Highway Trust Fund obligation ceiling.

EMERGENCY TRANSPORTATION

Question. Why does RSPA consider it essential to have an SES executive to head the OET?

Answer. The Director of the Office of Emergency Transportation has numerous senior level managerial decision-making responsibilities sufficient to support Senior Executive Service (SES) status. The Director is responsible for the development and implementation of policy, plans, and procedures for emergency management of the national civil transportation system. The Director serves as the Department's principal representative, spokesperson, and advisor on matters of civil transportation emergency preparedness and response in the full spectrum of crisis. The Director develops national policies, plans and procedures, and is the primary liaison with the Federal Emergency Management Agency (FEMA) and other Federal, State, local and private sector authorities. The Director provides direction to headquarters and field response teams, and represent the Department on the Catastrophic Disaster Response Group, a senior policy advisory group, chaired by FEMA. As the manager of the Regional Emergency Transportation Coordination (RETTCO) program, the Director coordinates the activities of Senior SES officials and U.S. Coast Guard admirals. On the international level, the Director serves as the principal Departmental representative, spokesperson, and advisor on matters of civil transportation emergency preparedness and response in time of national disasters.

Question. What new statutory or administrative requirements have been placed on the Office of Emergency Transportation which necessitates the increase of staff from 7 to 12 positions?

Answer. Presidential Decision Directives (PDD) 39, 62 and 63, and 67 place many new requirements on Office of Emergency Transportation (OET). These PDDs address the critical topics of weapons of mass destruction, continuity of operations and critical infrastructure protection. They place an extraordinary responsibility on a small office with a Department-wide mission. Since the terrorist attack on the Murrah Federal Building in Oklahoma City, OK, Federal departments and agencies have had an increased responsibility for readiness to respond to disasters. OET has been the focal point for this responsibility in DOT. Current staffing cannot be stretched any further to take on the added work required to meet the readiness requirements.

In addition to the PDD requirements, the increasing involvement by DOT and OET in disaster-response efforts, the added responsibility of maintaining and managing the DOT relocation site, coordinating the development of DOT continuity of operations plans for the individuals DOT operating administrations, and maintaining oversight for the successful operation of the DOT Crisis Management Center, more staffing is required to successfully carry out our critical life sustaining mission.

Question. Of these requested five new positions, what are the two most urgently required, and what would be the job titles and responsibilities of these new personnel? What level of increased funding would be associated with these two positions for six months?

Answer. All of the positions are most urgently needed to provide readiness capability for the American people. However, if OET were forced to select the two most critical positions necessary for restoring the flow of life sustaining supplies and commerce, then the choice would be the Regional Emergency Transportation Manager (GS-15) and the Operations Chief (GS-13/14).

—*Regional Emergency Transportation Manager.*—Extensive technical expertise in transportation emergency preparedness planning, response and management are required for this position. The manager would develop a stronger tie between headquarters and the regions concerning the functions performed in the regions in support of disaster response. This manager would establish guidelines to assure parallel regional structures and systems while recognizing geographical differences, manage the regional training program, and develop con-

tinuity of operations (COOP) plans since most response activities occur at regional level. He or she would work closely with State and local agencies to ensure their participation in the transportation planning and response efforts. Due to the nature of the COOP work, a Top Secret clearance is required. When natural disasters occur, this manager would provide high-level coordination.

—*Operations Chief.*—This position would function as the lead policy individual on the processes and procedures utilized in a crisis environment. The Operations Chief would lead activations at headquarters and the COOP site response centers during crisis situations. It would be his or her responsibility to ensure that emergency plans and response staffing plans are current and ready to use and the individuals are trained. The Operations Chief must coordinate with other Federal departments and agencies and the DOT 24-hour Operations Centers. To do this, extensive education, experience and training are required. This individual will maintain and operate the classified data systems used within the office. A Top Secret clearance is required due to the nature of the work to be performed on a daily basis.

We have requested \$132,000 for both positions, which would fund personnel compensation and benefits for one-half of the fiscal year for each position. That level of funding would also allow us to establish a work station (systems furniture, computers, phones, etc.), for each employee.

Question. How many times in fiscal year 1999 was the Center activated and for what reasons? How many times thus far in fiscal year 2000 has the Center been activated and for which reasons?

Answer. Any time a major incident occurs that disrupts the transportation infrastructure, usually without advance notice, DOT either partially or fully activates the DOT Crisis Management Center (CMC). In 1999, the DOT Center was used at least a dozen times for natural disasters including:

- flooding in Virginia,
- tornadoes in Arizona,
- Hurricane Floyd,
- winter storms in the Pacific Northwest,
- blizzards in the Midwest and the Northeast,
- severe cold weather in Alaska,
- winter storms in New York,
- the District of Columbia snow storm,
- Texas flooding, and o landslides in Idaho.

The center was also activated for one special event: the NATO Anniversary held in Washington, DC. It was also activated to serve as the Department’s clearing house for the Y2K rollover and earlier in the year for the Julian Calendar rollover on April 9, 1999.

Thus far in 2000, the center has been activated 24 hours a day for several days during the Y2K rollover event and the leap year rollover event. We plan to activate the center this Spring for a major National Security Exercise.

We use the CMC daily. The Office of Emergency Transportation staff researches information about ongoing disasters across the globe that may impact the transportation system. Staff members prepare reports and maintain communications with other Federal and State emergency operations centers. They also use the CMC to provide readiness training to Departmental and other Federal response personnel on a recurring basis.

Question. For the Crisis Response Management program, please provide a breakdown of how the fiscal year 1999 and fiscal year 2000 funds were or will be used.*Answer.*

| Fiscal year 1999 | Appropriation/Obligation |
|--|--|
| Contract Program: Crisis Response Mgmt | ¹ \$450,000/ ² \$397,000 |

¹ Include \$250,000 for Y2K supplemental.

² Balance of funding was carried over to fiscal year 2000.

Funds were used for developing regional and headquarters training, assisting the RETCOs as possible in the conduct of their program operations, internal contracts for software support contracting, and contracting for maintenance support in the Crisis Management Center.

| Fiscal year 1999 | Appropriation/Obligation |
|--|----------------------------------|
| Contract Program: Crisis Response Mgmt | ¹ \$280,000/\$323,000 |

¹ Estimated obligations; includes unobligated balance from Y2K fiscal year 1999 supplemental.

Fiscal year 2000 funding is for developing and conducting response team training at headquarters and in the regions, for limited support to the RETCO program, contract support for software systems, Crisis Management Center maintenance and contracting, Continuity of Operations (COOP) startup costs for the installation of a building access ramp (\$55,000) at the DOT relocation site, and for minimal equipment (\$25,000) for the relocation site.

PROGRAM SUPPORT

Question. Where is the Transportation Safety Institute? How many personnel work there? Are these RSPA employees? How is the Institute funded?

Answer. The Transportation Safety Institute (TSI) has two campuses in Oklahoma City, with the main campus located at the Mike Monroney Aeronautical Center, and the North Campus facility located at 4400 Will Rogers Parkway. Currently 56 Federal employees work at TSI, 10 of which are Coast Guard Container Inspection Training and Assistance Team positions, and 1 is a detailed position from Office of Pipeline Safety. Two of the positions (Director and Office Administrator) are RSPA employees.

TSI is funded and staffed with resources provided from sponsoring Federal Agencies through reimbursable agreements. TSI also receives funding from private companies who wish to have safety training, such as pipeline and hazardous materials safety training, provided for their employees. Sponsor costs are reduced by tuition and user fees charged to non-sponsor participants, such as international students, and state, industry, and local government students who fill available classroom slots, as permitted under specific legislative authority.

Question. Please explain the proposed move of 2 FTE associated with the Transportation Safety Institute from the Research and Technology budget to Program Support. How much of the increased request for Program Support PC&B is associated with the proposed transfer of two Transportation Safety Institute FTE?

Answer. The proposed move of two FTE associated with the Transportation Safety Institute from the Research and Technology budget to Program Support is due solely to the Secretary's reorganization of the Research and Special Programs Administration. The increased request for Program Support PC&B associated with the proposed transfer of two Transportation Safety Institute FTE is \$200,000.

Question. Department-wide, how much was allocated for the Garrett A. Morgan Technologies and Transportation Futures Program during fiscal year 2000 and how much will be allocated during fiscal year 2001? Please specify the exact source of those funds.

Answer.
[The information follows:]

GARRETT A. MORGAN TECHNOLOGY & TRANSPORTATION FUTURES PROGRAM

[In thousands of dollars]

| Operating Administration/Account | Fiscal year | |
|----------------------------------|-------------|-------|
| | 2000 | 2001 |
| USCG: General Operations | \$100 | |
| FAA: General Operations | 50 | |
| FHWA: Highway Trust Fund | | \$688 |
| RSPA: RSP/Program Support | | 200 |

In fiscal year 2000, USCG and FAA were the sole sources of funding for RSPA's Garrett A. Morgan Technologies and Transportation Futures Program.

Question. What different functions does the new "business modernization" program perform that are not met by the "information resource management" program? Between these two programs, the fiscal year 2001 budget request is almost \$1,000,000 higher than the enacted fiscal year 2000 funding level. If you got half the increase you requested in these programs, what could be accomplished in fiscal year 2001, and what would need to be deferred?

Answer. The Information Resource Management (IRM) Program allows RSPA to meet existing program office needs that translate into achievement of the goals and activities in DOT's and RSPA's Strategic Plans. The IRM Program request will ensure that we are able to provide the systems, support and maintenance for RSPA's current electronic infrastructure and automated business functions needed to provide the public with hazardous materials safety, environmental protection, mobility, national security and research and education.

The IRM program cannot support new initiatives. Business Modernization is a major new initiative envisioned to change the basic way RSPA will do business in a digitized government. RSPA needs additional resources to accelerate the evaluation of its systems and to automate additional business processes that make sense. Finding appropriate automation tools to leverage technology across such a diverse agency is a key challenge. Such automation is necessary to accomplish more with less tomorrow and to achieve RSPA's customer service goals.

Partial funding of half of the request would drastically narrow the focus of the Modernization Program. RSPA would be able to meet its DOT Wide Initiatives and with the Wide Area Network (WAN) Initiative improve electronic communications and performance to the RSPA regional offices.

Deferral of investments to Infrastructure and Programmatic Operations will not enable RSPA to keep pace with the technological development of its stakeholders, Government partners, and the public. Without the new and expanded systems RSPA will lose the capability to significantly improve data and information exchange and the analysis supporting regulatory decisions. The lack of these investments will deny RSPA the opportunity to maintain its oversight and regulatory effort in the face of the growth in industries regulated in RSPA's hazardous materials and pipeline programs. Ultimately, it would undermine RSPA's ability to achieve its mission of transportation safety, emergency response, and the development and dissemination of research and technology.

Question. Please specify what employee development activities have been accomplished in fiscal years 1999 and thus far in fiscal year 2000. How has RSPA paid for these activities? What planned activities would be undertaken with the new \$327,000 employment development program?

Answer. From fiscal year 1999 until now technical training was provided to employees who oversee hazardous materials transportation, pipeline safety, advanced technology research, and national mobility/security. This is critical training for employees in technical fields who require an understanding and expertise in industrial processes and techniques such as organic and physical chemistry, blasting and explosives, welding inspection for pipelines and pipeline inspections using intelligent pigs. This mission related training consumes the majority of our budget. In fiscal year 1999, we recognized the need to develop our staff's management competencies and were able to complete management development training.

Administrative training (i.e., acquisition, budget, accounting, human resources, diversity, etc.) including soft skills and basic education training (i.e., writing, English and grammar, time management, project management, communications skills, etc.) is only accomplished once technical training needs are met. Creating a digital government requires the Research and Special Program Administration to develop and maintain a computer literate population. We were able to accomplish limited training in this area during fiscal year 1999 and fiscal year 2000. RSPA is experiencing nearly full staffing levels, which makes alternate funding sources unavailable in fiscal year 2001.

The additional funding will provide for continuous learning especially critical in technological fields such as those that RSPA's employees oversee in the fields of hazardous materials transportation, pipeline safety, advanced technology research and national mobility/security. RSPA's technical workforce needs frequent re-training in industrial processes and techniques merely to keep pace with technological changes in the industries that it regulates.

Present day standard office technology, procedures and practices require us to stay abreast of current trends and technology. We plan to train existing employees in 21st century business processes and innovations to increase their productivity, efficiency, and customer service skills.

We anticipate using the additional fiscal year 2001 training funds for customer service training. Based on the results of a National Performance Review survey, the Department of Transportation plans to earmark customer service training as a high priority.

We plan to make greater use of distance learning technology, as directed by Executive Order 13111 "Using Learning Technology to Improve Training Opportunities for Federal Employees", to provide the highest quality and most efficient training opportunities possible to our employees.

The Secretary of Transportation's Workforce Planning Initiative directs us to analyze and identify our workforce skills requirements through fiscal year 2002, and to develop a strategy to maximize the extent to which critical skills needs can be filled internally. The additional funding will enable us to retrain employees in order to fill skill gaps and build talents pools to meet future organization's needs.

Executive and management training, new skills requirements, greater use of distance learning technology, workforce planning strategies, and identified gaps in traditional skills all underscore the need within RSPA for increased learning and development funding.

EMERGENCY PREPAREDNESS GRANTS

Question. Please prepare a table showing the amount allocated to each of the states for each of the last three years and display the increase that would be provided if the full request was allowed.

Answer. The following table is provided:

| STATES | ACTUAL ALLOCATIONS | | | FULL-FUNDING FISCAL YEAR 2000 | INCREASE 1999-2000 |
|----------------------------|--------------------|-----------|-----------|-------------------------------------|-----------------------|
| | FISCAL YEAR | | | | |
| | 1997 | 1998 | 1999 | | |
| ALABAMA | \$117,942 | \$117,942 | \$158,656 | \$234,957 | \$76,301 |
| ALASKA | 41,180 | 41,180 | 55,396 | 81,870 | 26,474 |
| ARIZONA | 81,763 | 81,763 | 109,987 | 163,390 | 53,403 |
| ARKANSAS | 72,907 | 72,907 | 98,074 | 145,952 | 47,878 |
| CALIFORNIA | 485,207 | 485,207 | 652,701 | 968,081 | 315,380 |

| WYOMING | 49,890 | 49,890 | 67,112 | 99,313 | 32,201 |
| TOTAL | 5,980,890 | 6,027,171 | 8,107,766 | 12,027,208 | 3,919,442 |

Question. How will the final regulation on registration fees influence fee collection for the next two years? How does this rulemaking influence the need for appropriated funds?

Answer. RSPA expects that under the revised registration regulations, approximately 45,000 companies will be required to register and that the grant program monies collected will be sufficient to fund that program at the \$14.3 million level reflected in the Department's fiscal year 2000 budget. The increase in the amounts collected under the revised registration requirements will be used to increase the training and planning grants. All other program funding levels will remain consistent with needs established in previous years.

Question. What would be the result if, for fiscal year 2001, the Appropriations Committees reinstated the obligation ceiling for emergency preparedness grants at \$7,500,000? How would the excess collections above the obligation ceiling be treated? Would the hazardous materials registration rulemaking be revised?

Answer. RSPA would distribute grant program funds up to the ceiling. All funds collected above any Congressionally-mandated ceiling would be held in the Emergency Preparedness Fund for distribution during the following year's grant cycle. An obligation ceiling on current year authority would not impact the need to collect funds for mandatory authority for the program in the future.

Question. Has RSPA performed any specific analysis to justify the expansion of the HMEP program as proposed in its February 14, 2000 rule? If so, please summarize this analysis and your findings. Does the analysis include an assessment of the role of privately funded, locally funded, and state-funded hazardous materials emergency response training?

Answer. The final rule published on February 14, 2000 was supported by a Final Regulatory Evaluation that considered five regulatory alternatives, including: (1) do nothing; (2) expand base of persons required to register and adopt a two-tier fee schedule (\$300 & \$2,000); (3) raise the flat fee for all persons currently required to register (\$575); (4) expand base of persons required to register and increase the flat fee (\$360); and (5) adopt a two-tier fee schedule for all persons currently required to register (\$300 & \$5,000). Our evaluation found:

- the average annual level of funding (approximately \$6.4 million) of the HMEP program is approximately 50 percent of that authorized by the Congress.
- 40 percent (\$2.56 million) of grant funds allocated for emergency preparedness planning purposes goes to support activities of the more than 3,000 Local Emergency Planning Committees throughout the nation.
- 60 percent (\$3.84 million) of grant funds allocated for emergency preparedness training purposes goes to support activities of the nation's more than 2 million emergency responders (250,000 paid firefighters, 800,000 volunteer firefighters, 725,000 law enforcement officers, and 500,000 emergency medical services providers).
- approximately 800,000 shipments of hazardous materials make their way through the national transportation system each day.
- the potential threats posed by the transportation of hazardous materials require the development of emergency plans and training of emergency responders to the full extent authorized by law.

RSPA's analysis did not include an assessment of the role of privately funded programs for hazardous materials emergency response training, but did include some discussion of state-funded hazardous materials emergency response training.

OFFICE OF PIPELINE SAFETY (OPS) THREE YEAR FUNDING

Question. What activities can be funded with the monies that are available for three years?

Answer. Three year funding availability is requested in our fiscal year 2001 President's Budget as follows. We have indicated the funding sources and note that an activity may be funded by more than one source (e.g., State Pipeline Safety Grants).

Fiscal Year 2001 President's Budget

| <i>Program Activity</i> | <i>Amount</i> |
|---|---------------|
| Trust Fund Share of Pipeline Safety: | |
| Operating Expenses: | |
| Personnel Compensation & Benefits | \$275,000 |
| Administrative Expenses | 45,000 |
| Contract Programs: | |
| Information & Analysis | 400,000 |
| Risk Assessment & Technical Studies | 400,000 |
| Compliance | 100,000 |
| Training & Information Dissemination | 100,000 |
| OPA: Implementing the Oil Pollution Act | 2,443,000 |
| Grants: State Pipeline Safety Grants | 500,000 |
| Total | 4,263,000 |
| Pipeline Safety Fund: | |
| Research and Development: | |
| Information Systems | 400,000 |
| Risk Assessment | 300,000 |
| Mapping | 800,000 |
| Outside Force Damage | 644,000 |
| Total | 2,144,000 |
| Grants: | |
| State Pipeline Safety Grants | 17,019,000 |
| Risk Grants | 500,000 |
| One-Call Grants | 1,000,000 |
| Damage Prevention Grants | 5,000,000 |
| Total | 23,569,000 |

OPS UNOBLIGATED BALANCES

Question. What are the current unobligated balances in the various sub accounts in the appropriation for the OPS? What amount will be unobligated at the end of fiscal year 2000? Will any unobligated funds be returned to the pipeline safety fund?

Answer. As of March 21, 2000, the total unobligated balance for the Office of Pipeline Safety was \$17.73 million. This includes \$.458 million for operation expenses; \$.273 million for contract program activities (one year funds); \$2 million for R&D program activities (three year funds); and \$15 million for grants. We plan to obligate all contract program and grant funding by close of fiscal year 2000. We estimate that our 3-year funding that was enacted in fiscal year 2000 for R&D will have an unobligated balance of approximately \$600,000 at the end of fiscal year 2000. At this time, we are estimating a lapse of less than \$100,000 of one year operating expenses. Unobligated "one-year" funds for a given fiscal year are returned to the Pipeline Safety Fund 5 years after the close of the fiscal year in which they were appropriated.

REGULATIONS IMPACTING WORKLOAD

Question. How will the forthcoming pipeline integrity regulations affect the OPS workload? How does the fiscal year 2001 budget request account for those expected impacts on OPS? How will this new regulatory requirement impact the workload of the OPS over the longer term?

Answer. We are currently analyzing the workload impact of these regulations, but we do expect that they will present sizeable challenges to OPS. In fiscal year 2000–2001, the impacts are primarily in areas of regulatory and standards development. The four new technical experts requested in fiscal year 2001 will help OPS develop the compliance strategy and audit process for the integrity regulation that we will implement in fiscal year 2002. We will begin training our inspection personnel on the audit process we will use to review the adequacy of internal inspection, hydrotesting, and analysis in fiscal year 2001. We will use funds derived from the Risk Assessment and Technical Studies account.

The fiscal year 2001 budget request does not account for the majority of these integrity rule impacts as the largest workload will begin in fiscal year 2002 with the review of operator-developed assessment plans. We are currently working to define workload needs and identify the appropriate mix between contractual and permanent staff to efficiently and effectively carry out the associated responsibilities.

OPS STAFFING LEVELS

Question. Please provide a breakout of the current staffing levels in OPS headquarters and the five regional offices. Are all 105 funded positions currently filled? If not, where are the vacancies?

Answer. The following table is provided:

OFFICE OF PIPELINE SAFETY STAFFING LEVELS

| Office | Authorized | Onboard | Vacant |
|--------------------|------------|------------|----------|
| Headquarters | 39 | 38 | 1 |
| Eastern | 10 | 10 | |
| Southern | 10 | 10 | |
| Central | 14 | 12 | 2 |
| Southwest | 13 | 12 | 1 |
| Western | 15 | 15 | |
| TSI | 4 | 4 | |
| Total | 105 | 101 | 4 |

PIPELINE SAFETY RESERVE FUND

Question. Please prepare a comparative historical table displaying the per mile user fee assessed to gas transmission and liquid pipeline operators, and the total collected in user fees from each industry in fiscal years 1997 through 1999 and anticipated for fiscal year 2000.

Answer. A table follows which shows the per mile rate and the total collections for fiscal years 1997 through 1999. We are currently collecting fiscal year 2000 user fees; therefore, the amounts shown below indicate the assessment made to the gas and liquid operators. We estimated the fiscal year 2000 figures based on the amount of \$30,612,888.65. This includes the President's Budget Request for the Pipeline Safety Program of \$36,879,000, less funds derived from the Oil Spill Liability Trust Fund of \$5,479,000 and \$1.4 million derived from existing user fees, plus an offset to the Research and Special Programs Appropriation for labor costs to support the Pipeline Safety Program. Other variables include the offset from previous year collections. The law allows RSPA to collect 105 percent of the appropriation.

1997–1999 PER MILE RATE/TOTAL COLLECTIONS

| | Per Mile Rate | Total collected |
|-------------------|---------------|-------------------------|
| Gas transmission: | | |
| Fiscal year: | | |
| 1997 | \$67.48 | \$18,927,000 |
| 1998 | 67.98 | 20,050,437 |
| 1999 | 70.47 | 20,725,337 |
| 2000 | 68.23 | ¹ 20,458,589 |

1997–1999 PER MILE RATE/TOTAL COLLECTIONS—Continued

| | Per Mile Rate | Total collected |
|--------------|---------------|------------------------|
| Liquid: | | |
| Fiscal year: | | |
| 1997 | 61.27 | 8,869,716 |
| 1998 | 59.59 | 8,864,335 |
| 1999 | 57.88 | 9,102,548 |
| 2000 | 63.11 | ¹ 9,761,800 |

¹ Fiscal year 2000 based on assessment.

Question. How did you allocate the user fee between gas transmission lines and product lines for each of the last two fiscal years? Does this accurately reflect the true allocation of your efforts and resources? Please document your answer.

Answer. In fiscal year 1999 and fiscal year 2000, RSPA charged gas operators 55 percent of program costs and 87 percent of grants. We charged liquid operators 45 percent of program costs and 13 percent of grants. These percentages closely reflect the allocation of our efforts and resources, as shown in the table that follows:

| Program Activity | Fiscal year | |
|--|---------------------|---------------------|
| | 1999 Gas/ Liquid | 2000 Gas/ Liquid |
| PC&B ¹ for the Inspectors (Regions) | 50/50 | 50/50 |
| PC&B for HQ personnel | 67/33 | 60/40 |
| Administration | 50/50 | 50/50 |
| Information and Analysis | 50/50 | 50/50 |
| Risk Assessment & Technical Studies | 50/50 | 50/50 |
| Compliance | 50/50 | 50/50 |
| Training & Information Dissemination | 75/25 | 75/25 |
| Emergency Response (NRC) | 50/50 | 50/50 |
| Public Education Campaign (One-call) | 50/50 | 50/50 |
| Research & Development | 50/50 | 50/50 |
| Average Apportionment | 54/47 | 54/47 |
| Actual Apportionment | 55/45 | 55/45 |
| Grants | 87/13 | 87/13 |

¹ Personnel, Compensation & Benefits.

Question. Please justify in detail why OPS maintains it needs to always have at least \$11 million in the Pipeline Safety fund. Please break down how that amount was determined.

Answer. RSPA recently re-evaluated the amount needed to sustain the pipeline program until fees could be collected. We looked at obligations for the first and second quarters and determined that, on average, OPS spends about 34 percent of its appropriation. In prior fiscal years 34 percent amounted to approximately \$11 million. For fiscal year 2001, 34 percent amounts to approximately \$15–\$16 million. Currently, user fees are collected in the later part of the second quarter (late March). March is the soonest we can expect to collect fees, with a billing cycle that starts after we receive our enacted appropriation in October, calculate rates for each operator, and issue assessments.

Question. What is the current balance in the pipeline safety reserve fund? Please provide an historical table displaying the annual unappropriated balance in the fund from the end of fiscal year 1998 through fiscal year 2000 with an estimated level for fiscal year 2001, assuming your full request were approved. Please describe how much of the unobligated balance could safely be drawn down taking into account replenishment of the fund through the collection of new fees.

Answer. The current balance in the Pipeline Safety (reserve) Fund as of March 5, 2000, was \$15,461,000 million. The historical table requested is provided as follows:

UNAVAILABLE COLLECTIONS

[In thousands of dollars]

| | Fiscal year | | | |
|--|----------------|----------------|-----------------|-----------------|
| | 1998 actual | 1999 actual | 2000 enacted | 2001 request |
| 01.00 Balance, start of year | 17,354 | 18,490 | 17,738 | 16,338 |
| 02.00 Receipts | 28,964 | 30,228 | 30,447 | 43,519 |
| 04.00 Total: Balances and collections | 46,318 | 48,718 | 48,185 | 59,857 |
| 05.00 Pipeline safety appropriation | -29,421 | -30,158 | -31,202 | -42,874 |
| Research and Special Programs | -574 | -574 | -645 | -645 |
| 05.99 Total appropriations | -29,995 | -30,732 | -31,847 | -43,519 |
| 06.10 Unobligated balance returned to receipts | 354 | 234 | | |
| 06.50 Other adjustments | 71 | -482 | | |
| 07.99 Balance, end of year | 16,748 | 17,735 | 16,338 | 16,338 |

We need a balance in the fund sufficient to sustain OPS operations through the second quarter when we collect user fees to replenish the fund. Based on our rate of outlays for salaries, contracts and other operating and administrative expenses, we estimate that about 34 percent of appropriated funds would be sufficient to sustain us. For fiscal year 2001, 34 percent amounts to approximately \$15–16 million.

Question. What has been the lowest balance that has been in the Pipeline Safety Fund for each of the last 20 months? What was the amount withdrawn from the Pipeline Safety Fund during each of the last 20 months?

Answer. The net balance in the Pipeline Safety Fund is determined at the end of each month. It is not calculated daily, therefore, we are unable to provide the lowest monthly balance for each month. The lowest balance during fiscal year 1999 was in April 1999 in the amount of \$15,410,796. The lowest balance during fiscal year 2000 was in October and November in the amount of \$16,014,711. The withdrawal of monies from the Pipeline Safety Fund for fiscal year 1999 amounted to \$30,974,000 (requested in April 1999), and \$17,394,000 in fiscal year 2000 was withdrawn in February.

Question. Please recalculate the minimum dollar amount that should be retained in the pipeline safety fund balance in order to maintain the integrity of the pipeline safety program. What is the justification for the recalculated amount?

Answer. We believe that \$15–\$16 million should be retained in the Pipeline Safety Fund in order to maintain the integrity of the pipeline safety program. We issue assessments in mid-December and receive collections by late March to replenish the Pipeline Safety Fund. Several years ago, we looked at OPS obligations during the first and second quarters and determined that, on average, OPS spends about 34 percent of its appropriation before the fund is replenished. In prior fiscal years, 34 percent amounted to approximately \$11 million. For fiscal year 2001, 34 percent amounts to approximately \$15–\$16 million.

Question. How could the billing and collection cycle be changed to decrease this minimum reserve amount? Could RSPA initiate a rulemaking that would make all fees due by the beginning of the federal fiscal year, to optimize the full and efficient use of Pipeline Safety Fund receipts?

Answer. RSPA changed the billing cycle in 1996, and issued user fees in the first quarter of the fiscal year (mid-December). User fees are based on the fiscal appropriation which is usually enacted on or about October 1. RSPA cannot assess fees in advance of this appropriation and it would be difficult to calculate the amounts due and issue bills much in advance of December.

OIL POLLUTION ACT EXPENSES AND OIL PIPELINES

Question. Please specify and describe all OPS expenses that legally could be associated with the Oil Pollution Act (OPA) in fiscal year 2001. What types of personnel related costs can be associated with OSLTF funds, and what is the maximum level

of personnel costs under the current budget request that could be funded in this manner.

Answer. We estimate that the total amount that could legally be associated with Oil Pollution Act program requirements is \$11,473,000. We estimate that this amount, described as follows, will ensure that activities, including personnel costs, that directly relate to preventing and mitigating the effects of oil spills into water and environmentally sensitive areas are funded by the appropriate source (OSLTF).

—PC&B and Administrative (\$1,056,000): OPS HQ and Region staff and administrative costs to address environmental policy, regulatory development, spill response plan review & exercise, pipeline inspection & spill response technical monitoring; special task force/studies of oil pipeline company risk management programs &

Over 360 hazardous liquid inspections, includes accident investigations and pipeline construction.

3 area exercises and 20 table top drills.

—Information and Analysis (\$700,000): Over half the incident reporting, data collection, analysis and trending labor.

Identifying accident cause and consequence, evaluating and acting on environmental impacts, particularly related to protecting drinking water sources.

—Risk Assessment and Technical Studies (\$650,000): Systematically identify hazardous liquid risks, and compare relative likelihood and consequences of an adverse events.

Monitor, report, and expand the Risk Demonstration and System Integrity Inspection Pilot programs.

Increase public awareness about potential risks from liquid pipelines.

—Compliance (\$150,000): Technical field engineering support for monitoring major spills and remediation.

Dedicated personnel for integrating public and private sector incident coordination and decision support for protective actions.

—Training & Information Dissemination (\$400,000): Computer-based training (CBT) to update safety evaluations of hazardous liquid pipeline systems.

Classes and seminars specifically given to address hazardous liquid risk and system integrity concerns.

—Emergency Notification (\$50,000): The National Response Center (NRC) provides immediate notification of hazardous liquid pipeline spills.

—Damage Prevention/Public Education Campaign (\$200,000): Investigate, encourage, and inform communities on damage prevention efforts on hazardous liquid pipelines.

—Implementation of the Oil Pollution Act (\$2,443,000): Review and approve pipeline operator spill response plans.

Contract support for 3 area exercises and 20 table top drills.

Obtain data on environmental sensitive area, includes drinking water and other ecological resource areas.

—National Pipeline Mapping System (\$400,000): Collecting and digitizing more accurate liquid pipeline location information as it becomes available. To be used in conjunction with data on population, drinking water intakes, terrain. Needed to set priorities for prevention and response actions.

—Outside Force Damage (\$400,000): Research to detect encroachment on pipeline right-of-way or mechanical damage to reduce accidents from third-party damage to hazardous liquid pipelines.

—Pipeline Safety Grants (\$5,024,000): State program which provides oversight of intrastate hazardous pipelines operations and maintenance, construction, repairs.

50 percent of one-call grants to states for programs to increase training, education and compliance activities.

—50 percent of damage prevention grants to reduce impacts on the environment from disruptions caused by excavation activities around railroads, sewage lines, electric, telecommunications, hazardous liquid pipelines.

Question. For fiscal year 2000 and fiscal year 2001, what was the Oil Spill Liability Trust Fund transfer levels requested by RSPA prior to the OMB passback?

Answer. RSPA's request for funding derived from the Oil Spill Liability Trust Fund, prior to the OMB passback, was \$8,814 million in fiscal year 2000 and \$4,263 million in fiscal year 2001.

ENVIRONMENTAL INDEXING

Question. Please describe progress made in the environmental indexing effort. What was accomplished with funding provided in fiscal year 1999? How much is

being spent in fiscal year 2000 for this activity, and for which purposes? What new initiatives will be conducted during fiscal year 2001 and how much will that cost?

Answer. RSPA has been working with the Environmental Protection Agency (EPA), as mandated by statute, the Departments of Interior (DOI), Agriculture (USDA), and Commerce (DOC), environmental organizations, state agencies, technical experts, and the pipeline industry to identify and locate drinking water and ecological resources that are most susceptible to a hazardous liquid release, or for which consequences would be most adverse if affected by a release.

RSPA has used fiscal year 1999 funding to pilot test a draft definition and model that identify unusually sensitive drinking water and ecological resource areas. The purpose of the pilot was to determine if the definition and model could be used to identify and locate unusually sensitive areas (USA's) using available data from government agencies and environmental organizations. Major categories in the definition include public drinking water systems, wellhead protection areas, sole source aquifers, threatened and endangered species, imperiled and critically imperiled species, depleted marine mammal habitats, and areas where a large percentage of the world's population of a species concentrates. The pilot was conducted in the States of Texas, California, and Louisiana, since these states contain approximately 45 percent of the nation's hazardous liquid pipelines and a large number of ecological and drinking water resources. In Texas, approximately 15,000 phone calls had to be made to determine if there were adequate alternative drinking water resources available. RSPA has used a portion of the fiscal year 1999 funding to gather drinking water data from state agencies which will be used once the USA definition and model are finalized. RSPA has also used a portion of the fiscal year 1999 funding to update a catalog that identifies the sources of drinking water data in all 50 states and to begin work on an ecological resource data catalog. The drinking water catalog can be found on the following RSPA Internet site: <http://ops.dot.gov>.

RSPA expects to spend \$900,000 in fiscal year 2000 on this initiative. A portion of this funding will be used to conduct a technical review of the pilot results. RSPA, other government agencies, academia, and environmental groups are conducting a technical review to determine if the pilot results actually depict the most unusually sensitive drinking water and ecological resource areas. The definition and model will be modified, if necessary, based on the pilot and technical review results. The funding will also be used to gather and process individual state datasets needed to identify drinking water and ecological USA's. These areas will be mapped using our geographic information system (GIS) technology and added to the National Pipeline Mapping System. We will use the remainder of the fiscal year 2000 funds to work with The Nature Conservancy, Association for Biodiversity Information, and other government agencies on a national database for sensitive ecological species. All of the location data on threatened and endangered species and species at risk of global extinction are created and maintained at the state level by State Heritage Programs or State Nature Conservancies. The national database effort will gather the individual state datasets into a common and standardized database.

RSPA is requesting \$900,000 in fiscal year 2001. The funding will continue our work with The Nature Conservancy, Association for Biodiversity Information, and other government agencies on a national database for sensitive ecological species, specifically to convert previously collected paper data on sensitive resources to digital data. The funding will also enable us to finish our initial mapping of drinking water and ecological USA's and to make these maps available over the Internet. The funding will also allow us to gather and process data on other resources of national importance such as cultural and recreational resources, transportation networks, historical sites, and economic areas, and to create maps of these sensitive resource areas, that we can make available over the Internet.

OIL SPILL RESPONSE PLANS/LESSONS LEARNED

Question. Please summarize the results of last year's review of pipeline operators' emergency response plans. Include the number of plans reviewed, the number accepted, and the number of plans which required corrective measures.

Answer. In fiscal year 1999, OPS reviewed 188 plans, of which 31 were new response plans and 87 were revisions to existing response plans. Of the 31 new plans we reviewed, 14 were able to be approved without requiring corrections, and 17 had at least one deficiency requiring correction. Of the 87 revisions to existing plans, 17 of them had at least one deficiency requiring correction. Under our regulations, OPS plan approvals expire every five years. Because most of the plans were initially approved in 1995, we are in the process of reviewing all of the plans again to ensure that they are still current and reflect the most current environmental and response information.

Question. Please discuss the amount of funds spent or planned to be spent on spill response exercises during each of the last three years. Given the lessons learned and the practice gained from past simulations, why couldn't the number of drills be reduced during fiscal year 2001?

Answer. In fiscal year 1997, OPS spent \$443,000 on spill response exercises, \$567,000 in fiscal year 1998, and \$306,981 in fiscal year 1999. These amounts include contractor support for exercise design, conduct, and evaluation. These figures also include an estimated \$15,000 per year for travel costs of OPS staff to participate in exercises.

We expect to spend \$450,000 on exercises in both fiscal year 2000 and in fiscal year 2001. This will fund approximately 20 tabletop exercises and at least 2 large scale area exercises. The value of conducting exercises is evident in the improvement of the pipeline industry's spill response capabilities. In addition, Federal, state, and local environmental and emergency response agencies improve their actual spill response by streamlining communications and increasing efficiency in command & control actions.

In the future, OPS is considering changing the exercise program mix by conducting more large-scale field exercises and perhaps fewer tabletop exercises. The exercises we conduct each year are a representative sample of the 1,400 facility response plans for facilities under our jurisdiction. We select operators based on risk factors, as identified in our review of their response plans and as suggested by our OPS regional staff. Until we reach a point of diminishing returns, it would be premature to begin reducing our exercise program.

Question. How are the lessons learned from both the actual releases and drills reflected in changes in the OPS program?

Answer. The OPA 1990 exercise program started out with fairly elementary table top and area drills in fiscal year 1997. Three years later, the drills have resulted in lessons learned about how to improve communications, command and control efficiency, and how to protect environmentally sensitive areas. Perhaps the most valuable aspect of the exercise program is that it allows emergency responders from industry, Federal, State, and local agencies to familiarize themselves with each other's procedures and priorities before an actual spill.

When we examined the exercise evaluation reports and after-action reports from actual spills, we drew the following conclusions. Most operators understand and use unified and incident command but could hone these skills with more practice. Operators need to update their notification lists more often and to strengthen their staffing practices. Operators need to ensure that they have enough containment, recovery, and temporary storage equipment available response in remote inland areas.

We are taking steps to strengthen our exercise program. We have implemented a quantitative, risk-based exercise selection methodology. This ensures that we exercise operators that carry products in a wide range of operating conditions and that range in size and in the environmentally sensitive areas the pipelines cross. We are making exercises more realistic by using maps showing sensitive areas and spill trajectories. We are also asking our facilitators to ask tough questions and to challenge assumptions about response capabilities.

ALYESKA—MEMORANDUM OF AGREEMENT

Question. Please update us on the implementation of the Alyeska memorandum of agreement regarding valves and corrosion. Are there any new issues in this area and how are those being addressed?

Answer. The Office of Pipeline Safety (OPS) continues to work with Alyeska to address the items outlined in the memorandum of agreement in addition to other safety issues. Following is a status update on the corrosion coupon monitoring program, the corrosion mitigation project for transition joints, the mainline valve program and our enforcement action against Alyeska for overpressure events on the pipeline.

Coupon Monitoring Program: In March 1996, Alyeska began a long-term, comprehensive study to specifically determine if corrosion coupons could be used to evaluate cathodic protection on the large diameter Trans Alaska pipeline system (TAPS). The results of the study indicate that, although corrosion coupons represent an important contributor to the monitoring of the cathodic protection system on TAPS, they cannot be used as a stand-alone method for determining adequate cathodic protection. However, coupons may be used in conjunction with other acceptable engineering practices such as internal inspection tools, close interval surveys, and local knowledge of environmental conditions.

On February 14, 2000, OPS conditionally approved Alyeska's Corrosion Control Management Program (CCMP). Final approval is pending the Joint Pipeline Office

(JPO) and OPS satisfaction with CCMP implementation plan. OPS believes that the CCMP, when properly implemented to meet regulatory and safety requirements, provides a methodology for corrosion control on TAPS that will result in a level of protection equal to or better than could be achieved through reliance on single stand-alone method of cathodic protection monitoring. Based on this and other information, OPS also modified an existing waiver on TAPS to allow Alyeska to run an internal inspection device on a 3-year rather than annual cycle. As a result of the CCMP pending approval, OPS is working towards closing out the 1996 coupon agreement and the 1992 TAPS monitoring report.

Corrosion at Transition Joints: Alyeska continues to work toward meeting an OPS order to evaluate and, if necessary, repair all aboveground fiberglass coating at transition joints to ensure that water does not penetrate the external pipeline coating. The fiberglass coating helps prevent corrosion where the pipeline transitions from belowground to aboveground. This action was supported by reports of corrosion at several of the transition areas.

Mainline Valve Program: We continue to closely monitor Alyeska's maintenance of the large mainline valves used to shut off the pipeline if an accident occurs. In 1995, we became concerned that many of these valves did not seal properly and initiated action to assure that public safety and the environment were not placed at risk. In 1996, Alyeska began a system-wide review of these valves and in January 1997, agreed with the Joint Pipeline Office on a plan for assessment of valves on the TAPS. During 1997, Alyeska conducted a risk assessment on mainline valves in order to prioritize these mainline valves for testing, and to establish performance standards for internal leak through. One-hundred-and-fifty mainline valves have been tested. The remaining 22 valves will be tested during 2000.

Alyeska is in the process of rehabilitating or replacing many of its valves. One remote gate valve in an environmentally sensitive area near the Yukon River was replaced in 1999. Alyeska has revised its valve testing, repair and maintenance program. The program now provides for extensive maintenance and testing beyond what is required by the pipeline safety regulations.

Overpressure of the Pipeline: We have taken enforcement action, including a civil penalty assessment, against Alyeska following a recent overpressure of pipeline facilities. This latest overpressure event occurred after Alyeska was ordered to take corrective action to prevent future overpressure of the pipeline. These actions were to include SCADA system examination and adjustment, evaluation of the pipeline control system and personnel training. OPS is reviewing Alyeska's compliance with the order.

RISK ASSESSMENT AND TECHNICAL STUDIES

Question. Please assess the effectiveness and utility of the System Integrity Inspection Program. How many companies have participated? What are the remaining challenges? How does this program fit into the more conventional inspection process?

Answer. The System Integrity Inspection (SII) program requires compliance with regulations; only the OPS approach to inspection is changing. OPS and the SII participants are reviewing a broad set of system-wide safety and integrity issues, instead of the standard regulatory compliance inspection. The SII inspections focus on areas of greatest risk so that OPS and operators can work together to find and fix problems related to significant risk at the earliest possible stage. The system-wide focus ensures that not only individual fixes are implemented, but also that the operator looks for analogous conditions elsewhere in their system and corrects them before problems arise. This, in effect, institutionalizes learning. As importantly, this program provides a more in-depth opportunity for enhanced communication and understanding of pipeline integrity issues between OPS and pipeline companies.

Discussions between the participants and OPS are focusing on corrosion control, hydrotesting and internal inspection, natural hazard-related issues and use of new technologies for risk identification and control. The SII allows OPS to investigate integrity-related information not normally addressed in a standard inspection and to address safety issues, like training, more systematically throughout a company's operations.

Three companies have applied for acceptance. OPS is nearing formal acceptance of two; the third only recently applied. A fourth company's application was declined because they were too small to help fully explore SII. We anticipate incorporating into our standard inspection process valuable lessons we learn as we go. We expect our experience to enrich our forthcoming rules requiring pipeline integrity management programs and mandatory compliance strategy for internal inspection on hydrotesting.

Question. Who are the current participants in pipeline risk management demonstration projects? What progress has been made in each of those projects? What challenges have been identified with the implementation of this program? Have any adverse safety or environmental impacts surfaced with any of the projects?

Answer. The Office of Pipeline Safety is submitting a report to Congress on the status, and results to date, of the Risk Management Demonstration Program shortly. This report will have detailed information on the program, its participants and their projects, programmatic challenges, as well as our assessment of the performance of both the Program and its participants.

OPS has authority to enter into 10 Risk Management Demonstration projects. The 10 companies are listed in a table that follows this reply. Each of these companies voluntarily applied for acceptance into the program. The companies were chosen by OPS because of their potential to (1) provide superior safety, environmental protection, and service reliability, and (2) help OPS test risk management systematically as a regulatory alternative. Other factors considered included operator's willingness to openly communicate with OPS and our state partners, new technologies they were willing to test, corporate commitment to their program, and their existing performance record. To date, we have formally approved the Risk Management Programs of 6 of the 10 companies; we continue to work with the remaining 4 companies.

We are actively auditing each of the approved companies against an established set of program review protocols and against the legally enforceable work orders produced upon approval of their programs. Though our auditing continues, OPS believes that each of the companies with formally approved programs, as well as several others we continue to work with, have clearly demonstrated that their management of safety and environmental protection can produce results that are superior to those of companies that merely comply with the minimum standards established by existing regulations. Each of these companies have, in concert with the OPS, sharpened the focus on the highest risks to the integrity of their pipelines, applied appropriate risk controls, and enhanced communication with affected communities.

At present, OPS believes that risk management—at least in the near term is best used in combination with, rather than as a replacement for, existing regulations. Further, our experience with systematic identification and control of risks shows that risk management is a viable consideration in development of future performance-based regulations. In fact, several OPS initiatives, as well as current and pending regulatory proposals have already begun to incorporate this lesson.

The 10 companies RSPA accepted into the Demonstration Program, and their acceptance dates, are listed as follows:

| Company | Approved | Affected State(s) |
|--|---------------|---|
| Equilon | 3/18/98 | Colorado, Louisiana, New Mexico, Texas. |
| Chevron | 2/17/99 | Idaho, Utah. |
| Phillips | 8/10/98 | Texas. |
| Kinder Morgan | 12/31/98 | Arkansas, Colorado, Iowa, Illinois, Indiana, Kansas, Louisiana, Missouri, Nebraska, Oklahoma, Texas, Wisconsin, Wyoming. |
| Columbia/Columbia Gulf Transmission Company. | Candidate .. | Kentucky, Louisiana, Maryland, Mississippi, Pennsylvania, Tennessee, Virginia. |
| Enron | Candidate .. | Arizona, California, Colorado, New Mexico, Oklahoma, Texas. |
| Mobil | 8/10/98 | Illinois. |
| Duke | Candidate .. | Alabama, Arkansas, Illinois, Indiana, Kentucky, Louisiana, Mississippi, Missouri, New Jersey, New York, Ohio, Pennsylvania, Tennessee, Texas, West Virginia. |
| Tennessee Gas/East Tennessee Natural Gas. | Candidate .. | Alabama, Arkansas, Connecticut, Kentucky, Louisiana, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Ohio, Pennsylvania, Rhode Island, Tennessee, Texas, Virginia, West Virginia. |
| Northwest | 1/11/00 | Colorado, Idaho, Oregon, Utah, Washington, Wyoming. |

Question. Please elaborate on the specific contracts and their associated funding amounts that have been or will be let to ensure continued monitoring and progress in the risk management demonstration projects.

Answer. Contract funding to ensure continued monitoring and progress in the risk management demonstration projects is derived from the Risk Assessment and Tech-

nical Studies account. One multi-year contract covering risk management and other services was awarded to Cycla Corporation for these services in 1996. This contract ends at the end of calendar year 2000. OPS anticipates letting a follow-on contract in fiscal year 2001 to continue these vital services. Funding under the new contract in fiscal year 2001 is expected to parallel levels from fiscal year 2000. Prior obligations under this contract directly attributable to support of the risk management demonstration projects follow:

| <i>Fiscal year</i> | |
|--------------------|----------------------|
| 1996 | \$1,249,956 |
| 1997 | 1,069,053 |
| 1998 | 811,599 |
| 1999 | 708,346 |
| 2000 | ¹ 900,000 |

¹ Estimate.

Question. How much funding was or is associated with various demonstration projects in fiscal year 1999 and fiscal year 2000, and how much is requested for these projects in the fiscal year 2001?

Answer. Funding to directly support the various risk management demonstration projects involves personnel compensation, travel, contract support costs, and state participation grants. The state participation grants cover many risk-related activities not involved with the risk management demonstration projects. Total costs under these categories since fiscal year 1999 are itemized in the following table; fiscal year 2001 funding is expected to remain level with fiscal year 2000 except for state grants:

RISK MANAGEMENT DEMONSTRATION PROJECT FUNDING

| | Fiscal year | | 2001 (est.) |
|-------------------------|-------------|-------------|-------------|
| | 1999 | 2000 (est.) | |
| Federal Personnel | \$393,000 | \$425,000 | \$425,000 |
| Federal Travel | 200,000 | 200,000 | 200,000 |
| Contract Support | 708,346 | 900,000 | 900,000 |
| State Grants | 100,000 | 100,000 | 50,000 |
| Total | 1,401,346 | 1,625,000 | 1,575,000 |

Funding requested under the Risk Assessment and Technical Studies account for fiscal year 2001 also covers continued oversight of the System Integrity Inspection program, risk and integrity management training of Federal and State inspection personnel, technical support for the Local Distribution Company risk management team, as well as needed administrative and clerical support.

In fiscal year 2001, we anticipate fewer consultation meetings and have reduced our request for state participation grant funding accordingly.

COMPLIANCE PROGRAM DATA

Question. For each of the last three fiscal years, please provide data on all enforcement actions taken by OPS, including the number of enforcement cases opened, closed, and the amount of civil penalty assessments collected. Please compare these data with the number of reportable events, number of deaths and injuries, and any other measures of pipeline safety for both hazardous liquids and gases.

Answer. The enforcement actions listed below do not reflect the actions OPS has taken to improve integrity and safety through voluntary agreements with operators. During each inspection, we discuss with operators ways to improve their operations and facilities beyond the minimum requirements through non-enforcement means, as we are able to positively impact safety performance.

| Measures | Calendar year | | |
|--------------------|---------------|------|------|
| | 1997 | 1998 | 1999 |
| Enforcement: | | | |
| Cases Opened | 179 | 218 | 89 |
| Cases Closed | 186 | 273 | 107 |

| Measures | Calendar year | | |
|---|---------------|-----------|-----------------------|
| | 1997 | 1998 | 1999 |
| Civil Penalty Assessments Collected | \$228,171 | \$316,846 | ¹ \$16,500 |
| Reportable events: | | | |
| Incidents Reported | 362 | 379 | 344 |
| Deaths | 11 | 19 | 21 |
| Injuries | 93 | 74 | 108 |
| Property Damage (in millions) | \$65 | \$104 | \$97 |

¹This does not include civil penalties for a number of pending cases.

COMPLIANCE REINSPECTIONS

Question. How many of those companies provided with technical education were reinspected? Did you find those companies still out of compliance? If so, how many enforcement actions were taken against those companies?

Answer. We provide technical education to every operator we inspect. During exit interviews, we point out areas for improvement and probable violations. We offer technical education on resolving these issues. Forty-six of the companies that were inspected and received enforcement actions in fiscal year 1998 were inspected at different locations in their system during fiscal year 1999. Enforcement action was initiated on 10 of these companies in fiscal year 1999. However, it should be noted that the concerns found in fiscal year 1998 were not necessarily the same items found in fiscal year 1999.

OPS INSPECTOR STAFFING

Question. Please prepare an updated table indicating the number of pipeline safety inspectors on board and the number of pipeline safety inspector positions authorized for each of the last three fiscal years. Please show how the additional staff requested for fiscal year 2001 would be deployed.

Answer. RSPA will use the additional staff to help evaluate the use of new technologies which identify the early stages of pipeline damage and potentially harmful environmental conditions. A recent report from the DOT Inspector General found RSPA pipeline inspector resources inadequate for oversight tasks in numbers and qualifications. A soon-to-be-released GAO report is expected to offer similar conclusions. The additional staff will also help prepare operator compliance activities for the forthcoming rule which will require operators to perform testing and more comprehensive evaluation of the integrity of pipeline systems. This will ultimately help prevent pipeline accidents, enable early detection of pipeline damage and assure prompt and effective mitigation of the accidents we cannot prevent.

NUMBER OF INSPECTORS ONBOARD

| Region | 1998 ¹ authorized/onboard | 1999 ¹ authorized/onboard | 2000 ¹ authorized/onboard |
|-----------------|---|---|---|
| Eastern | 8/8 | 8/8 | 8/8 |
| Southern | 8/7 | 8/8 | 8/8 |
| Central | 12/11 | 11/11 | ² 12/12 |
| Southwest | 11/11 | 12/12 | 11/11 |
| Western | 13/13 | 12/12 | 13/13 |
| Total | 51/50 | 51/51 | 52/52 |

¹These numbers do not include the five Region Directors or headquarter inspector positions that supply technical support to all five regions. Some of the authorized inspector positions have been moved between regions and the headquarters technical support to meet risk-based needs.

²This includes two inspectors that we are in the process of hiring for the Central Region.

Question. How many accident investigations were conducted during each of the last three fiscal years? Please include information on the number of follow-up accident investigations and the results.

Answer.

ACCIDENT INVESTIGATIONS

| | Fiscal year | | |
|---------------------------------------|-------------|------|------|
| | 1997 | 1998 | 1999 |
| Number of Onsite Investigations | 51 | 48 | 46 |
| Follow-up Investigations | 65 | 43 | 40 |
| Accident Reports Generated | 5 | 4 | 19 |

RSPA reviews each pipeline accident report to assess factors contributing to the failure and performs onsite investigation of those with national safety implications, public interest, fatalities, numerous injuries, significant property damage, or environmental impact. The dividing line between the accident investigation and the follow-on inspections is difficult to make and each may require months to complete. An example is the continuing investigation into the Olympic pipeline failure in Bellingham, Washington. Nine months after the pipeline failed, RSPA inspectors and technical staff continue to closely monitor Olympic's corrective actions and address the safety factors identified during the investigation.

We perform follow-on investigations for many of the onsite accident investigations and incorporate lessons learned into our inspection processes and regulatory initiatives. Recent accidents have highlighted the need for RSPA to conduct system-wide inspections and ensure pipeline companies are integrating data about their pipelines in order to make good preventative maintenance decisions.

Additionally, RSPA has set an aggressive schedule for implementation of integrity management regulations. We are looking at ways of increasing the capacity and capability of our field workforce to apply new technology to assess the soundness of critical segments of pipelines.

DAMAGE PREVENTION/PUBLIC EDUCATION CAMPAIGN

Question. How are you assuring that the results of the best practices study are used? What evidence do you have that those recommendations are being implemented? What are the next steps in advancing this work?

Answer. OPS is working with interstate pipeline operators to determine if operators: (1) are aware of the best practices identified in the "Common Ground Study of One Call Systems and Damage Prevention Best Practices;" (2) are aware of the various channels of access to the best practices on the OPS Information System; and (3) have evaluated their program against the best practices. OPS is coordinating with its state agency partners to determine the same information for intrastate pipelines.

We have been planning for implementation of a new grant program provided for in the Transportation Equity Act for the 21st Century (TEA-21) which will provide financial assistance to states to help encourage adoption of these practices. These funds will be provided to state damage prevention programs that meet certain criteria consistent with the provisions in TEA-21, which include evaluating a state's damage prevention program against the Common Ground best practices.

OPS is also currently assisting in the formation of a non-profit organization to advance damage prevention efforts consistent with the best practices and in the same spirit of cooperation resulting from the Common Ground Study. This organization will, among other things, encourage implementation of the best practices identified in the Study, and continue to identify future best practices to protect America's underground infrastructure. One of the best practices involves public education. OPS is actively working to expand use of our national Dig Safely campaign to promote public education and awareness of damage prevention programs.

Question. Please update your answer from last year regarding the production of a TV public service announcement for the national damage prevention campaign. What will the related costs be for such a PSA. Has OPS approached interested excavators and underground utility representatives about cost-sharing.

Answer. OPS is still considering production of a TV public service announcement (PSA); however, advertising agency estimates indicate that a TV PSA would cost a minimum of \$50,000 and would more likely be in excess of \$100,000. At this time, OPS is working with the major stakeholders in the damage prevention area to establish a private non-profit organization which would assume the work of the supporting the Dig Safely Campaign. This organization, to be funded entirely by the private sector but with staff support from OPS, is scheduled to be operating by the summer of 2000. The non-profit organization would decide if it wanted to proceed

with production of the PSA. OPS would support the public education initiatives of the non-profit organization.

Question. To date, what has been the Damage Prevention Quality Action Team's assessment of the effectiveness of its national education campaign? What improvements have been recommended?

Answer. All indications are that the campaign has been very well received. It has been endorsed by the U.S. Department of Transportation, the American Petroleum Institute, the Association of Oil Pipelines, the National Association of Regulatory Utility Commissioners, the National Telecommunications Damage Prevention Council, One Call Systems International, and Southeastern One Call Systems. Members of the Dig Safely Team have conducted thirty sessions nationwide to train one-call centers, facility operators, and others in the damage prevention community how to implement the campaign. Each organization that attends receives a detailed instruction manual and two CD ROMs with the campaign artwork. A number of one-call centers and other stake-holders have set aside their own damage prevention programs and are using the Dig Safely program exclusively. In addition, we have received many requests for the safety training video; we have exhausted our initial stock and are reproducing more videos and manuals. Southwest Bell is using the Dig Safely logo on bill inserts which will be distributed for three months across a five state area. One area of improvement is production of Spanish language materials. A translation of the manual into Spanish has been completed; we are preparing to dub the training video and to print brochures in Spanish. In addition, the files available on our web site were originally in a Macintosh format. These were converted into a PC format at the request of those interested in using the materials.

We need to continue conducting training sessions nationwide to produce more materials for distribution at permitting offices, retail outlets, equipment rental operations. At this point, the campaign has been very well received. We need to sustain its momentum until the Dig Safely message is recognized nationwide and the public reacts appropriately to the Dig Safely message.

Question. What were the accomplishments of the Team during the last year.

Answer. On June 30, 1999, the Team presented the National Dig Safely Campaign to the Secretary of Transportation, who officially launched the campaign's kickoff on a satellite broadcast. Team members have conducted 35 training sessions across the country; 5 more are scheduled in the next few months. The campaign received the official endorsement of the U.S. Department of Transportation, the American Petroleum Institute, the Association of Oil Pipelines, the National Association of Regulatory Utility Commissioners, the National Telecommunications Damage Prevention Council, One Call Systems International, and Southeastern One Call Systems. Team members have received many invitations to speak to one-call centers, facility operators, utility coordinating councils and industry groups which are interested in adopting the campaign. One-call centers, industry groups, and trade associations have produced materials bearing the Dig Safely logo which have been widely distributed at trade shows, and industry functions. Southwest Bell is using the Dig Safely logo on bill inserts which will be distributed for three months across a five state area.

Question. What are the anticipated activities of this team during the next year?

Answer. The Team is in a transitional phase, with necessary turnover due to the pressure of other commitments. We are replacing outgoing members of the team from those organizations as well as adding additional representation from other groups with a large stake in damage prevention, such as underground facility locators and the National Energy Board of Canada. We have invited the National League of Cities, the Edison Electric Institute, the National Cable Television Association and other interested parties to provide representation on the Team. The Team will continue to conduct training sessions across the country and to accept speaking engagements to promote the campaign. Some campaign materials are being translated into Spanish; the translation of the manual has already been completed. We are exploring other outlets for campaign materials such as permitting offices, equipment rental centers, and retail home improvement sites. We expect the private sector, non-profit organization to assume management of the Dig Safely Campaign. We anticipate that the Team itself will then function as a technical committee of the non-profit organization.

Question. Since last year, what have you done to motivate states to improve their one-call notification systems and excavation damage prevention activities? How much is planned for that activity in fiscal year 2000?

Answer. Each OPS regional office works with its state pipeline safety partners to encourage strong damage prevention programs and to assess operators' performance against the best practices guidelines we provided to states on how to perform these assessments. OPS also made one-call grant funds available to States. For the past

few years, many States have significantly improved their one-call notification systems and damage prevention activities by strengthening State one-call legislation, increasing enforcement efforts, and continuing public education. This considerable increase in one-call efforts has occurred since agency one-call program activities began. For fiscal year 2000, Congress authorized \$1 million in grant funds for State pipeline safety agency work in damage prevention and an additional \$1 million to support the advancement of Best Practices under a separate grant program authorized under the Transportation Equity Act for the 21st Century (TEA-21). TEA-21 grant funding will improve operational efficiency of one-call systems, including marking, locating, planning and design activities and would support States electing to implement Best Practices developed by the damage prevention study. For the past year and a half, State pipeline safety representatives served on the damage prevention "Best Practices" study authorized by TEA-21. OPS provided funding for their participation. Through their participation, they became more knowledgeable on how to improve and enhance all aspects of one-call system operations and how to minimize risks of third-party damage.

Question. How much is planned for that activity in fiscal year 2001? Please describe the scope and nature of those activities.

Answer. For fiscal year 2001, OPS is requesting \$1 million in grant funds for activities of state pipeline safety, which is the same amount requested last year. For the past few years, many state pipeline agencies have significantly improved their one-call notification systems and damage prevention activities by strengthening state one-call legislation, increasing enforcement efforts, and continuing public education. This considerable increase in one-call efforts has occurred since agency one-call program activities began.

We plan to conduct a separate grant program authorized under the Transportation Equity Act for the 21st Century at the \$5 million level in fiscal year 2001. This separate grant funding would improve operational efficiency of one-call systems, including marking, locating, planning and design activities and would support states electing to implement Best Practices developed by the Common Ground initiative.

Based on the assessment undertaken as part of the Common Ground Study, we believe the vast majority of states have extensive work to do to improve all aspects of their damage prevention programs. Funding will be provided to improve the overall quality and effectiveness of state damage prevention programs, including enhanced communication systems, record retention capabilities, training and public education efforts, and using more effective locating devices and other emerging technologies. Common Ground showed us that damage prevention is a responsibility shared by all stakeholders. This funding will allow for improvement of damage prevention programs around the country, and prove our commitment to the effort.

Question. What progress has been made in establishing a foundation to advance damage prevention activities? How much seed money is DOT going to provide to help establish such a foundation? What are the expected total federal costs to ensure the successful operation of the foundation for at least one year?

Answer. OPS is currently assisting in the establishment of a non-profit organization to advance damage prevention efforts consistent with the spirit of communication and shared responsibility resulting from the Common Ground Study. Organizational teams are working on drafting the necessary by-laws, developing a business plan for the organization, and identifying any necessary criteria for membership.

OPS has committed "seed resources" to facilitate the initial start-up of this organization, currently known as the damage prevention "Path Forward." These resources consist of OPS staff and OPS-funded consultants that work on the initiative.

After June 2000, this would include OPS assistance in the form of technical services and the continued development of the web-based information system, which provides fundamental communication services among thousands of interested stakeholders. OPS has allocated close to \$200,000 in fiscal year 2000, and we requested an increase of \$100,000 in fiscal year 2001 to continue to support the formation of the organization. This funding would cover the maintenance and continued development of the web-based information system; as well as print and video communications, and exhibits, holding meetings, logistics, and facilitation.

Question. Would the private sector likely continue that support once federal support ended? How much cost sharing is the private sector likely to contribute?

Answer. During the damage prevention "Path Forward" initiative, OPS has committed seed resources for an 18-month start-up period to support the formation of the non-profit organization. After this time, we expect the organization to be largely self-sustaining and primarily funded by affected industry stakeholder organizations. The Path Forward Finance Team is currently developing a business plan that includes funding strategies for the non-profit organization.

Question. How did you use the additional funds provided last year to improve damage prevention programs. What would you do with additional funds if a similar increase were provided for that activity for fiscal year 2001?

Answer. Additional funds provided last year were used to support production of additional campaign materials; to conduct training sessions across the country; and to provide campaign presentations at a variety of trade, one-call center, and industry functions. Funds were also used for production of a new Dig Safely brochure, which we distributed in large quantities. Since we still receive many requests for manuals and other campaign materials, we would use supplemental fiscal year 2001 funds for production of additional materials and training. We would also use the additional funds to help the new non-profit damage prevention organization produce a video for distribution to TV and cable channels.

We have requested an additional \$100,000 in fiscal year 2001 to support formation of the non-profit organization to advance damage prevention to underground facilities. These costs include the maintenance and continued development of the web-based information system, planning conferences and team meetings, logistics, and other communication costs.

Question. How are you working with NTSB to advance damage prevention strategies?

Answer. OPS and NTSB co-sponsored a damage prevention symposium on June 30, 1999, in Washington, DC. We presented the Common Ground Study of one-call systems and damage prevention best practices to the DOT Secretary at this event, and kicked off the Dig Safely public education campaign. We have met with NTSB on several occasions to update them on our efforts and have invited them to participate in the Common Ground Study, as well as in the efforts to establish a non-profit organization to advance underground damage prevention.

There are currently 11 NTSB Safety Recommendation dealing with damage prevention issues. OPS has initially responded to these recommendations, and will continue to do so as the development of the non-profit organization progresses. All NTSB "Open" Recommendations addressing underground damage prevention are currently classified as "acceptable" response. NTSB also recently closed a recommendation regarding directional drilling practices as "Closed—Acceptable Action."

Question. What specific commitments for cost sharing have you gotten from the private sector to help pay the one-call/damage prevention outreach effort. Please quantify cash and in-kind contributions.

Answer. The American Petroleum Institute and Aegis Loss Control, both of which are represented on the Dig Safely Team, underwrote production of several hundred additional Dig Safely Training manuals for distribution to their members and clients. Many one-call centers and industry groups have paid for production of items which bear the Dig Safely logo; these items are being widely distributed. The following groups contributed to the national kick-off of the Dig Safely Campaign: the American Gas Association, the American Public Gas Association, Ameritech, the American Petroleum Institute, the Associated General Contractors of America, the American Association of Railroads, the Association of Oil Pipelines, the Interstate Natural Gas Association of American, and the National Utility Contractors Association. The following organizations have provided in-kind contributions by supporting participation of their representatives on the Dig Safely Team: the National Association of Regulatory Utility Commissioners, the Interstate Natural Gas Association of America; Aegis Loss Control, One Call Systems International, the American Gas Association, the American Public Gas Association, Associated General Contractors of America, the American Petroleum Institute, the National Telecommunications Damage Prevention Council, and the National Association of Pipeline Safety Representatives.

RESEARCH AND DEVELOPMENT AND MAPPING

Question. What is the current status of your pipeline safety R&D plan? How can you assure the Committee that your R&D program will lead to advances to meet your future challenges? Is it time to update that plan.

Answer. The pipeline safety R&D plan which was developed in the early 1990's is presently being updated to bring it in line with current safety issues and needs of RSPA. We have polled our Region Directors for their suggested input to the plan and are in the process of prioritizing the R&D initiatives they have suggested. We will obtain additional input from our headquarters technical staff to arrive at a final plan. Many of our future R&D initiatives will be conducted as collaborative research with the pipeline industry co-funding the projects as is currently done.

We are presently developing agreements to conduct collaborative research in three areas. The first area is advancing magnetic flux leakage technology used on inline inspection (ILI) tools or "smart pigs" to identify and characterize mechanical damage on pipelines. We have just completed a RSPA funded \$3.1 million, 40-month contract with Battelle, Southwest Research Institute and Iowa State University. A final report on this research should be available in two months. This research involved examining mechanical damage with a magnetic flux produced along the pipe's longitudinal axis. We are awarding a two-year, \$2 million dollar cooperative agreement with GRI to conduct companion research with the magnetic flux oriented in the circumferential direction around the pipe. This additional smart pig research, scheduled to be awarded by the end of March 2000, will be funded 50 percent by RSPA and 50 percent by GRI. The research will provide for better identification and characterization of mechanical damage oriented in the pipe's longitudinal axis. Mechanical damage from excavators is the leading cause of major pipeline accidents.

The second area is advancing acoustic technology for real time monitoring for pipeline right-of-way encroachment and outside force damage. We have agreed to cooperatively fund this research with GRI, which has already started the research. We are awaiting a statement of work from them. The results from this research has the potential to significantly reduce pipeline mechanical damage caused by excavators.

The third area is offshore research project to investigate the validity of data on wall thinning gathered by internal inspection tools. We would hydrostatically test to failure a number of abandoned pipelines and comparing the failure data with the ILI inspection data. We, along with industry and other government partners, are participating in this research sponsored by the Minerals Management Service.

Question. Please describe the progress made in your mapping initiative since last year. When will the project be completed? How much was appropriated and spent on this effort in fiscal years 1998 and 1999 and planned for fiscal years 2000 and 2001? What are the remaining challenges? Will there be a need for funding over the long-term?

Answer. OPS is in the process of collecting natural gas transmission and hazardous liquid trunk line data from pipeline operators for the National Pipeline Mapping System (NPMS). The NPMS consists of a National Repository and 12 state repositories, funded through cooperative agreements, located in Alabama, California, Connecticut, Kansas, Kentucky, Louisiana, Maine, Minnesota, New Jersey, Oklahoma, Pennsylvania, and Texas. Through a current Commerce Business Daily announcement, we are requesting proposals for additional state repositories to join the NPMS.

To date, the program has received data for 10 percent of the pipelines that RSPA regulates. RSPA is working closely with the American Gas Association, the American Public Gas Association, Interstate Natural Gas Association of America, and the American Petroleum Institute and the pipeline operators to achieve the goal of collecting 70 percent of the pipeline data by the end of calendar year 2000. RSPA is also working on collecting the remaining 30 percent which is generally represented by smaller interstate and intrastate transmission operators. An educational workshop is being arranged with the intrastate transmission trade associations to assist the smaller operators with their data submissions. The NPMS repositories will maintain the currency of the data after the initial operator data has been collected, as pipelines are bought and sold, abandoned, and constructed.

The appropriated mapping funds are 3-year Research and Development money and therefore are not necessarily fully spent in the year they are appropriated.

| | Fiscal year | | | |
|--------------------|-------------|-----------|-----------|------------------------|
| | 1998 | 1999 | 2000 | 2001 |
| Appropriated | \$400,000 | \$800,000 | \$800,000 | ¹ \$800,000 |
| Obligated | 510,000 | 818,000 | 212,000 | N/A |

¹ Requested.

The biggest challenge facing NPMS is getting the pipeline operators to participate in the voluntary mapping initiative and submit their data to the NPMS. If we do not have adequate participation in this year on a voluntary basis, we will proceed to a rulemaking.

The NPMS will require continued funding at current levels to continue with NPMS initiatives in data collection, data processing, performing outreach, data dissemination, and funding for the National Repository and state repositories.

GRANTS

Question. For fiscal year 1999 and 2000, please list the states that participated in your hazardous liquids and natural gas state grant programs. For each participating state, display the amount requested by state, the amount of federal funds received, and the percentage of federal contribution to total costs represented by that grant. What efforts were taken to increase participation in the grant program?

Answer. Attached are the allocations for fiscal year 1999. As soon as the allocations for fiscal year 2000 are complete, we will forward them to Congress.

RSPA has encouraged further intrastate jurisdiction and improvements to state one-call damage prevention programs. In addition, RSPA has enhanced participation by the states on risk management and industry committee meetings- all of which increase the amount of money available to the states.

1999 NATURAL GAS PIPELINE SAFETY GRANT ALLOCATION

| State | Request | State points | Allocation | Percent of funding |
|----------------------|-----------|--------------|------------|--------------------|
| Alabama | \$385,591 | 100 | \$340,438 | 44 |
| Arizona | 397,607 | 100 | 350,719 | 44 |
| Arkansas | 211,275 | 100 | 186,361 | 44 |
| California | 1,155,167 | 100 | 1,018,945 | 44 |
| Colorado | 198,137 | 100 | 174,772 | 44 |
| Connecticut | 225,000 | 95 | 188,544 | 42 |
| Delaware | 19,723 | 95 | 16,527 | 42 |
| Florida | 56,000 | 95 | 46,926 | 42 |
| Georgia | 301,936 | 100 | 266,330 | 44 |
| Illinois | 279,450 | 100 | 245,496 | 44 |
| Indiana | 166,350 | 100 | 146,733 | 44 |
| Iowa | 198,550 | 100 | 175,136 | 44 |
| Kansas | 346,538 | 100 | 305,673 | 44 |
| Kentucky | 252,050 | 100 | 222,327 | 44 |
| Louisiana | 330,000 | 100 | 291,085 | 44 |
| Maine | 56,900 | 90 | 45,243 | 40 |
| Maryland | 154,380 | 100 | 136,175 | 44 |
| Massachusetts | 379,312 | 95 | 317,852 | 42 |
| Michigan | 308,650 | 95 | 258,640 | 42 |
| Minnesota | 686,261 | 100 | 605,334 | 44 |
| Mississippi | 133,500 | 100 | 117,757 | 44 |
| Missouri | 320,070 | 95 | 268,210 | 42 |
| Montana | 22,818 | 95 | 19,120 | 42 |
| Nebraska | 77,246 | 95 | 64,730 | 42 |
| Nevada | 189,051 | 100 | 166,757 | 44 |
| New Hampshire | 101,182 | 100 | 89,250 | 44 |
| New Jersey | 348,533 | 100 | 307,432 | 44 |
| New Mexico | 170,143 | 90 | 135,071 | 40 |
| New York | 1,201,750 | 100 | 1,060,035 | 44 |
| North Carolina | 134,975 | 100 | 119,058 | 44 |
| North Dakota | 37,817 | 95 | 31,960 | 42 |
| Ohio | 499,541 | 100 | 440,633 | 44 |
| Oklahoma | 336,372 | 100 | 296,705 | 44 |
| Oregon | 161,363 | 100 | 142,334 | 44 |
| Pennsylvania | 297,179 | 95 | 249,027 | 42 |
| Puerto Rico | 45,000 | 100 | 39,693 | 44 |
| Rhode Island | 64,956 | 90 | 51,567 | 40 |
| South Dakota | 28,840 | 90 | 22,895 | 40 |
| Tennessee | 265,140 | 100 | 233,874 | 44 |
| Texas | 1,246,612 | 100 | 1,099,606 | 44 |
| Utah | 160,325 | 100 | 141,419 | 44 |
| Vermont | 48,095 | 100 | 42,423 | 44 |

1999 NATURAL GAS PIPELINE SAFETY GRANT ALLOCATION—Continued

| State | Request | State points | Allocation | Percent of funding |
|----------------------|------------|--------------|------------|--------------------|
| Virginia | 187,500 | 95 | 157,120 | 42 |
| Washington, DC | 87,500 | 95 | 73,323 | 42 |
| Washington | 270,000 | 100 | 238,161 | 44 |
| West Virginia | 273,650 | 100 | 241,380 | 44 |
| Wisconsin | 203,300 | 90 | 161,393 | 40 |
| Wyoming | 83,700 | 95 | 70,138 | 42 |
| Totals | 13,105,485 | | 11,421,058 | 44 |

Note.—The “Request” represents 50 percent of the states estimated budget. The “Percent of funding” is the percentage of the budget represented by the allocation.

1999 HAZARDOUS LIQUID PIPELINE SAFETY GRANT ALLOCATION

| State | Request | State points | Allocation | Percent of funding |
|---------------------|-----------|--------------|------------|--------------------|
| Alabama | \$23,329 | 100 | \$20,758 | 44 |
| Arizona | 42,810 | 100 | 37,762 | 44 |
| Arkansas | 975,000 | 100 | 860,024 | 44 |
| Kentucky | 10,700 | 90 | 8,494 | 40 |
| Louisiana | 90,491 | 100 | 79,820 | 44 |
| Minnesota | 161,850 | 100 | 42,764 | 44 |
| Mississippi | 6,663 | 100 | 5,877 | 44 |
| New Mexico | 9,350 | 85 | 6,935 | 37 |
| New York | 52,300 | 100 | 46,133 | 44 |
| Oklahoma | 100,767 | 100 | 88,884 | 44 |
| Texas | 219,991 | 100 | 194,048 | 44 |
| Virginia | 17,500 | 100 | 15,436 | 44 |
| Washington | 42,586 | 100 | 37,564 | 44 |
| West Virginia | 39,250 | 100 | 34,621 | 44 |
| Totals | 1,792,487 | | 1,578,942 | 44 |

Note.—The “Request” represents 50 percent of the states estimated budget. The “Percent of funding” is the percentage of the budget represented by the allocation.

Question. RSPA and the states have agreed to attempt to provide 50 percent of the states’ pipeline safety program funding from the federal government. As an aggregate, what percent of the states’ pipeline safety program funds were appropriated through the OPS state grant program in fiscal years 1998, 1999, and 2000?

Answer. The funding levels for fiscal year 1998 and fiscal year 1999 were 41 percent and 44 percent, respectively. The funding level for fiscal year 2000 will be 40 percent.

Question. Part of the original justification for the increase in the pipeline grant program was that with increased funds the states would be encouraged to expand their enforcement responsibilities. Please provide quantitative data on a state-by-state basis indicating whether that has happened.

Answer. The states have expanded their enforcement jurisdiction in the past few years by adding new intrastate gas and liquid programs and new areas of municipal, LPG, or master meter operators jurisdiction in their particular state and enhanced one-call compliance.

Question. TEA21 authorized a \$5,000,000 damage prevention grant program in fiscal year 2001. If funding constraints do not permit full funding of this program in fiscal year 2001, what would be the most effective way to ramp this program up over a two-year period?

Answer. Congress has allocated \$1 million for fiscal year 2000 consistent with provisions in the Transportation Equity Act for the 21st Century (TEA–21). We have structured a grant program consistent with provisions in TEA–21. If the additional

\$5 million is never allocated, the full effectiveness of this program will not be reached. OPS could make awards as funding is available, requesting applicants to show approved management plans to account for a longer funding period. TEA-21 authorized grant funding to improve state damage prevention programs that were lacking, and this money is badly needed. However, if full funding is not provided, we will provide whatever funding is appropriate based on the points of our award criteria on a pro-rated basis to enhance damage prevention to the extent possible until the full \$5 million is available. We would pro-rate the grant to the extent possible to reward those states that best meet our criteria. We are assisting states in reaching a minimum level of progress and encouraging consortium among states to share responsibility for damage prevention.

Question. Please update past data provided on the status of one-call systems, their completeness, effectiveness, legislative status, and enforcement capabilities of the states. How many, and which, states have utilized one-call grant funds to establish one-call programs?

Answer. Within the past 5 years, 18 States have passed or improved one-call legislation: Kentucky, Montana, North Dakota, Nebraska, New Mexico, New York, Oregon, Pennsylvania, Puerto Rico, South Dakota, Tennessee, Texas, Utah, Virginia, Washington, West Virginia, Wisconsin, and Wyoming. Since the incident in San Juan, Puerto Rico, in 1996, we have been working closely with Puerto Rico for legislation to create a one-call center. This legislation was passed in September 1998. We also supported Texas in the passage of its first one-call legislation in 1997.

There is also a growing number of States with a strong one-call enforcement mechanism (Arizona, Connecticut, Massachusetts, Minnesota, New Hampshire, New Jersey, Tennessee, and Virginia) that include:

- A specific agency with jurisdiction over excavators and facility operators.
- Authority to issue immediate citations and the power to collect penalties.
- Administrative encouragement and staff assigned to enforce the law.

Eleven States do not require all underground facility operators to belong to one-call organizations. We expect several state legislatures to enact or modify one-call legislation for this purpose.

More than 30 States have emergency service available on a 24-hour basis. In States without 24-hour emergency service, excavators have to notify operators of impending excavation after business hours.

OPS has also utilized one-call grant funds to support States to establish one-call programs. This past year, 33 States have requested one-call grants to further one-call activities. Many of these States are preparing to request TEA-21 grant funds to expand their damage prevention efforts by implementing Best Practices within their States.

VOLPE NATIONAL TRANSPORTATION SYSTEMS CENTER

Question. For fiscal year 1998 and fiscal year 1999, what percent of funds were contracted out? For fiscal year 2000 what percent of funds do you plan to contract out?

Answer. For fiscal years 1998 and 1999, 77 percent and 73 percent, respectively, of the Center's obligations were contracted to the private and university sectors. We estimate the percentage to be approximately the same for fiscal year 2000.

Question. What percent of your personnel costs are for contract administration, technical program direction, and in-house research?

Answer. Five percent of personnel costs are for contract administration. 70 percent is tied to specific project work, including technical direction. No funding or staff was devoted to in-house research (i.e., independent research and development not tied to a client project) in fiscal year 1999 and none is planned for fiscal year 2000. The remaining 25 percent of personnel costs cover facility operations, business services, staff development, managerial process improvements, stakeholder reporting, and outreach. *Question.* Please discuss the current staffing situation at Volpe in relationship to current and anticipated workload.

Answer. The competitive nature of recruiting for technical skills has caused some delays in filling positions needed for current and projected work, especially in the areas of systems planning, analysis, and simulation, surveillance, infrastructures, etc.

Question. Please break out, in tabular form, obligations by each of the DOT modal administrations to the Volpe Center for each of the last three fiscal years. What is the significance of these funding trends?

Answer. The following table shows Volpe Center obligations for projects with the following DOT Operating Administrations in millions of dollars.

| | Fiscal year | | |
|--------------------|----------------|----------------|------------------|
| | 1998 actual | 1999 actual | 2000 estimate |
| FAA | 84.5 | 72.0 | 78.6 |
| FHWA | 11.8 | 13.3 | 13.4 |
| USCG | 6.8 | 6.4 | 7.5 |
| FRA | 10.9 | 11.9 | 10.9 |
| FTA | 7.5 | 8.8 | 8.8 |
| NHTSA | 8.8 | 7.8 | 8.9 |
| RSPA | 6.6 | 5.1 | 7.1 |
| OTHER DOT | 2.3 | 6.0 | 6.0 |
| OST | 2.6 | 0.7 | 0.8 |
| Total | 141.8 | 132.0 | 142.0 |

Note.—Each amount includes the customers' participation in DOT's Small Business Innovative Research (SBIR) program, which the Volpe Center manages.

The trends reflect changes in our customers' program emphasis as well as changes to DOT's appropriations.

Question. What are the Volpe overhead charges and how have you tried to reduce these charges? Please provide a detailed explanation and dollar figures of all overhead costs for each of the last three fiscal years.

Answer. Following is the distribution of the Center's indirect expenses (in millions of dollars obligated):

[In millions of dollars]

| Indirect activity | Fiscal year | | |
|---|----------------|----------------|------------------|
| | 1998 actual | 1999 actual | 2000 estimate |
| Facility Operations | \$3.4 | \$3.4 | \$3.4 |
| Business Services | 9.8 | 8.8 | 9.8 |
| Line Management | 2.5 | 2.7 | 2.8 |
| Center-wide Services | 1.5 | 1.5 | 1.7 |
| Computer & LAN Services | 3.8 | 3.4 | 3.7 |
| Industry Outreach | 0.3 | 0.3 | 0.4 |
| Capability Development | 0.3 | 0.3 | 0.4 |
| Plans & Pgm Development | 0.9 | 1.6 | 1.8 |
| Chief Counsel | 0.3 | 0.3 | 0.4 |
| Executive Management | 1.0 | 1.1 | 1.0 |
| Total Indirect | 23.8 | 23.4 | 25.4 |
| Total Obligations ¹ | 197.0 | 174.0 | 202.0 |
| Indirect to Total (percent) | 12.0 | 13.4 | 12.6 |

¹ Net of recoveries of prior year obligations.

The estimated fiscal year 2000 indirect expenses reflect increases for salaries, benefits, negotiated contract price adjustments and other normal cost growth plus an amount for depreciation of prior year capital investments and increased investment in staff training and recruitment. Current energy conservation technology has offset some of the Center's increases.

Question. Please provide a detailed listing of all fiscal year 1999 and fiscal year 2000 new start reimbursable agreements that the Volpe Center has with other Federal agencies. Include all costs that are paid out to contractors hired by the Volpe Center.

Answer. Following is a list of all the fiscal year 1999 and fiscal year 2000 new start reimbursable agreements. NASA Aviation Safety Program Risk Assessment and Mitigation is the only fiscal year 2000 new start.

PROJECT: Aviation Mail Hazmat Support Services

SPONSOR: United States Postal Service (USPS)

FUNDING: \$1.6 Million

CONTRACT PERCENT: 40 percent

The Volpe Center will support the Aviation Mail Security group by assisting in the planning, development, implementation of policies, and training supporting HAZMAT acceptance, handling, transportation, and delivery.

PROJECT: Region 8 Site Assessment and Redemption

SPONSOR: Environmental Protection Agency (EPA)

FUNDING: \$10.7 Million

CONTRACT PERCENT: 81 percent

To provide environmental support services in the assessment, design, remediation, restoration and oversight of contaminated sites in Region 8.

PROJECT: Information Transition & Organizational Planning Office (ITOP)

SPONSOR: EPA FUNDING: \$70 Thousand

CONTRACT PERCENT: 0 percent

Volpe will support EPA in designing and establishing its new Office of Environmental Information.

PROJECT: Philadelphia Support Office

SPONSOR: Department of Interior/National Park Service (NPS)

FUNDING: \$35 Thousand

CONTRACT PERCENT: 37 percent

The Volpe Center will work with NPS, Philadelphia Support Office, in the planning for the management of parks in its region as they relate to existing and anticipated transportation issues.

PROJECT: National Marine & Fisheries Vessel Monitoring

SPONSOR: National Oceanographic and Atmospheric Administration (NOAA)

FUNDING: \$1.0 Million

CONTRACT PERCENT: 73 percent

The Volpe Center will support NOAA's National Marine and Fisheries Service (NMFS) in the development of a comprehensive Vessel Monitoring System (VMS) to ensure compliance with the NMFS fishing regulations and international agreements on protection of controlled fish stocks.

PROJECT: Energy Motor Carrier Safety Evaluation

SPONSOR: Department of Energy (DOE)

FUNDING: \$50 Thousand

CONTRACT PERCENT: 24 percent

Develop a safety status supported process for the Doe National Transportation Program (NTP) to evaluate motor carriers for use in transportation radioactive materials and waste from site cleanup.

PROJECT: Security Review of Treasury Facilities

SPONSOR: United States Treasury Department

FUNDING: \$80 Thousand

CONTRACT PERCENT: 21 percent

Support will be provided for the development and implementation of a physical security review concept of operations plan (PSR CONOPS). The CONOPS documents a proposed course of action to be undertaken by Treasury that, at a minimum, increases the physical security of Treasury owned assets, as well as assets where Treasury employees work, to the minimum physical security standard required by the 1995 US Marshal Service Study. The Volpe Center will analyze the information and develop the CONOPS that maps a course to increase facility security for identified bureaus.

PROJECT: Advanced Communications for Aviation

SPONSOR: National Aeronautics and Space Administration (NASA), Glenn Research Center (GRC)

FUNDING: \$75 Thousand

CONTRACT PERCENT: 60 percent

The Volpe Center will support NASA in the development of advanced communications concepts (primarily satellite-based) for civil aviation. Two tasks will be performed: (1) Identification of spectrum management issues (including approaches to their resolution) that are likely to arise when implementing new communications techniques in the National Airspace System(NAS); (2) exploration of the feasibility of employing the merging Ultra Wide Band (UWB) technology for aviation communications.

PROJECT: NASA Small Aircraft Transportation System

SPONSOR: NASA Langley
 FUNDING: \$100 Thousand
 CONTRACT PERCENT: 14 percent
 Assess the commercial feasibility of a next generation small aircraft and supporting air & ground infrastructure.

PROJECT: Environmental Support to Hanscom AFB
 SPONSOR: U.S. Air Force (USAF)
 FUNDING: \$50 Thousand
 CONTRACT PERCENT: 14 percent
 Volpe Center will provide environmental oversight services to the Air Force and Navy during the construction, demonstration, and operation of this world class high-frequency radio wave generator in Alaska.

PROJECT: National Airspace System (NAS) Engineering & Installation Support
 SPONSOR: USAF
 FUNDING: \$1.0 Million
 CONTRACT PERCENT: 14 percent
 The USAF Electronic Systems Center (ESC) National Airspace Systems Program Office (GAA) has the responsibility for national airspace systems implementation for the Department of Defense (DOD). ESC/GAA, site implementation group (SIG), had been accomplishing the additional site preparation effort at various DOD military bases. The Volpe Center competed for, and won, the contract (in the form of a Reimbursable Agreement) to accomplish site preparation at various DOD military bases.

PROJECT: Naval Air Systems Command Advanced Technology Launcher
 SPONSOR: U.S. Navy (USN)
 FUNDING: \$150 Thousand
 CONTRACT PERCENT: 40 percent
 Reviews conducted by the Naval Air Systems Command have indicated technologies exist that, if utilized in an advanced technology launcher, could eliminate the launcher's dependence on propulsion plant system. A survey of industry confirmed that industry was capable of developing selected technologies into operational launch systems with Navy sponsorship. The Volpe Center will conduct assessments of technologies expected to be proposed by the Advanced Technology Launcher (ATL) contractor and provide technical expertise in linear motor technology as well as linear motor and magnetic guidance and suspension control systems.

PROJECT: DOD Duty Free Entry Program Evaluation
 SPONSOR: Defense Logistics Agency (DLA)
 FUNDING: \$60 Thousand
 CONTRACT PERCENT: 16 percent
 The Volpe Center will support DLA in determining whether or not the current Duty Free Entry program for foreign imports for DOD and its contractors is economically viable. The Volpe Center federal staff will work with the Defense Contract Management Command New York customs Team that manages duty-free program and DLA's Operations Research and Resources Analysis office (DORRA).

PROJECT: NASA Aviation Safety Program Risk Assessment and Mitigation
 SPONSOR: NASA Langley
 FUNDING: \$200 Thousand
 CONTRACT PERCENT: 8 percent
 The Aviation Safety Program (AvSP) is a NASA technology focus program, which was formed to improve aviation safety through the introduction of technical advances that enable the reduction of fatal accidents. The Volpe Center, in collaboration with the NASA Safety and Mission Assurance personnel at Ames Research Center, Dryden Flight Research Center, Glenn Research Center, and Langley Research Center, will help the AvSP projects identify, track, and identify ways to mitigate risks.

QUESTIONS SUBMITTED TO THE UNITED STATES COAST GUARD

QUESTIONS SUBMITTED BY SENATOR RICHARD C. SHELBY

FISCAL YEAR 1999 AND 2000 REPROGRAMMINGS AND TRANSFERS

Question. Please provide the amount and description of all reprogrammings or transfers of funds that occurred during fiscal year 1999 and thus far in fiscal year 2000.

Answer. There have been no congressional reprogrammings in the Operating Expenses (OE) appropriation in fiscal year 1999 and thus far in 2000. The table below shows the transfers to the OE appropriation in fiscal year 1999 and thus far in 2000.

| Agency | Amount | Reason for transfer |
|---|--------------|--|
| Fiscal year 1999: | | |
| Information Technology Systems and Related Expenses | \$20,505,000 | Y2K projects. |
| Information Technology Systems and Related Expenses | 7,210,000 | Y2K projects. |
| Information Technology Systems and Related Expenses | 4,058,000 | Y2K projects. |
| Office of National Drug Control Policy (ONDCP) | 94,798 | High Intensity Drug Trafficking Area (HIDTA) |
| Fiscal year 2000: None | | |

There have been no transfers of funds in the Acquisition, Construction, and Improvements (AC&I) appropriation in fiscal year 1999 or thus far in fiscal year 2000. The following tables show the amount and description of reprogrammings that occurred within AC&I in fiscal year 1999 and thus far in 2000 for the appropriation.

UNITED STATES COAST GUARD ACQUISITION, CONSTRUCTION, AND IMPROVEMENTS—FISCAL YEAR 1999 REPROGRAMMING ACTIONS

[Dollars in thousands]

| Fiscal year funding | Project title | Brief description of reprogramming | Amount |
|---------------------|---|---------------------------------------|----------|
| 1999 | COASTAL BUOY TENDER (WLM) REPLACEMENT | PROJECT SAVINGS | -\$3,000 |
| 1999 | DEEPWATER CAPABILITY REPLACEMENT ANALYSIS | INSUFFICIENT FUNDS | -3,000 |
| 1997 | CONVERSION OF SOFTWARE APPLICATION | PROJECT SAVINGS | -1,500 |
| 1997 | FLEET LOGISTIC SYSTEM (FLS) | PROCUREMENT MODULE | 1,500 |
| 1997 | CONVERSION OF SOFTWARE APPLICATION | PROJECT SAVINGS | -800 |
| 1997 | MARINE INFO FOR SAFETY AND LAW ENFORCEMENT | INSUFFICIENT FUNDS | 800 |

| 2000 | SURVEY AND DESIGN | APPROVED BY CONGRESS | 577 |

UNOBLIGATED AND CARRYOVER FUNDS

Question. Please provide a list of any unobligated funds and carryover funds by account or program from previous fiscal years.

Answer. The Operating Expenses (OE) account was appropriated \$2,781,039,000 in fiscal year 2000, of which \$791,117,233 was unobligated as of 31 March. OE carried over \$186,532,744 from fiscal year 1999 to fiscal year 2000. Of these funds, \$178,117,000 was carried over and are available until September 30, 2000, for emergency Kosovo funding pursuant to the 1999 Emergency Supplemental Appropriations Act, Public Law 106-31. \$8,415,744 were carried over and are available until September 30, 2001, for Y2K funding, pursuant to the Omnibus Consolidated and Emergency Supplemental Appropriations Act for fiscal year 1999, Public Law 105-277.

The following tables provide a list of unobligated funds carried forward from previous fiscal years for the Acquisition, Construction, and Improvements (AC&I) appropriation.

LIST OF FINAL RULEMAKINGS

Question. Please prepare a list of all final rulemakings that have been issued since last year.

Answer. Below is a list of all final rules issued by Coast Guard Headquarters program offices since January 1, 1999. Copies of all Coast Guard final rules have been submitted to both Houses of Congress as required by the Congressional Notification Act.

NOTICES OF PROPOSED RULEMAKING PUBLISHED SINCE APRIL 1, 1999

| DOCKET NUMBER | PUB DATE | TITLE |
|----------------------|----------|---|
| USCG-1998-3386 | 2/1/99 | Adjustment of Fees for Issuing Numbers to Undocumented Vessels in Alaska. |
| USCG-1998-3868 | 12/7/99 | Outer Continental Shelf Activities. |
| USCG-1998-4354 | 3/22/99 | Tank Vessel Response Plans for Hazardous Substances. |
| USCG-1998-4593 | 3/16/00 | Revision to Federal Blood Alcohol Concentration (BAC) Standard for Recreational Vessel Operations. |
| USCG-1999-4976 | 11/15/99 | Frequency of Inspection, Alternate Hull Examination Program for Certain Passenger Vessels, and Underwater Surveys for Passenger, Nautical School, and Sailing School Vessels. |
| USCG-1999-5040 | 3/2/00 | Safety of Uninspected Passenger Vessels Under the Passenger Vessel Safety Act of 1993 (PVSA). |
| USCG-1999-5149 | 4/8/99 | Response Plans for Marine Transportation-Related Facilities Handling Non-Petroleum Oils. |
| USCG-1999-5700 | 6/17/99 | Traffic Separation Schemes: Off San Francisco, in the Santa Barbara Channel, in the Approaches to Los Angeles-Long Beach, California. |

RULEMAKING THAT THE COAST GUARD HAS PUBLISHED IN THE FEDERAL REGISTER IN
THE LAST 12 MONTHS

Question. Please list and explain the major notices of proposed rulemaking that the Coast Guard has published in the Federal Register in the last 12 months?

Answer. Below is a list of all notices of proposed rulemaking issued by Coast Guard Headquarters program offices since April 1, 1999.

FINAL RULES PUBLISHED SINCE January 1, 1999

| DOCKET NUMBER | PUB DATE | TITLE |
|----------------------|----------|---|
| USCG-1997-2799 | 8/4/99 | User Fees for Licenses, Certificates of Registry, and Merchant Mariner Documents. |
| USCG-1998-3423 | 5/17/99 | Implementation of the National Invasive Species Act of 1996 (NISA) (Interim rule). |
| USCG-1998-3472 | 4/24/99 | Rules of Practice, Procedure, and Evidence for administrative Proceedings of the Coast Guard (Interim Rule). |
| USCG-1998-3821 | 2/10/99 | Coast Guard Child Development Services Programs. |
| USCG-1998-3824 | 2/2/99 | Maritime Course Approval Procedures. |
| USCG-1998-4445 | 10/19/99 | Fire Protection Measures for Towing Vessels (Interim Rule). |
| USCG-1998-4469 | 4/27/99 | Management Information System (MIS) Requirements. |
| USCG-1998-4819 | 6/23/99 | Year 2000 (Y2K) Reporting Requirements for Vessels and Marine Facilities (Temporary Interim Rule). |
| USCG-1998-4819 | 8/2/99 | Year 2000 (Y2K) Reporting Requirements for Vessels and Marine Facilities (Temporary Interim Rule). |
| USCG-1999-4976 | 2/9/00 | Frequency of Inspection. |
| USCG-1999-5036 | 3/2/99 | Conformance of the Western Rivers Marking System With the United States Aids to Navigation System (Final Rule; delay of implementation date). |
| USCG-1999-5118 | 11/30/99 | Standard Measurement System Exemption from Gross Tonnage (Direct Final Rule). |
| USCG-1999-5151 | 3/1/00 | Update of Standards From the American Society for Testing and Materials (ASTM)(Direct Final Rule). |
| USCG-1999-5525 | 6/1/99 | Mandatory Ship Reporting Systems (Interim Rule). |
| USCG-1999-5832 | 6/29/99 | Technical Amendments; Organizational changes; Miscellaneous Editorial Changes and Conforming Amendments. |
| USCG-1999-6141 | 3/20/00 | Puget Sound Vessel Traffic Service (Direct Final Rule). |
| USCG-1999-6216 | 10/1/99 | Technical Amendments; Organizational Changes; Miscellaneous Editorial Changes and Conforming Amendments. |
| USCG-1999-6224 | 11/19/99 | Licensing and Manning for Officers of Towing Vessels (Interim Rule). |

PROPERTIES EXCESSED IN FISCAL YEAR 2000 AND FISCAL YEAR 2001

Question. Please provide a list of all properties the Coast Guard declared excess in fiscal year 2000 and expects to excess during fiscal year 2001.

Answer.

| DESCRIPTION | EXCESS IN FISCAL YEAR | STATE |
|----------------------------------|-----------------------|-------|
| LORAN STATION MIDDLETOWN | 2000 | CA |
| LIGHT STATION PATOS ISLAND | 2000 | WA |

| DESCRIPTION | ANTICIPATED EXCESS IN FISCAL YEAR ¹ | STATE |
|-----------------------------------|--|-------|
| LIGHT STATION GUARD ISLANDS | 2001 | AK |
| LIGHT STATION MARY ISLAND | 2001 | AK |
| AMELIA LIGHT | 2001 | FL |
| BLYTHE ISLAND LIGHT | 2001 | FL |
| BOCA GRANDE LIGHT | 2001 | FL |
| CAPE CANAVERAL LIGHT | 2001 | FL |
| CITY LIMITS LIGHT | 2001 | FL |
| CROOKED RIVER LIGHT | 2001 | FL |
| EGMONT KEY LIGHT | 2001 | FL |
| SANIBEL LIGHT | 2001 | FL |

| DESCRIPTION | ANTICIPATED EXCESS IN FISCAL YEAR ¹ | STATE |
|-------------------------------|--|-------|
| BUCK ISLAND LIGHT | 2001 | PR |
| CULEBRITA LIGHT | 2001 | PR |
| CHARLESTON LIGHT | 2001 | SC |
| SULLIVAN'S ISLAND LIGHT | 2001 | SC |
| MATAGORDA LIGHT | 2001 | TX |
| SOUTH JETTY LIGHT | 2001 | TX |

¹ Anticipated Excess.—The Coast Guard is in the process of preparing the documentation necessary to determine if these properties are excess to its needs. Other factors (such as environmental issues) may impact the projected timelines and delay the actual Report of Excess or Notice of Relinquishment.

EXPECTED ASSET SALE COLLECTIIONS

Question. Please provide a table showing a description of each asset sale and the amount collected during fiscal years 1999, 2000, and 2001.

Answer. The following lists the personal property that has been sold during fiscal years 1999 and 2000 and those projected for 2001. These sales were conducted by the General Services Administration with all proceeds returned to the general treasury. Items marked with an asterisk are assets that are anticipated to be offered for sale.

Fiscal year 1999—No asset sales.

FISCAL YEAR 2000

| Asset | Sale date | Sale price |
|---|-----------------------|-------------|
| USCGC PAPAW | December 17, 1999 ... | \$63,888.00 |
| USCGC SORREL | December 17, 1999 ... | 75,010.00 |
| USCGC PRIMROSE | March 9, 2000 | 79,999.88 |
| CG-55012 | March 9, 2000 | 52,886.88 |
| Marine Engines, Cummings Model 12900M w/trans. (2 engines) | March 21, 2000 | 4,631.00 |
| Marine Engines, Cummings Model 12900M w/o trans (2 engines) | March 21, 2000 | 4,181.00 |
| Warping Drums for Anchor Windlass from 180 ft Buoy Tender | March 21, 2000 | 600.00 |
| * USCGC SPAR | Summer 2000 | TBD |
| * USCGC MALLOW | Summer 2000 | TBD |

FISCAL YEAR 2001

| Asset | Sale date | Sale price ¹ |
|---|---------------|-------------------------|
| 180-ft Seagoing Buoy Tenders and Spare Parts Kits | Various | TBD |
| 82-ft Patrol Boats & Spare Parts Kits | Various | TBD |
| 44-ft Motor Life Boats | Various | TBD |
| HU-25 Aircraft | Various | TBD |

¹ Individual asset sales prices are as yet undetermined. Consistent with the President's Budget, however, the Coast Guard would anticipate netting approximately \$10 million from the collective sale of these assets.

OFFSETTING COLLECTIONS FROM FEDERAL SOURCES

Question. Please explain the source and amount of offsetting collections from "Federal sources."

Answer. The Coast Guard anticipates the collection of \$125 million in fiscal year 2001 from federal sources (per page OE-4). These offsetting collections come from various federal agencies as follows:

1274

[Dollars in millions]

| Source | Amount | Description |
|-------------------------------|------------|---|
| Dept. of Defense | \$32 | Funds for personnel costs, medical/dental services, parts and maintenance, maintenance of aircraft radar, sonar, and weapons. |
| Dept. of Transportation | 9 | Funds for USCG TSC Telenet, National Response Center, DAFIS, NASSIF/TRANS Medical Unit, Security Policy and Planning, OMEGA Project, FAA liaison. |
| EPA | 3 | Funds for personnel costs, CERCLA, ¹ environmental management, pollution mitigation. |
| Other Govt. Agencies | 56 | Funds for NSF, ² NOAA, ³ DOS, ⁴ OSIA, ⁵ Customs, FEMA, ⁶ Interior, Panama Canal Commission, icebreaker fuel/maintenance, security assistance, Customs Forfeiture Fund, migrant interdiction. |
| OSLTF | 25 | Funds for oil spill response. |
| TOTAL | 125 | |

¹ Comprehensive Environmental Response, and Compensation Liability Act.

² National Science Foundation.

³ National Oceanic and Atmospheric Administration.

⁴ Department of State.

⁵ Order Sons of Italy in America.

⁶ Federal Emergency Management Agency.

MILITARY PAY AND ALLOWANCES

Question. Please breakdown the military pay and allowances in greater detail (basic pay, within-grade increases, specialty pay, etc.) and compare to the fiscal year 2000 allocation.

Answer. The following breakdown in military pay and benefits includes all appropriations:

COAST GUARD SPECIAL, INCENTIVE AND RETENTION PAY FOR MILITARY PERSONNEL (ALL APPROPRIATIONS)

| Category | Fiscal year | |
|---|-------------|-------------|
| | 2000 (est) | 2001 (est) |
| Responsibility Pay | \$138,000 | \$138,000 |
| Diving Pay | 65,000 | 65,000 |
| Hostile Fire/Imminent Danger Pay | 680,000 | 680,000 |
| Sea Pay | 13,600,000 | 13,750,000 |
| Hardship Duty Pay—Location | 108,000 | 110,000 |
| Aviation Career Incentive Pay | 7,500,000 | 7,500,000 |
| Hazardous Duty Incentive Pay | 5,500,000 | 5,500,000 |
| Special Duty Assignment Pay | 2,500,000 | 2,800,000 |
| Selective Reenlistment Bonuses ¹ | 9,795,000 | 10,500,000 |
| Aviation Career Continuation Pay | 1,000,000 | 1,300,000 |
| Targeted Enlistment Bonuses ¹ | 6,205,000 | 7,500,000 |
| Applicant College Fund | 150,000 | 150,000 |
| Clothing and Uniform Allowances | 13,100,000 | 13,500,000 |
| Subsistence and Rations | 90,500,000 | 93,000,000 |
| Housing Entitlements | 248,370,000 | 284,000,000 |
| Station Allowances and COLA | 29,000,000 | 39,000,000 |
| Other Entitlements | 29,999,000 | 32,144,000 |
| Basic Pay | 912,300,000 | 962,300,000 |
| Social Security Admin. Payments | 78,130,000 | 82,227,000 |

COAST GUARD SPECIAL, INCENTIVE AND RETENTION PAY FOR MILITARY PERSONNEL (ALL
APPROPRIATIONS)—Continued

|-------------|---------------|---------------|
| | 2000 (est) | 2001 (est) |
| Total | 1,448,640,000 | 1,556,164,000 |

¹The table on page PPA-5 of the Coast Guard congressional stage budget is incorrect. The correct information for Selective Reenlistment Bonuses and Targeted Enlistment Bonuses are contained in the above table.

CIVILIAN PAY AND BENEFITS

Question. Please breakdown the civilian pay and benefits in greater detail and compare to the fiscal year 2000 allocation.

Answer. The following breakdown of Coast Guard civilian pay and benefits includes all appropriations:

| Category | Fiscal year | |
|---|---------------|---------------|
| | 2000 (est) | 2001 (est) |
| Basic Pay—Full Time Permanent | \$237,147,000 | \$251,681,000 |
| Basic Pay—Other than Full Time Permanent | 9,576,000 | 10,163,000 |
| Health Insurance, Life Insurance & Retirement | 57,362,000 | 60,878,000 |
| Lump Sum Leave Payments | 750,000 | 796,000 |
| Bonuses & Awards | 2,674,000 | 2,762,000 |
| Other Compensation | 11,978,000 | 12,712,000 |
| Total Pay & Benefits | 319,487,000 | 338,992,000 |

TRICARE REMOTE

Question. What progress has the Coast Guard made in improving health care coverage for personnel stationed at remote locations where TRICARE is insufficient or nonexistent?

Answer. The Coast Guard continues to use non-federal health care contractual arrangements to provide active duty service members' health care where there are no established TRICARE Prime network providers or TRICARE Prime Remote services provided. In working with DoD/TRICARE, providers in certain Alaska areas are now receiving higher reimbursement. Signing new providers and retaining existing providers indicates that many are satisfied with this increase. Also, additional training is being given to providers on accurate coding or procedures.

Currently there is a significant disparity in services to family members in remote areas, which affects approximately 50 percent of these members. TRICARE Prime Remote is being developed in fiscal year 2001 to improve "TRICARE Prime-like" benefits for these personnel.

COAST GUARD PARTICIPATION IN TRICARE

Question. What legal requirements does the Coast Guard have by virtue of being a participant in the Department of Defense's TRICARE system?

Answer. The Coast Guard, as a Uniformed Service (Army, Navy, Air Force, Marine Corps, Coast Guard, National Oceanic and Atmospheric Administration, and the United States Public Health Service) is required by law (statute) to be a full participant in the Department of Defense TRICARE program. TRICARE combines the Military Healthcare System and the Civilian Health and Medical Program of the Uniformed Services; as such, it provides care for our active duty, retiree, and family members. The Coast Guard is a full participant in the program, and is required to provide care to members of each of the other uniformed services on an equal basis. In addition, the Coast Guard provides the same benefit packages to its members as do the other Services. Likewise, the other military services are available to provide care to Coast Guard beneficiaries. This care is provided on a "fee-for-service" basis.

MILITARY TRICARE VERSUS CIVILIAN HEALTH CARE COST

Question. What is the difference between the average cost to provide TRICARE to military personnel, retirees, and their dependents and healthcare benefits to Coast Guard civilian employees, retirees, and their dependents?

Answer. Depending on location and options of coverage, the average cost of healthcare for military personnel, retirees, and their dependents and the cost of healthcare benefits provided to Coast Guard civilian employees, retirees, and their dependents can vary considerably. Using the fiscal year 2001 estimate of \$176 million in health care costs compared against our military FTE, the cost is about \$407 per month per military person. To compare the military plan to the Federal Employee Health Benefit Program (FEHBP). We chose plan prices for Washington D.C. as a reasonable median for medical insurance rates. There are lower rates present in some rural areas, but there are also many areas in which a significant number of Coast Guard personnel reside where medical rates are much higher (e.g. the Atlantic, Pacific, and Gulf seaboards; Alaska; and Hawaii). The rate that should be used for comparison with military health plans for active duty personnel and their dependents is the column labeled "Monthly Fee." Full costs should be considered, as TRICARE does not charge enrollment premiums for active duty dependents.

| Company ¹ | Monthly Fee ² | Gov't Portion ³ | Employee Portion ⁴ |
|------------------------------|--------------------------|----------------------------|-------------------------------|
| Aetna | \$761.57 | \$594.02 | \$167.55 |
| Alliance | 1073.46 | 837.29 | 236.17 |
| APWU | 829.20 | 646.77 | 182.43 |
| Association | 904.33 | 705.37 | 198.96 |
| Blue Cross Blue Shield | 1323.09 | 1032.00 | 291.09 |
| Capital Care | 762.93 | 595.08 | 167.85 |
| Free State | 1071.69 | 835.91 | 235.78 |
| GEHA | 912.61 | 711.83 | 200.78 |
| George Washington | 619.52 | 483.22 | 136.30 |

¹This identifies the name of the company providing the medical insurance. All rates quoted are for the Washington, D.C. area.

²This is the total amount of premium. This fee provides insurance for the employee and his/her family. This number must be used for a like comparison to the military health care system since no premiums are charged for active duty family members under TRICARE.

³This identifies the amount the government pays under the FEHBP insurance plan. For civilian employees, the government pays 78 percent of the insurance premium.

⁴This identifies the amount the employee pays under the FEHBP insurance plan. For civilian employees, the employee pays 22 percent of the insurance premium.

ALLOCATION OF TRAINING AND EDUCATION FUNDS

Question. Please explain in detail, by center and course of instruction, how the Coast Guard proposes to allocate the \$85.557 million requested for training and education. How does this compare to the allocation of funds provided during fiscal year 2000?

Answer. The funding information for training and education shown on pages PPA-1 and PPA-24 is incorrect. The proper amounts shown should be as follows:

[In thousands of dollars]

| | Fiscal year | | 2001 request level |
|-------------------------------|---------------------|-----------------------|--------------------|
| | 2000 estimate level | 2001 required changes | |
| E. Training & Education | 74,991 | 3,591 | 78,582 |

The allocation of the \$74,991,000 for fiscal year 2000 and \$78,582,000 for fiscal year 2001 is as follows:

(In thousands of dollars)

| | Fiscal year | |
|--|-------------|--------|
| | 2000 | 2001 |
| Training Travel, Transportation, & Tuition. Includes inter-service agreement with the Navy for flight training | 34,703 | 37,192 |
| Training Center Cape May, NJ. (enlisted accessions training) | 8,746 | 8,994 |
| Coast Guard Academy, New London, CT; (officer accessions and leadership development training) | 12,908 | 13,180 |
| Aviation Training Center, Mobile, AL, and Aviation Technical Training Center, Elizabeth City, NC; (officer and enlisted flight training) | 5,394 | 5,778 |
| Training Center Yorktown, VA; (enlisted and officer advanced training) | 8,380 | 8,505 |
| Training Center Petaluma, CA; (enlisted and officer advanced training) | 4,860 | 4,933 |

COAST GUARD RECRUITING BUDGET

Question. Why is the budget request for recruiting flat when compared to fiscal year 2000 even though the Coast Guard has ambitious recruiting goals and still faces stiff competition for personnel from a strong economy?

Answer. The information contained on pages PPA-1 and PPA-25 is incorrect. The fiscal year 2001 budget actually reflects an increasing emphasis upon work force recruiting; the proper amounts should be shown on page PPA-1 as follows: (in thousands of dollars)

(In thousands of dollars)

| | Fiscal year | | 2001 request level |
|---------------------|---------------------|-----------------------|--------------------|
| | 2000 estimate level | 2001 required changes | |
| F. Recruiting | 10,877 | 2,305 | 13,182 |

PACIFIC AREA COMMAND BUDGET

Question. Why is the budget request for Atlantic Area Command increasing by \$4.565 million while the request for Pacific Area Command is decreasing by \$4.322 million?

Answer. The President's fiscal year 2001 Budget proposes a change to the reimbursement policy for polar icebreaking services provided to the National Science Foundation (NSF). A programmatic reduction of \$7,800,000 in the Coast Guard's budget presentation has been included to reflect this policy shift. Because the Coast Guard's three Polar Class icebreakers fall under the operational control of the Pacific Area Commander, this programmatic reduction impacts that funding account.

OTHER ACTIVITIES

Question. Please explain in greater detail by project or activity the line "other activities" and how the Coast Guard proposes to allocate the \$1.653 million requested.

Answer. This PPA II line item provides funding for the Chief of Staff's Contingency Account. The \$1.653 million in funding for this account is for agency contingencies, natural or mission related emergencies below the scope of a supplemental appropriation, and critical program needs arising since submission of the Congressional budget.

HEADQUARTERS DIRECTORATES

Question. Please breakdown the request for Headquarters Directorates, including a description of each office, number of civilian and military personnel assigned to each office, and amount of funding requested for each office.

Answer. The following table provides a detailed breakdown of the Headquarters Directorates for fiscal year 2001. All military and civilian personnel listed are funded by the Operating Expenses (OE) appropriation.

(In thousands of dollars)

| | Fiscal year 2001 (projected funds) | Military | Civilian |
|--------------------------------|---------------------------------------|----------|----------|
| G-M | 11,184 | 150 | 123 |
| G-O | 47,038 | 219 | 116 |
| G-S | 9,525 | 103 | 89 |
| G-W | 27,773 | 126 | 92 |
| G-A | 800 | 3 | 47 |
| HSC and Other HQ Offices | 127,093 | 201 | 205 |
| Total | 223,413 | 802 | 672 |

Description of each office:

Marine Safety and Environmental Protection Directorate (G-M)

The Marine Safety and Marine Environmental Protection programs support four of the five strategic goals of the Coast Guard: safety, protection of natural resources, mobility and maritime security. Principle responsibilities include establishing federal policies and standards for the design, construction, equipment, manning, operations and maintenance of commercial vessels, and for the qualifications of their crew; developing standards for handling hazardous materials onboard vessels & marine facilities; negotiating international maritime safety and environmental protection standards on behalf of the U.S.; assuring U.S. vessel compliance with domestic and international standards and compliance by all vessels and regulated facilities in U.S. ports and waters, through a combination of education, monitoring, and enforcement; controlling vessel and facility operations to correct or reduce significant safety, security, or environmental threats; coordinating national protocols for preparedness planning, training, and exercising; and directing response activities to mitigate the effects of maritime casualties and pollution.

Operations Directorate (G-O)

The Operations Directorate develops doctrine and policy; provides guidance; allocates resources; and coordinates with other countries, government agencies, and industry to employ Coast Guard forces and accomplish Coast Guard operational maritime missions. G-O is the program manager for Coast Guard aircraft, cutters, and boats. The Assistant Commandant for Operations (G-O) is responsible for ensuring that operations resources effectively support the five Coast Guard Strategic Goals of Safety, Protection of Natural Resources, Mobility, Maritime Security and National Defense. Support is provided through seven Operations Policy (G-OP) offices, which provide doctrine, policy and resource requirements for Operational Programs such as the airborne use of force initiative. In addition, support is also provided through six Operations Capability (G-OC) offices, providing facility management, capability and resource acquisition support. The Coast Guard Investigative Service is also part of G-O.

Human Resources Directorate (G-W)

The Human Resources Directorate executes programs to meet the personnel requirements of the Coast Guard. This includes the execution of programs that ensure quality employee development and integrate human resource support functions at minimal cost. Examples include workforce management support for the active duty, reserve, and civilian workforces, training and education, health and safety, inter-service agreements with Department of Defense (DoD) for common personnel and security, diversity enhancement, and Information Resource Management (IRM) support for Human Resource management information systems. The G-W Directorate meets the needs of Coast Guard people by providing centrally managed quality of life support services, such as employee assistance, transition assistance, family support, and housing support programs.

Systems Directorate (G-S)

The Systems Directorate executes policy and programmatic management of engineering, logistics, information and technology, and command, control, communications, and computer functions and systems in support of Coast Guard operations. The Engineering Division handles the aeronautical, civil, naval, and ocean engineering programs along with environmental compliance and restoration. The Logistics Division deals with logistics policy and design, implementation, and oversight of logistics systems. The Information and Technology Division encompasses information

systems architecture and planning, information management, and research and development. The Command, Control, Communications, and Computers Division manages the electronics engineering program and communications and computer systems. The Systems Resource Management Division oversees overall planning and fiscal efforts for the Directorate. G-S also manages the Federal Telephone System (FTS), Postal, and GSA rent central funds.

Acquisition Directorate (G-A)

The Acquisition Directorate is a specialized element of Headquarters focused on acquiring major and non-major assets and systems. G-A manages the timely acquisition of capable, supportable, and affordable systems, products and services needed by sponsors to accomplish Coast Guard missions. The directorate is composed of resource management, technical, and contract support staff, and a variety of acquisition projects. Recent acquisition projects include the 175' and 225' buoy tenders, the icebreaker CGC HEALY, and the Traffic and Collision Avoidance System (TCAS) for use aboard Coast Guard aircraft. Deepwater Concept Exploration, National Distress and Response System Modernization Project, and Great Lakes Icebreaking Capability Replacement are examples of current projects in G-A.

Headquarters Support Command (HSC) and other Headquarters Offices

Funding for the Headquarters Support Command provides consolidated support for Coast Guard Headquarters including: administrative, logistics, transportation, facilities, information services, and health services. Also funded in this category are the Assistant Commandant for Civil Rights, Legal, Chief of Staff, and the Office of the Commandant.

COAST GUARD HEADQUARTERS MANAGED UNITS

Question. Please breakdown the request for Headquarters Managed Units, including a description of each office, number of civilian and military personnel assigned to each office, and amount of funding requested for each office.

Answer. The following table provides a detailed breakdown of the Headquarters-managed units for fiscal year 2001. All military and civilian personnel listed are funded by the operating expenses appropriation.

[In thousands of dollars]

| | Fiscal year 2001 (projected funds) | Military | Civilian |
|---|---------------------------------------|--------------|------------|
| Engineering Logistics Center | 6,764 | 172 | 318 |
| Finance Center | 7,247 | 45 | 247 |
| Human Resources Service & Information Center | 1,362 | 144 | 103 |
| Coast Guard Yard | 2,901 | 68 | 6 |
| National Strike Force | 3,758 | 29 | 9 |
| National Pollution Funds Center | 1,357 | 19 | 33 |
| Command & Control Engineering Center | 6,424 | 90 | 17 |
| Air Station Washington | 856 | 15 | |
| Operations System Center | 9,905 | 24 | 22 |
| Telecommunications & Information Systems Command | 4,853 | 158 | 31 |
| Navigation Center | 1,633 | 94 | 10 |
| Intelligence Coordination Center | 568 | 25 | 8 |
| Electronics Engineering Center—LORAN Support Unit | 561 | 28 | 6 |
| Container Inspection Training & Assist Team | 291 | 9 | |
| Institute | 750 | 19 | 8 |
| Research & Development Center | 1,287 | 1 | 2 |
| Coast Guard Personnel Command | 2,221 | 393 | 135 |
| National Maritime Center | 2,604 | 7 | 29 |
| Total | 55,342 | 1,340 | 984 |

Description of each unit:

Engineering Logistics Center (ELC)

The ELC, located in Baltimore, MD, is the focal point for management of vessel and electronics logistics: managing platform and equipment configuration; developing maintenance policy; setting vessel parts allowance standards; providing design

and engineering support; managing and distributing approximately \$190M of Coast Guard unique inventory that cannot be effectively sourced directly from commercial vendors and is not managed by Department of Defense logistics systems; and developing, managing and providing technical information and logistics information systems support. Funds within this account also pay salaries for the included federal wage grade personnel employed by the ELC.

Finance Center (FINCEN)

The FINCEN, located in Chesapeake, VA, is responsible for the payment of all government and commercial bills and maintaining all accounting records and submission of reports for all units within the Coast Guard except Inventory Control Points (ICPs). In fiscal year 1998, the FINCEN managed more than 4,700,000 accounting transactions while also coordinating the payments and acting as auditor of the government-wide credit card program. The FINCEN provides guidance for selecting and training individuals who have fund certification authority, unit level guidance for separation of financial duties, funds certification, account reconciliation, and Coast Guard-wide management of the Large Unit Financial System (LUFS) functions.

Human Resources Service and Information Center (HRS&IC)

HRS&IC, located in Topeka, KS, gathers, maintains, and manages personnel information on all active duty, reserve, and retired Coast Guard military personnel. HRS&IC develops and provides personnel, financial, and accounting reports and information for Coast Guard managers and other government agencies. HRS&IC administers the Personnel Management Information System/Joint Uniform Military Pay System (PMIS/JUMPS), and provides payment and personnel support services to active duty, reserve, and retired personnel, as well as annuitants and the NOAA Officer Corps. HRS&IC processes all Coast Guard travel claims, administers the evaluation program and the servicewide examinations for active duty and reserve enlisted personnel; processes reserve and active duty separations and retirements; administers the in-service and out-of-service debt collection program, processes allotments and garnishments, and receives and processes initial reports of all Coast Guard and NOAA personnel casualties.

Coast Guard Yard

The Coast Guard Yard is the only shipbuilding and vessel repair facility operated by the Coast Guard. The Yard's industrial operations include the repair, modification, and construction of vessels; ordnance overhaul and maintenance; manufacturing of miscellaneous equipment; maintenance and repair of vessel components; and providing casualty response support to the fleet. The Yard electronics shop completes electronic work on cutters during yard periods and performs electronic equipment overhauls and develops prototypes in support of Coast Guard mission areas. The Yard has been certified by the Naval Sea Systems Command (NAVSEA) as a Limited Repair Facility (LRF) for Navy owned ordnance.

National Strike Force

The National Strike Force is comprised of three regional Strike Teams (Atlantic Strike Team, Fort Dix, NJ; Gulf Strike Team, Mobile, AL; and the Pacific Strike Team, Hamilton AFB, CA) and the National Strike Force Coordination Center (NSFCC). Each Strike Team is comprised of highly trained personnel and fully-outfitted with a contingent of response and recovery equipment. The NSFCC provides a centralized reporting point for spills of oil or hazardous substances and activates the rapid deployment of oil pollution response resources. The NSFCC also coordinates the National Pollution Response Exercise program, enhancing the preparedness of a network of response capabilities in bulk-liquid maritime ports throughout the country.

National Pollution Funds Center (NPFC)

NPFC administers laws and regulations relating to oil pollution liability and compensation, including carrying out the responsibilities in Title I of the Oil Pollution Act of 1990 that have been delegated to the Coast Guard. The NPFC also acts in a fiduciary capacity under the Comprehensive Environmental Response Compensation and Liability Act (CERCLA) for provisions managed by the Coast Guard. The NPFC manages the Oil Spill Liability Trust Fund (OSLTF) to provide funds for response to oil spills in navigable waters of the U.S., adjoining shorelines, and the exclusive economic zone. The NPFC coordinates with the Environmental Protection Agency in matters pertaining to Coast Guard involvement with expenditures and recovery of funds from the Hazardous Substance Response Fund.

Command and Control Engineering Center (C₂CEN)

The C₂CEN located in Portsmouth, VA, is the Coast Guard's Center of Excellence for integrating Command and Control (C₂) engineering and support for all Coast Guard C₂ systems ashore and afloat. Basic missions of the C₂CEN are to provide engineering, systems management and training support at a centralized facility for the following systems:

- Command Display and Control (COMDAC) system
- Optical Surveillance System (OSS)
- Shipboard Command & Control Systems onboard 210', 270' & 378' cutters
- Radar
- Vessel Traffic System (VTS) upgrade
- Differential Global Positioning System (DGPS)
- Short Range Aids to Navigation (SRAN)
- Land Based Support Facility for WLB/WLM Replacement
- Navigation Sensors

Air Station Washington

Air Station Washington operates and maintains the Coast Guard's single Long Range Command and Control aircraft which provides necessary and required transportation and airborne command and control for the Commandant of the Coast Guard and certain members of the Commandant's staff, the Secretary of Transportation and certain members of the Secretary's staff, and occasional Congressional delegations.

Operations Systems Center (OSC)

OSC, located in Martinsburg, WV, develops, supports, and maintains major operational information systems and databases. The OSC provides services that are accessible to the Coast Guard 24-hours per day from around the world to support operational mission accomplishment and mission oversight analysis. The Coast Guard's operational databases include:

- Automated Mutual Assistance Vessel Rescue (AMVER) system, which tracks participating merchant vessels so as to provide a guide to potential assistance in the vicinity when distress calls are received.
- Computer Aided Search Planning (CASP), this system leverages the world class search and rescue expertise of the Coast Guard to produce fast, accurate, and comprehensive search planning that incorporates weather, currents, and numerous other critical factors.
- Law Enforcement Information system (LEIS) II; a client-server data system with links to internal (Coast Guard) and external law enforcement (LE) databases. LEIS II provides tactical LE information to field units on a near real-time basis. It provides the fundamental system for standardization and automation of LE data collection and retrieval.
- Joint Maritime Information Element support system (JMIE): a group of government agencies with common interest in maritime issues. In order to improve their ability to exchange data and support their business programs, the JMIE has developed the JMIE Support System (JSS), a centralized database of maritime information to which analysts from the JMIE consortium agencies have access.
- Marine Safety Information System (MSIS); a mission critical system that supports program management needs, field operations, and decision support requirements. Data is collected at the port level through vessel and facility inspections and compliance, marine violations and casualties, and port activities.
- In fiscal year 1997, three more systems were transferred from the Transportation Computer Center (TCC) in Washington, DC to the OSC; Auxiliary Management Information System (AUXMIS), Search and Rescue Management Information System (SARMIS), and Automated Requisitioning Management System (ARMS). In combination, the information systems at OSC serve as the heart of Coast Guard's search and rescue, law enforcement, and marine safety missions.

Telecommunication and Information Systems Command (TISCOM)

TISCOM, located in Alexandria, VA, is the Coast Guard's Center of Excellence for operating, managing and providing technical support for Coast Guard telecommunication and computer networks. TISCOM manages all voice and message telecommunications including telephone, radio, and satellite systems, security, and configuration control.

The Coast Guard telecommunication and computer systems form an integrated network of voice and message communication capabilities to ensure reliable continuity of operations around the world.

Navigation Center (NAVCEN)

The NAVCEN is collocated with the Telecommunications Systems Command (TISCOM) in Alexandria, VA. The NAVCEN is responsible for gathering, processing, and disseminating timely status and general information about the Global Positioning System (GPS), maritime Differential Global Positioning System (DGPS), National Differential Global Positioning System (NDGPS), and Long Range Navigation (LORAN)-C systems to domestic as well as foreign users of the systems. The NAVCEN also exercises operational control of the U.S. LORAN-C system, the maritime DGPS service, and the Nationwide DGPS service.

Intelligence Coordination Center (ICC)

The ICC is the Coast Guard's strategic intelligence center serving as the focal point for interaction with the intelligence components of the Department of Defense, other law enforcement agencies, and the intelligence community. The ICC is co-located with the National Maritime Intelligence Center (with the Office of Naval Intelligence and the Marine Corps Intelligence Activity) in Suitland, MD. The ICC serves as the focal point for Coast Guard collection management as well as submitting Coast Guard needs to the intelligence community.

LORAN-C Support Unit (LSU)

The Long Range Navigation (LORAN) Support Unit, located in Wildwood, NJ, provides Coast Guard-wide support for LORAN-C marine electronic navigation systems. LORAN-C provides electronic navigation for commercial and privately-owned vessels and aircraft. In addition to providing all maintenance and technical assistance for LORAN, the LSU conducts a variety of projects for the Coast Guard and Federal Aviation Administration to improve existing systems.

Container Inspection Training and Assist Team (CITAT)

The CITAT, located in Oklahoma City, OK, provides hazardous materials identification and handling training to Coast Guard personnel assigned duties as marine safety inspectors. The team also assists field personnel in the performance of their duties to ensure the highest level of proficiency by Coast Guard marine safety inspectors who daily ensure the safety of American ports and waterways.

Coast Guard Institute

The Coast Guard Institute, located in Oklahoma City, OK, manages a variety of training and testing materials for Coast Guard personnel for purposes of advancement and nonresident training. The Institute manages the distribution, administration, and scoring of courses and examinations; as well as publishing advancement lists on the basis of scored examinations.

Research and Development Center (R&D Center)

The R&D Center, located in Groton, CT, conducts applied research to develop operational techniques, concepts, systems, equipment and materials in support of the operational missions and regulatory programs of the Coast Guard. The R&D Center assists Coast Guard operating programs to identify emerging technology that can be integrated into existing or new operational systems that will result in future Operating Expenses (OE) savings. The R&D Center operates a remote Fire and Safety Test Detachment in Mobile, AL which is the only facility in the world that uses real vessel platforms for full-scale fire testing. The R&D Center is the Administrative Target Unit (ATU) for two tenant commands, the Marine Safety Lab, and the International Ice Patrol.

Coast Guard Personnel Command (CGPC)

The CGPC, located in Washington, DC, manages the entire Coast Guard military and civilian workforce. The CGPC oversees all Coast Guard accessions, assignments, advancements and promotions, and separations. The CGPC also conducts Physical Disability Evaluation Boards. The CGPC consists of an administrative staff, an officer personnel management division, an enlisted personnel management division, a reserve personnel management division, a civilian personnel management division, a recruiting center, and a records and correspondence section.

National Maritime Center (NMC)

The NMC, located in Arlington, VA, is an independent USCG Headquarters command that actively pursues new and innovative ways to assist the maritime community in gaining and using the services of the Coast Guard. NMC's primary function is to initiate and execute various marine safety programs at a national and international level. The NMC executes policy, regulations and standards developed by Headquarters, and it acts as the "voice of the program" to external customers. The

NMC maintains an active public and industry awareness outreach program aimed at communicating Coast Guard regulatory activities and policy guidelines. NMC programs consist of several divisions located in Arlington, VA, and four field units located throughout the nation. The four field units are the Marine Safety Center, the National Vessel Documentation Center, the Marine Personnel Administration Division, and the Marine Safety Laboratory.

AVIATION MAINTENANCE BACKLOG

Question. What is the aviation maintenance backlog?

Answer. At the end of fiscal year 1999, the non-recurring Coast Guard aviation maintenance backlog was \$18.7 million.

ELECTRONICS MAINTENANCE BACKLOG

Question. What is the electronic maintenance backlog?

Answer. The electronics maintenance backlog includes preventative maintenance that is not completed due to casualty response and obsolete equipment that is in need of replacement. Preventative maintenance for fiscal year 2000 is running at an 80 percent completion rate.

The fiscal year 2000 backlog to replace obsolete electronics equipment is \$24.7 million.

VESSEL MAINTENANCE BACKLOG

Question. What is the vessel maintenance backlog?

Answer. The maintenance backlog for vessels consists primarily of depot level maintenance that is deferred. The maintenance backlog for fiscal year 2000 is \$12 million.

OCEAN ENGINEERING & SHORE FACILITY MAINTENANCE BACKLOG

Question. What is the ocean engineering and shore facility maintenance backlog?

Answer. The ocean engineering and shore facility maintenance backlog consists of waterfront and station facility repairs; Aids to Navigation repairs and replacements; building and housing maintenance and repairs; dredging; structural inspections; utility system repairs; code compliance projects; energy savings projects; safety and health projects; etc. The backlog for ocean engineering and shore facility maintenance this year will be \$27.4 million.

ACQUISITION, CONSTRUCTION, & IMPROVEMENTS PROJECT LIST

Question. Please provide a table which displays all Acquisition, Construction, & Improvements (AC&I) projects, number of units required (if appropriate), total prior year spending, fiscal year 2001 request, and outyear funding projections.

Answer. A listing of the all Acquisition, Construction, & Improvements (AC&I) projects is attached.

| ITEM | TOTAL UNITS REQUIRED | PRIOR YEAR SPENDING | FISCAL YEAR 2001 REQUEST (DOLLARS IN THOUSANDS) | OUTYEAR |
|--|--|---|--|---------|
| VESSELS: | | | | |
| SEAGOING BUOY TENDER (WLB) REPLACEMENT | 16 hulls | 11 hulls; \$432.4M | \$123,730 | \$5,000 |
| POLAR ICEBREAKER USCGC HEALY | | \$36.5M CG funding plus Navy SCN fund- ing. | 1,000 | |
| SURFACE SEARCH RADAR REPLACEMENT | 106 units | \$43.1M | 1,150 | |
| 87' PATROL BOAT (WPB) REPLACEMENT | 47 hulls | \$213.6M | 7,000 | |
| GREAT LAKES ICEBREAKER (GLIB) REPLACEMENT | Single-hull replacement for CGC MACKI- NAW. | \$20.3M | 111,000 | |
| OTH CUTTER BOATS & SHIP MODS | Install OTH boats on 5 WMEC/WHECs | | 1,500 | 7,750 |
| POLAR CLASS RELIABILITY IMPROVEMENT PROJECT (RIP) .. | | \$33.1M | 4,500 | 5,000 |
| ALEX HALEY CONVERSION | | \$20.0M | 3,200 | 5,000 |
| CONFIGURATION MANAGEMENT SYSTEM | | \$34.6M | 3,600 | |
| PATROL CRAFT (WPC) CONVERSION PROJECT | TBD | | 1,000 | |
| DEEPWATER | TBD | \$73.9M | 42,300 | 350,000 |
| AIRCRAFT: | | | | |
| H65 MISSION COMPUTER UNIT | Replace MCU in 93 helos | \$13M for 68 helos | 3,650 | 4,700 |
| H65 ENGINE LIFE-CYCLE COST REDUCTION | Upgrades for 93 helos | \$13M for engineering and some compo- nents. | 1,000 | 9,900 |
| AVIATION SIMULATOR MODERNIZATION | Upgrade H65 and H25 simulators | | 3,000 | 5,000 |
| CGC HEALY AVIATION SUPPORT | Provide 3 helos | 0 units | 36,000 | |
| OTHER EQUIPMENT: | | | | |
| FLEET LOGISTICS SYSTEM | | \$36.8M | 5,500 | |

ACQUISITION PROCESS

Question. Before one of the military services of the Department of Defense begins the process of acquiring new equipment, it first must establish a formal requirement for replacement equipment. That stated requirement exists until that service declares through a similar formal process, that the requirement is no longer valid. Would the Coast Guard support the establishment of a similar process?

Answer. The Coast Guard follows this approach. As is required for all Federal agencies, the Coast Guard has a capital management process to establish clear linkages between strategic and performance goals, strategies, activities undertaken to achieve goals, and the assets employed in carrying out those activities. Capital planning and portfolio management are the primary mechanisms by which the Coast Guard equips itself to implement the Coast Guard's mission, vision, and strategic goals. The capital planning process, through mission analysis, establishes mission requirements that are the basis for initiating acquisitions of new or replacement systems. Once an acquisition is begun, mission requirements are revalidated at key decision points throughout the process. If the requirement is found to be no longer valid, business and capital plans are updated and the acquisition is evaluated for modification or termination.

CUTTER AND BOAT DESIGN

Question. Please explain in detail by project or activity the proposed allocation of the \$500,000 requested for cutter and boat design and compare to the fiscal year 2000 spending plan.

Answer. The fiscal year 2001 spending plan will follow a similar theme to the fiscal year 2000 plan. It will concentrate on the identification of design parameters and standards that have application to existing and near term Coast Guard acquisitions. It will be used to bridge the gap between existing research and hard design criteria. The effort will have application across a broad spectrum of acquisition, construction and improvement (AC&I) projects. This up-front work is critical to the success/timely execution of projects in that Coast Guard requirements can be better related to contractors through acquisition specifications.

The spending plan includes dynamic stability criteria development, surveys of new cutter technologies and investigations of new hull forms. Efforts to develop improved dynamic stability criteria will enable the Coast Guard to accurately describe and evaluate needed sea-keeping performance in the Deepwater acquisition. The growing mission need for deploying larger and faster boats at sea requires the development of design criteria and the limiting sea conditions for the recovery of these boats using technologies such as stern launch and new davit systems. Efforts in these areas have direct application to Deepwater as well as Over the Horizon (OTH) cutter boat davits for legacy assets. Work with azimuth propulsion hydrodynamic performance will prepare the Coast Guard for evaluating the Great Lakes Icebreaker (GLIB) acquisition and may have implications for Deepwater. The model testing of various boat and river tender hull forms will enable the Coast Guard to develop design requirements for vessels operating in environments that do not have similar commercial counterparts in order to plan for the future replacement of utility boats and coastal aids to navigation assets.

SEAGOING BUOY TENDER (WLB) AVERAGE PRICE PER HULL

Question. The sailaway cost of hulls 10 and 11 of the Seagoing Buoy Tender (WLB) replacement was \$69.317 million. The sailaway cost of the three Seagoing Buoy Tenders requested for fiscal year 2001 is \$117.095 million. Is the average price of these ships increasing by approximately \$5 million, and if so, why?

Answer. No. The sailaway costs are consistent with project requirements. Sailaway costs includes contract award for the three ships requested in fiscal year 2001, unfunded items for ships already awarded, plus fleet support and standardization costs. Unfunded items for ships already awarded includes contract change allowance and Economic Price Adjustment (EPA).

SEAGOING BUOY TENDER (WLB) BASE PRICE AND TOTAL UNIT COSTS

Question. Please provide a table delineating the contract base price for each Seagoing Buoy Tender (WLB), the unfunded liability of each hull, and the total unit costs.

Answer. Contract base award and follow-on contract cost (economic price adjustments and contract changes) information is provided below.

| HULL | CONTRACT BASE PRICE AT AWARD | ESTIMATED FUTURE ADDITIONAL CONTRACT COSTS | | ESTIMATED CONTRACT COST TO DATE | ESTIMATED CONTRACT COST AT COMPLETION |
|------------------------|------------------------------------|---|----------|--|--|
| | | FUNDED THRU FISCAL YEAR 2000 | UNFUNDED | | |
| 201 | \$40.7 | | | \$48.2 | \$48.2 |
| 202 | 26.8 | | | 30.6 | 30.6 |
| 203 | 24.9 | | | 28.4 | 28.4 |
| 204 | 24.2 | | | 30.3 | 30.3 |
| 205 | 23.8 | | | 27.5 | 27.5 |
| 206 ¹ | 34.2 | \$5.0 | | 36.3 | 41.3 |
| 207 | 28.8 | 5.0 | | 29.3 | 34.3 |
| 208 | 27.9 | 4.5 | \$0.5 | 28.2 | 33.2 |
| 209 | 27.9 | 4.5 | 0.5 | 28.2 | 33.2 |
| 210 | 27.5 | 2.0 | 3.2 | 27.6 | 32.8 |
| 211 | 27.5 | 2.0 | 3.2 | 27.6 | 32.8 |
| 212 ² | 27.4 | | 7.3 | | 34.7 |
| 213 ² | 27.4 | | 7.3 | | 34.7 |
| 214 ² | 27.4 | | 7.3 | | 34.7 |
| 215 | 27.4 | | 9.3 | | 36.7 |
| 216 | 27.4 | | 9.3 | | 36.7 |

¹ 1st of B Class.

² Hulls requested in fiscal year 2001.

Note.—Future average unit cost estimate is \$41 million for the 16-ship WLB fleet. Future average unit cost includes the Estimated Contract Cost At Completion, plus the total of non-contract costs, including Government Furnished Equipment, Fleet Standardization and Support, Logistics/Facilities, Project Administration and Spare Parts.

THIRD SEAGOING BOUY TENDER (WLB) IN FISCAL YEAR 2001

Question. If the third seagoing buoy tender is not procured in fiscal year 2001, is there any legal restriction barring the Coast Guard from negotiating a similar contract option for a third buoy tender in 2002 or an option for another hull in 2003?

Answer. If fewer than 3 ships were procured in fiscal year 2001, a non-competitive contract option would be required to procure the 16th ship, with an expected increase in cost and delay in schedule.

COASTAL PATROL BOAT FISCAL YEAR 2001 BUDGET REQUEST

Question. If the Coast Guard is not requesting to procure 87-foot patrol boats in fiscal year 2001, why is there a request for \$7 million in this procurement line?

Answer. With 47 boats on contract, the last Coastal Patrol Boat (CPB) will not be delivered until June 2002, followed by a one-year warranty period. The \$7 million is required in fiscal year 2001 for expenses associated with delivering 23 CPBs in fiscal year 2001 and fiscal year 2002—nearly half of the CPB fleet. The primary fiscal year 2001 cost drivers for each CPB includes pre-commissioning crew training, Preliminary Acceptance Trials, Project Resident Office administration of the warranty program, contract closeout, plus procurement and installation of Government Furnished Equipment (GFE) during post-delivery. The balance of the \$7 million will enable the Coast Guard to approve pending engineering changes and allow sufficient funds to retrofit boats already delivered. These changes are required to reduce maintenance and insert technology that will significantly reduce life cycle costs over the CPB's 25-year service life.

COASTAL PATROL BOAT COST FOR HULLS 48–50

Question. What is the cost to acquire hulls 48–50?

Answer. The cost to acquire hulls 48–50 is \$15 million, or \$5 million per hull.

GREAT LAKES ICEBREAKER DETAIL \$110M REQUEST

Question. Please break down in greater detail the \$110 million request for Great Lakes Icebreaker (GLIB).

Answer. The cost estimate of work to be done in fiscal year 2001 is as follows:

[In millions of dollars]

| | |
|---|----|
| Ship Construction | 98 |
| Detailed Design; Construction; Outfitting/GFE; C4ISR Systems; Integrated Logistics Support; Warranty; Testing | |
| Studies | 6 |
| Validation of design; Review of construction submittals; and Homeporting study | |
| Project Administration | 6 |
| Contract Administration; Project inspection office; ravel; amd Crew training | |

GREAT LAKES ICEBREAKER FUNDS EXECUTION IN FISCAL YEAR 2001

Question. If the GLIB construction contract is not scheduled to be awarded until fiscal year 2002, how much of the \$110 million is requesting can be executed in fiscal year 2001?

Answer. The Coast Guard plans to award the construction contract in the third quarter of fiscal year 2001. The acquisition strategy is a competitive procurement using a single-phase award to design and construct a multi-purpose icebreaker under a fixed price arrangement.

GREAT LAKES ICEBREAKER FISCAL YEAR 2000 FUNDING

Question. What is the status of the \$10 million provided for construction of the GLIB in the fiscal year 2000 transportation appropriations act?

Answer. None of the \$10M provided for construction in fiscal year 2000 has been obligated to date. The Coast Guard intends to award a construction contract in fiscal year 2001 using fiscal year 2000 and fiscal year 2001 funds, subject to full funding in fiscal year 2001.

PHASE II PROJECT OF USCGC ALEX HALEY

Question. Will the Phase II project of the CGC Alex Haley be competitively bid?

Answer. Phase II of the USCGC ALEX HALEY project will not be competitively bid. Exportable teams from the Coast Guard Yard will be used to accomplish the work. This approach enables the work to be conducted in homeport without impacting the operational schedule for the vessel. It will also enable the Coast Guard to take advantage of the Yard's previous work experience with the vessel.

CONVERSION OF PC-170 TO COAST GUARD PATROL CRAFT

Question. Please explain in greater detail the two phases of the conversion of the PC-170 to the Coast Guard Patrol Craft (WPC) and the funding of each phase. Will this work be competitively bid?

Answer. The conversion of PC-170 to a Coast Guard Patrol Craft is divided into two phases. Phase I of the project includes \$1.2 million to purchase long lead-time material and to fund the initial stages of overhauling the four main diesel engines.

Phase II of the repair and conversion will include outfitting the ship with required equipment and spare parts, making hull structural repairs, completing a dry-docking, upgrading the communications/electronics suites for interoperability with other Coast Guard platforms, and adding a stern ramp to accommodate small boat operations. Phase II funding requirements have not yet been determined.

The Coast Guard intends to complete a majority of this work at the Coast Guard Yard.

DEEPWATER DOT-IG CONCERNS

Question. It is my understanding that the planning phase for the Deepwater project will not be completed before the Coast Guard submits its fiscal year 2002 budget request or congressional action on that request. The Department's Inspector General has stated that "requesting budget authority without critical cost and schedule information carries substantial risk and is inconsistent with acquisition program best practices." What steps is the Coast Guard taking to address this concern?

Answer. The Coast Guard has a sound strategy in place to justify the planned project budget request. Conceptual designs were completed in December 1999 by all three industry teams. The teams are now engaged in the functional design phase, during which they will continue to refine their designs. Functional Design deliverables include concept of operations, total ownership and life-cycle costs estimates, affordability analysis, and implementation plans. Because they are scheduled for submittal throughout the design process, the information will be available for

use in justifying the fiscal year 2002 budget request. Adequate cost and schedule information is available to prepare and justify a fiscal year 2002 budget request. As noted by the Department of Transportation Inspector General, the Deepwater planning process is sound.

DEEPWATER \$21 MILLION REQUEST

Question. Please provide a detailed breakdown, which includes project description and level of funding, of \$21 million requested for the various assessments and analyses listed on page DEPWT-1 of the budget justification.

Answer. During Functional Design, the Deepwater Project relies on both private sector and government agencies to provide technical support that is not readily available from within the Coast Guard. The support and information obtained will be used in the Coast Guard's assessment of deliverables from each of the three competing industry teams and in preparing for Phase II of the Project. The \$21 million requested will be used for the following specific efforts:

—*Trade-off Analyses, Technology Assessments, Technology Demonstrations (approx. \$8.5 million).*—Analyses and studies to assess industry optimization of various physical components of their Integrated Deepwater System (IDS) proposals. Studies of new technologies proposed by industry in their Deepwater systems, including capabilities, limitations, applications and best practices. Demonstrations of new technologies and analysis of technical and other issues relating to the integration of new technology into the proposed Deepwater systems and the Coast Guard.

—*Modeling and Simulation (approx. \$2 million).*—Continued refinement and execution of the Maritime Operations Simulation model to provide continuous assessment of Functional Design deliverables and provide feedback to the industry teams. Modeling and simulation complement and support the project's technical assessment process as a means to further mitigate risk.

—*Systems Supportability Analysis, Total Ownership Cost Baseline Analysis (approx. \$5 million).*—Includes analysis of industry's proposals for logistics support of their IDS, including environmental impact, and facility and systems integration assessments. In accordance with the Project plan and in response to the GAO, the Deepwater Project is developing a total ownership cost baseline of existing Deepwater legacy assets. This information will provide the Coast Guard with a cost baseline for comparison of industry's future Integrated Deepwater System total ownership estimates.

—*Matrix Project Team (MPT) Studies (approx. \$3 million).*—The MPTs continually assess the industry teams in each of four principal technical areas (surface, air, logistics, and command and control).

—*Independent Validation and Verification (IV&V) and Test and Evaluation (T&E) (approx. \$2 million).*—IV&V of the operational effectiveness model is used to validate the model's stated purpose and verify the underlying assumptions of the model, which is to quantify the ability of a proposed IDS to meet stated performance requirements. T&E plans and processes will be initiated and protocols for testing established.

—*Phase II Request for Proposal Preparation (RFP) and Technical Evaluation Team (TET) Support (approx. \$500,000).*—Provides direct support and analysis support for developing the Phase II RFPs and establishment of the Phase II TET that will evaluate the Phase II proposals received from industry.

DEEPWATER INDUSTRY TEAMS TASKS AND FUNDING

Question. How much funding is requested for each industry team and what specific tasks is each team expected to accomplish during fiscal year 2001?

Answer. The Coast Guard expects to provide \$5.1 million to each Deepwater industry team in fiscal year 2001, for a total of \$15.3 million. These funds will be used for industry's continued refinement of the functional design of their Integrated Deepwater System concepts. Functional Design tasks to be completed during fiscal year 2001 include refinement of: the Integrated Deepwater System and major asset designs; Configuration Management; Logistics; System Implementation Plans; Concept of Operations Plan; environmental impacts; Affordability Analyses; Life Cycle Cost and Total Ownership Cost Estimates.

DISPOSAL OF ASSETS WITH PROCEEDS CREDITED TO DEEPWATER

Question. Has the Coast Guard disposed of any of the assets that are authorized by the fiscal year 2000 transportation appropriations act to be credited to the deepwater appropriation? If so, please explain what was sold and how the funding is being allocated?

Answer. Of the assets authorized by the fiscal year 2000 transportation appropriations act, the Coast Guard disposed of:

- ESMT Portsmouth, NH.*—disposed at no cost to the City of Portsmouth under the park conveyance provisions in the Code of Federal Regulations,
- ANT Huron, OH.*—sold for approximately \$110,000. The sale proceeds have not yet been received, however the USCG expects approximately \$83,600 in net sale proceeds.

DEEPWATER CONTRACT AWARD

Question. When the Coast Guard awards the Deepwater contract, will the award be solely to one industry team and its proposal or will the Coast Guard pick and choose the best, most innovative procurement ideas from each team and compete that item separately?

Answer. The Coast Guard intends to award the Integrated Deepwater System acquisition contract to just one of the three competing industry teams. However, to obtain essential contractual flexibility, the Coast Guard intends to structure the Deepwater acquisition contract as an indefinite delivery, indefinite quantity type contract. The Coast Guard will issue separate delivery orders under this contract to perform the upgrades and acquire the new assets comprising the industry's proposed Integrated Deepwater System. In addition, the Coast Guard intends to include specific Value Engineering and/or Technology Refreshment contract clauses. These clauses will enable the Coast Guard to acquire new technology that meets or exceeds proposed cost and performance levels from firms not originally part of the selected Deepwater industry team. While the so-called "mix and match" option has been preserved, selecting specific assets or components from all three Deepwater industry teams would shift the risk and responsibility for systems integration and interoperability from industry to the government. Similarly, such an approach would invalidate industry's proposed operational effectiveness and total ownership cost estimates as these are based upon the assets in their proposed Integrated Deepwater System concepts. The Coast Guard seeks to acquire an Integrated Deepwater System and this is best achieved by awarding a Deepwater acquisition contract to one team.

FADEC FUNDING ALLOCATION

Question. The fiscal year 2000 transportation appropriations act included \$7 million for an HH-65 engine program which could be applied to the fuel control (FADEC) upgrade or for technology insertion through a parts replacement program based on the commercial version of the LTS-101 engine. How is this funding being allocated?

Answer. The majority of these fiscal year 2000 funds are being allocated for technology insertion through a parts replacement process. The Coast Guard is replacing engine parts nearing the end of their service lives with redesigned components that are more reliable, supportable, and efficient. These improved components will extend the overhaul interval on the LTS-101 engine, thus reducing maintenance requirements and overall engine life-cycle costs. Installation of these improved engine components is also a prerequisite for any future power improvement effort.

HH-65 ENGINE POWER RESTORATION PROGRAM

Question. Is the Coast Guard considering an HH-65 engine power restoration program? If this is the case, please describe the program and explain its operational benefits, costs (including non-recurring and recurring costs), and schedule.

Answer. The Coast Guard is studying the need for power restoration for the HH-65 aircraft. Due to required aircraft modifications, as well as the congressionally mandated Rescue Swimmer program, an additional 1,625 pounds has been added to the operational weight of the HH-65. There has been no comparable improvement to the engine performance capability to offset the additional weight. The Coast Guard is not currently pursuing an HH-65 power enhancement program due to more urgent capitalization priorities. Operational benefits, costs and a schedule for a HH-65 power restoration program have not been quantified.

HH-65 ENGINE POWER RESTORATION PROGRAM ACCELERATION

Question. If Congress wanted to accelerate this program by providing non-recurring funding in fiscal year 2001 to reduce schedule concurrency and improve sequencing, what amount could be executed and for what purpose?

Answer. The Coast Guard currently has no program to restore power for HH-65s. The existing HH-65 LTS-101 Engine Life Cycle Cost Reduction Project will replace

obsolete, maintenance intensive components, some of which are required to be replaced if the Coast Guard pursues a power enhancement in the future. Although additional off-the-shelf components for this project could be purchased, they could not be installed in a year's time due to operational commitments of the fleet.

FLEET LOGISTICS SYSTEM

Question. Please provide a breakdown of the Coast Guard's specific procurement plans for the fleet logistics system in fiscal year 2000 and fiscal year 2001.

Answer. The Fleet Logistics System (FLS) project received funding of \$6.17 million in fiscal year 2000 (including reprogrammed funds). The FLS fiscal year 2001 budget request is \$5.5 million. The Coast Guard's updated procurement plan for these funds is:

[In thousands of dollars]

| | Fiscal year | |
|---|--------------|--------------|
| | 2000 | 2001 |
| FLS Software Development and Implementation | 4,239 | 4,440 |
| FLS Web Based Training Development | 525 | 515 |
| FLS Maintenance | 660 | |
| Equipment | 300 | 100 |
| Project Management | 446 | 445 |
| Total | 6,170 | 5,500 |

PORTS AND WATERWAYS SAFETY SYSTEM

Question. On what basis were Berwick Bay, Louisiana and Sault Saint Marie selected to receive the ports and waterways safety systems (PAWSS)?

Answer. The Coast Guard has requested funds to install the Ports and Waterways Safety System (PAWSS) in Berwick Bay, Louisiana, and Sault Saint Marie, Michigan. The Coast Guard evaluated these ports based on a comprehensive view of navigation risk taken together with many years of experience in managing the risks inherent in these our nation's waterways. They have been included in the PAWSS project because there is a compelling federal interest in keeping these VTSs fully operational. The equipment they are using is technologically obsolete and in need of replacement. The Coast Guard recognizes the need for traffic management at these critical waterways and is moving to upgrade the equipment to take advantage of the Automatic Identification System as soon as it becomes available. Converting existing VTSs to the PAWSS operating system will improve vessel traffic center operation and data management.

PORTS AND WATERWAYS SAFETY SYSTEM

Question. The justification indicates that the Coast Guard surveyed three additional ports for installation of PAWSS. On page 786 of the House hearings report for fiscal year 2000, the Coast Guard listed several ports under consideration, but PAWSS is not being implemented at any of these ports. Why is this?

Answer. The areas listed in the House Hearings Report for fiscal year 2000 were some of the ports in which the Coast Guard planned to conduct formal risk assessments in 1999 and 2000. Subsequent installation of a vessel traffic service (VTS) in any port under the Ports and Waterways Safety System (PAWSS) project would only be done had that assessment indicated a VTS was needed to mitigate an unacceptable level of risk.

So far, the risk assessments the Coast Guard has completed in conjunction with local maritime and stakeholder communities have not revealed any additional ports (beyond those where a VTS already exists) where a VTS is necessary or appropriate to mitigate identified risks. Effective risk management remains a constant requirement for the Coast Guard as port risk profiles change over time. The Coast Guard will continue to perform periodic formal and informal risk assessments in our nation's critical ports and waterways.

MARINE INFORMATION AND SAFETY AND LAW ENFORCEMENT COST/SCHEDULE CHANGES

Question. Please explain the nature and extent of cost overruns and schedule delays associated with development of the Marine Information and Safety and Law Enforcement (MISLE) program.

Answer. Prior to October 1999, MISLE development was being accomplished under a contract to Computer Science Corporation (CSC). Due to the nature of the contract, a decision was made to move MISLE development to Operations Systems Center (OSC) at Kearneysville, WV. The project scope remains the same. The OSC development effort is able to utilize the system requirements work completed by CSC, allowing the project to be completed on schedule. The new plan has less risk because the development will be accomplished in incremental, usable pieces as recommended by industry, OMB, and Congressional guidance. Under the new plan, Phase 1, in which Marine Safety Network (MSN) functionality replaces Marine Safety Information System (MSIS), will be completed in the third quarter of fiscal year 2001. Phase 2, which begins Law Enforcement Information System (LEIS) II integration and additional functionality, will be completed in the second quarter of fiscal year 2002; and Phase 3, which completes LEIS II and provides new capabilities, will be completed in the fourth quarter of fiscal year 2003. The project will be completed within the schedule and cost baselines, given the requested budget amount.

NATIONAL DISTRESS AND RESPONSE SYSTEM MODERNIZATION CONTRACT

Question. How much funding is requested for each industry team competing for the National Distress and Response System Modernization contract, and what specific tasks is each team expected to accomplish during fiscal year 2001?

Answer. The Independent Government Cost Estimate (IGCE) for the National Distress and Response System Modernization Project (NDRSMP) Design Demonstration and Validation (Phase I) scope of work is \$8.5 million. The contract will be structured with a base period (fiscal year 2000 funding) and an option period (fiscal year 2001 funding). The Coast Guard requested sufficient funds in fiscal year 2000 and 2001 to fund up to three (3) contracts for the NDRSMP Design Demonstration and Validation. The entire period of performance for the Phase I contract is 15 months.

As described in the Phase I Request for Proposal (RFP), each contractor is required to:

- conduct surveys of five (5) Coast Guard Groups and the associated units;
- develop a Functional Design to include the Functional Baseline consisting of the System Specification, System Development Specification and Interface Control Document;
- develop a Preliminary Design to include the Allocated Baseline detailing each Configuration Item;
- propose a Product Baseline (production equipment list) developed from the Allocated Baseline (functional list);
- conduct a Critical Functions demonstration to show compliance with the functional requirements of the performance specification;
- perform a cost/performance trade-off analysis on each system parameter identified in the RFP;
- develop an initial Life Cycle Cost Estimate (LCCE) based on the Functional Design, and an updated LCCE based on the Preliminary Design; and
- propose a project management plan for the Development, Production and Deployment (NDRSMP Phase II) for their proposed Product Baseline.

NATIONAL DISTRESS AND RESPONSE SYSTEM MODERNIZATION PROJECT

Question. There still appears to be a significant amount of concurrency in the program schedule for the NDRS modernization. Why is this degree of concurrency necessary; how does it raise the technical, costs and schedule risks of the program; and what specific management controls has the agency implemented to mitigate these risks?

Answer. In November 1999, the Coast Guard Acquisition Review Council (CGARC) approved a revision of the National Distress and Response System Modernization Project (NDRSMP) Acquisition Plan to incorporate a phased acquisition strategy that is generally sequential and mitigates or improves control of project risk. The phased acquisition strategy divides the project into a Design Demonstration and Validation Phase (Phase I) and a Development, Production, and Deployment Phase (Phase II).

During Phase I, a preliminary design will be developed for the NDRSMP. The preliminary design will be demonstrated and validated to show compliance with the

functional requirements of the performance specification. The majority of the Phase I activities are sequential and build upon the prior activity. The Phase I activities were developed to help control or reduce the technical risk.

During Phase II, the production design will be finalized and a regional system built, installed, and tested to achieve Initial Operating Capability (IOC). After IOC, additional systems will be built and fielded to achieve Full Operating Capability (FOC). Several of these activities are sequential, but there are instances when tasks can be performed concurrently without significantly increasing the technical, schedule or cost risk. A large degree of concurrency will still be necessary in Phase II to accomplish the project's milestones and schedule. Concurrent installation of the system at various Coast Guard Groups and units is necessary to achieve timely FOC.

NATIONAL DISTRESS AND RESPONSE SYSTEM MODERNIZATION PROJECT FUTURE COST

Question. Please break down the estimated future cost of \$220 million for the NDRS modernization program.

Answer. The estimated future cost for the National Distress and Response System Modernization Project (NDRSMP) provides funding of the NDRSMP Development, Production and Deployment (Phase II). The Coast Guard will be able to better estimate the future costs using the Life Cycle Cost Estimates (LCCE) developed during the Design Demonstration and Validation (Phase I).

[In millions of dollars]

| Element | Estimated funding request | Acquisition project base-line (APB) range |
|-------------------------------------|---------------------------|---|
| Production Design Development | 30 | 25-35 |
| Production and Deployment | 190 | 181-223 |

Production Design Development consists of developing the detailed design and installing the regional system for Initial Operating Capability (IOC), developmental testing and evaluation during this period, and operational testing and evaluation for acceptance of the IOC system.

Production and Deployment consists of pre-installation site surveys, site preparation work, system production in quantity, and the installation of the system equipment at various Coast Guard Groups and units.

SELF-LOCATING DATUM MARKER BUOYS

Question. How many Self-locating Datum Marker Buoys are the Coast Guard planning to procure as part of the search and rescue capabilities enhancement project? How many are planned for purchase in fiscal year 2002? What is the deployment schedule?

Answer. The Coast Guard is planning on procuring 300 Self-Locating Datum Marker Buoys (SLDMB) in fiscal year 2001 as part of the search and rescue (SAR) capabilities enhancement project. In fiscal year 2002 the Coast Guard will begin annual purchases of 300 to 350 buoys. SLDMBs are expendable, not intended to be recovered following use.

The SLDMBs will be initially distributed to Coast Guard air stations (approximately ten per air station) and restocked as they are used. The distribution to air stations will take place over several months as the SLDMBs become available from the manufacturer.

Actual operational employment of the first SLDMBs in search and rescue missions is expected in late March, 2001.

SURVEY & DESIGN SHORE FACILITY FUNDING BREAKDOWN

Question. With respect to the request of \$7 million for survey and design-shore facilities, please breakdown how the agency would allocate funding by facility for each of fiscal years 1999, 2000, and 2001.

Answer. Amounts allocated to individual facilities follow. Many 2000 and 2001 figures are planning estimates and may change as project schedules and design costs are solidified.

| Facility | Fiscal year | | |
|--|-------------|--------------|--------------|
| | 1999 actual | 2000 planned | 2001 planned |
| Academy, New London, CT | \$250,000 | \$150,000 | \$50,000 |
| Air Station Astoria, OR | | | 100,000 |
| Air Station Barbers Point, HI | | 105,000 | 125,000 |
| Air Station Elizabeth City, NC | | 560,000 | 500,000 |
| Air Station Miami, FL | 205,000 | 210,000 | |
| Air Station North Bend, OR | | | 100,000 |
| Base Galveston, TX | | 150,000 | 150,000 |
| Base San Juan, PR | 845,000 | 475,000 | 150,000 |

AC&I PERSONNEL FUNDING INCREASE

Question. The agency is requesting a \$3.97 million increase for direct personnel costs. Why is such a large increase necessary?

Answer. The \$54.151 million fiscal year 2001 request for direct personnel costs is a \$3.97 million increase over the fiscal year 2000 appropriation level. The increase is required to account for additional personnel costs and entitlements such as civilian and military pay increases, Basic Allowance for Housing (BAH) adjustments and increased medical costs. The slight increase also allows for an additional 9.5 Full Time Equivalents (FTE) over the actual fiscal year 2000 level. The increase is required in order to provide for the increased personnel requirements associated

with the National Distress & Response System Modernization, Great Lakes Ice-breaker Replacement, and Deepwater projects during fiscal year 2001. These increases are taking place at the same time that other large AC&I projects such as Coastal Patrol Boats, Seagoing Buoy Tender Replacement, and Motor Lifeboat Replacement are in full-scale production.

C&I PERSONNEL INCREASE

Question. How many new personnel are requested?

Answer. The requested funding level will provide for an increase of 9.5 Full Time Equivalent (FTE) over the Coast Guard's fiscal year 2000 actual FTE level.

AC&I PERSONNEL LISTING

Question. Please provide a table listing all personnel funded with AC&I appropriations, similar to the information the Coast Guard provided on pages 806 and 807 of last year's House hearing record.

Answer. Information is attached.

FISCAL YEAR 2000 ACI PERSONNEL

| PROJECT | LOCATION | CO | CWO | ENL | CIV | TOTAL | EXPLANATION OF CHANGE |

In an effort to maximize authorized FTP/FTE this plan includes a total of 716 billets/positions, 8 percent above the fiscal year 2000 request of 663. This plan reflects the fact that many of the billets are partial year FTE and assumes that the historical lapse rate associated with additions/deletions will continue and that any reduction due to unanticipated increase in the fill rate can be realized by postponing fourth quarter adds.

CHANGES TO AC&I PERSONNEL FULL-TIME EQUIVALENT (FTES)

Question. By program, project, and activity, please provide a table indicating the changes from 1999 to 2000 in positions and FTE and the reasons for such changes, similar to the information the agency provided on pages 809 through 811 of last year's House hearing record.

Answer. Information is attached.

| WLB RECOMPETE TOTAL | PRO TBD AFTER AWARD | 5 | 4.25 | 5 | 4.25 | | | Second WLB Contract award. |
| TOTAL | | 716 | 650.5 | 742 | 660 | | | |

Note: In an effort to maximize requested FTP/FTE, the current plan contains a total of 742 fiscal year 2001 billets/positions, 9.0 percent above the requested number of 704 and a total of 660 FTE. This plan reflects the fact that many of the billets are partial year FTE and assumes that (a) the historical lapse rate associated with additions/deletions will continue to some degree and that (b) any reduction necessary due to unanticipated increase in the fill rate can be realized by postponing fourth quarter adds.
 NDRSMP, GLIB and Deepwater project requirements require maximum utilization of AC&I personnel funding.

FISCAL YEAR 2001 ALTERATION OF BRIDGES

Question. What bridges is the Coast Guard proposing to fund with the fiscal year 2001 budget request and at what level of funding?

Answer. The Coast Guard proposes to fund the below list of bridges in fiscal year 2001. Section 101(b) of public Law 104-324 (Coast Guard Authorization Act of 1996) allows for the transfer of funds, by the Secretary of Transportation from the FHWA Discretionary Bridge account to the Coast Guard Bridge Alteration account for highway bridge alterations:

[Dollars in millions]

| Name of bridge | Location | Funding |
|--|-------------------------------------|---------|
| Sidney Lanier Highway | Bridge Brunswick, Georgia | \$1 |
| Limehouse Highway Bridge | John's Island, South Carolina | 1 |
| Florida Avenue Railroad/Highway Bridge | New Orleans, Louisiana | 1 |
| Chelsea Street Bridge | Boston, Massachusetts | 1 |
| Burlington Northern Santa Fe Railroad Bridge | Burlington, Iowa | 3 |
| Fort Madison Railroad Bridge | Fort Madison, Iowa | 2 |
| Elgin, Joliet, and Eastern Railway Company Bridge .. | Divine, Illinois | 1 |
| CSX Transportation Company Bridge | Hurricane, Alabama | 1 |

OBSTRUCTIVE BRIDGES TO NAVIGATION

Question. Please provide a list of all bridges that have been declared obstructions to navigation as well as their location, the estimated total cost of each bridge, and expenditures to date if appropriate.

Answer:

1. Burlington Northern Railroad Bridge located across the Upper Mississippi River at milepost 403.1 in Burlington, Iowa. Estimated total project cost is \$32 million and expenditures to date are \$777,363.00.

2. Fort Madison Railroad Bridge located across the Upper Mississippi River at milepost 383.9 in Fort Madison, Iowa. Estimated total project cost is \$40 million and expenditures to date are \$206,518.00.

3. Sidney Lanier Highway Bridge located across the Brunswick River at milepost 4.6 in Brunswick, Georgia. Estimated total project cost is \$112 million and expenditures to date are \$30,728,000.00.

4. Florida Avenue Railroad/Highway Bridge across the Inner Harbor Navigation Canal at milepost 1.7 in New Orleans, Louisiana. Estimated total project cost is \$43 million and expenditures to date are \$1,513,455.00.

5. Chelsea Street Bridge across the Chelsea Creek at milepost 1.2 in Boston, Massachusetts. Estimated total project cost is \$42 million and expenditures to date are \$415,074.00.

6. Limehouse Highway Bridge across the Stono River at milepost 479.3 in Johns Island, South Carolina. Estimated total project cost is \$33 million and expenditures to date are \$2,536,368.00.

7. Bordeaux Railroad Bridge across the Cumberland River at milepost 185.2 in Bordeaux, Tennessee. Estimated total alteration project cost is \$21 million. The Coast Guard decision to alter or remove this bridge is pending. No funds have been appropriated for this project.

8. Elgin, Joliet, and Eastern Railway Company Bridge across the Illinois Waterway at milepost 270.6 in Devine, Illinois. Estimated total project cost is \$25 million and expenditures to date are \$4,000,000.

9. Union Pacific Railroad Bridge across the Upper Mississippi River at milepost 518.0 in Clinton, Iowa. Estimated total project cost is \$26.5 million. No funds have been appropriated for this project.

10. Union Pacific Railroad Bridge across the Illinois Waterway at milepost 151.2 in Pekin, Iowa. Estimated total project cost is \$23 million. No funds have been appropriated for this project.

11. Canadian Pacific Rail System Bridge across the Upper Mississippi River at milepost 534.9 in Sabula, Iowa. Estimated total project cost is \$20 million. No funds have been appropriated for this project.

12. Gateway Western Railway Company Bridge, across the Upper Mississippi River at milepost 282.1 in Louisiana, Missouri. Estimated total project cost is \$21.5 million. No funds have been appropriated for this project.

13. CSX Transportation Company Bridge across the Mobile River at milepost 13.6 in Hurricane, Alabama. Estimated total project cost is \$27 million and expenditures to date are \$2,000.00.

14. Canadian Pacific Railroad Bridge across the Upper Mississippi River at milepost 699.8 in LaCrosse, Wisconsin. Estimated total project cost is \$29 million. No funds have been appropriated for this project.

FUNDING FOR OBSTRUCTIVE BRIDGES

Question. The budget requests to fund these bridges from the Federal-Aid Highways program. Are all of the bridges eligible for funding under the Truman-Hobbs Act also eligible for funding under the Federal-Aid Highways program?

Answer. No, only the highway bridges determined to be unreasonable obstructions to navigation under the Truman-Hobbs Act are eligible for funding from the Federal Aid Highways (FAH) program. Railroad bridges are not eligible under the FAH program.

RETIRED PAY

Question. Is the retired pay appropriation based on an actuarially sound system?

Answer. Yes. Annually, the Coast Guard retains the services of a certified actuary firm to estimate the size of the Coast Guard's liability for retirees. These estimates are used in the process of preparing the Coast Guard's Retired Pay Appropriation Request.

RESERVE TRAINING

Question. What is the shortfall, if any, in the reserve training account for fiscal year 2000?

Answer. As we are currently managing it, there is no shortfall in the Reserve Training account for fiscal year 2000.

SELECTIVE RESERVE STRENGTH

Question. The budget justification indicates that the Coast Guard intends to reduce SELRES strength by 300 to 7,300. I have been informed, however, that the Selected Reserve strength is greater than 8,000 personnel, which would require a reduction of more than 600 personnel to meet the requested funding level. What accounts for this discrepancy?

Answer. As directed in fiscal year 2000 report language, the Coast Guard has made every effort to maintain a Selected Reserve of 8,000 by adjusting the frequency of member drills. The Coast Guard has determined, however, that this policy is less than optimal in the long run and is subsequently adjusting the Selected Reserve to a level that can be fully trained and supported. Furthermore, additional active duty in fiscal year 2000 will relieve some of the Coast Guard's dependence on the Selected Reserve to conduct normal operations and missions.

COAST GUARD PERSONNEL REDUCTION

Question. How does the Coast Guard propose reducing 600 people in one year and what is your schedule?

Answer. The Coast Guard would reduce accessions and offer Reserve personnel voluntary separations. If further reductions are needed, the Coast Guard would pursue involuntary separations of personnel.

RESERVE FUNDING

Question. What would the cost be to fully fund the reserve component at the present strength (about 8,000) at the optimal training level?

Answer. The Coast Guard supports the President's Budget, which supports a Selected Reserve of 7,300. To adequately fund a selected reserve of 8,000 in fiscal year 2001, the Coast Guard Reserve Training (RT) Appropriation would require an appropriation of \$79.952,000,000.

OMB STUDY OF COAST GUARD SELECTIVE RESERVE

Question. Does the Coast Guard still agree with the findings of the OMB directed study which concluded that a Selected Reserve of 12,300 is necessary?

Answer. The 1997 Coast Guard Reserve Roles and Missions Study concluded that 12,300 Selected Reserve (SELRES) would be required under specific threat conditions. Under current threat conditions, the Coast Guard supports the President's Request for 7,300 SELRES in fiscal year 2001.

FULL—TIME SUPPORT POSITIONS

Question. The budget justification indicates a reduction of 5 military full-time support billets and 2 civilian FTEs. What are the number of full-time support positions requested for this account and what functions do they perform?

Answer. There are currently 494 Full Time Support positions funded by the Reserve Training Appropriation. Full Time Support personnel perform functions associated with the organization, administration, recruitment, instruction, maintenance, and supply support of the Reserve. Full Time Support billets are deployed where they can optimize and leverage Reserve Component readiness. Coast Guard reservists are largely integrated into active component commands, and perform virtually all Coast Guard functions side by side with their active duty counterparts. The operations-focused deployment of the Coast Guard Selected Reserve requires a similarly broad-focused deployment of Full Time Support structure. These fulltime billets enable Reserve Component readiness in the following areas:

- Attaining and Maintaining Reserve Component Strength (recruiting, medical, personnel and systems support);
- Maximizing the Reserve Component Training (HQ and Training Commands);
- Providing Augmentation Training to Maximize Mobilization Readiness (organic training and administrative support for deployable units, field units/activities); and
- Managing Reserve Force Plans, Policy, Organization and Employment/Deployment (HQ policy/programs and regional force optimization staffs).

RESEARCH, DEVELOPMENT, TEST, AND EVALUATION APPROPRIATION INCREASE

Question. The Coast Guard is requesting an approximately 12 percent increase for the RDT&E appropriation. Why is this increase necessary?

Answer. COLA increases account for \$505,000 (2.6 percent) of the \$2,327,000 increase over the fiscal year 2000 request to fund increases in pay and support service costs. The rest of the increase is needed to fund new and current research and development (R&D) project work.

The fiscal year 2001 R&D project portfolio was developed to make measurable improvements toward meeting Government and Performance Results Act (GPRA) goals. The increase in project work is needed to pursue three technologies having the potential to significantly improve progress towards Coast Guard performance goals. Three new projects show great potential to improve performance in the Coast Guard's GPRA goals for safety and drug law enforcement.

A "risk management" project will provide the Coast Guard with tools needed to analyze complex, interwoven systems most likely to cause accidents and injuries. A "fatigue countermeasures" project builds on successes to help reduce accidents in hazardous commercial operations such as fishing and towing. New work in "new sensor technology" includes investigation of a variety of airborne, surface, and sub-surface sensor systems that provide Coast Guard commanders with real time information about all threats in their area of responsibility.

SEARCH AND RESCUE FUNDING RESEARCH ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$1.855 million requested for research related to search and rescue. How does this compare to funding provided for fiscal year 2000?

Answer. The Program & Finance Digest (page RDTE-2) provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

The amount requested in fiscal year 2001 for search and rescue is \$457,000, which appears on the Line Item Summary exhibit (p. RDTE-8) and on Budget Sheet G1: IMPROVE SEARCH AND RESCUE CAPABILITY (p. RDTE-9). The Budget Sheet explains how the funds requested in fiscal year 2001 will be used. The \$457,000 requested is for Search Planning Tool Methodology research and direct project personnel costs. By comparison, the fiscal year 2000 request contained \$1.162 million for research related to search and rescue.

AIDS TO NAVIGATION RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$2.577 million requested for research related to aids to navigation. How does this compare to the allocation of funding provided for fiscal year 2000.

Answer. The Program & Finance Digest (p. RDTE-2) provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

The amount requested in fiscal year 2001 for aids to navigation is \$1.196 million, which appears on the Line Item Summary exhibit and on Budget Sheet G2: WATERWAYS SAFETY AND MANAGEMENT AND AIDS TO NAVIGATION (p. RDTE-10). The Budget Sheet explains how the funds requested in fiscal year 2001 will be used. The \$1,196,000 requested is for research in Advanced Vessel Traffic Systems, International Communications and Navigation Standards, Navigational Aids Mix System Analysis, and for direct project personnel costs. By comparison, the fiscal year 2000 request contained \$725,000 for research related to waterways management and safety and aids to navigation.

MARINE SAFETY RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$7.427 million requested for research related to marine safety. How does this compare to the allocation of funding provided for fiscal year 2000?

Answer. The Program & Finance Digest provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

The amount requested in fiscal year 2001 for marine safety is \$5.448 million, which appears on the Line Item Summary exhibit (p. RDTE-8) and on Budget Sheet G3: MARINE SAFETY (p. RDTE-11). The Budget Sheet explains how the funds requested in fiscal year 2001 will be used. The \$5.448 million requested is for research in Risk-based Planning and Management, Human Error and Human Performance, Fire Safety for Commercial Vessels, and for direct project personnel costs. By comparison, the fiscal year 2000 request contained \$3.108 million for research related to marine safety.

MARINE ENVIRONMENTAL PROTECTION RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$2.87 million requested for research related to marine environmental protection. How does this compare to the allocation of funding provided for fiscal year 2000?

Answer. The Program & Finance Digest provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

The amount requested for fiscal year 2001 for marine environmental protection is \$1.142 million, which appears on the Line Item Summary exhibit (p. RDTE-8) and on Budget Sheet G5: MARINE ENVIRONMENTAL PROTECTION (p. RDTE-13). The Budget Sheet explains how the funds requested in fiscal year 2001 will be used. The \$1,142,000 requested is for research in Spill Response Planning, Management and Training, Aquatic Nuisance Species Control, and for direct project personnel costs. By comparison, the fiscal year 2000 request contained \$2,465,000 for research related to marine environmental protection.

ENFORCEMENT OF LAWS AND TREATIES RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$5.80 million requested for research related to enforcement of laws and treaties. How does this compare to the allocation of funding provided for fiscal year 2000.

Answer. The Program & Finance Digest provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

The amount requested for fiscal year 2001 for enforcement of laws and treaties is \$4,422,000, which appears on the Line Item Summary exhibit (p. RDTE-8) and on Budget Sheet G6: COMPREHENSIVE LAW ENFORCEMENT (p. RDTE-15). The Budget Sheet explains how the funds requested in fiscal year 2001 will be used. The \$4,422,000 requested is for research in Improved Surveillance Capability, Improved Vessel Search Capability, Non-lethal Vessel Disabling Technologies, and for direct project personnel costs. By comparison, the fiscal year 2000 request contained \$3,826,000 for research related to enforcement of laws and treaties.

ICE OPERATIONS RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$406,000 requested for research related to ice operations. How does this compare to the allocation of funding provided for fiscal year 2000?

Answer. The Program & Finance Digest provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

There are no funds requested in fiscal year 2001 for research in this specific area, nor were any requested for fiscal year 2000.

DEFENSE READINESS RESEARCH FUNDING ALLOCATION

Question. Please explain in detail by project or activity how the Coast Guard proposes to allocate the \$381,000 requested for research related to defense readiness. How does this compare to the allocation of funding provided for fiscal year 2000?

Answer. The Program & Finance Digest provides the Coast Guard's best estimate of that portion of all research proposed for fiscal year 2001 that will contribute to advancing the state of a given mission area. The Program & Finance Digest displays the seven traditional Coast Guard Mission Areas, which do not correlate directly with entries under "Program by activities" on the Line Item Summary exhibit (p. RDTE-8). The Program Digest is a part of every appropriation's budget presentation to provide a consistent view, based on seven traditional Coast Guard missions areas, between very dissimilar appropriations.

There are no funds requested in fiscal year 2001 for research in this specific area, nor were any requested for fiscal year 2000.

RESEARCH AND DEVELOPEMNT PERSONNEL, PROGRAM SUPPORT AND OPERATIONS
BREAKDOWN

Question. Please break down in further detail the line, "R&D Personnel, Program Support & Operations" on page RDTE-8 of the budget justification.

Answer. This line item is comprised of:

| | |
|--|-------------|
| Administration/Support Personnel & Related Costs | \$3,049,000 |
| Support and Operations | 1,214,000 |
| Fire and Safety Test Detachment, Mobile, AL Operations and Maintenance | 20,000 |
| Total | 4,283,000 |

NATIONAL RECREATIONAL BOATING SAFETY PROGRAM FUNDING

Question. The TEA-21 Act made the appropriation for boat safety mandatory spending and set the level of funding for this important activity for fiscal year 2001 at \$64 million, which is the same amount as was provided for fiscal year 2000. Is this level of funding adequate to maintain a national recreational boating safety program or is there a shortfall as some have claimed? If there is a shortfall, what is the amount?

Answer. The minimum funding level for State RBS programs was set in TEA-21 at \$59 million per year for fiscal years 1999 through 2003. An additional \$5 million for the Coast Guard's national coordination activities is also a component of the TEA-21 formula. This funding is provided through a transfer from the Sport Fish Restoration Account's mandatory appropriation when there is no discretionary funding provided. TEA-21 does not adjust the mandatory funding level to account for inflation or for growth in recreational boating. This level was adequate for the national recreational boating safety program in fiscal year 2000.

QUESTIONS SUBMITTED BY SENATOR BARBARA A. MIKULSKI

COAST GUARD YARD—CORE FACILITY

Question. I'd like to raise the issue of the Curtis Bay Coast Guard Yard with Vice Admiral Card. As you know, the Coast Guard Yard has played a vital role in ensuring the readiness of the Coast Guard fleet through the construction, repair, and renovation of both vessels and aids to navigation peculiar to the Coast Guard.

The Yard provides essential capabilities that are simply not available in commercial shipyards. Those capabilities include the Yard's instant response for emergency and non-emergency work, special ordnance and electronic repair expertise, instant ability to obligate funds without pre- and post-contract requirements and delays, and no-risk performance guarantees. Without the help of the Yard, the Coast Guard would be unable to maintain its fleet and therefore unable to meet its mission of saving lives.

Do you consider the Curtis Bay Coast Guard Yard to be a Core Logistics Facility?

Answer. Yes. In response to requirements outlined by the Coast Guard Authorization Act of 1988, the Secretary of Transportation provided a list of "essential logistics" activities. The Coast Guard Yard is on that list. The Yard remains an essential component to meet Coast Guard support requirements for our fleet.

COAST GUARD YARD POLICY STATEMENT

Question. If so, will you state that the Curtis Bay Coast Guard Yard is a Core Logistics Facility in the policy statement that is currently being developed by Headquarters?

Answer. Yes, the Coast Guard will reaffirm the essential nature of the Yard in our new policy statement. Over the past 100 years, the Yard has adapted to significant changes and challenges the Coast Guard has faced. The Yard's flexibility is a key component of its value to the Coast Guard. The Coast Guard continues to evaluate how the Yard can best meet the needs of the fleet and also lend its expertise to other government agencies. The Coast Guard's assessment in this regard is a continuous process and includes accounting for changes in its fleet size and opportunities for new business.

REFURBISHING USCGC MACKINAW

Question. Also, is the Coast Guard giving serious consideration to refurbishing the Great Lakes Icebreaker at the Curtis Bay Coast Guard Yard?

Answer. The Coast Guard intends to replace (not refurbish) Coast Guard Cutter MACKINAW with a new construction multipurpose icebreaker.

The Coast Guard has determined that a competitive procurement is the most appropriate strategy to achieve performance, cost, and schedule objectives. Market surveys conducted by the Coast Guard reflect significant commercial interest in this acquisition.

USCGC MACKINAW REFURBISHMENT DECISION TIMELINE

Question. When will the Coast Guard decide where the Great Lakes Icebreaker will be refurbished?

Answer. The Coast Guard intends to replace (not refurbish) Coast Guard Cutter MACKINAW with a new construction multipurpose icebreaker. The Coast Guard in-

tends to award a commercial contract to design and build the Great Lakes Ice-breaker during the third quarter of fiscal year 2001.

AIR-21 IMPACT

Question. Admiral Card, as you know, the Senate and the House currently are conferencing on the so-called AIR-21, the FAA reauthorization bill. One of the areas that remains unresolved is the issue of budgetary treatment for aviation programs. The House has proposed to create a firewall that would guarantee both trust funds revenues as well as general tax revenues for aviation programs. What impact would the House's budgetary treatment proposal have on Coast Guard safety programs?

Answer. AIR-21 mandates large increases for FAA capital spending under the budget caps, making it more difficult to fund other discretionary programs, including the Coast Guard. Nevertheless, safety programs are a core mission which we will attempt to protect and we will continue to seek your support for the funding levels for the Coast Guard requested in the President's Budget.

QUESTIONS SUBMITTED TO THE NATIONAL HIGHWAY TRAFFIC SAFETY
ADMINISTRATION

QUESTIONS SUBMITTED BY SENATOR RICHARD C. SHELBY

NHTSA MAJOR CONTRACTORS

Question. Please provide a list of NHTSA's major contractors, what projects they are working on, and the cost of each contract.

Answer. A list of NHTSA's major contractors' follows.

| <i>Contractor</i> | <i>Amount</i> |
|---|---------------|
| TRW, San Diego, CA 92198: DTNH22-94-C-07125—National Advanced Driving Simulator | \$12,440,000 |
| <hr/> | |
| General Motors Corporation, Warren, MI 48090: DTNH22-99-H-07019—Automotive Collision Avoidance System (ACAS) Field Operational Test | 8,374,013 |
| <hr/> | |
| CALSPAN Corporation, Buffalo, NY 14225: | |
| DTNH22-93-C-07024—Intersection Collision Avoidance Using IVHS Countermeasures | 249,998 |
| DTNH22-93-C-07034—Operation of Zone Center #1 for the NASS | 3,343,463 |
| DTNH22-94-D-07058—Establishment of Special Crash Investigative Teams | 388,948 |
| DTNH22-95-D-11000—Multiple FMVSS Compliance Testing | 36,800 |
| DTNH22-96-D-02010—Composite Crash Testing for New Car Assessment Program (NCAP) | 292,034 |
| Total | 4,311,243 |
| <hr/> | |
| KLD Associates, Inc., Huntington Station, NY 11746: | |
| DTNH22-93-C-07035—Operation of Zone Center #2 for the NASS | 3,150,000 |
| DTNH22-95-C-02029—Analysis of Insurer Reports Rec'd Pursuant to Chapter 331 of 49 U.S.C. | 43,618 |
| Total | 3,193,618 |
| <hr/> | |
| Signal Corporation, Fairfax, VA 22031: DTNH22-96-D-01049—Information Technology Support | 3,118,132 |
| <hr/> | |
| Information Systems & SVCS., Inc., Silver Spring, MD 20910: | |
| DTNH22-95-D-07159—Base Level On-Going Technical Support & Indefinite Technical Services | 2,246,848 |

| <i>Contractor</i> | <i>Amount</i> |
|---|---------------|
| DTNH22-97-C-07000—ADP Support for NHTSA Data Center | 763,132 |
| Total | 3,009,980 |
| Information Management Consultants, McLean, VA 22102: DTNH22-96-D-03100—OIRM Information Technology Technical Support | 2,540,566 |
| National Safety Council, Itasca, IL 60611: | |
| DTNH22-93-Y-05240—National Safety Belt Coalition | 551,470 |
| DTNH22-94-Z-05063—Traffic Safety Rap Contest | 43,935 |
| DTNH22-96-H-05243—Technical Assistance for Occupant Protection | 645,000 |
| DTNH22-97-H-05015—Third Annual “Strides For Safety” Campaign | 79,106 |
| DTNH22-97-H-05278—Research, Evaluation and Traffic Records Initiatives and Support | 945,565 |
| Total | 2,265,076 |
| Information Dynamics, Inc., Washington, D.C. 20024: DTNH22-97D-07008—ADP Support for FARS and NCSA LAN Operations | 1,304,465 |
| Capital Consulting Corporation, Fairfax, VA 22031: | |
| DTNH22-93-D-07192—Computerized Quality Assurance, QC & Stat. Support Services | 67,974 |
| DTNH22-94-C-01043—Hotline Contact Representatives/Transcribers | 720,000 |
| DTNH22-99-D-07009—Computerized Quality Assurance, Quality Control, And Statistical Support Services | 497,601 |
| Total | 1,285,575 |
| University of Michigan Transportation Research Institute, Ann Arbor, MI 48109: | |
| DTNH22-94-Y-47016—Foster the Development, Evaluation, and Deployment Of Collision Avoidance Systems | 296,000 |
| DTNH22-97-D-25018—Evaluations Support of Traffic Safety Programs | 50,000 |
| DTNH22-99-H-07003—System for Assessing the Vehicle Motion Environment | 788,103 |
| Total | 1,134,103 |
| Enterprise III Systems, Reston, VA 22091: DTNH22-97-C-03004—Imaging Network Support & Scanning Services | 1,133,340 |
| University of Alabama, Birmingham, AL 35294: DTNH22-99G-05139—Model State Head Injury Program | 1,000,000 |
| Louisiana Highway Safety Commission, Baton Rouge, LA 70806: DTNH22-99-H-15132—Targets of Opportunity: State Demo. & Eval. Pgm. To Reduce Alcohol Related Crashes | 1,000,000 |
| Financial Technologies Inc., Chantilly, VA 22021: DTNH22-98-C-05000—Teleprocessing for the National Driver Register (NDR) | 992,968 |
| Tennessee Governor’s Office of Highway Safety, Nashville, TN 37243: | |
| DTNH22-99-H-07159—Crash Outcome Data Evaluation System | 300,037 |

| <i>Contractor</i> | <i>Amount</i> |
|--|---------------|
| DTNH22-99-H-25132—Targets of Opportunity: State Demo. & Eval. Pgm. To Reduce alcohol Related Crashes | 600,000 |
| Total | 900,037 |
| University of Virginia, Charlottesville, VA 22906: DTNH22-93-Y- 07028—Biomechanical Response of Human Surrogates to Im- pact | 900,000 |
| Internat'l Assoc. of Chiefs of Police, Alexandria, VA 22314: DTNH22-96-G-05235—IACP Traffic Enforcement Initiatives | 879,810 |
| Global Exchange, Inc., Bethesda, MD 20814: | |
| DTNH22-95-D-05152—Public Information Technical Assist- ance | 479,293 |
| DTNH22-97-F-05125—Roundtable on EMS & Managed Care | 29,956 |
| DTNH22-98F-05335—Aggressive Driving Summit Logistics | 140,000 |
| DTOS59-95-C-00408—IQC for Conference/Media Support | 229,923 |
| Total | 879,172 |
| Conwal, Inc., McLean, VA 22101: | |
| DTNH22-98-C-05007—Operation of, and Information Re- trieval Support for, the Traffic Safety Pgm. Resource Cen- ter | 693,601 |
| DTNH22-99-P-09019—TSD: Database Documentation of In- novative State & Community Highway Safety Projects | 85,000 |
| DTNH22-99-P-09036—TSD: Database Documentation of In- novative State & Community Highway Safety Projects | 21,996 |
| Total | 800,597 |

NHTSA REPROGRAMMINGS

Question. Please provide the amount and description of all reprogrammings or transfers of funds that occurred during fiscal year 1999 and thus far in fiscal year 2000.

Answer. In fiscal year 1999, NHTSA received Congressional approval to reprogram \$2.35 million from the Research and Analysis and the Highway Safety programs for the National Advanced Driving Simulator. The reprogrammed funds were used to fund unanticipated cost overruns. Without the reprogrammed funds, the program would have been delayed or work would have stopped, causing greater delays to the program. In fiscal year 2000, there have been no reprogramming actions to date. Any funding shifts have been minor and represent minor but necessary fine-tuning which typically takes place when the agency implements its budget.

UNOBLIGATED BALANCES

Question. Please provide a list of any unobligated funds and carryover funds by subaccounts from previous fiscal years.

Answer. In the Operations and Research appropriation, an unobligated balance of \$8.669 million was brought forward and made available for use in fiscal year 2000. This represents 5.4 percent of the total funds available for spending in fiscal year 1999. Approximately 30 percent of the carryover funding (\$2.617 million) is earmarked for the ITS program. The following is a listing of unobligated balances brought forward:

| [In thousands of dollars] | |
|--|-------|
| Salaries and Benefits | 615 |
| Headquarters and Regional Operating Expenses | 291 |
| Contract Program: | |
| Safety Performance | 160 |
| Safety Assurance | 409 |
| Highway Safety | 261 |
| State and Community Services | 20 |
| Research and Development | 6,102 |

| | |
|------------------------------|--------------|
| General Administration | 53 |
| Miscellaneous | 758 |
| Total | 8,669 |

Salaries and Benefits.—Carryover resulted from delays in hiring and will be applied to the fiscal year 2000 personnel costs.

Headquarters and Regional Operating Expenses.—This amount comprises carryover from both field and headquarters operating expenses and was the result of underruns in telecommunications costs.

Safety Performance.—Carryover is associated with contract underruns and will be applied to the Vehicle Safety and Consumer Standards Program.

Safety Assurance.—Carryover is associated with underruns in compliance testing. Highway Safety—Carryover is associated with underruns in various programs.

State and Community Services.—Carryover is associated with underruns in various programs and will be applied to the Buckle Up America program.

Research and Development.—\$2.617 million is earmarked for the ITS program and resulted from delays in awards of ITS procurements; the remaining \$3.485 million resulted from delays in contract awards and testing delays in the areas of Motor Vehicle Research (\$1.185 million), Biomechanics (\$.6 million), Crash Avoidance (\$.3 million), and Heavy Vehicles (\$.4 million). In addition, carryover resulted from delays in contract awards in NCSA (\$.6 million), PNGV (\$.4 million). Carryover will be applied to complete the awards and testing originally planned.

General Administration.—Carryover is associated with underruns in various programs.

Miscellaneous.—Unallocated deobligations from prior years totaled \$758,000. Funds will be used to cover shortfalls in various operating expenses and unanticipated intermodal reimbursable agreements.

NHTSA REGULATIONS

Question. Please prepare a list of all final rulemakings that have been issued since last year.

Answer. Below is a list of all final rulemakings that have been issued since April 1, 1999 through April 5, 2000:

| Standard Part No. | Description |
|-------------------|---|
| 105 | In response to a petition for rulemaking, the agency corrected Table II—Stopping Distances, which contains the applicable stopping distance requirements that was published in the final rule on March 10, 1995 (9/7/99—64 FR 48562). |
| 105;135 | In response to petitions for reconsideration, the agency is allowing regenerative braking for electric vehicles (EV) to facilitate new technology in the braking system of an EV (2/9/00—65 FR 6327). |
| 108 | In response to a petition for rulemaking, the agency is allowing manufacturers of motor vehicles with headlamp concealment devices to choose between complying with the existing provisions, or with a new provision incorporating by reference the United Nations Economic Commission for Europe's standard (ECE standard) on those devices (8/23/99—64 FR 45895). |
| 201 | In response to petitions for reconsideration, the agency deletes a humidity range specification for calibration of the test device used in the car-to-pole test (12/14/99—64 FR 69665). |
| 209 | Deletes the provision requiring that the lap belt portion of a safety belt system be designed to remain on the pelvis under all conditions (5/19/99—64 FR 27203). |
| 216 | In response to petitions for rulemaking, revises the test procedure to make it more suitable to testing vehicles with rounded roofs or vehicles with raised roofs (4/27/99—64 FR 22567). |
| 216 | Partial response to petitions for reconsideration, the agency extends the effective date of the April 1999 final rule to 10/25/00 to make the roof crush resistance more suitable to testing motor vehicle with raised roofs (1/31/00—65 FR 4579). |
| 221 | Partial response to petitions for reconsideration, the agency extends the effective date of the November final rule to 5/5/01 to reduce deaths and injuries resulting from the structural collapse of school bus bodies during crashes (3/6/00—65 FR 11751). |

| Standard Part No. | Description |
|-------------------|---|
| 225 | In response to several petitions for reconsideration, the agency is allowing vehicle manufacturers to meet alternative requirements during an initial several year period (8/31/99—64 FR 47566). |
| 531 | Provides a procedure by which a vehicle manufacturer may notify the agency of the model year (MY) in which it elects to consider production of components and automobile assembly in Mexico as domestic value added (5/19/99—64—27201). |
| 533 | Establishes the average fuel economy standard for light trucks manufactured in model year (MY) 2001 which is identical to the standard for MY 2000, 20.7 mpg (4/7/99—64 FR 16860). |
| 533 | Establishes the average fuel economy standard for light trucks manufactured in model year (MY) 2002 which is identical to the standard for MY 2001, 20.7 mpg (4/5/00—65 FR 17776). |
| 572 | Establishes design and performance specifications for a more advanced 6-year-old Hybrid III test dummy (1/13/00—65 FR 2059). |
| 572 | Establishes design and performance specifications for a more advanced fifth percentile Hybrid III test dummy (3/1/00—65 FR 10961). |
| 572 | Establishes design and performance specifications for a more advanced 3-year-old Hybrid III test dummy (3/22/00—65 FR 15254). |
| 572 | Establishes design and performance specifications for a more advanced 12-month-old Hybrid III test dummy (CRABI) (3/31/00—65 FR 17180). |
| 574 | In response to a petition for rulemaking, the agency amended the standard to allow the date to be expressed in 4 digits instead of 3 and reduced the minimum size of the digits from 6 millimeters (mm) (3/4 inch) to 4 mm (1/2 inch) (7/8/99—64 FR 36807). |
| 575 | In response to a petition for rulemaking, rescinds the requirement that passenger car manufacturers provide general uniform tire quality grading standard (UTQGS) information to purchasers and potential purchasers at the point of sale of new vehicles requiring instead that such information be included in owner's manual (5/24/99—64 FR 27921). |
| 575 | In response to a petition for reconsideration, the agency is allowing manufacturers: to combine the rollover and air bag alert labels in one label; to comply with either of two options for installing both labels on the same side of the sun visor until September 1, 2000; and voluntarily install on the same side of the sun visor as the air bag label, rollover warning labels in vehicles for which they are not required (8/30/99—64 FR 47119). |
| 575 | In response to petitions for reconsideration, the agency is staying with the requirement for the inclusion of UTQGS information in the owner's manual for one year until 9/1/00 (9/27/99—64 FR 51920). |
| 583 | The agency extended the effective date of the Automobile Parts Content Labeling requirements to June 1, 2000, while permitting optional early compliance (7/28/99—64 FR 40777). |
| 587 | Adds specifications for an offset deformable barrier used in offset deformable barrier test to evaluate the crashworthiness of vehicles (65 FR 17196). |

Question. What is the number and nature of the major notices of proposed rulemaking that NHTSA has published in the Federal Register in the last 12 months.

Answer. Below is a list of the six notices of proposed rulemaking published in the Federal Register from April 1, 1999 through April 5, 2000:

| Standard Part No. | Description |
|-------------------|---|
| 121 | The agency is proposing that the braking-in-a-curve dynamic performance test requirement apply to single-unit trucks and buses that are required to be equipped with antilock braking systems (12/21/99—64 FR 71377). |
| 122 | In response to a petition for rulemaking, the agency is proposing to reduce the minimum hand lever force from five pounds (presently specified to 2.3 pounds) and the minimum foot pedal force from 10 pounds (presently specified to 5.6 pounds) in the fade recovery and water recovery tests (11/17/99—64 FR 62622). |
| 201 | The agency is proposing to modify the minimum distance between certain target points on vertical surfaces inside a vehicle (4/5/00—65 FR 17842). |

| Standard Part No. | Description |
|-------------------|--|
| 205 | In response to a petition for rulemaking, the agency is proposing to update the standard on glazing materials so that it incorporates by reference the 1996 version of the industry standard on motor vehicle glazing (8/4/99—64 FR 42330). |
| 401 | The agency is proposing the requirement that all new vehicles with trunks come equipped with a release latch inside the trunk compartment beginning January 1, 2001 (12/17/9—64 FR 70672). |
| 575 | In response to a petition for rulemaking, the agency is proposing to amend our consumer information regulations to require seat belt positioners to be labeled as not suitable for children for a certain age, e.g., under 6-year-old, or of a certain height (8/13/99—64 FR 44164). |

TEA-21 AUTHORIZED FUNDING LEVEL

Question. Under TEA-21, as amended, what is the authorized level of funding for NHTSA for fiscal year 2001?

Answer. TEA-21 authorized a total of \$402.376 million for NHTSA. The authorization is as follows:

| [Dollars in millions] | |
|--|----------------|
| Motor Vehicle Safety Act | \$98.314 |
| Motor Vehicle Information & Cost Savings Act | 9.562 |
| National Driver Register | 2.000 |
| Highway Safety R&D (Section 403) | 72.000 |
| Section 2003(b) Child Passenger Protection | 7.500 |
| Highway Traffic Safety Grants | 213.000 |
| Total Authorized | 402.376 |

Question. Does NHTSA's budget request for fiscal year 2001 comport with the authorization act? If not, please submit to the Committee a revised budget request that matches the authorized level of funding.

Answer. NHTSA's budget request exceeds the authorized levels by \$97.1 million. However, NHTSA has asked for an increase of \$35 million to the authorizing legislation. NHTSA does not propose to revise its budget request and encourages the Congress to support the full amount requested for NHTSA in the Presidents Budget.

SAFETY STANDARDS SUPPORT FUNDING

Question. Please break out how the funds for safety standards support are expected to be used by rulemaking during fiscal year 2001 and compare activities and funding amounts to the fiscal year 2000 spending plan. Which rulemakings require additional analysis?

Answer. The following chart compares safety standards support activities and funding amounts between fiscal year 2001 and fiscal year 2000.

| Safety standards support activity | Fiscal year 2000 enacted | Fiscal year 2001 request |
|--|--------------------------|--------------------------|
| Crashworthiness | \$293,000 | \$671,000 |
| Fiscal year 2000—Funding is targeted for testing or studies relating to frontal offset and side impact crashes, improved dummy necks, head restraints, advanced air bags, door lock retention, and motorcycle helmet strength. | | |
| Fiscal year 2001—Funding will be used on projects relating to frontal offset crash safety, improved child seats, child protection in school buses crashes, side impact protection, upgraded roof-crush protection and fuel system integrity. | | |
| Crash Avoidance | 315,000 | 1,037,000 |

| Safety standards support activity | Fiscal year 2000 enacted | Fiscal year 2001 request |
|---|-----------------------------|-----------------------------|
| Fiscal year 2000—Funding is targeted for testing or studies relating to tire safety, motorcycle braking, and collecting data on adaptive equipment for the disabled population. | | |
| Fiscal year 2001—Projects will cover safety issues such as light vehicle and heavy truck braking, tire safety, light vehicle rollover propensity, trunk entrapment and continued work relating to adaptive equipment for the disabled population. | | |
| Consumer Information Program | 100,000 | 0 |
| Fiscal year 2000 funds allocated to consumer information activities. | | |
| Total | 708,000 | 1,708,000 |

Of the activities listed for fiscal year 2001, the significant rulemaking projects carried over from fiscal year 2000 which require additional analysis and safety standards support funding include frontal offset and side impact protection, and light vehicle braking. Although not in support of a specific rulemaking, carryover funding is required to continue work begun on a non rulemaking project to collect data on adaptive vehicles for the disabled population.

SAFETY PERFORMANCE PROGRAM FUNDING

Question. NHTSA is proposing to increase funding for the Safety Performance Standards program by more than 100 percent. Why is this large increase necessary?

Answer. This large increase for the Safety Performance Standards program is necessary to accomplish goals in the following areas.

Safety Standards Support

Funding will be used to support the following activities:

- Based on the outcome of the current school bus occupant protection research, develop test procedure to support rulemaking action to amend the school bus occupant protection safety standard;
- Continue the agency’s efforts to improve child seat safety; and develop, through testing and evaluation, a revised FMVSS No. 213 test procedure, specifically with respect to design and development of a bench seat fixture that is more representative of the seat geometry for the current vehicle fleet and other associated concerns;
- Continue agency information collection on vehicles that have been adapted for the disabled population. Very little centralized data exists on the number and types of vehicle modifications and adaptive equipment installations done to accommodate persons with disabilities. This lack of data hampers NHTSA’s efforts to determine the size of the modified vehicle fleet, whether vehicles are made safely, and whether the consumers of the equipment and modifications are experiencing any particular problems, particularly those that might lead to crashes or injuries;
- Assess the capability of Electronically Controlled Braking Systems (ECBS) to improve braking performance for heavy trucks and buses. As part of this effort, the agency plans to conduct test track evaluations and operational (fleet test) evaluations on ECBS-equipped vehicles;
- Continue development of test procedures for offset frontal testing;
- Develop through testing and evaluation, a more appropriate test for bead unseating of radial tires. This harmonization activity is in response to a petition from six tire manufacturers. The petition requested the agency to begin rulemaking to amend its federal motor vehicle safety standard for passenger car tires (FMVSS No. 109) to conform to a proposed new Global Tire Standard 2000 (GTS-2000) that has been developed by tire manufacturers around the world. However, NHTSA’s testing has shown that tires can separate from light car and truck wheels during hard maneuvering;
- Cost weight and lead time studies to support key rulemaking actions in the areas of upgraded roof crush protection, side impact protection, advanced electronic braking systems for trucks, fuel system integrity, and child protection in school bus crashes.

New Car Assessment Program

One in four e-mails to the agency's crash test website is from an unhappy consumer who cannot find safety information on the vehicle he or she wants to purchase. In 2000, the agency provided safety information on 72 percent of vehicles sold. The agency needs increased funding for fiscal year 2001 frontal and side impact testing to cover 80–90 percent of new vehicles for these most common crash modes. The increase would raise consumer information to the 1997 fleet coverage level of 86 percent.

Additional funding is necessary to add small size dummy tests to NCAP. Distributions of trauma in real world crashes suggest that short stature occupants have as great a risk of injury as mid-size occupants. Also, the 10–15 crash tests for fiscal year 2001 using the small stature dummy in the driver and passenger positions will test the feasibility of using the 5th percentile female dummy in frontal crash tests, to supplement the information gathered with the 50th percentile male dummy.

In response to calls for a broader range of vehicle safety consumer information, a demonstration project will conduct tests that will provide information on the braking performance of passenger cars and light trucks. In addition, support is needed for the development of test protocols for rating the headlighting performance of new vehicles.

Consumer Information Program

Additional funding is necessary to expand our consumer information activities in an effort to motivate manufacturers to improve the safety of their vehicles and to further aid consumers with their purchasing decisions. Funding will be used for new requirements and to sustain and expand present activities and programs to meet the recommendations of the National Academy of Science's 1996 Special Report, *Shopping for Safety: Providing Consumer Automotive Safety Information*.

The fiscal year 2001 program will use increased funding for consumer research to support emerging issues, such as child safety seat labeling, and expanding NCAP ratings and information (such as a summary rating score). Increased funding will allow the agency to produce more information products to meet the increasing demand for existing publications and materials, which we presently cannot meet. At the same time, the agency will undertake efforts to increase the content and improve the quality of existing materials. Resources also are necessary to sustain the growing needs of partnerships that we have established to promote vehicle safety information (AAA, Goodyear, Jiffy Lube, Championship Auto Racing Teams, etc.) and to cultivate new partnerships with other organizations.

CONSUMER INFORMATION PROGRAMS

Question. How much is spent on consumer-related information activities in fiscal year 2000 using NCAP funds or other agency funds?

Answer. Safety Performance Standards' consumer-related activities are currently funded using \$247,000 of NCAP and \$100,000 of Safety Standards Support funds.

Question. What is the basis for the amount requested in fiscal year 2001 for consumer-related information programs?

Answer. The basis for the requested budget for consumer information programs in fiscal year 2001 is a combination of new requirements, and the need to sustain and grow current activities and programs to meet the recommendations of the National Academy of Science's 1996 Special Report, *Shopping For Safety: Providing Consumer Automotive Safety Information*. The study recommended that NHTSA broaden the scope of the information it provides to consumers, improve the presentation of the information, and expand the dissemination of the information. Further, increasing consumer awareness and demand for vehicle safety information also substantiates the need for greater resources. For instance, the New Car Assessment Program (NCAP) web site hits have increased from 1,100 per month when the site was created in 1996 to over 33,000 presently. In the most recent NHTSA Customer Satisfaction Survey, 76 percent of the respondents rate safety as "very important" in their selection of a motor vehicle for purchase.

The fiscal year 2001 program will utilize increased funding for consumer research to support emerging issues, such as child safety seat labeling, and expansion of NCAP ratings and information, such as a summary rating score. Larger volumes of products will be produced to meet the increasing demand for existing publications and materials, which we presently cannot meet. At the same time, efforts to increase the content and improve the quality of existing materials will be undertaken. Resources are also necessary to sustain the growing needs of partnerships that have been established to promote vehicle safety information (AAA, Goodyear, Jiffy Lube,

Championship Auto Racing Teams, etc.) and to cultivate new partnerships with other organizations.

Question. If the consumer information activity were increased by \$.5 million from the fiscal year 2000 enacted level, what additional activities would be funded?

Answer. At a reduced level of effort, funding would be used for the following activities: Conduct research for child safety seat labeling issues to determine how to best present new or revised warnings and information to child safety seat users.

- Conduct research to determine how to best develop and present new or revised vehicle safety information required by rulemakings, and how to most effectively disseminate this information. This includes warning labels and owner's manual information.
- Develop new research-based information for development of new campaigns and materials on high interest issues, such as air bags, rollover, antilock brakes, adapted vehicles, and other emerging issues. Use research results to upgrade and improve existing publications, the web-site, and marketing strategies.
- Develop and deliver NCAP and other vehicle safety information more effectively through new and enhanced materials such as brochures and pamphlets, mass media campaigns, and electronic media materials. Increase the quantities of the annual Buying A Safer Car and Buying A Safer Car for Child Passengers, and other brochures to meet public demand.
- Develop and deliver new comparative vehicle safety information on braking performance. Facilitate the public's understanding of the information and its value in making vehicle purchase decisions.
- Develop diversity initiatives and materials to better reach underserved populations.
- Continue and increase the leveraging effect of federal spending to meet the requirements of participation in existing partnerships and expand outreach efforts to new partners and constituents in order to increase the marketing and dissemination of consumer information materials.

NEW CAR ASSESSMENT PROGRAM (NCAP)

Question. If funding for the NCAP were increased by \$1.0 million from the fiscal year 2000 enacted level, how many more vehicles would be tested? With this amount of funding, what is the percentage of vehicles in the U.S. fleet about which we would have frontal impact and side impact safety information?

Answer. With a funding increase of \$1.0 million over fiscal year 2000, NHTSA would crash about twenty additional vehicles in model year 2001. NHTSA had safety information on 72 percent of new vehicles sold in the U.S. in model year 2000. With an additional \$1 million in fiscal year 2001, NHTSA would have safety information on 79 percent versus the 85 to 90 percent that could be achieved at the fiscal year 2001 requested level.

Question. Assuming a funding level for NCAP below the fiscal year 2001 budget request, what would NHTSA's priorities be in terms of conducting additional frontal crashes, additional side crashes, or testing smaller crash dummies?

Answer. NHTSA would first reduce the number of frontal and side crashes by the same amount. As we drop frontal and side crashes, the fleet coverage would decrease. The fleet coverage would fall from a high of 85–90 percent of the vehicles sold in the U.S. in 2001. (NHTSA assumes coverage of 85–90 percent of the fleet if the fiscal year 2001 budget request were to be approved.) Once the percentage of fleet coverage fell to 80 percent, NHTSA would cease dropping frontal and side tests. At the 80 percent level, testing with the smaller crash dummy would be reduced.

Question. How many 6-year-old Hybrid III and 5th percentile female dummies does NHTSA need to acquire and calibrate? How much will it cost to procure and calibrate small stature dummies?

Answer. NHTSA needs five 6-year-old Hybrid III dummies and six 5th percentile female Hybrid III dummies. To purchase five instrumented 6-year-old dummies and do one calibration per dummy would cost roughly \$173,000. To purchase six instrumented fifth percentile female Hybrid III dummies and do one calibration per dummy would cost roughly \$249,000.

Question. The agency's budget requests a \$1 million increase for safety standards support. Please explain how NHTSA proposes to allocate the additional funds.

Answer. Additional funds for safety standards support will be used to support the following activities:

- To continue the agency's efforts to improve school bus safety;
- To continue efforts to improve the child seat safety;

- To continue agency data information collection on vehicles that have been adapted for the disabled population;
- To assess the capability of Electronically Controlled Braking Systems for heavy trucks and buses;
- To continue development of test procedures for offset frontal testing;
- To address the issue of increased glare from headlamps and other front mounted lamps;
- To develop a more appropriate test procedure for bead unseating of radial tires; and
- To support cost and lead time work in support of several priority rulemaking actions.

Question. Please explain how you would allocate additional funding if the contract funding for safety standards support were increased by \$.5 million.

Answer. If the agency were to receive \$.5 million for safety standards support, the additional funds would be used to support our efforts to improve child seat safety, heavy truck brakes, frontal off-set testing and tire safety.

SAFETY DEFECTS INVESTIGATION PROGRAM

Question. How many safety defect investigations has NHTSA initiated each year over the past five years that led to a vehicle or equipment recall?

Answer. [The information follows:]

NUMBER OF DEFECT INVESTIGATIONS WHICH RESULTED IN RECALLS

| Year in which investigation began | Vehicle investigations | Equipment investigations |
|-----------------------------------|------------------------|--------------------------|
| 1995 | 48 | 11 |
| 1996 | 63 | 10 |
| 1997 | 31 | 10 |
| 1998 | 65 | 5 |
| 1999 | 55 | 4 |
| Total | 262 | 40 |

The vehicle investigations and equipment investigations in the above table reflect the number of investigations opened in the specified investigation year and not necessarily the year in which the recall occurred. As additional recalls are initiated, the numbers in the above table may increase slightly for investigation year 1998 and significantly for investigation year 1999.

VEHICLE SAFETY COMPLIANCE

Question. Please explain how you would allocate the additional funds requested if the contract funding for the vehicle safety compliance program were increased by \$1.0 million and \$2.0 million.

Answer. The fiscal year 2001 budget request includes \$5,000,000 for current services and \$2,245,000 for increased funding. The increased funding would cover the following: \$675,000 to return the agency's compliance test program of full-scale vehicle crash testing to the prior year level, \$1,160,000 to purchase 16 new crash test dummies for advanced occupant protection in frontal crashes, and \$410,000 to conduct five side-impact pole tests (which includes the cost of two specialized dummies and five vehicles, and the cost of five tests). We also requested funds to purchase 16 dummies for use in our forthcoming advanced air bag compliance test program (eight dummies, of two sets, would be required at each of two laboratories).

Our first priority is to restore the \$675,000 deleted from the compliance program in fiscal year 2000. If the program were only increased \$1.0 million in fiscal year 2001, we would use the remaining \$325,000 to purchase four dummies and not conduct any side impact pole tests. If the increase were \$2.0 million, we would allocate the funds as follows:

| | |
|---|-----------|
| Return full-scale vehicle tests to prior year level | \$675,000 |
| Purchase 13 dummies—advanced air bag testing | 1,015,000 |
| Purchase 3 side impact pole tests and 3 vehicles | 150,000 |
| Purchase 2 dummies—side impact pole tests | 160,000 |
| Total | 2,000,000 |

The \$2 million increase would provide for only 13 of 16 dummies which are required to conduct advanced air bag testing at two laboratories and would reduce the number of planned side impact pole tests from five to three.

ADVANCED AIR BAG PROTECTION

Question. Please explain your plans for a testing program for advanced air bag protection, explaining the minimum amount that would be needed to initiate work in fiscal year 2001.

Answer. Vehicle performance requirements for advanced air bag protection will be assessed using a number of test protocols, most of which are different from the tests that are currently being conducted. The differences involve how vehicles are tested, which test dummies are used in those tests, and how those dummies are calibrated and positioned in the vehicles. New test procedures (i.e., detailed instructions to independent testing facilities) will be prepared for positioning the test dummies in and performing tests on these vehicles. The test procedures for crash testing also specify requirements for the maintenance, preparation, and calibration of the test dummies used in those tests. The minimum amount needed to initiate this work in fiscal year 2001 would be \$580,000 to purchase two sets of test dummies at a cost of \$290,000 per set:

| | |
|---|----------------|
| Two six-year-old dummies | \$160,000 |
| Two three-year-old dummies | 160,000 |
| Two fifth percentile female dummies | 200,000 |
| Two 12-month-old dummies | 60,000 |
| Total | 580,000 |

Because of anticipated demand for these devices, it is imperative to have this funding available at the beginning of fiscal year 2001 so that orders can be placed. Also, past experience has shown that new test dummies, as manufactured, will require some corrections by the dummy manufacturer(s) prior to acceptance by NHTSA. Once the devices have been accepted, they will be used by the staff in the vehicle safety compliance office who will write the detailed test procedures. In addition, vehicle manufacturers will have the option to certify vehicles which have advanced air bag protection to the new requirements beginning in mid-model year 2000. Therefore, it is anticipated that some fiscal year 2001 tests for Federal Motor Vehicle Safety Standard No. 208 will use these new procedures. To be able to conduct these tests, it is imperative that the new test dummies be available quickly so that the test procedures can be completed.

While work can begin in fiscal year 2001 with two sets of dummies, this amount is insufficient to conduct an advanced air bag compliance test program. As proposed in the fiscal year 2001 budget, a minimum of two sets of dummies would be required at each of two test laboratories to conduct a compliance test program. The estimated cost for dummies would be \$1,160,000 (4 × \$290,000 per set of dummies). A fully operational program would require three sets of dummies at each of three test laboratories. The third set of dummies would enable the program to continue without extensive time delays when dummies are damaged during testing. The estimated cost for dummies for a fully operational program would be \$2,610,000 (9 × \$290,000).

SAFETY DEFECTS INVESTIGATION FUNDING

Question. Please break out how the funds requested for safety defects investigation would be used and compare the amounts expended (or planned to be expended) in fiscal year 2000.

Answer. [The information follows:]

| Activity | Fiscal year 2000 | Fiscal year 2001 |
|--|------------------|------------------|
| Defect Identification and Evaluation | \$1,613,000 | \$2,466,000 |
| Testing and Surveys | 850,000 | 1,060,000 |
| Recall Monitoring and Performance | 200,000 | 200,000 |
| Total | 2,663,000 | 3,726,000 |

The increases in the safety defect investigation request will enable the agency to: —\$210,000—Restore defect investigation testing to the Vehicle Research and Test Center;

- \$145,000—Provide staff support to monitor and investigate small population vehicle groups as transit buses, recreational vehicles, fire and rescue vehicles, and motorcycles for which the consequences of a vehicle defect can be catastrophic;
- \$100,000—Enhance internet capabilities for both the agency and public with additional hardware and software to expand Internet search options;
- \$218,000—Purchase equipment and expertise to conduct computer-aided design analyses of vehicle components;
- \$290,000—Provide contract staff support to conduct on-site investigations of crashes; and
- \$100,000—Enhance defect investigation databases to maintain consistency with industry.

COOPERATIVE AGREEMENT WITH LAW ENFORCEMENT OFFICERS

Question. In what states and when has NHTSA entered into cooperative agreements to train law enforcement officers as odometer fraud investigators?

Answer. In fiscal year 1998, NHTSA entered into cooperative agreements with the Florida Highway Patrol, the Colorado State Patrol, and the Utah Motor Vehicle Enforcement Division. Each of these states provided a law enforcement officer to NHTSA for training. In fiscal year 1999, there were no cooperative agreements. In fiscal year 2000, the agency entered into a cooperative agreement with Connecticut State Police. An officer from this state is currently assigned to NHTSA for training. The agency is in the process of soliciting applications from several states for a second officer to be assigned in fiscal year 2001.

ODOMETER FRAUD

Question. The NHTSA budget submission requests funding to train odometer fraud investigators in two states. From what two states does NHTSA intend to train investigators?

Answer. States for fiscal year 2001 have not been selected. When funds are available, NHTSA will solicit applications from all state enforcement agencies involved in odometer fraud enforcement.

Question. What is the status and findings of the investigation to determine the effectiveness of the odometer fraud enforcement program?

Answer. The Congress earmarked funds in fiscal year 1994 and an initial Request for Proposal was announced in fiscal year 1995 but no bids were submitted. A second Request for Proposals was announced in fiscal year 1996 and a contract to perform this research was awarded in July 1996. The contractor has collected the data and completed the requirement of the contract. The agency is assessing and analyzing the data and plans to complete the study by the spring of 2001.

HIGHWAY SAFETY PROGRAM

Question. Please submit a copy of your fiscal year 1999 and fiscal year 2000 spending plans which indicates major activities and contracts approved.

Answer. Within the Highway Safety program areas, major activities (such as Impaired Driving, Occupant Protection, etc.) are further broken down in major areas of effort, e.g., Enforcement/Adjudication and Public Education/Prevention. Although smaller program areas would have similar areas of effort, the emphases and funding may vary from year-to-year.

Attached is a table summarizing the major activities and funding categories for fiscal year 1999 and fiscal year 2000.

HIGHWAY SAFETY PROGRAMS

| | Fiscal year 1999 | Fiscal year 2000 |
|--|------------------|------------------|
| OCCUPANT PROTECTION: | | |
| Program Development | \$4,867,900 | \$4,602,000 |
| Public Information and Education | 2,880,000 | 2,698,800 |
| Technology Sharing | 1,250,000 | 1,370,000 |
| Outreach | 2,475,100 | 1,071,200 |
| Total, Occupant Protection | 11,473,000 | 9,742,000 |
| IMPAIRED DRIVING: | | |
| Public Information and Education | 4,715,000 | 3,675,000 |

HIGHWAY SAFETY PROGRAMS—Continued

| | Fiscal year 1999 | Fiscal year 2000 |
|--|-------------------|------------------|
| Enforcement and Adjudication | 3,190,000 | 2,900,000 |
| Outreach | 2,200,000 | 2,102,000 |
| Legislation | 543,000 | 615,000 |
| Total, Impaired Driving ¹ | 10,648,000 | 9,292,000 |
| RESEARCH AND EVALUATION: | | |
| Alcohol and Drug Research | 1,594,000 | 1,475,000 |
| Aggressive Driving (Earmark) | 0 | 1,000,000 |
| Occupant Protection Research | 1,018,000 | 969,000 |
| Rural Trauma (Earmark) | 0 | 875,000 |
| Speed and Aggressive Driving | 928,000 | 801,000 |
| Evaluation and Technology Transfer | 657,000 | 574,000 |
| Pedestrian/Bicycle Research | 380,000 | 522,000 |
| Older Driver Research | 555,000 | 493,000 |
| EMS Research | 305,000 | 305,000 |
| Fatigue Research | 0 | 138,000 |
| Total, Research & Evaluation | 5,437,000 | 7,152,000 |
| RECORD/LICENSING AND DRIVER ED: | | |
| Driver Licensing and Education | 373,000 | 826,000 |
| Traffic Records | 755,000 | 724,000 |
| State and Community Services | 789,000 | 746,000 |
| Total, Record/Licensing & Driver Ed | 1,917,000 | 2,296,000 |
| TRAFFIC LAW ENFORCEMENT: | | |
| Enforcement Demonstrations | 427,500 | 700,800 |
| National Organizations | 270,000 | 460,200 |
| Training and Technical Assistance | 444,500 | 400,000 |
| Public Information and Education | 321,000 | 375,000 |
| Technology Transfer | 250,000 | 100,000 |
| Total Traffic Law Enforcement | 1,713,000 | 2,036,000 |
| EMERGENCY MEDICAL SERVICES: | | |
| National Standard Curricula | 1,600,000 | 755,000 |
| EMS Leadership | 260,000 | 238,000 |
| EMS System Component Support | 387,000 | 220,000 |
| Injury Prevention and Control | 235,000 | 128,000 |
| EMS Information, Technologies, and Dissemination | 110,000 | 84,000 |
| Total, Emergency, Medical Services | 2,592,000 | 1,425,000 |
| DRUGS, DRIVING, AND YOUTH: | | |
| Public Information and Education | 267,000 | 310,000 |
| Advanced Drugged Driving Training | 733,000 | 280,000 |
| Law Enforcement Initiatives and New Technologies | 0 | 260,000 |
| Coordination and Data Collection | 0 | 218,000 |
| Drugged Driving Research | 250,000 | 50,000 |
| International Conference on Drug Research | 0 | 20,000 |
| Juvenile Judge Prevention Program | 0 | 0 |
| National Summit Meeting | 150,000 | 0 |
| Total, Drugs, Driving and Youth | 1,400,000 | 1,138,000 |

HIGHWAY SAFETY PROGRAMS—Continued

| | Fiscal year 1999 | Fiscal year 2000 |
|---|------------------|------------------|
| NATIONAL DRIVER REGISTER: Timesharing Computer Services & Help Desk | 1,110,000 | 1,110,000 |
| PEDESTRIAN, BICYCLE AND PUPIL TRANSPORTATION: | | |
| Technical Assistance, Training, and Infrastructure Support | 507,000 | 400,000 |
| Public Information and Education | 340,000 | 373,000 |
| Partnerships and Outreach | 255,000 | 285,000 |
| Total, Pedestrian, Bicycle and Public Transportation ² | 1,102,000 | 1,058,000 |
| NEW/EMERGING/TEA-21 ISSUES: Aggressive driving, drowsy driving, older driving, training | 0 | 1,000,000 |
| NOPUS: Surveys | 300,000 | 850,000 |
| MOTORCYCLE SAFETY: | | |
| Information and Education | 200,000 | 200,000 |

| Total, Motorcycle Safety | 509,000 | 414,000 |
| DRIVER LICENSE IDENTIFICATION: State driver licensing system grants | 325,000 | 0 |
| Total | 38,526,000 | 37,513,000 |

¹ Fiscal year 1999 combined the Alcohol and DEC programs.

² Fiscal year 1999 included \$357,000 from Patterns for Life.

Question. With respect to the fiscal year 2000 program, how did you improve the allocation or targeting of the Highway Safety funds since last year? How is this allocation consistent with the agency's performance goals?

Answer. This budget request aligns our major priority areas with funding needs. NHTSA's highway safety performance goals include reducing alcohol-related fatalities; increasing the use of seat belts, child safety seats, and motorcycle and bicycle helmets; reducing speeding and aggressive driving related fatalities; reducing pedestrian fatalities; reducing crashes associated with driver fatigue; enhancing the older driver's ability to drive safely; and reducing the over-representation of young drivers in crashes.

NHTSA's fiscal year 1999 and fiscal year 2000 budgets reflect small adjustments to augment and emphasize certain programs that are demanding the attention of the agency. For example, the small increase in the Traffic Law Enforcement program reflects the congressionally mandated pursuit driving training for law enforcement officers and the agency's Strategic Plan to reduce speeding-related fatalities which have been on the rise since the elimination of the national maximum speed limit. Funding increases in the Highway Safety Research program reflect congressional earmarks for an aggressive driving demonstration in Maryland and head trauma research in Alabama. Increases in the Records and Licensing budget will provide funds to examine different licensing policies of several states as they relate to older drivers as well as to enhance efforts to improve the quality, uniformity and utility of traffic records data. The new Emerging Traffic Safety Issues program provides educational programs and materials on problems involving older drivers, aggressive drivers, and drowsy drivers.

The small decreases in the Occupant Protection and Impaired Driving Programs were necessary to allow for means to address the above and do not reflect a lower priority for these programs which remain NHTSA's and DOT's highest priority programs. NHTSA's complete fiscal year 2001 budget request includes significant increases designed to meet Presidential and Secretarial goals to increase seat belt usage and reduce alcohol-related fatalities and child fatalities.

Question. Please explain how you would allocate the additional funds if the contract funding for highway safety programs was increased by \$.5 million and by \$1.0 million?

Answer. Any additional funding would be used to augment programs throughout the Highway Safety program areas with a significant amount of any funds going to the Impaired Driving and Occupant Protection priority programs which have critical program targets.

OLDER DRIVER PROGRAM

Question. Please explain the scope and nature of your older driver program, describing current demonstrations underway, research projects, public information and educational activities, and assistance to state licensing agents and physicians.

Answer. In 1989, NHTSA initiated a research program to address the behavioral aspects related to older drivers focusing on (a) identifying the functional capabilities required for driving, (b) identifying problem drivers, and (c) identifying those conditions that may be amenable to rehabilitation.

One ongoing demonstration addresses all three of these areas. It is the Maryland Model Driver Screening and Evaluation Program. The primary outcome of this project will be an evaluation of the value of the Gross Impairment Screening tool (GRIMPS) in identifying drivers whose skills or capabilities have declined to the point where it is not safe for them to drive. Analyses will determine which individual portions of the GRIMPS are most predictive of poor driving performance. Occupational therapists in this study will determine if those persons identified as having poor functional capabilities can be rehabilitated or retrained to make them safer drivers.

Other demonstrations include a Florida evaluation of an automated version of the GRIMPS in Memory Clinic settings, and a Texas project to document a successful pedestrian program operating in a health organization setting. This project will also adapt key components for use by Hispanic populations.

Other research addresses the needs of licensing agencies, physicians, and others who work with elderly people. Past research includes an evaluation of the relative risk posed by drivers with reported medical conditions. It will help the licensing authority in the State of Utah to reexamine and revise its reporting requirements. Another investigation will develop a matrix of health symptoms or conditions that are common among older people. It will provide recommendations regarding driving by persons with those symptoms, based on the identified severity of the symptom. Such recommendations could include referral to the licensing authority, counseling, or a variety of rehabilitation options.

Development of public information and education materials regarding older drivers is in its early stages. Currently, NHTSA is establishing partnerships with organizations that have an interest in older driver safety, including AARP and the USAA Educational Foundation. We will develop a brochure to help older drivers recognize health changes that might affect their driving, while directing them to changes in their driving patterns or to professionals who can help them maintain and improve their health and driving abilities.

Question. If funding for the older driver program were increased by \$.5 million, (not including the flagship initiative), what activities would be funded?

Answer. With increased funding, our two primary objectives of implementing public awareness efforts and continuing critical research would be improved.

In terms of research, additional funds would enable NHTSA to investigate the types of traffic safety messages that resonate with older persons including those in diverse communities. These messages would then be used to develop and produce materials that are relevant to diverse target audiences. NHTSA would also form additional strategic partnerships with senior citizen organizations and with other diverse organizations to promote the new public awareness materials.

Additional funding would also enable NHTSA to redirect existing safety programs to provide more emphasis on the needs of older drivers and pedestrians. For example, increasing numbers of older people ride bicycles, but NHTSA does not have any programs that encourage older people to wear bicycle helmets. NHTSA could adapt bicycle helmet programs that were designed for younger audiences to meet the needs of this different population. NHTSA would examine all program areas and adapt the programs in those that would have the greatest potential safety impact.

Question. Please describe the activities that have been conducted or are planned in response to the Committee's assertion that more guidance and research is needed

on the impacts of 0.08 BAC laws and on countermeasures targeted at drivers aged 21- to 34-year-old.

Answer. Since 1991, NHTSA has published five studies regarding the effectiveness of .08 BAC laws in reducing alcohol-related fatal crashes. These studies have provided consistent and persuasive evidence that these laws, particularly in combination with administrative license revocation (ALR) laws, are associated with reductions in alcohol-related crashes and fatalities.

A project that began in fiscal year 1999 is examining the impact of the Illinois .08 BAC law on alcohol-related crashes and the enforcement and court systems. The final report will be available in 2001.

A fiscal year 2000 study will evaluate the .08 BAC legislation in Texas. The final report is scheduled to be available in 2002.

Another fiscal year 2000 project will evaluate a program that is targeted at 21-34 year olds, the highest risk impaired driving population. In this study, scheduled to start in June 2000, NHTSA will identify and screen existing programs to select one amenable to evaluation. The study will describe the program, conduct a process evaluation, and determine whether the program was effective in changing DWI-related incidents and behavior(s).

Question. Please delineate the nature and amount of fiscal year 2000 contracts and fiscal year 2001 plans and associated funding amounts to continue your efforts to further the adoption and implementation of 0.08 BAC laws.

Answer. NHTSA provides public information and educational materials that support the adoption and implementation of 0.08 BAC laws and, when requested by state officials, offers testimony on 0.08 BAC issues.

In fiscal year 2000, \$80 million is authorized for the Section 163 0.08 BAC Law Incentive Grant program, which was designed to encourage states to pass and enforce 0.08 BAC laws. To be eligible for these grants, states have until July 15, 2000, to enact complying laws. Currently, 17 states and the District of Columbia have 0.08 BAC laws in effect. For fiscal year 2001, \$90 million is authorized for Section 163.

A fiscal year 2000 research and evaluation contract for \$150 thousand is in place to measure the effectiveness of the Texas 0.08 law and its impact on law enforcement and the courts. Similar research is planned for fiscal year 2001 in the State of Washington.

Question. What studies has NHTSA initiated or supported to evaluate the effectiveness, costs, or benefits of 0.08 BAC laws? What is the status of the Illinois project? What studies on 0.08 BAC laws are planned with fiscal year 2001 funds? How much has been allocated for each study?

Answer. NHTSA has published five studies regarding the effectiveness of .08 BAC laws in reducing alcohol-related fatal crashes. They are:

- The Effects Following the Implementation of an 0.08 BAC Limit and Administrative Per Se Law in California (1991) (\$125,000)
- The Impact of Lowering the Illegal BAC Limit to .08 in Five States in the U.S. (1995) (Conducted in-house—no contract funds)
- The Relationship of Alcohol Safety Laws to Drinking Drivers in Fatal Crashes (1999) (\$20,000)
- The Effects of .08 BAC Laws (1999) (\$65,000)
- Evaluation of the Effects of North Carolina's .08 BAC Law (1999) (\$80,000)

Other than the California study, these studies were restricted in scope to examining the effectiveness of .08 BAC laws on alcohol-related crashes. The California study analyzed changes in alcohol-related crashes, and also examined the law's effect on enforcement and court systems. The .08 law was not found to create a burden for either the police or courts.

A fiscal year 1999 NHTSA study is examining the effectiveness of Illinois' .08 BAC law. That study, modeled after the California study, is also examining both alcohol-related fatalities and the impact on law enforcement and the courts. To-date, police officers, prosecutors, and judges have been interviewed in several Illinois jurisdictions regarding the impact of the law on their work and on their agencies. An interim report, documenting the results of these interviews, is due in May 2000. The final report, including fatal crash analysis, is due June 2001. (\$150,000)

A fiscal year 2000 study of Texas' .08 BAC law will parallel the Illinois study, providing information on alcohol-related fatalities, and impact on law enforcement and the court system. The report will be available in 2002. (\$150,000)

There are no studies planned with fiscal year 2001 funds. The only other jurisdictions to recently adopt .08 are Washington (which simultaneously adopted 12 other impaired driving laws) and Kentucky (which we will consider evaluating in fiscal year 2002 when more data is available).

OPEN CONTAINER LAWS

Question. Although the statutory deadline has not passed, how many states are likely to face a diversion of some of their federal aid highway funds for not adopting and enforcing an open container law as specified in TEA-21? How does the fiscal year 2001 budget address the issue of open container laws?

Answer. As of April 19, 2000, 32 states, the District of Columbia, and Puerto Rico do not have laws in place that meet the open container provisions of TEA-21 and, therefore, face a diversion of some of their federal aid highway funds in fiscal year 2001. The following 18 states have enacted laws that comply: Arizona, California, Illinois, Iowa, Kansas, Maine, Michigan, Nebraska, Nevada, New Hampshire, North Dakota, Ohio, Oklahoma, Rhode Island, South Dakota, Utah, Washington, and Wisconsin.

Open container laws are not addressed in the fiscal year 2001 budget, however, a research and evaluation project on the effectiveness of open container laws is currently in progress and should be completed in fiscal year 2001.

REPEAT OFFENDER PROVISIONS

Question. Although the statutory deadline has not passed, how many states are likely to face a diversion of some of their federal aid highway funds because they are not in compliance with the repeat offender provisions of TEA-21?

Answer. As of April 19, 2000, 40 states, the District of Columbia, and Puerto Rico do not have laws in place that meet the requirements of the repeat intoxicated driver provisions of TEA-21 and face a diversion of some of their federal aid highway funds in fiscal year 2001. The following ten states have enacted laws that comply: Arkansas; Arizona; Colorado; Indiana; Maine; Michigan; Nevada; Nebraska; New Hampshire; and Washington.

IMPAIRED DRIVING

Question. The states have adopted various statutes with the goal of curing impaired driving. Has NHTSA conducted any studies to determine which laws or combination of laws are the most effective? If so, what does the research tell us about the contribution of congressionally mandated laws, such as open container or repeat offender, in reducing impaired driving?

Answer. Over the last 30 years, NHTSA and others have conducted research on impaired driving laws to determine if they reduce the number of alcohol-related fatalities. Studies include laws focused on minimum drinking age, mandatory jail sentences, per se BAC limits (including .08 BAC limits for adults and .02 BAC limits for drivers under age 21), administrative license revocation, graduated drivers' licensing programs, and vehicle sanctions.

In general, research suggest that (1) most of these laws have had some impact in reducing alcohol-related crashes or fatalities; (2) these laws are more effective when accompanied by publicity and enforcement; and (3) combinations of laws (and other activities) are more likely to reduce the number of alcohol-related crashes than are individual laws (or activities).

Federally mandated laws can be effective. As a result of federal legislation requiring age 21 Drinking Laws, all states enacted such laws and research provides very consistent and convincing evidence that they have reduced the number of alcohol-related crashes, deaths, and injuries.

Prior to fiscal year 1999, NHTSA had not conducted any research on the effectiveness of open container laws. A study initiated in fiscal year 1999 is now examining the effectiveness of these laws in several states.

No research has been conducted on the effectiveness of the repeat offender transfer provision. However, NHTSA has conducted several studies on the effectiveness of specific countermeasures included in that provision that are targeted at repeat offenders, including the use of vehicle sanctions, such as ignition interlocks, and vehicle impoundment or immobilization. A project to determine the effectiveness of the repeat offender provision is planned for 2001.

DRUG EVALUATION AND CLASSIFICATION (DEC) PROGRAM

Question. Please explain how the funds requested for the Drug Evaluation and Classification (DEC) program would be used and compare the fiscal year 2001 request to fiscal year 2000 expenditures.

Answer. NHTSA estimates that drugs are used by approximately 10 to 22 percent of drivers involved in crashes. Often these drugs are used in combination with alcohol.

There is no longer a separate budget for the DEC Program. The DEC program has been incorporated into the overall impaired driving program and the Drugs, Driving, and Youth initiative. The following chart is reflective of the drug-impaired driving budgeted items.

| Projects | Fiscal year 2000 | Fiscal year 2001 |
|--|------------------|------------------|
| Request Advanced Drugged Driving Training | \$280,000 | \$250,000 |
| Drugged Driving Research | 50,000 | 50,000 |
| International Conference on Drug Research | 20,000 | 0 |
| Law Enforcement Initiatives and New Technologies | 260,000 | 350,000 |
| Public Information and Education | 310,000 | 300,000 |
| Coordination and Data Collection | 218,000 | 200,000 |
| Juvenile Judge Prevention Program | 0 | 250,000 |
| Total | 1,138,000 | 1,400,000 |

While great strides have been made in the area of reducing impaired driving over the past 15 years, America's impaired driving crash rate has stagnated for the past three years. Countermeasures are needed to reduce the number of alcohol-impaired and other drug-impaired drivers on the nation's highways. The funding will increase and promote training in drugged driving detection, drug detection and training for prosecutors; involvement of prosecutors in community drug prevention programs; uniform sanctions for drug offenders; DEC related research; collection and analysis of state arrest data on drug impaired drivers; development of courtroom skills for testifying in alcohol and drug impaired driving cases; and expansion of DEC to community policing programs.

Public information and education materials are needed to educate the public, health care providers, and the courts on the risks of drugged driving. New programs will be initiated to involve juvenile judges in prevention activities at the community level and to develop educational materials for diverse communities.

IMPAIRED DRIVING

Question. Please provide an update on any studies that NHTSA has underway or planned that will help the criminal justice system deal with drug-impaired drivers. How much will be spent on those efforts during fiscal year 2000 and fiscal year 2001?

Answer. NHTSA currently has two important literature reviews underway that examine drug-impaired driving. One review focuses on antihistamine use and driving-related skills; the other is a state-of-knowledge literature review covering the entire drug-impaired driving area. This review will include all available scientific studies, including specific studies of drug-impaired driving as it relates to the criminal justice system (e.g., studies on the arrest and adjudication process and sanctioning). Total funding for these two projects is approximately \$200,000.

A new fiscal year 1999 study will determine the feasibility of developing a drugged-driver detection system, similar to the Standardized Field Sobriety Test, based on observable signs and symptoms of drug use. This study, funded at \$175,000 will identify potential performance measures that can be used to assess drug impairment in any setting, as well as measures that could be used in roadside situations. This project will include a field demonstration of the selected performance measures.

Future funds will be used for a combination of epidemiological research (e.g., determining the incidence of drug-related driving or crash involvement), laboratory studies (e.g., measuring the performance-related effects of various drugs), and countermeasure development (e.g., developing tools for law enforcement).

Question. What is NHTSA doing to work with the states to improve laws pertaining to drug-impaired driving? How much is in your fiscal year 2000 spending plan and fiscal year 2001 budget request for that activity?

Answer. NHTSA works with the states to provide public information and educational materials on effective laws through publications such as the Digest of State Alcohol-Highway Safety Related Legislation that contrasts each state's impaired driving (alcohol and other drug) laws and provides a resource for comparing and developing improved impaired driving laws.

Considerable legal research and assistance are given to the states directly through a contract with the National Prosecutor Research Institute's National Traffic Law Center. The Center provides direct technical expertise on existing alcohol and drug

impaired driving laws, provides opinions on proposed laws, and develops training for prosecutors and judges.

The Drugs, Driving and Youth initiative of \$1.1 million in fiscal year 2000 and \$1.4 million in fiscal year 2001 provides funding for activities that support improvements to laws and countermeasures to reduce drug and alcohol impaired driving.

Question. Please break out in detail by project or activity how NHTSA proposes to use the \$11,181,000 requested for impaired driving and compare that to the allocation expected for fiscal year 2000.

Answer. Alcohol-related fatalities account for 38 percent of all motor vehicle fatalities. While this represents a slight decline from 1998 levels, more investment is needed for reaching the high risk groups.

[Dollars in thousands]

| Area | Fiscal year 2000 | Fiscal year 2001 request |
|--|------------------|--------------------------|
| Impaired Driving Program | \$9,292 | \$11,181 |
| Public Information and Education | 3,675 | 3,975 |
| Outreach | 2,102 | 2,495 |
| Legislation | 615 | 815 |
| Enforcement and Adjudication | 2,900 | 3,896 |

Slight increases are requested in the areas of public information and education, outreach, and legislation to meet the needs of states and communities. A more significant increase is requested in enforcement and adjudication to continue to focus on states with high alcohol-related fatalities using highly publicized enforcement initiatives. In addition, maintaining up-to-date training and technology applications for law enforcement, prosecutors, and judges in the detection and sentencing of DUI offenders will remain a priority activity.

In fiscal year 2001, NHTSA will be exploring new strategies for reaching the youth population, including underage college students. Action grants will be awarded to engage strategic organizations to support highly visible enforcement. In addition, outreach grants are planned with national organizations and employers to support prevention activities. The national public education campaign entitled You Drink & Drive. You Lose. will be expanded to focus on a summer message due to the high number of alcohol-related fatalities during that period. This campaign will target the high risk 21–34 year old age group.

MOTORCYCLE SAFETY

Question. The NHTSA budget requests to triple funding for motorcycle safety. Why is such a large increase necessary?

Answer. Unlike other traffic safety performance indicators that reveal that fatalities are declining, motorcyclist fatalities are actually on an upward trend. In 1998, 2,284 motorcyclists were killed and an additional 49,000 were injured in traffic crashes in the U.S.—8 percent more than the 2,116 motorcyclist fatalities, but 7 percent less than the 53,000 motorcyclists injured in 1997. For 1999, preliminary estimates indicate that this upward trend is continuing—while an estimated 48,000 motorcyclists were injured, an estimated 2,537 motorcyclists were killed in 1999, 11 percent more than in 1998. Moreover, motorcyclists killed in traffic crashes continue to have higher rates of intoxication than drivers of other vehicles.

In 1998, NHTSA facilitated development of the National Agenda for Motorcycle Safety, a comprehensive plan that incorporates the diverse viewpoints of the motorcycling community. The draft National Agenda for Motorcycle Safety, released for comment in November, 1999, identified 51 recommendations to improve motorcycle safety.

Prior public investments in motorcycle safety issues have been minimal. Recommendations in the draft Agenda include studies on the efficacy of motorcycle training programs and the role of alcohol in motorcycling.

In addition to continuing current program initiatives, the requested budget increase will support efforts to:

- investigate the causes of motorcycle crashes;
- collect data to determine the impact and relationship of licensing programs, training curricula content, behavior and attitudes, and vehicle characteristics (e.g., braking systems) on crash occurrence and involvement;
- undertake research to understand the role of alcohol in motorcycling;

- characterize the extent and impact of the injuries sustained in motorcycle crashes by supporting efforts to enhance the Crash Outcome Data Evaluation Systems (CODES) program for linking medical and crash data; and
- gather data on the costs of rehabilitation and disability resulting from involvement in motorcycle crashes.

DRUGS, DRIVING AND YOUTH

Question. Please explain the expected costs of each of the new and on-going initiatives specified under the Drugs, Driving & Youth initiative.

Answer. The following table summarizes the planned expenditures, in fiscal year 2001, for drugs, driving, and youth.

| <i>Projects</i> | <i>Fiscal year 2001 request</i> |
|--|-------------------------------------|
| Law Enforcement Initiatives & New Technologies | \$350,000 |
| Public Information and Education | 300,000 |
| Advanced Drugged Driving Training | 250,000 |
| Juvenile Judge Prevention Program | 250,000 |
| Coordination and Data Collection | 200,000 |
| Drugged Driving Research | 50,000 |

In 1998, 6,168 youth, ages 15 through 20, died in motor vehicle crashes, a 1.2 percent decrease from 1997. Of this number, 2,210 fatalities were alcohol-related; this was a 4 percent decrease from 1997. Since 1982, youth fatality trends have compared favorably to those of the adult (over age 21) population, with a 28 percent overall decline for youth compared to a 2 percent increase for adults. However, in terms of fatality rates per 100,000 population, youth are still over-represented by a factor of 3 to 2 (9 to 7 for alcohol-related fatalities).

Countermeasures are needed to reduce the number of alcohol and other drug-impaired drivers on the nation's highways. Additional training for law enforcement officers, prosecutors and judges are needed in the identification, prosecution, and adjudication of the drug-impaired driver. A focus on technology support for the trained drug recognition expert will also be supported. Funding will be provided to collect additional data to more clearly define and understand the extent of the drug impaired driving problem.

Public information and education materials will be developed to educate the public, health care providers, and the courts on the risks of drugged driving (particularly among youth) and potential prevention strategies. A new program will be initiated to involve juvenile judges in prevention activities at the community level, as well as the development of educational materials for diverse communities.

GRADUATED DRIVER LICENSING (GDL) SYSTEMS

Question. How many states are now receiving grant funds to test and evaluate graduated licensing systems? Please indicate funding amounts and results of the various evaluations now being conducted.

Answer. Novice drivers are over-involved in crashes. Graduated driver licensing systems are one means to reducing these crashes. Three states, Kentucky, Michigan, and North Carolina, have received funds to assist them in evaluations of their new graduated driver licensing systems. Kentucky has received a total of \$230,000 (fiscal year 1998, fiscal year 1999, and fiscal year 2000). Michigan has received a total of \$370,000 (fiscal year 1998, fiscal year 1999, and fiscal year 2000), and North Carolina has received a total of \$397,271 (fiscal year 1994).

Preliminary evaluation results from all three states will be available in calendar 2000. However, until the evaluations are completed (i.e., in CY 2001 for Kentucky and North Carolina, and CY 2003 for Michigan), it will not be possible to determine the impact of these laws. It is expected, however, that all three evaluations will further corroborate other graduated driver licensing systems evaluations which have shown crash reductions of 5 to 30 percent for novice drivers.

PRE-LICENSING DRUG TEST FUNDING

Question. Will any funds be spent on random or pre-licensing drug tests for youth in fiscal year 2000 or fiscal year 2001?

Answer. No funding will be expended on pre-licensing drug testing in fiscal year 2000 nor is any budgeted for in fiscal year 2001.

SEAT BELT USAGE

Question. According to the Department's 1999 Performance Report, NHTSA missed its seat belt usage goal for 1999. NHTSA's goals for 2000 and 2001 in this

are even greater than the missed goal. When a performance objective like this is missed, does it make sense to review outyear goals and reassign current objective to the future?

Answer. The seat belt use goal, while ambitious, has tremendous potential in terms of significantly increasing safety and reducing the toll associated with traffic crash fatalities and injuries. Reaching 85 percent seat belt use would prevent an estimated 4,200 deaths and 102,000 injuries and reduce substantially the societal costs associated with highway traffic crashes. The Department, with its many partners, has committed to mounting an all-out effort to meet the national goal of 85 percent by the end of 2000.

The agency has outlined a two pronged approach to achieve a significant increase in seat belt use over the next year. This two pronged approach requires NHTSA to: (1) expand the scope of the Buckle Up America Campaign in all 50 states; and (2) focus on several opportunities including: states with high seat belt use rates, states with new primary laws, states with potential to increase belt use, and states likely to pass primary seat belt laws.

A key element of the campaign is working with states and law enforcement agencies to increase enforcement activities throughout 2000 and 2001. NHTSA will continue to build upon the cadre of 7,000 law enforcement agencies participating in the national seat belt enforcement mobilizations targeted to the Memorial Day and Thanksgiving Holiday weeks of each year.

To support this enforcement effort, the agency will provide technical assistance to the states as they implement their fiscal year 2000 Section 157 innovative grants (\$25 million) provided to increase seat belt use. These funds were awarded under the TEA-21, Section 157 discretionary grant program, and will institutionalize periodic waves of seat belt and child passenger protection enforcement. Additional funds of over \$54 million were awarded through the Section 157 incentive grant portion to states whose seat belt use rate exceeded the national average or reported an increase in seat belt use from the previous year.

A significant portion of these grants along with Section 403 Demonstration and 402 grant funds will support increased enforcement for states by funding additional enforcement waves, equipment, and statewide media campaigns.

MINI-NOPUS SURVEYS

Question. What were the results of mini-NOPUS surveys that were conducted most recently in conjunction with the Buckle Up America campaign?

Answer. The results of the mini-National Occupant Protection Use Surveys (NOPUS) conducted most recently in conjunction with the Buckle Up America campaign are as follows:

MINI-NOPUS PERCENT SHOULDER BELT USE

| | May 98 | June 98 | Dec 98 | Dec 99 |
|---------------------------|--------|---------|--------|--------|
| Overall | 62 | 65 | 70 | 67 |
| Drivers | 63 | 66 | 70 | 67 |
| Passengers | 60 | 63 | 69 | 64 |
| Passenger Cars | 66 | 69 | 72 | 70 |
| Drivers | 67 | 70 | 73 | 71 |
| Passengers | 62 | 66 | 72 | 66 |
| Other Pass Vehicles | 56 | 60 | 66 | 62 |
| Drivers | 57 | 61 | 67 | 62 |
| Passengers | 55 | 58 | 65 | 60 |

The mini-NOPUS conducted in May 1998 obtained observational shoulder belt use prior to the 1998 Memorial Day Buckle Up America blitz. The shoulder belt use rate obtained from this mini-NOPUS provided a baseline by which to monitor restraint use. The mini-NOPUS conducted in June 1998 obtained the data within five to seven days after the 1998 Memorial Day blitz. The December 1998 mini-NOPUS was conducted within five days after the 1998 Thanksgiving Day blitz. The December 1999 mini-NOPUS was conducted within five days after the 1999 Thanksgiving Day blitz.

SEAT BELT USAGE RATE

Question. How many states had a lower seat belt usage rate in 1999 than 1998?

Answer. Eleven states reported lower seat belt usage rates for 1999 as compared to 1998. These included seven whose reported usage rates were more than one full percentage point below the rates reported for 1998: The District of Columbia (down 3.9 percent); Indiana (down 4.5 percent); Maine (down 2.3 percent); Mississippi (down 3.5 percent); New Hampshire (down 2.5 percent); Virginia (down 3.7 percent); and, West Virginia (down 5.8 percent). The other four states reported decreases of less than one full percentage point from 1998 to 1999: Colorado (down 0.8 percent); Hawaii (down 0.2 percent); Texas (down 0.4 percent); and Puerto Rico (down 0.5 percent). South Dakota and Wyoming reported no seat belt surveys for 1999.

SECTION 157 INNOVATIVE GRANT PROGRAM

Question. How many employees work on the innovative grant portion of the Section 157 innovative grant program?

Answer. Because of the competitive nature of the Section 157 innovative program and the grant requirements themselves, a NHTSA committee of interdisciplinary experts was formed to review the grant proposals. Seven members serve on this committee. In addition to the seven headquarters staff who serve on the grant evaluation committee, two staff members in the Office of State and Community Services provide coordination services to the regional office staff who have oversight responsibilities for the Section 157 innovative grants.

In the Office of Contracts and Procurement, a contract specialist is responsible for communicating and coordinating all correspondence and information between the 52 potential applicants and the evaluation committee. In addition, this staff person prepares all award documents, contract modifications and other grant obligations.

In the NHTSA Regional offices, 41 staff members serve as Contracting Officer's Technical Representatives (COTRs) to carry out management and oversight responsibilities for the 46 innovative grants that were awarded.

Question. Please describe in detail each of the reasons why funds for the innovative grant portion of the Section 157 program were not distributed by October 1, 1999.

Answer. Current legislation requires states to submit applications in the prior fiscal year with the intention that Section 157 innovative grants will be awarded on the first of the new fiscal year, October 1. However, grant funds cannot be awarded until annual appropriations laws are signed and funds are made available to the agency. In addition, funding for Section 157 innovative grants could not be determined until after the award of Section 157 incentive grants. The Section 157 incentive grants were not awarded until November 2, 1999. Therefore, final negotiations were delayed in 1999 until the exact amount of funding available for fiscal year 2000 Section 157 innovative grants was known.

Following the award of the Section 157 incentive grants, when exact funding amounts could be determined, additional time was needed to allow the transfer of funds from FHWA to NHTSA. Current legislation requires funding to be allocated to FHWA and then distributed to NHTSA.

Even if the budget process would have allowed an October 1, 1999 award, the time to review the proposals would have made this date difficult to meet. The competitive process for awarding these innovative grants involved the review of 49 proposals and technical negotiation with each applicant. The negotiation process involved two or more rounds of technical questions about the proposal and suggestions for improvement to raise the chances of award for each particular state. Each state was given the required minimum of 10 days to respond to technical questions. The six month time period time was necessary to study and evaluate the proposals and negotiate the contents of each proposal, within the guidelines of a competitive grant process, prior to awarding 46 innovative grants.

Question. What steps are underway to ensure a more timely delivery of those funds during the next grant cycle?

Answer. NHTSA is taking several steps to ensure that the Section 157 review-approval-award process proceeds more expeditiously in future years.

First, NHTSA is seeking a legislative change in the timeline for allocation of Section 157 innovative funds (moving application and award dates forward), to create more separation between the incentive and innovative portions of the program. In this way the agency expects to provide the state applicants better information about available balances for innovative grants, after incentive funds are allocated, and to ensure that full funding is available and transferred from the Federal Highway Administration (FHWA) to NHTSA at the time award decisions are scheduled to be made.

Second, NHTSA has conducted an assessment with the State Highway Safety Offices to determine ways to improve the application, review and approval process of the fiscal year 2000 Section 157 innovative grant program.

Third, the Federal Register Notice for fiscal year 2001 will contain more details about the specific components that need to be included in each proposal and the criteria that will be used to evaluate each proposal. Providing the states with more information in the Federal Register Notice should improve the overall grant award process.

The combined effect of these steps should result in a streamlined, more efficient grant award process.

Question. What process did you use to award the innovative Section 157 grants?

Answer. The Section 157 innovative grants are intended to provide funding to develop and implement new programs that increase seat belt use.

To award the Section 157 innovative grants, an evaluation committee comprised of seven staff people was established to review the applications, prepare technical questions, evaluate the responses, and make recommendations for awards.

The process for this grant program, similar to other discretionary competitive grant programs, required that the committee members evaluate the individual proposals, assign scores to each proposal based on criteria described in the Federal Register Notice, assess applicant responses to technical questions, and reach consensus on which proposals to recommend for award.

Given the unique situation of evaluating proposals for future fiscal year dollars, it was necessary for the committee to further negotiate with several of the state applicants to ensure that the level of effort proposed by the states matched the amount of grant funding available.

Once decisions were made to award the selected states, funds were transferred from the Federal Highway Administration (FHWA) to NHTSA. Current legislation requires funding to be allocated to FHWA and then distributed to NHTSA.

Once the award and budget decisions were finalized, NHTSA prepared grant award documents for signature.

SECTION 157 INNOVATIVE GRANT AND SECTION 403 FUNDING

Question. Please prepare estimates of the amount of funds that will be available for the innovative grant portion of the Section 157 program for fiscal year 2001 and each of the remaining years of the TEA-21 authorization period. How will these funds be integrated with the ongoing NHTSA Section 403 program?

Answer. It is estimated that the Section 157 innovative grant portion of the program will remain constant at 20 to 25 million dollars annually. Currently the only estimates of funding available under Section 157 are the amounts provided in the Transportation Equity Act for the 21st Century (TEA-21) legislation for both the incentive and innovative portions. Under Section 157, the TEA-21 legislation provides for federal funding in the amounts of: \$92 million for 2000, \$102 million for 2001, \$112 million for 2002 and \$112 million for 2003. These figures illustrate a steady upward trend in funding that levels off in 2002 and 2003.

As specified in the legislation, before determining the innovative portion of the grant, the incentive portion for each state must be calculated. Incentive grant amounts for each state are calculated based upon savings in medical costs to the federal government that result from increased seat belt use rates. As additional states qualify for the incentive portion, the total amount allocated for that portion will increase. However, given that the overall budget for the Section 157 program is also scheduled to increase, it is estimated that the innovative grant amounts will remain relatively constant.

Section 403 funds are used primarily to develop, demonstrate, evaluate and research new countermeasures or strategies and conduct national public information and education campaigns. Section 157 innovative grant funds are used for developing and implementing innovative strategies at the state level to increase seat belt use. These strategies are based on each state's individual set of circumstances. Section 157 innovative grant fund programs will utilize information and countermeasures developed with Section 403 funds. The combination of programs to increase seat belt use funded by Section 157 and Section 403 funds should provide the best opportunity for raising seat belt use in individual states and, subsequently, raise our nationwide performance.

PRIMARY ENFORCEMENT LAWS

Question. How many additional states enacted primary enforcement laws last year? What was NHTSA's role in those legislative initiatives?

Answer. In 1999, Alabama and Michigan enacted primary enforcement laws. NHTSA provided technical assistance to both states on the effectiveness of a primary enforcement seat belt law in reducing deaths and serious injuries in motor vehicle related crashes.

AIR BAG SAFETY

Question. Please provide an update on the results of NHTSA'S efforts to reduce the adverse effects of airbag deployment, specifically as related to serious injuries and fatalities.

Answer. To reduce the affects of airbag deployment, NHTSA has completed the following activities:

- On March 19, 1997, NHTSA allowed vehicle manufacturers to quickly change the design of air bags to make them less powerful. This action resulted in air bags in most 1998 vehicles being redesigned and reduced in power.
- On November 21, 1997, NHTSA changed the vehicle safety rules to permit dealerships and repair shops to legally install air bag on-off switches for consumers meeting certain criteria.
- The agency took broad steps of exploratory research to improve future air bags. Collectively, these future improvements will be called advanced air bags and result from this major program of research to test and evaluate air bag systems.
- On September 17, 1998, and November 5, 1999, NHTSA published proposals to amend the federal motor vehicle safety standards to require advanced air bags in the near future. On May 12, 2000, the Final Rule for advanced air bags was published in the Federal Register (65 FR 30680) amending Federal Motor Vehicle Safety Standard No. 208, Occupant Crash Protection, to specify the details of the required phase-in of advanced air bags.

This agency continues its program to increase belt usage. NHTSA's educational activities to reduce the adverse effects of air bag deployment are conducted through the Buckle Up America campaign to increase education to consumers on the correct use of both safety belts and child safety seats and to get children to ride in the back. For example, since the Buckle Up America campaign began in 1996, motor vehicle deaths of children (0–4 years) have been reduced 12 percent. This reduction was the direct result of NHTSA's efforts to implement the strategies of high visibility enforcement of child passenger safety laws combined with public education. NHTSA plans to continue these same strategies.

Question. How much of the fiscal year 2001 budget request would be allocated to that area? Please break out those funds in detail.

Answer. In fiscal year 2001, \$23.2 million is programmed for addressing air bag safety. This includes \$11.9 million in funding requested for air bag research to reduce the adverse effects of air bag deployment, specifically as related to serious injuries and fatalities, and \$11.3 million for Highway Safety programs.

The following provides a brief description for each of the major research areas:
Biomechanics Program—(\$5.0 million).—Research will continue to address the near-term development of pediatric and small female injury criteria associated with the intense and complex out-of-position air bag-vehicle occupant interaction. These efforts have as their goal the development of essential tools for the assessment of current and emerging air bag deployment systems.

Safety Systems Program—(\$4.4 million).—Research will continue on the development, performance, and monitoring of advanced air bag systems that build upon the technological solutions to air bag problems identified in the field experience, including those injuries resulting from aggressive air bag deployments (especially to children and occupants of short stature). Production vehicles with advanced safety systems will be evaluated and performance requirements established based on these systems. Such systems will include production multi-stage air bag inflators, air bag suppression technologies through occupant detection, seat position sensors, adjustable pedals, etc. Research will also continue on the development of improved air bag deployment timing through the use of anticipatory crash sensing technology. High speed (56 kmph) crash protection will continue to be evaluated for belted small female occupants in high severity crashes (and mid sized male occupant protection will be analyzed through NCAP performance testing). Also, research will include out-of-position occupant tests (static and/or dynamic) to evaluate the performance of side air bags and other related systems, i.e., Inflatable Tubular Structure (ITS), deployable upper interior paddings, etc.

Special Crash Investigations—(SCI) (about \$2.5 million).—During fiscal year 2001, over 400 advanced air bag and side air bag cases would be investigated. Research will continue to investigate, through its SCI program, approximately 200

motor vehicle crashes that qualify for NHTSA's Air Bag Investigations Program and non-air bag related vehicle safety problems.

Highway Safety (\$11.3 million).—The most effective action anyone can take to prevent air bag injury is to be properly restrained when riding in a vehicle with an air bag. Therefore, NHTSA does not distinguish between education to reduce the adverse effects of air bags and education to increase the correct use of safety belts and child safety seats. The entire fiscal year 2001 Highway Safety Occupant Protection budget request of \$11.3 million should be considered as allocated to reducing the adverse effects of air bags.

SEAT BELTS

Question. How much is being spent in fiscal year 2000 and proposed for fiscal year 2001 within the core NHTSA program (not counting flagship initiatives) to determine why people do not wear their seat belts?

Answer. A total of \$500,000 is being spent in fiscal year 2000, and \$425,000 is proposed to be spent in fiscal year 2001, on projects that will collect data to determine why people do not wear their seat belts.

NHTSA will conduct a national telephone survey on occupant protection in the Fall (fiscal year 2000) that will include questions regarding the reasons for seat belt use and non-use. This survey will also collect data on attitudes and knowledge related to seat belts in order to assess how (self-reported) seat belt use differs according to various attitudes and knowledge levels. This project is funded at \$250,000 in fiscal year 2000 and \$150,000 is proposed for fiscal year 2001.

NHTSA will also conduct telephone surveys both before and after upcoming Buckle Up America (BUA) Enforcement Mobilizations. These surveys will collect data to assess how enforcement-related and other information affects decisions to wear seat belts. This project is funded at \$50,000 in fiscal year 2000 and \$125,000 is proposed for fiscal year 2001.

A third effort will explore reasons for non-use of seat belts among African Americans. This research is part of a larger program to identify the overall highway safety needs of African American communities and to develop more effective approaches for promoting highway safety in these communities. This project will be funded at \$200,000 in fiscal year 2000 and \$150,000 is proposed in fiscal year 2001.

Not included in the activities identified above is countermeasure development, based on past research to identify reasons for non-use of seat belts. Our past research has indicated that "part time" users of seat belts greatly outnumber persons who never use their seat belts. As a result, NHTSA is in the process of developing and testing interventions specifically designed for "part time" users. Project funding is \$261,000 in fiscal year 2000 and \$200,000 in fiscal year 2001. These numbers are not included in totals provided above since these activities are not for the purpose of identifying reasons for non-use of seat belts. Rather, this project goes to the next step and is developing countermeasures based on such reasons.

Question. How much is being spent in fiscal year 2000 and proposed for fiscal year 2001 within the core NHTSA program (not counting flagship initiatives) to develop and implement strategies to encourage those high risk groups to use their seat belts?

Answer. Of the core NHTSA program, approximately \$1,905,000 is being spent to increase high risk group seat belt use in fiscal year 2000 and \$1,794,000 in fiscal year 2001 through a combination of outreach programs, information and materials development and distribution, and research projects.

Of this amount, \$1,044,000 is being distributed to organizations that represent or serve people living in rural areas as well as youth, truck drivers, the African American, Hispanic, and Native American communities. Approximately 30 organizations are being funded in fiscal year 2000, most of which are conducting outreach activities targeting high risk populations. For example, a number of projects initiated in fiscal year 1999 under the Buckle Up America Cooperative Agreement will be continued and expanded in fiscal year 2000 and 2001. Of the 21 organizations funded, eight represent African American organizations, five Hispanic organizations, and three youth, and two rural, with some crossover among them. Other youth targeted projects include Black Entertainment Television (BET), National Science Teachers Association, National Organizations for Youth Safety (NOYS), the Boys and Girls Clubs of America and the National Latino Children's Institute as well as support for the Healthy Child Care America Campaign and Buckle Up Kids Curriculum. We are continuing and expanding our outreach to the Native American community through our interagency agreement with the Indian Health Service. We are also funding several medical and health organizations to conduct educational outreach programs such as the Association of City and County Health Officials, American

Hospital Association, the National Medical Association and the National Hispanic Medical Association, Emergency Nurses Association and Emergency Nurses CARE, Inc., and the Meharry Medical College.

Approximately \$300,000 is being spent on seat belt public information and education materials to support Buckle Up America and increase belt use among high-risk groups. This includes materials printed in languages other than English and materials that target other high-risk groups such as youth, truck drivers, the African American community, and Americans who reside in rural communities. NHTSA expects to devote roughly the same level of resources to these organizations and for printing costs of public information and education materials in fiscal year 2001.

In addition, a NHTSA project will explore reasons for non-use of seat belts as part of a study focusing on African Americans. The project goals will be to identify highway safety needs of African American communities and ways of promoting highway safety to those communities. Project funding is \$200,000 in fiscal year 2000 and \$150,000 proposed in fiscal year 2001.

Finally, advanced project work based on past NHTSA research on reasons for non-use of seat belts is being funded. That research has shown that "part time" users of seat belts greatly outnumber non-users. NHTSA currently is developing and testing interventions for part time seat belt users. Project funding is \$261,000 in fiscal year 2000 and \$200,000 in fiscal year 2001. An additional \$100,000 will focus exclusively on research into pick-up truck driver non-seat belt use and children being allowed to ride in the cargo area of pick-up trucks in fiscal year 2000 and fiscal year 2001.

STATE SURVEY DATA

Question. Can NHTSA determine from state survey data of seat belt use counties or regions within a state that are below the national average? If so, please provide a table which depicts, on a state by state basis, the counties or regions of each state with low seat belt usage rates.

Answer. NHTSA cannot determine from state survey data of seat belt use counties or regions within a state that are below the national average. Under the NHTSA guidelines for seat belt observational surveys, states use random probabilistic methods to select places where seat belt observations will occur. Generally, this involves randomly choosing a subset of sampling units and specific locations within the selected sampling units where observations take place. States are not required to sample usage in all counties or regions of the state. The large majority of counties throughout the country are not surveyed. Thus, it is not possible to list counties or regions where seat belt usage is below the national average.

TRAFFIC LAW ENFORCEMENT PROGRAM

Question. What are the major challenges facing the law enforcement community and how does your budget request address those challenges?

Answer. The major challenge facing the law enforcement community is the need to continue conducting high visibility traffic law enforcement initiatives with dwindling resources and increasing demands for service. The traffic law enforcement budget request specifically addresses initiatives directed at increasing safety belt and child safety seat use and the reduction of impaired driving, speeding, and aggressive driving.

Increasing safety belt and child safety seat usage and combating impaired driving, speeding, and aggressive driving behaviors will require innovative countermeasures and best practices that can be tailored for use by law enforcement agencies throughout the country. Also, agencies are looking for automated enforcement technologies to supplement limited personnel resources. NHTSA is involved in researching existing and new technologies to identify where and how automated devices can supplement enforcement efforts for red-light running, speeding and railroad grade crossing violations. Ensuring the accuracy and reliability of these automated devices is crucial to their acceptance in any legal proceeding.

Law enforcement is committed to strongly supporting the NHTSA goals of reducing alcohol-related motor vehicle fatalities to no more than 11,000 by the year 2005 and increasing seat belt use to 90 percent by 2005. To meet these ambitious goals and to also reduce the carnage resulting from speeding and aggressive drivers, law enforcement agencies must continue to conduct high visibility enforcement programs. These programs, coupled with public information and education campaigns, increase the public's perception that traffic law enforcement efforts are widespread and critical to reducing motor vehicle injuries and fatalities.

In direct support of both the TEA-21 initiatives and the NHTSA strategic plan, the law enforcement community is working towards reducing speed related fatali-

ties. These fatalities have been on the rise since the elimination of the national maximum speed limit. Through a joint NHTSA and FHWA field demonstration project, emphasis will be directed to restoring credibility to speed limits through enforcement, engineering and education. NHTSA will continue to respond to high risk, aggressive driving by promoting innovative enforcement practices and new technologies and bringing more public attention to the issue.

AGGRESSIVE DRIVING

Question. What was the purpose and amount of each contract NHTSA let to reduce aggressive driving in fiscal year 1999 and fiscal year 2000?

Answer. A fiscal year 1999 NHTSA demonstration and evaluation project will soon be implemented in two sites. Two metropolitan law enforcement agencies, or combinations of agencies, have been selected to implement innovative enforcement techniques or strategies. Each program will include a public information and education (PI&E) component. The enforcement effort will be implemented in each site for a minimum of six months, and the effectiveness of each program will be evaluated. The funding for this effort in fiscal year 1999 was \$500,000.

In a fiscal year 2000 project, NHTSA is identifying specific enforcement practices that show promise for deterring aggressive driving. In addition, this project is developing a public education effort to increase the public's perception of high risk driving behavior. The cost of this project is \$115,000.

An estimated \$20,000 in fiscal year 2000 is also being used to fund a law enforcement officer to work with NHTSA on a one-year assignment to collect and summarize information from law enforcement agencies across the nation that are conducting aggressive driving programs. This information will then be entered into a database of aggressive driving programs which can be used by other law enforcement agencies.

NHTSA and FHWA have convened an Aggressive Driving Implementation Group to review progress in implementing the recommendations from the 1999 Aggressive Driving and the Law symposium. The group has reviewed recommendations from this symposium and is currently establishing priorities, identifying partners, and determining the next steps for developing a National Action Plan. A total of \$60,000 has been identified to support this activity for fiscal year 2000.

TRAFFIC LAW ENFORCEMENT FUNDING

Question. Please provide a table for the components in the Traffic Law Enforcement Program which shows how funds requested for fiscal year 2001 are intended to be spent. In that table, please compare the amount provided for similar activities for fiscal year 2000 and provide a justification for the need for the requested increases above fiscal year 2000 appropriations.

Answer. Efforts to reduce impaired driving, speeding, aggressive driving, and other unsafe driving acts in addition to promoting increased seat belt and child safety seat use are critical responsibilities of our nation's law enforcement agencies.

The fiscal year 2000 and fiscal year 2001 funding levels for the five Traffic Law Enforcement Program components are as follows:

| Program area | Fiscal year 2000 | Fiscal year 2001 |
|--|------------------|------------------|
| Enforcement Demonstrations | \$700,800 | \$903,000 |
| Training and Technical Assistance ¹ | 400,000 | 1,279,000 |
| Technology Transfer | 100,000 | 262,000 |
| National Organizations | 460,200 | 452,000 |
| Public Information and Education | 375,000 | 446,000 |
| Total | 2,036,000 | 3,342,000 |

¹ Congress has directed that NHTSA provide Pursuit Management training and TEA-21 authorized \$1M to fund this program.

The Traffic Law Enforcement budget directly supports both TEA-21 initiatives and the agency's strategic plan to increase seat belt usage and reduce impaired, speeding and aggressive drivers.

The fiscal year 2001 budget request seeks continued funding for our current partnerships with national law enforcement associations such as the International Association of Chiefs of Police, the National Sheriffs Association, the National Organization of Black Law Enforcement executives, and others. These partnerships provide an efficient and economical method of promoting our traffic safety initiatives. In ad-

dition, funding is needed for other traffic law enforcement projects that are included in the DOT and NHTSA Strategic Plan. The additional funds are needed to:

- Provide seminars on Traffic Safety in the New Millennium: Law Enforcement Strategies for law enforcement executives, designed to enable and prepare them to address emerging traffic safety challenges;
- Provide a seminar on newly developed technologies designed to supplement law enforcement efforts through automated enforcement of red-light running, speeding, and railroad crossing violations;
- Develop a resource guide for new technologies to ensure the accuracy and reliability of enforcement devices for enforcement agencies, the courts, and the motoring public;
- Develop a training program for law enforcement administrators designed to aid in developing a broader, general emphasis on traffic safety related programs while protecting the individual rights of the motoring public; and
- Continue the development of the aggressive driving public information materials.

INTEGRATED DRIVER LICENSING SYSTEM

Question. What is the status of the comprehensive integrated driver licensing system? What costs, broken out by year, are associated with its development? How much work remains to be done to fully implement the system?

Answer. Currently, NHTSA is preparing a Report to Congress regarding the National Driver Register's (NDR's) Problem Driver Pointer System (PDPS), operated by NHTSA, and the Commercial Driver License Information System (CDLIS), formerly operated by the Federal Highway Administration (FHWA) and now operated by the Federal Motor Carrier Safety Administration (FMCSA). This evaluation, required by the Transportation Equity Act for the 21st century (TEA-21), focuses on the ability of these two systems to transfer records electronically and to identify drivers with multiple licenses.

NHTSA is also conducting an assessment of various technologies to facilitate processing of the large volume of data and transactions which would be associated with an integrated driver licensing system. The total expenditure for this activity, also required by TEA-21, is \$250,000 provided to the American Association of Motor Vehicle Administrators (AAMVA). No additional funds have been provided for this activity.

Much of the information for the Report to Congress comes from a 1997 study, conducted by NHTSA, FHWA, and AAMVA, which recommended combining PDPS and CDLIS with the Driver License Reciprocity (DLR) System (operated by AAMVA) to form an integrated national system. This report suggested that such a system would greatly facilitate the ability of motor vehicle administrators to transfer records electronically and to identify drivers with multiple licenses.

There are some significant obstacles which must be overcome before such a system, which would contain information on nearly 200 million drivers, can be fully developed. First, as the 1997 Report concluded, some form of unique identifier (e.g., social security number) will be needed to differentiate between potentially thousands of similar records in the system (e.g. nearly 2.4 million persons have the surname "Smith"). This need for a unique identifier has been strongly opposed by privacy advocates. Second, in order to identify drivers with multiple licenses, it will be essential that all states participate. Finally, the costs associated with developing such a system will be formidable. Each of these issues will be addressed in the Report to Congress.

OLDER DRIVER PROGRAM

Question. In Senate Report 104-325, the Committee indicated that NHTSA should continue its work on demonstration activities for technologies and practices intended to improve driver performance of older drivers at risk of losing their licenses. How is that directive reflected in the fiscal year 2001 budget request and in the fiscal year 2000 spending plan for the transportation safety program? Please provide a list of each activity and its spending level.

Answer. For the fiscal year 2001 budget request, \$300,000 is planned for conducting up to three demonstration activities designed to enhance the safety and mobility of older drivers and pedestrians. NHTSA is still reviewing program alternatives to determine which specific programs will be demonstrated. Programs under consideration include: senior fitness programs that incorporate pedestrian safety and driving health; conducting assessment activities at senior health fairs; and assistance to a state licensing authority's medical advisory board to develop an evaluation program for referrals that is grounded in research. For the fiscal year 2000

spending plan, \$130,000 is planned for conducting demonstration activities specifically for identification and potential rehabilitation of at-risk older drivers.

Question. How many states are involved in older driver demonstrations supported with NHTSA funds?

Answer. Three states are currently involved in NHTSA older driver demonstrations. They are as follows:

- Maryland is conducting an effort to determine the value of the Gross Impairment Screening tool (GRIMPS) as a means for identifying potential problem drivers in Department of Motor Vehicle (DMVs) settings and in senior centers and its value in providing counseling or rehabilitation to such persons.
- Florida is involved in a project to assess the value of using an automated version of GRIMPS for identifying problem drivers. The program, which will be administered in memory clinics, aims to address those drivers whose cognitive abilities may have declined and who may be unaware of how the declines are affecting their driving. Beyond simply assessing individuals with cognitive impairments, the program also aims to provide counseling with regard to potential rehabilitation or, if indicated, counseling individuals to stop driving and use other options.
- Texas is in the process of documenting a program on elderly pedestrian, bicyclist, and driver safety that is operated by the Texas Department of Health and the Texas Department of Transportation. This very successful and popular program will be described in an evaluation report so that people in other states or local agencies can copy components of the program. This effort also involves modifying portions of the program to meet the needs of Spanish-speaking older adults, a large audience that has remained largely unaddressed.

Question. How much is allocated toward those efforts in fiscal year 2000? Will those efforts be expanded during fiscal year 2001? How much is requested for those efforts in fiscal year 2001?

Answer. A total \$263,000 in funding is planned for fiscal year 2000 older driver demonstration projects. Depending on the outcomes of the efforts in Florida, Texas, and Maryland, NHTSA will either fund additional activities at these sites or, if the results are sufficiently definitive, new demonstrations will be initiated. These additional activities might include aiding the Maryland medical advisory board in adapting assessment tools for use on referred drivers. Another program could entail the use of automated assessment tools at senior health fairs to generate an understanding among seniors of how their health influences their driving. For fiscal year 2001, \$300,000 has been requested for demonstration projects on older driver and pedestrian safety. Thus, the level of effort will increase slightly in fiscal year 2001.

HIGHWAY SAFETY RESEARCH

Question. Please break out how the \$7.446 million requested under highway safety research would be allocated.

Answer. The Highway Safety Research breakdown is as follows:

| | |
|------------------------------------|-------------|
| Impaired Driving | \$1,900,000 |
| Occupant Protection | 1,400,000 |
| Older Driver | 850,000 |
| Pedestrian and Cyclist | 876,000 |
| Speed & Aggressive Driving | 1,120,000 |
| Emergency Medical Services | 400,000 |
| Evaluation | 650,000 |
| Driver Fatigue & Inattention | 250,000 |
| | <hr/> |
| Total | 7,446,000 |

NATIONAL OCCUPANT PROTECTION USE SURVEY

Question. What are the status and the results to date of the National Occupant Protection Use Survey?

Answer. The results of the National Occupant Protection Use Survey (NOPUS) to date are as follows:

TABLE 1.—NATIONAL OCCUPANT PROTECTION USE SURVEY—MOVING TRAFFIC STUDY

| Belt and helmet use | Percent restraint use | | |
|---------------------------|-----------------------|-----------|-----------|
| | Fall 1994 | Fall 1996 | Fall 1998 |
| Overall | 58 | 61 | 69 |
| Drivers | 59 | 62 | 70 |
| Passenger | 55 | 59 | 65 |
| Passenger Cars | 63 | 65 | 71 |
| Drivers | 64 | 65 | 72 |
| Passengers | 59 | 62 | 68 |
| Other Pass Vehicles | 50 | 56 | 66 |
| Drivers | 51 | 58 | 67 |
| Passengers | 49 | 53 | 61 |
| Helmet Use | 63 | 64 | 67 |
| Operators | 67 | 66 | 64 |
| Riders | 54 | 58 | 84 |

The restraint use rates presented in Table 1 were obtained through the Moving Traffic Study portion of the NOPUS which provides overall restraint use rates for drivers and right front passengers in passenger vehicles (passenger vehicles are defined as passenger cars, pickup trucks, vans, and sport utility vehicles).

TABLE 2.—NATIONAL OCCUPANT PROTECTION USE SURVEY CONTROLLED INTERSECTION STUDY

[Percent Restraint Use by Year, Age, Sex, Race, and Urbanization]

| | Year | | |
|-------------------|-------------------|------|------|
| | 1994 | 1996 | 1998 |
| Age: | | | |
| Infant | 87.7 | 85.2 | 96.9 |
| Toddler | 60.7 | 60.1 | 90.7 |
| Youth | 57.7 | 64.6 | 71.8 |
| Young Adult | 52.6 | 49.5 | 57.2 |
| Adult | ¹ 59.1 | 62.4 | 69.8 |
| Senior | ¹ 59.1 | 68.8 | 77.3 |
| Sex: | | | |
| Female | 64.4 | 68.0 | 76.3 |
| Male | 54.4 | 56.8 | 62.8 |
| Race: | | | |
| White | 59.6 | 62.6 | 69.8 |
| Black | 53.0 | 51.2 | 65.4 |
| Other | 54.6 | 58.0 | 65.3 |
| Urbanization: | | | |
| City | 57.7 | 61.1 | 73.8 |
| Suburban | 62.9 | 64.4 | 66.5 |
| Rural | 52.8 | 60.1 | 66.7 |

¹ 1994 NOPUS collected only Adult (25 years or older).

Table 2 shows the restraint use rates obtained from the Controlled Intersection Study portion of the NOPUS which provides more detailed information about shoulder belt use by type of vehicle and person characteristics and child restraint use for occupants of passenger vehicles.

EMERGENCY MEDICAL SERVICES (EMS)

Question. How much funding is NHTSA requesting to fund the proposal to develop strategies for wireless E9-1-1? Please explain the specific projects of this proposal and the level of funding associated with each.

Answer. More than 100,000 wireless emergency calls are made per day across the United States. The dramatic increase in the use of wireless technology to call for help has heightened the need to address institutional and other barriers to effective

management of these important calls, including proper call routing. The fiscal year 2001 budget request includes \$162,000 to complete funding of a three-year demonstration program in New York. This project will model strategies for overcoming a range of institutional barriers to implementing wireless E9-1-1. The total cost of this project will be \$962,000, with \$600,000 being contributed by the Intelligent Transportation System program and the remainder from the EMS Program.

To implement wireless E9-1-1, states need to resolve a number of institutional issues, such as determining which state agency will control the routing of wireless emergency calls. The New York demonstration will model a consensus approach to resolving these issues, led by members of the emergency medical community. The emergency medical community is particularly well positioned to host these negotiations, since they are focused on quick resolution of the issues and are unbiased concerning specific institutional arrangements. Resolving the wireless E9-1-1 issue was one of the top priorities in the recent EMS strategic planning document, the EMS Agenda for the Future.

Question. What are the planned activities and funding amounts requested for the proposal to train emergency dispatchers for wireless 911 calls?

Answer. With more than 100,000 wireless emergency calls per day coming in to Public Safety Answering Points (PSAP's) across the country, emergency dispatchers must be prepared to receive the calls, identify location of the incident (with help of emerging technologies) and dispatch appropriate EMS, fire or law enforcement resources to the scene.

NHTSA is requesting approximately \$100,000 to develop training materials and outreach techniques to help local dispatch centers implement wireless E9-1-1. To begin receiving and responding to wireless E9-1-1 calls, each of the approximately 6,000 PSAP's across the nation will need to make changes to current procedures and equipment. This project will speed the adoption of these changes by ensuring that dispatch centers receive accurate information and guidance. The training is expected to include details about relevant federal rules and regulations, options for local institutional arrangements, and details on technology choices.

NATIONAL BYSTANDER TRAINING

Question. What are the objectives of the national bystander care training network? Please break down funding requested for this activity and compare to fiscal year 2000.

Answer. Uninjured vehicle occupants or other motorists are often the first people at the scene of a motor vehicle crash. These "bystanders", with proper training, could provide valuable lifesaving assistance until emergency personnel arrive at the scene. During fiscal year 2000, NHTSA is introducing a bystander care program to prepare motorists to take proper actions when coming on the scene of a recent crash. The program instructs the motorist to immediately call 9-1-1 and then render lifesaving medical care, if needed, while waiting for emergency medical services to arrive.

The bystander care program encourages medical professionals to teach hands-on training to the public. In fiscal year 2000, NHTSA dedicated \$75,000 to initiate an outreach program to fund the costs of conducting national bystander care training. These funds were distributed through a number of national medical associations to provide bystander care training at ten national medical conferences. The goal is to establish a nationwide database network of bystander trainers.

In fiscal year 2001, an additional \$50,000 will be directed to completing the training initiatives by funding five additional training sessions in selected states.

EMS AND SAFE COMMUNITIES NETWORK

Question. Please explain in detail by project or activity the proposal to expand EMS involvement in delivering community traffic safety messages through the Safe Communities network. Is it necessary to utilize the Safe Communities network to expand EMS involvement in public safety campaigns?

Answer. The 1996 EMS Agenda for the Future, a consensus strategic planning document supported by NHTSA, highlighted the importance of EMS participation in prevention activities and specifically pointed out the value of EMS involvement in the Safe Communities program. In fiscal year 2000, NHTSA responded to this recommendation by initiating a revision of the EMS PIER (Public Information, Education and Relations) program to incorporate a module on Safe Communities. The agency's fiscal year 2001 request includes funds to complete this revision.

The PIER program was developed in 1996 to encourage and prepare EMS personnel to conduct community education activities. The program instructs EMS personnel in community outreach and media skills. The new module will educate EMS

providers concerning their potential role in Safe Communities either as leaders or participants.

While it is not necessary to use Safe Communities to engage EMS personnel in prevention activities, this approach offers an attractive incentive and efficient mode of giving EMS a clear and appropriate role in community injury prevention.

EMERGING TRAFFIC ISSUES

Question. Please break out in detail by project or activity how NHTSA proposes to use the \$1,500,000 requested for new/emerging issues and compare the requested amount to the allocation for fiscal year 2000.

Answer. Last year, Congress appropriated \$1,000,000 for NHTSA to use for new, emerging, and Transportation Equity Act for the 21st Century (TEA-21) issues.

Primarily, the funds are used to develop, print and distribute program materials, including aggressive driving, older drivers, and drowsy driving, specifically identified by emerging research, and requiring NHTSA's attention. Surveys suggest that aggressive driving is becoming the top highway safety concern of the public. As the Baby Boomers move into their later years, demographics show that problems facing the older driver are becoming an increasing problem. A number of states have identified drowsy driving as a significant problem; 70,000 injury-causing crashes and 1,550 fatalities annually are attributed to drowsy driving. Specifically, the agency is (1) collaborating with the Outdoor Advertising Association of America, Inc. on a national campaign (billboards and bus placards) to curb aggressive driving; (2) partnering with USAA to develop, and the American Association of Retired People to develop, market and distribute materials targeted to consumers and care providers to help older drivers remain safe and mobile as long as possible; and (3) working with the Network of Employers for Traffic Safety to market and distribute the drowsy driving comprehensive program materials targeted to shift workers and their families. Additionally, these funds are being used for large-scale revisions to all of the NHTSA Professional Development training programs for state and local highway safety officials in order to incorporate major changes in programs due to the Transportation Equity Act for the 21st Century (TEA-21). In addition, a new one-half day course has been developed to provide a TEA-21 presentation piece for use with highway safety executives and new employees.

With the training completed, the agency would continue the activities initiated in 2000 and would initiate the following activities with the \$1,500,000 requested: (1) expand the drowsy driving program materials to include the high-risk group that includes high school youth and college students; (2) develop additional older drivers program materials, market and distribute the program and materials to additional intermediaries such as the increasing number of senior centers, geriatric physicians, law enforcement, and the courts; (3) develop new and focused media messages relating to aggressive driving behaviors as we identify additional high risk groups, and materials on aggressive driving; and (4) raise awareness and develop countermeasures for the increasing problems related to increased activities inside the vehicle, such as the use of cell phones, eating, reading, putting on make-up and faxing, which can overload the driver with distractions.

TRAFFIC SAFETY DATA SYSTEMS

Question. How much funding is NHTSA requesting to assist states in developing and implementing traffic safety data systems?

Answer. Traffic safety data systems are critical for the identification of traffic safety problems and for the effective evaluation and management of traffic safety programs. One of the major deficiencies in state traffic safety data systems is the tracking and exchange of citation and driver history information. For this reason, NHTSA is requesting \$325,000 to assist states in developing and implementing data systems that allow for information tracking and exchange. These funds will specifically be used for the development, testing and implementation of traffic safety data technologies that facilitate the exchange of traffic citation and driver history information between law enforcement, the courts and driver licensing agencies. This effort will be conducted in conjunction with the Federal Motor Carrier Safety Administration (FMCSA), which has been mandated by the Motor Carrier Safety Improvement Act of 1999 to implement traffic safety data systems that integrate driver citation and conviction information.

Question. What is the difference between the funding in the highway safety account for state safety records and the Section 411 incentive grants?

Answer. Over the last 20 years, state and locally provided resources for traffic safety data systems have eroded. This has had negative consequences for state and national data bases that are used to identify traffic safety problems and evaluate

implemented traffic safety countermeasures. As a result of the decreased state and local resources, funding in the highway safety account is used for traffic safety data system activities that provide information on both standards and best practices that allow a state or local traffic safety organization to maximize their available resources. Some of the activities funded by the highway safety account include local, state and national traffic safety data system conferences and meetings, traffic safety data systems assessments that provide information on best practices, data analysis courses and other training that promote effective problem identification and evaluation processes, and development, revision, and implementation of standards such as ANSI D16, ANSI D20, and the Model Minimum Uniform Crash Criteria (MMUCC). The adoption of traffic safety data system standards is critical if the impact of implemented traffic safety activities is to be compared over time and across geographic areas.

Section 411 incentive grants are managed and coordinated by the states. Funds can be used for a number of state and local data system improvements and activities such as infrastructure development and improvement, data collection, data management, system linkages, and data access technologies. For many states, the availability of 411 funds has been an important resource for making improvements to their traffic safety data system.

SAFE/LIVABLE COMMUNITIES

Question. The Department has delegated NHTSA as the coordinator of the "Livable Communities" initiative. Please explain this initiative in greater detail and identify the modes, specific programs, and amounts that are being requested to further it.

Answer. The Safe/Livable Communities Initiative incorporates safety and injury prevention programs into all Departmental programs involved with "quality of life" issues (i.e. Transportation and Community and System Preservation Pilot Program, Rural Initiative, and Livability Initiative). The initiative promotes the implementation, in as many communities as possible, of programs designed to improve safety, efficiency and accessibility of all modes of transportation. Much of the technical assistance the Department provides at the community level is delivered through regional intermodal safety teams, working in concert with state transportation agency partners. The initiative also seeks to incorporate safety and injury prevention into community improvement programs sponsored by other federal agencies.

The safety elements of the initiative include:

- Clearinghouse*—\$500,000.—NHTSA will expand the Safe Communities Clearinghouse and website to incorporate information on other agency community-based transportation safety initiatives and will link to technical assistance sites.
- Training*—\$450,000.—NHTSA's Safe Communities Community Practitioner's Course and Intermodal/Interagency Executive Seminar will include information on ONE DOT safety messages and modal safety training programs.
- Technical Assistance*—\$1,000,000.—NHTSA will coordinate a network of multidisciplinary assessment teams of experienced practitioners to conduct assessments of communities' resources, safety problems, capabilities, and trends and provide an action plan for affecting improvements in the community.
- Materials*—\$791,000.—The Regional ONE DOT Teams are working across modes to develop and deliver similar safety messages, i.e., buckle up in the car, in the air and on the water, to the Department's wide range of partners.
- Partnerships*—\$300,000.—Through the Safe/Livable Communities Initiative, NHTSA can deliver its highway traffic safety message to partners to whom the agency might not have access otherwise. NHTSA is able to expand the agency's reach across the nation by having other modes and programs deliver buckle-up and impaired driving messages.

Each modal administration assigns staff to the Department's Community Outreach Task Force (chaired by NHTSA), which provides overall direction to the Safe/Livable Communities Initiative. Each mode has programs that enhance safety, mobility, economic development, environmental protection and other factors that impact the quality of community life. Each mode works within its organizational structure and budget to develop and support these programs. Through the Task Force, the modes lend overall support to one another's communication and outreach efforts, and help to promote them through their own networks of customers and partners. To date, these efforts have been part of the ongoing activities of the field staffs of the individual modes. It is not possible to segregate out the exact amount of funds that each agency will expend to support this effort.

Question. What are the differences between funding requested by NHTSA for this initiative and the Section 402 formula program and the Safe Communities program?

Answer. The Section 402 formula grant program provides funds to the states, the Indian Nations and the Territories to support a wide range of highway safety programs to reduce crashes, injuries and fatalities, including occupant protection, impaired driving, motorcycle safety, traffic records, and roadway safety programs. The states must direct at least 40 percent of these funds to support community level programs. Safe Communities is a tool for communities to utilize in identifying their own injury problems and developing solutions to those problems. At the discretion of the states, Section 402 funding can be used to support Safe Communities.

The Safe/Livable Communities Initiative seeks funding for the Department of Transportation efforts to incorporate safety and injury prevention programs into the vast array of Departmental programs designed to make communities better places to live and work, such as the Transportation and Community and System Preservation Pilot Program, Rural Initiative, and Livability Initiative. To implement this effort in as many communities as possible, the funds will be used to support a clearinghouse, training, technical assistance, materials and partnerships—all developed intermodally. The initiative will be directed by the Department's Community Outreach Task Force, which has representation from all modes and is chaired by NHTSA.

ADVANCED AIR BAGS

Question. What is the status of your R&D to advance smart air bags? What are some of the remaining challenges and how does the fiscal year 2001 budget address them?

Answer. NHTSA recently completed near-term research and testing in support of the Final Rule to amend Federal Motor Vehicle Safety Standard (FMVSS) No. 208, "Occupant Crash Protection" to require advanced air bags. Full-vehicle crash tests were conducted with belted and unbelted mid-sized male and small female crash test dummies in different crash configurations, seating positions and impact speeds. Vehicles with advanced air bag technologies, such as dual stage inflators, advanced crash sensors, belt use sensors and seat position sensors were selected in the program. Air bag aggressivity tests were conducted with out-of-position small female driver dummies and child passenger dummies. NHTSA also completed a two-year cooperative agreement effort with a major air bag supplier studying dual stage air bag performance (both in terms of restraint potential and aggressivity to out-of-position occupants of various sizes). NHTSA also worked cooperatively with a vehicle manufacturer to test and evaluate pre-production prototype MY 2000 vehicles equipped with advanced air bag technologies. NHTSA continued another cooperative agreement working with a supplier on the development of a dynamic occupant sensing system for modulating air bag deployment. Additionally real world crash investigations are continually being collected and analyzed on redesigned air bag systems (model year 1998–2000 vehicles) and on air bag-related serious injury and fatality cases. High severity crashes in the National Automotive Sampling System were recently reviewed for cases where the air bag was determined to be the cause of the fatality or conversely, the air bag was not powered enough. Pediatric and small female injury research was continued, and assessment tools in predicting injury to out-of-position occupants were evaluated. NHTSA will be publishing its latest injury criteria formulations for the proposed family of dummies in the Final Rule on FMVSS No. 208.

The remaining challenges associated with smart air bag systems include the evaluation and development of production-ready occupant sensing systems. Research will continue to address the near-term development of pediatric and small female injury criteria associated with the intense and complex out-of-position air bag-vehicle occupant interaction. These efforts have as their goal the development of essential tools for the assessment of current and emerging air bag deployment systems. Additionally, research will continue on the development, performance, and monitoring of advanced air bag systems that build upon the technological solutions to air bag problems identified in the field experience, including those injuries resulting from aggressive air bag deployments (especially to children and occupants of short stature). Production vehicles with advanced safety systems will be evaluated and performance requirements established based on these systems. Such systems will include production multi-stage air bag inflators, air bag suppression technologies through occupant detection, seat position sensors, adjustable pedals, etc. Research will also continue on the development of improved air bag deployment timing through the use of anticipatory crash sensing technology. High speed (56 kmph) crash protection will continue to be evaluated for belted small female occupants in high severity crashes (and mid sized male occupant protection will be analyzed through NCAP performance testing). Also, research will include out-of-position occu-

pant tests (static and/or dynamic) to evaluate the performance of side air bags and other related systems, i.e., Inflatable Tubular Structure (ITS), deployable upper interior paddings, etc. During fiscal year 2001, over 400 advanced air bag and side air bag cases would be investigated. Research will continue to investigate, through its Special Crash Investigation program, approximately 200 motor vehicle crashes that qualify for NHTSA's Air Bag Investigations Program and non-air bag related vehicle safety problems.

ADVANCED AIR BAG FUNDING

Question. If this account were funded at \$10 million above the fiscal year 2000 level, how would you allocate the fundings? Please explain your allocation within the context of your performance goals and strategic plan.

Answer. Funding would be allocated as follows:

| Program area | Fiscal year 2000 level (\$k) (a) | Fiscal year 2000 level + \$10 M (\$k) (b) | Delta (\$k) (b - a) |
|---|----------------------------------|---|---------------------|
| Crashworthiness | 8,858 | 9,901 | 1,043 |
| NTBRC | 13,232 | 14,200 | 968 |
| Crash Avoid & Driver/Vehicle Perf | 2,948 | 8,050 | 5,102 |
| Heavy Vehicles | 1,892 | 2,200 | 308 |
| Fatality Analysis Reporting System | 5,213 | 5,500 | 287 |
| National Automotive Sampling System | 9,987 | 10,200 | 213 |
| Data Analysis Program | 1,924 | 2,800 | 876 |
| State Data Systems | 2,344 | 2,500 | 156 |
| Special Crash Investigation | 1,553 | 2,600 | 1,047 |
| Technology Transfer | 0 | 0 | 0 |
| PNGV | 0 | 0 | 0 |
| VRTC | 950 | 950 | 0 |
| Total, Research and Analysis | 48,901 | 58,901 | 10,000 |

Over the past 30 years, NHTSA has developed successful strategies in addressing fatalities and injuries through occupant protection and injury mitigation vehicle based countermeasures. However, easy gains in safety improvements have already been made and new approaches through collision avoidance, driving behavior, driving performance, and driver-vehicle interaction research as well as research into the use of advanced technologies to occupant protection and human injury research must be undertaken to achieve the performance goals set by the agency. Additionally, monitoring of real-world safety performance of vehicles must continue at an increased pace to keep up with the changing vehicle technologies.

Question. If this account were funded at \$8 million above the fiscal year 2000 level, how would you allocate the funding? Please explain your allocation within the context of your performance goals and strategic plan.

Answer. Funding would be allocated as follows:

| Program area | Fiscal year 2000 level (\$k) (a) | Fiscal year 2000 level + \$8 M (\$k) (b) | Delta (\$k) (b - a) |
|---|----------------------------------|--|---------------------|
| Crashworthiness | 8,858 | 9,401 | 543 |
| NTBRC | 13,232 | 13,700 | 468 |
| Crash Avoid & Driver/Vehicle Perf | 2,948 | 7,050 | 4,102 |
| Heavy Vehicles | 1,892 | 2,200 | 308 |
| Fatality Analysis Reporting System | 5,213 | 5,500 | 287 |
| National Automotive Sampling System | 9,987 | 10,200 | 213 |
| Data Analysis Program | 1,924 | 2,800 | 876 |
| State Data Systems | 2,344 | 2,500 | 156 |
| Special Crash Investigation | 1,553 | 2,600 | 1,047 |
| Technology Transfer | 0 | 0 | 0 |
| PNGV | 0 | 0 | 0 |
| VRTC | 950 | 950 | 0 |

| Program area | Fiscal year 2000 level (\$k) (a) | Fiscal year 2000 level + \$8 M (\$k) (b) | Delta (\$k) (b - a) |
|------------------------------------|----------------------------------|--|---------------------|
| Total, Research and Analysis | 48,901 | 56,901 | 8,000 |

Over the past 30 years, NHTSA has developed successful strategies in addressing fatalities and injuries through occupant protection and injury mitigation vehicle based countermeasures. However, easy gains in safety improvements have already been made and new approaches through collision avoidance, driving behavior, driving performance, and driver-vehicle interaction research as well as research into the use of advanced technologies to occupant protection and human injury research must be undertaken to achieve the performance goals set by the agency. Additionally, monitoring of real-world safety performance of vehicles must continue at an increased pace to keep up with the changing vehicle technologies.

NATIONAL ADVANCED DRIVING SIMULATOR (NADS)

Question. Please delineate funding requests, by project, for operation of the NADS.

Answer. The following human factors research projects are being planned on the NADS. They will be conducted utilizing up to \$5 million of the fiscal year 2001 budget request. The detailed spending plan will be determined only after the final appropriation of the funds.

- Relationship between Blood Alcohol Concentration (BAC) and driver performance under demanding driving situations
- Driver Distraction due to advanced in-vehicle communications systems
- Identification of driver cues in rollover crashes

DRIVER DISTRACTIONS

Question. Please discuss the scope, nature, and anticipated funding amount for research regarding driver distractions.

Answer. NHTSA's program of research on driving distraction is a coordinated effort involving the total human factors research spectrum for which a total of up to \$7 million may be allocated. To address concerns on the level of driver distraction caused by advanced information and communication systems, the Office of Human Centered Research will conduct research using the National Advanced Driving Simulator (NADS). Initial efforts will focus on: (1) the relative safety of using various types of wireless devices (e.g., cell phones) including hand-held, hands-free and voice activated systems in vehicles, and (2) the level of driver distraction from more complex information systems, including navigation, e-mail and general Internet access.

This effort will develop design guidelines that will assist vehicle designers in successfully integrating communication services and will synthesize the results for major in-vehicle systems to ensure that drivers can safely and effectively process inputs from multiple information sources. The NADS will be used to identify knowledge gaps and to help determine the optimal manner of organizing and presenting in-vehicle information to drivers and preferable control/display characteristics. Integration of information for the driver will include such areas as message priority, multiple sensory channels, and modes of driver-information integration.

NATIONAL TRANSPORTATION BIOMECHANICS RESEARCH CENTER (NTBRC)

Question. With respect to the medical institutions, hospitals, trauma centers, and universities that are under contract to NHTSA in support of the biomechanics program, what is the nature of research and level of funding at each of them?

Answer. The following lists the medical institutions, hospitals, trauma centers, and universities supporting the NHTSA's biomechanics program, the nature of the research they are providing, and their individual fiscal year 2000 levels of funding:

- Children's National Medical Center (Washington, DC): \$400,000—Crash Injury Research and Engineering Network (CIREN) participant with emphasis on pediatric injuries.
- Duke University: \$300,000—Experimental investigations quantifying mechanisms of injury to cervical spine.
- Harborview Hospital (Seattle, WA): \$400,000—CIREN participant with emphasis on pediatric injuries.
- Johns Hopkins University/Applied Physics Laboratory (Baltimore, MD):—\$140,000—Experimental and analytical investigations of mechanisms of injury to lower body.

- Lehman Research Center/University of Miami (Miami, FA): \$400,000—CIREN participant with emphasis on thoracic injuries.
- Medical College of Wisconsin: \$500,000—Experimental investigations quantifying mechanisms of injury in side impact, cervical spine injuries, and lower extremity injuries.
- National Study Center for Trauma and Emergency Medical Services (Baltimore, MD): \$400,000—CIREN participant with emphasis on orthopaedic injuries.
- Ohio State University (Columbus, OH): \$200,000—Experimental biomechanics quantifying mechanisms of injury in side impact crashes.
- San Diego County Trauma System (San Diego, CA): \$400,000—CIREN participant with emphasis on regional EMS issues.
- University of Medicine and Dentistry (Newark, NJ): \$400,000—CIREN participant with emphasis on frontal and side impact crashes.
- University of Alabama (Birmingham, AB): \$1,250,000—Experimental biomechanics investigating mechanisms of injury to the brain, pelvis, and lower extremities. (also Mercedes funded CIREN participant).
- University of Virginia (Charlottesville, VA): \$1,051,000—Experimental biomechanics investigating mechanisms of injury to the thorax and lower extremities in frontal crashes, thoracic and abdominal injuries resulting in out-of-position situations, and evaluation of advanced test dummy components.
- University of Michigan (Ann Arbor, MI): \$140,000—Experimental biomechanics efforts investigating mechanisms of injury to thorax, lower extremities, and the pelvis. \$400,000—CIREN participant with emphasis on trauma and burns.
- University of Washington (Seattle, WA): \$138,000—Experimental investigations quantifying injury mechanisms to the pediatric cervical spine.
- Veterans Administration Medical Center (Milwaukee, WI): \$200,000 from previous fiscal year—Experimental investigations quantifying injury mechanisms to the pediatric and adult cervical spine.
- U.S. Army Medical Research Command: \$700,000—Development of advanced head/brain and torso injury criteria, assessment of motorcycle helmet performance, research in airbag noise-related ear injuries, and quantifying airbag-occupant interaction when in close proximity.

Question. Congress has urged NHTSA to redouble its efforts to obtain cost-sharing with other organizations which benefit from the national center. What progress has been made?

Answer. The National Transportation Biomechanics Research Center (NTBRC) has entered into a long term Cooperative Agreement with the Daimler Chrysler Corporation to fund a new Crash Injury Research and Engineering Network (CIREN) center at the University of Alabama at Birmingham Medical Center. The center is being funded by Daimler Chrysler at \$500 thousand per year for two years with options for renewal for an additional three years. The NTBRC is also in the final stages of negotiation with a major domestic auto company to fund another CIREN center in Virginia. Additionally, the NTBRC has employed “Cooperative Agreements” as its main contractual mechanism with its university-based research organizations whereby they contribute a negotiated additional portion of support, in kind, to the total research effort, either in the form of enhanced facilities, additional equipment, and/or more staff time.

Other significant cost-sharing opportunities have been created by the NTBRC’s world-wide cooperative efforts to have interested parties evaluate the performance of NHTSA’s new advanced frontal dummy, THOR. By offering use of the physical device along with technical support, more than 16 research organizations, from both other governments and the automotive industry, have extensively tested this device and shared their test results and analyses with the NTBRC. This has offered the participants the opportunity to preview and gain experience with NHTSA’s newly developed testing technologies as well as providing the NTBRC the equivalent of more than \$2 million worth of testing effort without charge.

NHTSA has also had other agencies, such as the Federal Railroad Administration and the Federal Aviation Administration, using the agency’s dummies for evaluation of occupant protection in rail and airline transportation.

CIREN CENTERS

Question. How much funding was provided to each of the CIREN centers in fiscal year 1999 and fiscal year 2000? What is the budget request for each of the CIREN centers for fiscal year 2001?

Answer. The funding and budget request follow:

| CIREN Center | Fiscal year 1999 | Fiscal year 2000 | Fiscal year 2001 |
|---|------------------|------------------|------------------------|
| Lehman Research Center/University of Miami | \$425,000 | \$400,000 | ¹ \$500,000 |
| University of Medicine and Dentistry | 425,000 | 400,000 | ¹ 500,000 |
| National Study Center for Trauma and Emergency Medical Services | 425,0090 | 400,000 | ¹ 500,000 |
| Children's National Medical Center | 425,000 | 400,000 | ¹ 500,000 |
| Harborview Hospital: | | | |
| General Motors ² | 150,000 | 0 | 0 |
| Federal | 133,000 | 400,000 | ¹ 500,000 |
| University of Michigan: | | | |
| General Motors ² | 150,000 | 0 | 0 |
| Federal | 133,000 | 400,000 | 500,000 |
| San Diego County Trauma System: | | | |
| General Motors ² | 150,000 | 0 | 0 |
| Federal | 133,000 | 400,000 | 500,000 |
| University of Alabama: Mercedes ³ | 500,000 | 500,000 | 500,000 |
| New CIREN Center | 0 | 0 | ¹ 500,000 |
| Total | 3,049,000 | 3,300,000 | 4,500,000 |

¹ Pending fiscal year 2001 Authorization, requested increase will enable centers to collect and analyze additional biomechanics measurements for CIREN.

² General Motors Funded CIREN Center.

³ Mercedes Funded CIREN Center.

INTELLIGENT VEHICLE INITIATIVE (IVI)

Question. Please break out in detail by project or activity how NHTSA proposes to use the \$30,000,000 requested for the IVI program and compare that to spending in the area in fiscal year 2000.

Answer. Please see the table below. This table includes all IVI projects funded by the DOT Intelligent Transportation System's (ITS) Joint Program Office; those that involve NHTSA, as well as those that do not. NHTSA staff will serve as contract technical representatives on several light vehicle research projects, however only about \$7 million of these funds will be obligated for ongoing research projects through NHTSA's Office of Contracts and Procurement.

| Activity/project | Fiscal year 2000 | Fiscal year 2001 |
|--|------------------|------------------------|
| 1. Generation 0 Operational Tests and Evaluations | \$5,500,000 | \$4,600,000 |
| 2. Generation 1 Rear-End Collision Avoidance System Field Test and Evaluation | 4,250,000 | ¹ 4,500,000 |
| 3. Generation 1 Rear-End Collision Avoidance Systems Research | 1,400,000 | ² 700,000 |
| 4. Generation 1 Lane Change/Merge Collision Avoidance Systems Research | 850,000 | 1,900,000 |
| 5. Generation 1 Road Departure Crash Avoidance Systems Research | 2,250,000 | 1,000,000 |
| 6. Generation 1 Safety Impacting Systems Research | 335,000 | (³) |
| 7. Generation 1 Electronic Braking Systems for Commercial Vehicles | 250,000 | 0 |
| 8. Generation 1 Commercial Vehicle Stability System Field Test and Evaluation | 0 | 1,000,000 |
| 9. Generation 1 Drowsy Driver System Field Test and Evaluation | 1,000,000 | 1,500,000 |
| 10. Generation 1 Pedestrian Safety Systems Research | 0 | 600,000 |
| 11. Enabling Research for Multiple Systems Integration | 940,000 | ⁴ 500,000 |
| 12. Enabling Research for Forward Collision Warning | 500,000 | (⁵) |
| 13. Enabling Research on Driver Workload Metrics | 600,000 | 500,000 |
| 14. Enabling Research on Enhanced Digital Maps | 1,500,000 | (⁶) |
| 15. Enabling Research on Transit Rear-End Collision Avoidance Systems .. | 550,000 | 0 |
| 16. Transit Rear-End Collision Avoidance Systems Field Test and Evaluation | 0 | 1,500,000 |
| 17. Cross Cutting Human Factors Research into Information Systems, Societal and Institutional Issues, and Cost Benefit Methodology | 425,000 | 600,000 |
| 18. Generation 2 Rear-End Collision Avoidance Systems Research | 0 | 700,000 |
| 19. Generation 2 Road Departure Crash Avoidance Systems Research | 0 | 1,000,000 |

| Activity/project | Fiscal year 2000 | Fiscal year 2001 |
|--|-------------------|------------------------|
| 20. Driver Vision Enhancement Research | (⁷) | ⁴ 250,000 |
| 21. Intersection Collision Avoidance Systems Research | 800,000 | ⁸ 2,000,000 |
| 22. Generation 2 Cross Cutting Research on Sensor Friendly Roadway, Short Range Communication, Radio Navigation, and Cooperative Sys- tem Requirements | 500,000 | 1,000,000 |
| 23. Generation 2 Commercial Vehicle Stability Systems Research | 0 | 700,000 |
| 24. Program Support | 1,351,000 | ⁹ 2,450,000 |
| Total Budget Request | 23,001,000 | 30,000,000 |

¹ NHTSA—GM Project under Cooperative Agreement.

² NHTSA—Naturalistic Driving Data Collection.

³ Continued under (11) below.

⁴ NHTSA Project.

⁵ Continued under (3) above.

⁶ Continued under (3)–(5) above.

⁷ Continued under (6) above.

⁸ NHTSA Project for Data Collection—\$550K.

⁹ NHTSA Project for Data Collection—\$400k.

Notes:

—Generation 0 will assess the technical performance, determine user acceptance, and measure the benefits of driver assistance systems that are expected to enter production preparation by 2003.

—Generation 1 is expected to address systems with more advanced capabilities than Generation 0, higher levels of integration and increased infrastructure cooperation, and focus mainly on driver warning and assistance systems.

—Generation 2 is expected to build on the accomplishments of Generation 1, especially with a greatly increased role of infrastructure-vehicle cooperation.

CRASH OUTCOME DATA EVALUATION SYSTEM (CODES)

Question. Please update your answer from last year's hearing record regarding how NHTSA has conducted work beyond the CODES project in the areas of injury assessment, costs, and relationships to the use of seat belts, air bags, and other engineering enhancements.

Answer. In fiscal year 2000, NHTSA funded four new CODES states—Arizona, Delaware, Minnesota, and Tennessee—to continue the implementation of Crash Outcome Data Evaluation Systems (CODES) and the development of state-specific applications for the CODES linked data. These four states plan to focus on safety belt and roadway issues by comparing injury severity and average hospital inpatient charges for restrained and unrestrained victims of motor vehicle crashes. Arizona plans to evaluate belt effectiveness in terms of sex and age group, geographic location, type of road and driver characteristics. Delaware wants the linked data to support primary belt legislation and identify costs and injuries suffered by children involved in motor vehicle crashes. Minnesota will partner with the surrounding CODES states (Iowa, North Dakota, South Dakota and Wisconsin) to identify the public's share of the costs associated with non-use of safety belts. Tennessee proposes to determine the relationship between the driver, vehicle, roadway and crash characteristics and to use this information to support law enforcement, EMS, roadway engineering and other prevention efforts. Also, in fiscal year 2000, NHTSA has published "Standardizing Reporting Using CODES" which presents management formats for reporting medical and financial outcome information related to the use of seat belts, air bags, and other engineering enhancements. In addition, ten existing CODES states will be funded by NHTSA during May 2000 to develop a CODES Data Network. Through this network, NHTSA and the Data Network states will collaboratively evaluate crash injury costs and outcome by payer source, air bag location, lateral impact crashes for vehicles of a particular size and weight, injury type including lower extremity injuries and injury patterns for the most recent five year period. As the Data Network expands with the addition of more linked data from both existing and new Data Network states, the range of research opportunities for NHTSA analysts and the state CODES experts also will expand.

Question. How is this different from the Section 411 grant program?

Answer. The Section 411 grant program provides three levels of funding to states to organize a Traffic Records Coordinating Committee (TRCC), develop a plan and then implement the plan for developing or improving their traffic records. CODES, in comparison, does not fund the development of traffic records data systems. Instead, it adds value to existing traffic safety data by linking them to medical and financial outcome information related to motor vehicle crashes. Data quality problems which are identified during the linkage process can be forwarded to the respec-

tive data owners. This feedback information, available to the states which have implemented CODES, is useful to the TRCC to target those areas that need the most resources. In turn, CODES benefits when the quality of the data files being linked improves.

AUTOMATIC CRASH NOTIFICATION (ACN)

Question. Your agency is requesting funding for automatic crash notification (ACN) in several different programs. Please provide a table that lists each request for ACN, the amount requested, and a description of each item.

Answer. The table below provides the requested information. This research will address the final issues to fine tune capabilities demonstrated in a recent field operational test of ACN by NHTSA, and should facilitate the deployment of this type of system.

| Budget Request | Funds Re- quested | Description |
|---|----------------------|--|
| Special Crash Investigations of ACN vehicles. | \$300,000 | The Special Crash Investigations Program will team with an industry partner (e.g., General Motors) to perform 10 or more in-depth investigations for crashes involving vehicles with a current ACN-like system such as OnStar. This knowledge will help inform development of evaluation criteria for triage procedures for injured occupants. |
| Injury Prediction Algorithms. | 150,000 | This research will lead to advanced injury prediction algorithms so that more detailed and appropriate warnings can be automatically sent to EMS dispatch centers by advanced ACN systems. |
| Advanced Technologies for ACN Communication. | 376,893 | This research will explore transmission alternatives and develop institutional requirements to enhance the readiness of the 911 community to receive and process automatic crash notification transmissions from vehicles. |

AUTHORIZED FULL TIME POSITIONS (FTP'S) AND ON-BOARD STRENGTH

Question. Please provide a table that compares, by office, authorized full time employees to actual filled positions.

Answer. The following table compares the authorized full time positions to on-board full time positions by office as of February 29, 2000.

AUTHORIZED FTP'S AND ON-BOARD STRENGTH BY OFFICE

| | Authorized FTP | Actual FTP |
|---|----------------|------------|
| Safety Performance Standards | 69 | 58 |
| Safety Assurance | 97 | 92 |
| Traffic Safety | 203 | 194 |
| Research and Development | 124 | 103 |
| Office of the Administrator and Staff Offices | 60 | 56 |
| General Administration | 111 | 103 |
| Totals | 664 | 606 |

NHTSA ON-SITE CONTRACT EMPLOYEES

Question. During the last three years, how many outside employees are under contract with NHTSA? How much was spent on contract employees in each year? How much is estimated to be allocated in fiscal year 2001?

Answer. Listed below is the information requested for NHTSA contractor employees working on-site in the Nassif Building.

(In million of dollars)

| Fiscal year | No. Contractor employees | Expended | Expended/pro- jected | Planned alloca- tion |
|-------------|--------------------------|----------|-------------------------|-------------------------|
| 1998 | 117 | \$8.28 | | |
| 1999 | 127 | 11.89 | | |
| 2000 | 116 | | \$11.48 | |
| 2001 | 108 | | | \$11.98 |

ADMINISTRATIVE EXPENSES

Question. For fiscal year 1999, fiscal year 2000, and planned for fiscal year 2001, please provide a table similar to that provided previously to the Committee, showing the amount of funds spent or allocated for non-mandatory awards and bonuses, PCS, overtime pay, travel and training.

Answer. The following is a table showing the costs for awards and bonuses, PCS, overtime pay, travel and training:

[Dollars in thousands]

| | Fiscal year 1999 actual | Fiscal year 2000 enacted | Fiscal year 2001 request |
|--------------------------|----------------------------|-----------------------------|-----------------------------|
| Awards and Bonuses | \$707 | \$761 | \$820 |
| PCS | 87 | 87 | 87 |
| Overtime Pay | 131 | 200 | 215 |
| Travel | 1,141 | 1,155 | 1,777 |
| Training | 207 | 216 | 219 |

HIGHWAY SAFETY DATA SYSTEMS AND TRAFFIC RECORDS GRANTS (SECTION 411)

Question. Please describe how the Highway Safety Data Systems and Traffic Records Grant Program is being implemented. How are the states using the funds received.

Answer. By January 15 of each year, states can submit an application for a Highway Safety Data Systems and Traffic Records grant. A state that applies for a grant for the first time has three options for which it may apply: (1) an implementation grant, which requires that the state have in place a traffic records coordinating committee, an assessment or audit of its traffic records system that was conducted or updated within the past five years, and a strategic plan for effecting traffic records system improvements; (2) an initiation grant, that also requires an in place traffic records coordinating committee and an audit or assessment within the past five years, but only requires that development of a strategic plan has begun; or, (3) a start up grant, that requires the state to certify that it does not meet the criteria for either an implementation or an initiation grant. In fiscal year 2000—the second year of this program—NHTSA awarded 46 grants totaling \$7.6 million to 42 states, Puerto Rico, American Samoa, Guam, and Northern Marianas. Initiation grants (\$96,480 each) were awarded to 5 states and implementation grants (\$173,600) to 37 states, Puerto Rico, and the three territories. All states that applied received funding.

A state that has previously received only a start up grant may apply for either an initiation or an implementation grant in a subsequent year, under the same criteria listed above. A state that has previously received either an initiation or an implementation grant may apply for a subsequent year grant, provided that its traffic records coordinating committee continues to be in operation and continues to oversee implementation of the strategic plan. States receiving any grant funds are required to certify that the funds will be used only to adopt and implement an effective highway safety data and traffic records program, in accordance with 23 CFR 1335.10(b). A team of agency subject matter experts reviews all applications from the states and determines compliance with the grant criteria.

The following table indicates how the states are using the funds received.

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS

| State | Grant amount | How state is using grant funds |
|---------------|--------------|--|
| Alabama | \$173,600 | Traffic Records Assessment, update strategic plan, implement state-wide electronic submission of traffic citations. |
| Alaska | 173,600 | Implement strategic traffic records plan develop an upgraded crash report, develop health system and crash data linkages and improve traffic records database interface. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|-------------------|--------------|--|
| Arizona | 173,600 | Develop a simplified and timely system for data users to retrieve crash data from traffic data systems and improve the compatibility between the two systems, research the development of a statewide citation tracking system, and support and/or provide access to technology to local police agencies that will improve electronic transfer of traffic data and increase on site data gathering. |
| Arkansas | 173,600 | Improve timeliness and efficiency of the data entry process for crash reports. |
| California | 173,600 | Implemented Department of Motor Vehicles (DMV) Automation of Rural Courts Project that provided automation hardware and software technology to input, send and retrieve traffic conviction and other data electronically, develop a laptop computer system for completing crash reports at crash sites to facilitate the direct entry of data into the crash file, and equip and train Highway Patrol with evidential quality pre-arrest breath testing devices to improve upon the alcohol detection at crash sites and in traffic stops. |
| Colorado | 173,600 | Complete a software upgrades for remote data entry of crash report data, and initiating development of probability matching of crash data and hospital data. |
| Connecticut | 173,600 | Complete a Traffic Records Assessment, update the Traffic Records Strategic Plan, complete an automated crash report form and report analysis package for use by State and local police departments, purchase new software to store the State crash file, develop an electronic ticketing system, complete development of GIS mapping capability, continue development of a data warehouse, and to improve user accessibility to Crash Outcome Data Evaluation System (CODES). |
| Delaware | 173,600 | Create an Emergency Medical System (EMS) data network, develop an automated Crash Reporting System, and create a GIS Crash Database. |
| Florida | 173,600 | Implement regional data centers, revise crash report instruction manual, crash report training. |
| Georgia | 173,600 | Automate crash reporting system, survey & software. |
| Hawaii | 173,600 | Develop file linkage, training for local police departments in crash reporting and alcohol screening devices, and develop electronic data transfer system. |
| Idaho | 96,480 | Develop a strategic traffic records plan. |
| Illinois | 96,480 | Develop a traffic records strategic improvement plan. |
| Indiana | 173,600 | Hire committee coordinator, improve crash data access, pilot test new crash location system. |
| Iowa | 173,600 | Capture of crash reports electronically, review crash report data, technology transfer, emergency response information and mapping. |
| Kentucky | 173,600 | Crash Project Phase IV—Develop, purchase Scanners. |
| Louisiana | 173,600 | Implement data entry, electronic data transfer, networking, and document imaging for crash reports and traffic records in State, parish, and local communities. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|----------------------|--------------|---|
| Maine | 173,600 | Pilot test an automated crash report form, provide training to state and local police, develop a new crash reporting data base with GIS capabilities capable of receiving crash reports electronically, coordinate Strategic Planning among state agencies, and design a statewide system architecture for integrated traffic records files. |
| Maryland | 173,600 | Support a Data Analysis Evaluation Coordinator, improve state crash form, expand scope and use of GIS, and implement statewide training. |
| Massachusetts | 173,600 | Update the traffic records assessment and the traffic records strategic plan. Activity continues to improve the quality of CODES data files and to update the state crash report form to comply with MMUCC (Model Minimum Uniform Crash Criteria). |
| Michigan | 173,600 | Develop an internet access query system. |
| Minnesota | 173,600 | Link two commercial vehicle crash systems, revise crash report form, improve data collection. |
| Mississippi | 173,600 | Software/Hardware for crash & citation data collection, data linkage for state CODES study, revision of crash report. |
| Missouri | 173,600 | STARS (Statewide Traffic Accident Reporting System) Data Base, conduct annual conference & workshop, Data Base Evaluation and Consultation. |
| Nebraska | 173,600 | Crash file linkage, revise report for electronic transfer, update existing traffic records files. |
| Nevada | 173,600 | Form an interagency subcommittee of the Traffic Records Committee to develop a 2001 legislative proposal to gain support and funding to implement an updated traffic records system, implement Traffic Accident System Planning and Design Project, and to promote a statewide traffic records conference. |
| New Hampshire | 173,600 | Purchase notebook PCs to complete crash reports in the field, revise crash report form to be in compliance with MMUCC, and to develop crash reporting software which can electronically capture driver license/vehicle registration data and Global Positioning System (GPS) location data. |
| New York | 173,600 | Accident information system upgrade. This project would allow direct electronic transfer of crash information from investigation agency to the state DMV file. Another project is scheduled to upgrade the ticket file. This upgrade would establish a ticket file electronically on a client server data base and would allow the courts to data-enter ticket disposition information electronically to a data base. |
| North Carolina | 173,600 | Development of a new crash reporting form, pilot test for electronic citation in one State Patrol District, and development of system to retrieve data via Internet. |
| North Dakota | 96,480 | Development of traffic records strategic plan. |
| Ohio | 173,600 | Complete interactive Internet web site, capture and image a redesign crash report form. |
| Oklahoma | 173,600 | Update traffic records strategic plan, address customer/client access to data bases. |
| Oregon | 173,600 | Linking health and crash data, DOT crash data retrieval and analysis, crash location upgrade and a Division of Motor Vehicles driver and vehicle files upgrade. |
| Pennsylvania | 173,600 | Conduct a series of regional traffic records symposiums to help determine and refine the information needs of the users/customers. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|-------------------------|--------------|---|
| Rhode Island | 173,600 | Complete successful electronic transfer of crash reports from state and local police agencies to a central repository at DOT. All 39 cities and towns will be on line by September, 2000. State crash file will have capability to reference intersection locations and GIS mapping. Mobile data capture and transfer capability from police cruiser laptops will also exist. "Canned" and ad hoc report capability will be available from state crash file. RI will be the first state in the nation with 100 percent of all police agencies participating in electronic transfer of crash data to a central repository. |
| South Carolina | 173,600 | Design/implement an upgraded statewide traffic records system with linked citation and crash data. |
| Tennessee | 173,600 | Improve state crash reporting equipment, establish data collection in local law enforcement. |
| Vermont | 173,600 | Redesign the uniform crash report to be in compliance with MMUCC, develop software for a new crash data storage system which can interface with law enforcement telecommunications systems, pilot test electronic capture of EMS run data, develop software for electronic transfer of data to a central repository at the Department of Transportation, and to provide for Traffic Records System program management capabilities. |
| Virginia | 173,600 | Support statewide coordination, perform equipment and inventory assessments, develop communication standards, and develop a training package. |
| Washington | 173,600 | Upgrade emergency Medical Services trauma registry, develop a collision reporting system with Wisconsin DOT, a traffic records awareness campaign and a collision analysis reporting system with the Washington State Patrol. |
| West Virginia | 96,480 | Support statewide coordination and strategic planning development. |
| Wisconsin | 96,480 | Develop a traffic records strategic improvement plan. |
| Puerto Rico | 173,600 | Contract data processing of Police Accident Report form, pilot test pen based system to improve data collection and the use of Global Positioning System to improve data related to location of crashes. |
| American Samoa | 173,600 | Develop a 24/7 network link, obtain computer workstation for police dispatch and e substations, and develop pen based citation system and citation form. |
| Guam | 173,600 | Obtain manpower to input crash data, develop pilot project for a pen based citation entry system, and purchase computer system for Traffic Engineering Section. |
| Northern Marianas | 173,600 | Improve driver file system by eliminating double typing of license data and exploring adding a bar code/magnetic strip to driver licenses, provide computers and software for EMS database and connect the driver and EMS files to their main crash reporting system. |
| Total | 7,600,000 | |

Question. How are you overseeing the use of those funds by the states? What technical assistance is NHTSA providing to the states?

Answer. States applying for Highway Safety Data Systems and Traffic Records grants must certify that the funds will be used only to adopt and implement an effective highway safety data and traffic records program. After grant award, a state must document for NHTSA how it plans to use these funds, as part of the its comprehensive Highway Safety Plan. Then, NHTSA's regional staff work with the states

on a regular basis to provide oversight and technical assistance in implementation of the states' highway safety plan. Also, prior to receipt of a subsequent data grant, a state must document progress made in improving highway safety data systems and traffic records since the previous submission of a grant application, specifically including an accounting of how previous grant funds were used. NHTSA's technical assistance efforts include offering the services of regional data analysis contractors. In addition, at a state's request, NHTSA facilitates the conduct of an independent assessment of a state's traffic records system by experts from across the nation.

HIGHWAY TRAFFIC SAFETY GRANT ADMINISTRATION

Question. Please break out how the administrative takedown funds were used for each of the grant programs for fiscal year 1999 and fiscal year 2000.

Answer. The following table represents how the administrative draw down funds were used in fiscal year 1999 and fiscal year 2000:

GRANT ADMINISTRATION

[In thousands of dollars]

| | Fiscal year 1999 actuals | Fiscal year 2000 enacted |
|-----------------------------|-----------------------------|-----------------------------|
| Salaries and Benefits | 6,736 | 7,500 |
| Travel | 334 | 336 |
| Operating Expenses | 506 | 815 |
| Contract Program | 1,562 | 1,689 |
| Total | 9,138 | 10,340 |

Question. How do you propose to use the takedown funds for your grant programs in fiscal year 2001?

Answer. The following is NHTSA's proposed used of the draw down from the grant programs in fiscal year 2001:

Fiscal year 2001 grant administration

[In thousands of dollars]

| | |
|-----------------------------|--------------|
| Salaries and Benefits | 8,207 |
| Travel | 421 |
| Operating Expenses | 815 |
| Contract Program | 555 |
| Total | 9,998 |

CONTRACTS MANAGED OR OVERSEEN BY STATE AND COMMUNITY SERVICES

Question. Please list the amount, nature, and benefits obtained from each contract managed or overseen by regional operations during fiscal year 1999 and thus far during fiscal year 2000.

Answer. The following table lists the amount, nature, and benefits obtained from each contract managed or overseen by the Office of State and Community Services (formerly the Office of Regional Operations) during fiscal year 1999 and thus far during fiscal year 2000.

CONTRACTS MANAGED OR OVERSEEN BY STATE AND COMMUNITY SERVICES DURING FISCAL YEAR 1999 & 2000

| Nature | Contract amount | | Benefits |
|--|------------------------|------------------------|---|
| | Fiscal year 1999 funds | Fiscal year 2000 funds | |
| Data Analysis and Evaluation Support—NHTSA Region I | \$49,006 | \$50,000 | These contracts provide the services of statisticians and data analysis experts who assist the states in setting goals and performance measures, designing and analyzing the results of seat belt observational surveys, implementing Crash Outcome Data Evaluation Systems, evaluating key projects, updating strategic plans for traffic records and data systems improvements and in carrying out other analytic services appropriate to the states' highway traffic safety missions. A key component of both the Presidential Initiative for Increasing Seat Belt Use Nationwide and the DOT initiative to reduce alcohol-related deaths and injuries is high visibility law enforcement. The Regional Law Enforcement Liaisons provide comprehensive technical assistance to state, county, and local law enforcement agencies within the Region. The Liaisons market and coordinate law enforcement activities for these efforts. The Traffic Safety Digest is a publication that highlights successful traffic safety programs that are being implemented around the country. It is distributed to over 3,000 traffic safety advocates on a quarterly basis. The Traffic Safety Digest allows traffic safety advocates to become aware of projects that are taking place nationwide and presents them with ideas that can be replicated. This internship allows minority students the opportunity to study and gain hands-on experience in the field of traffic safety and other related areas. |
| Data Analysis and Evaluation Support—NHTSA Region II | (1) | 0 | |
| Data Analysis and Evaluation Support—NHTSA Region III | 50,038 | (1) | |
| Data Analysis and Evaluation Support—NHTSA Region IV | 50,000 | (2) | |
| Data Analysis and Evaluation Support—NHTSA Region V | (1) | (2) | |
| Data Analysis and Evaluation Support—NHTSA Region VI | 50,000 | (2) | |
| Data Analysis and Evaluation Support—NHTSA Region VII | (1) | (2) | |
| Data Analysis and Evaluation Support—NHTSA Region VIII | 47,436 | (2) | |
| Data Analysis and Evaluation Support—NHTSA Region IX & X | 90,100 | 90,048 | |
| Law Enforcement Liaison—Region III | 56,000 | (2) | |
| Law Enforcement Liaison—Region V | 27,500 | (2) | |
| Law Enforcement Liaison—Region VI | 0 | (2) | |
| Law Enforcement Liaison—Region VII | 0 | 75,000 | |
| Law Enforcement Liaison—Region VIII | 63,540 | 65,220 | |
| Law Enforcement Liaison—Region IX | 33,050 | (2) | |
| Law Enforcement Liaison—Region X | 0 | 72,952 | |
| Traffic Safety Digest | 85,000 | (2) | |
| Region I Internship Co-op with Boston University | 121,000 | (2) | |
| Region IV Internship Co-op with Clark Atlanta University | 21,000 | (2) | |
| Region V Internship Co-op with Chicago State University | 21,000 | (2) | |

| | | | |
|--|------------------|------------------|---|
| Media Support Contract—Region I | 35,000 | 35,000 | The purpose of the media support contract is to provide services for the Regional Offices and their states to promote the goals of the Buckle Up America Campaign, You Drink and Drive. You Lose. Campaign, and highway safety educational programs in general. Through the technical assistance of experienced media consultants, NHTSA's critical highway safety messages can be effectively communicated to the public and policy makers. |
| Media Support Contract—Region II | 35,000 | 33,325 | |
| Media Support Contract—Region III | 35,000 | 33,740 | |
| Media Support Contract—Region IV | 35,000 | 35,000 | |
| Media Support Contract—Region V | (¹) | (²) | |
| Media Support Contract—Region VI | 35,000 | 34,000 | |
| Media Support Contract—Region VII | 35,000 | 29,127 | |
| Media Support Contract—Region VIII | 35,000 | 35,000 | |
| Media Support Contract—Region IX | 60,000 | 32,000 | |
| Media Support Contract—Region X | 35,000 | 0 | |
| Highway Safety Training Services | 1,555,000 | 787,647 | The contract provides for a comprehensive package of highway safety training services from the Transportation Safety Institute. The training curricula is developed to assist the highway safety community in all aspects of highway safety program administration and implementation. |
| Computer Support Services | 25,000 | 80,000 | The contract provides the ten NHTSA regional offices with onsite computer service for both hardware and software on an "as needed" basis. |
| Injury Control Cooperative Agreement—Region I | 35,000 | (²) | NHTSA's Regional Offices are using injury control cooperative agreements to promote collaboration among State Highway Safety Offices, medical and public health professionals (including HMO's and health plan associations), law enforcement, insurance, business groups and non-traditional partners in an effort to promote traffic safety initiatives. Injury control contractors are helping to expand Safe and Livable Communities and promote Buckle Up America and the agency's impaired driving prevention programs. |
| Injury Control Cooperative Agreement—Region II | 35,000 | (²) | |
| Injury Control Cooperative Agreement—Region III | 35,000 | 0 | |
| Injury Control Cooperative Agreement—Region IV | 35,000 | (²) | |
| Injury Control Cooperative Agreement—Region V | 30,000 | (²) | |
| Injury Control Cooperative Agreement—Region VII | 5,000 | (²) | |
| Injury Control Cooperative Agreement—Region VIII | 35,000 | (²) | |
| Injury Control Cooperative Agreement—Region IX | 35,000 | (³) | |
| Injury Control Cooperative Agreement—Region X | 35,000 | (²) | |
| | 35,000 | 35,000 | |

CONTRACTS MANAGED OR OVERSEEN BY STATE AND COMMUNITY SERVICES DURING FISCAL YEAR 1999 & 2000—Continued

| Nature | Contract amount | | Benefits |

¹ Continued with prior year funds.

² TBD.

³ No contractor.

⁴ No funds expended in fiscal year 1999.

HIGHWAY TRAFFIC SAFETY GRANTS FUNDING

Question. How many states are receiving Section 410 grant funds from fiscal year 2000 appropriations? Please indicate how much funding was provided to each state and how each state spent the grant money. Please provide similar tables for the other NHTSA administered grant programs.

Answer. No state has received Section 410 Alcohol Incentive Grant funds from fiscal year 2000 appropriations yet. The applications for these funds are not due until August 1, 2000. Similarly, no fiscal year 2000 funds have been awarded yet under the Section 163 .08 BAC Law Incentive Grant program and the Section 405 Occupant Protection Incentive Grant program, since applications are due July 15 and August 1, respectively.

The NHTSA administered grant programs which have already awarded fiscal year 2000 grant funds are (1) the Section 402 State and Community Highway Safety formula grant program, (2) the Section 157 Seat Belt Use Incentive Grant program, (3) the Section 2003(b) Child Passenger Protection Education Grant program, and (4) the Section 411 State Highway Safety Data Improvement Grant program. The following four tables provide information on how much fiscal year 2000 funding was provided to each state and how each state is spending the grant money under each of these programs.

FISCAL YEAR 2000 SECTION 402 STATE AND COMMUNITY HIGHWAY SAFETY FORMULA GRANT FUNDING

| State | Grant amount | How state is using grant funds |
|-------------------|--------------|--|
| Alabama | \$2,516,007 | \$184K Planning & Administration, \$592K Alcohol programs, \$425K Emergency Medical Services, \$252K Occupant Protection, \$146K Police Traffic Services, \$912K Community Traffic Safety Project, \$5K Railroad/Highway Crossings. |
| Alaska | 725,800 | \$67K Planning & Administration, \$132K Alcohol Programs, \$9K Emergency Medical Services, \$101K Occupant Protection, \$52K Pedestrian Safety, \$238K Police Traffic Services, \$63K Traffic Records, \$63K Safe Communities. |
| Arizona | 2,030,069 | \$203K Planning & Administration, \$1,052K Alcohol programs, \$90K Emergency Medical Services, \$104K Occupant Protection, \$14K Pedestrian Safety, \$372K Police Traffic Services, \$30K Traffic Records, \$48K Alcohol programs, \$2K School Bus Safety, \$45K Safe Communities, \$70K Roadway Safety. |
| Arkansas | 1,818,023 | \$122K Planning & Administration, \$644K Alcohol, \$705K Occupant Protection, \$30K Traffic Records, \$101K Speed Control, \$6K Rail/Hwy Crossings, \$110K Safe Communities, \$100K Roadway Safety. |
| California | 13,888,151 | \$874K Planning & Administration, \$134K Alcohol programs, \$2,561K Emergency Medical Services, \$1,117K Occupant Protection, \$2,029K Pedestrian Safety, \$4,311K Police Traffic Services, \$397K Traffic Records, \$1,623K Safe Communities, \$842K Roadway Safety. |
| Colorado | 2,125,636 | \$180K Planning & Administration, \$388K Alcohol programs, \$25K Motorcycle Safety, \$524K Occupant Protection, \$11K Pedestrian Safety, \$413K Police Traffic Services, \$315K Traffic Records, \$119K Safe Communities, \$150K Roadway Safety. |
| Connecticut | 1,555,073 | \$155K Planning & Administration, \$315K Alcohol Countermeasures, \$175K Motorcycle Safety, \$235K Occupant Protection, \$535K Police Traffic Services, \$90K Traffic Records, \$50K Child Restraints. |
| Delaware | 725,800 | \$179K Alcohol Programs, \$63K Planning & Administration, \$254K Occupant Protection, \$38K Pedestrian Safety, \$191K Police Traffic Services, \$1K School Bus Safety. |

FISCAL YEAR 2000 SECTION 402 STATE AND COMMUNITY HIGHWAY SAFETY FORMULA GRANT
FUNDING—Continued

| State | Grant amount | How state is using grant funds |
|-----------------|--------------|--|
| DC | 725,800 | \$244K Alcohol, \$62K Planning & Administration, \$197K Occupant Protection, \$25K Pedestrian Safety, \$136K Police Traffic Services, \$62K Safe Communities. |
| Florida | 6,418,232 | \$149K Planning & Administration, \$1,761K Alcohol programs, \$1,701K Occupant Protection, \$654K Pedestrian Safety, \$1,003K Police Traffic Services, \$121K Traffic Records, \$429K Community Traffic Safety Project, \$600K Roadway Safety. |
| Georgia | 3,704,007 | \$380K Planning & Administration, \$355K Alcohol programs, \$827K Occupant Protection, \$150K Pedestrian Safety, \$204K Traffic Records, \$1,300K Community Traffic Safety Project, \$128K Speed Control, \$360K Safe Communities. |
| Hawaii | 725,800 | \$29K Planning & Administration, \$342K Alcohol programs, \$38K Emergency Medical Services, \$3K MC; \$8K Occupant Protection, \$2K Pedestrian Safety, \$1K Police Traffic Services, \$192K Speed Control, \$111K Safe Communities. |
| Idaho | 850,553 | \$40K Planning & Administration, \$251K Alcohol Programs, \$37K Emergency Medical Services, \$160K Occupant Protection, \$22K Pedestrian Safety, \$163K Police Traffic Services, \$121K Traffic Records, \$12K Roadway Safety, \$45K Paid Media. |
| Illinois | 5,986,792 | \$235K Planning & Administration, \$1,032K Occupant Protection, \$1,021K Alcohol programs, \$130K Emergency Medical Services, \$90K Pedestrian Safety, \$1,705K Police Traffic Services, \$60K Traffic Records, \$1,655K Community Traffic Safety Project, \$60K Roadway Safety. |
| Indiana | 3,136,224 | \$250K Planning & Administration, \$1,029K Occupant Protection, \$1,083K Alcohol programs, \$392K Police Traffic Services, \$275K Traffic Records, \$107K Community Traffic Safety Project. |
| Iowa | 2,151,493 | \$125K Planning & Administration, \$666K Alcohol Programs, \$10K Emergency Medical Services, \$700K Occupant Protection, \$25K Pedestrian Safety, \$599K Police Traffic Services, \$26K Safe Communities. |
| Kansas | 2,211,418 | \$142K Planning & Administration, \$35K Emergency Medical Services, \$160K Motorcycle Safety, \$502K Occupant Protection, \$542K Police Traffic Services, \$11K Traffic Records, \$150K Speed Enforcement, \$187K Safe Communities, \$482K Alcohol programs. |
| Kentucky | 2,186,582 | \$91K Planning & Administration, \$540K Alcohol Programs, \$429K Occupant Protection, \$63K Pedestrian Safety, \$799K Police Traffic Services, \$99K Community Traffic Safety Project, \$125K Driver Licensing, \$40K Roadway Safety. |
| Louisiana | 2,296,547 | \$166K Planning & Administration, \$402K Alcohol, \$74K EMS, \$299K Occupant Protection, \$865K Police Traffic Services, \$269 Traffic Records, \$179K Safe Communities, \$43K Roadway Safety. |
| Maine | 725,800 | \$73K Planning & Administration, \$65K Alcohol Countermeasures, \$45K Emergency Medical Services, \$58K Police Traffic Services, \$180K Traffic Records, \$104K Driver Education, \$21K School Bus Safety, \$80K Child Restraints, \$100K Safe Communities. |

FISCAL YEAR 2000 SECTION 402 STATE AND COMMUNITY HIGHWAY SAFETY FORMULA GRANT
FUNDING—Continued

| State | Grant amount | How state is using grant funds |
|---------------------|--------------|---|
| Maryland | 2,262,382 | \$110K Alcohol, \$58K Planning & Administration, \$137K Emergency Medical Services, \$301K Occupant Protection, \$8K Pedestrian Safety, \$36K Police Traffic Services, \$1,233K Comprehensive Traffic Safety, \$336K Safe Communities, \$44K Roadway Safety |
| Massachusetts | 2,822,652 | \$250K Planning & Administration, \$236K Alcohol Countermeasures, \$23K Emergency Medical Services, \$72K Motorcycle Safety, \$285K Occupant Protection, \$189K Pedestrian Safety, \$765K Police Traffic Services, \$335K Traffic Records, \$648K Community Traffic Safety Project, \$19K School Bus Safety. |
| Michigan | 4,950,255 | \$413K Planning & Administration, \$720K Occupant Protection, \$1,283K Alcohol Programs, \$25K Motorcycle Safety, \$60K Pedestrian Safety, \$779K Police Traffic Services, \$127K Traffic Records, \$1,202K Community Traffic Safety Project, \$71K Driver Education, \$14K Safe Communities, \$256K Roadway Safety |
| Minnesota | 2,980,708 | \$110K Planning & Administration, \$766K Occupant Protection, \$374K Alcohol Programs, \$1,101K Police Traffic Services, \$120K Traffic Records, \$510K Community Traffic Safety Project. |
| Mississippi | 1,719,141 | \$172K Planning & Administration, \$209K Alcohol programs, \$292K Occupant Protection, \$419K Police Traffic Services, \$112K Traffic Records, \$118K Community Traffic Safety Project, \$142K Youth Alcohol programs, \$172K Safe Communities, \$83K Roadway Safety. |
| Missouri | 3,217,266 | \$140K Planning & Administration, \$1,279K Police Traffic Services, \$485K Alcohol programs, \$408K Youth Alcohol programs, \$214K Occupant Protection, \$131K Traffic Records, \$218K Safe Communities, \$342K Roadway Safety. |
| Montana | 948,242 | \$59K Planning & Administration, \$190K Alcohol programs, \$100K Emergency Medical Services, \$1K Motorcycle Safety, \$208K Occupant Protection, \$51K Pedestrian Safety, \$101K Police Traffic Services, \$156K Traffic Records, \$83K Safe Communities |
| Nebraska | 1,474,640 | \$50K Planning & Administration, \$277K Alcohol programs, \$122K Occupant Protection, \$75K Police Traffic Services, \$20K Traffic Records, \$75K Identification & Surveillance, \$788K Speed Enforcement, \$20K Speed Control, \$48K Safe Communities. |
| Nevada | 904,578 | \$90K Planning & Administration, \$76K Alcohol programs, \$59K Emergency Medical Services, \$62K Occupant Protection, \$27K Pedestrian Safety, \$148K Police Traffic Services, \$420K Community Traffic Safety Project, \$23K Roadway Safety. |
| New Hampshire | 725,800 | \$73K Planning & Administration, \$146K Alcohol Countermeasures, \$13K Emergency Medical Services, \$108K Occupant Protection, \$43K Pedestrian Safety, \$93K Police Traffic Services, \$36K Traffic Records, \$36K Community Traffic Safety Project, \$156K Speed Control, \$11K Safe Communities, \$11K Roadway Safety. |

FISCAL YEAR 2000 SECTION 402 STATE AND COMMUNITY HIGHWAY SAFETY FORMULA GRANT
FUNDING—Continued

| State | Grant amount | How state is using grant funds |
|----------------------|--------------|---|
| New Jersey | 3,544,289 | \$338K Planning & Administration, \$533K Alcohol programs, \$307K Occupant Protection, \$131K Pedestrian Safety, \$1,059K Police Traffic Services, \$238K Traffic Records, \$449K Community Traffic Safety Project, \$335K Roadway Safety, \$154K Paid Advertising. |
| New Mexico | 1,159,542 | \$40K Planning & Administration, \$87K Alcohol, \$80K Emergency Medical Services, \$268K Occupant Protection, \$39K Pedestrian, \$195K Police Traffic Services, \$250K Traffic Records, \$200K Safe Communities. |
| New York | 8,502,951 | \$560K, Planning & Administration, \$400K Alcohol programs, \$20K, Emergency Medical Services, \$650K Occupant Protection, \$360K Pedestrian Safety, \$2,000K Police Traffic Services, \$1,400K Traffic Records, \$2,741K Community Traffic Safety Project, \$300K Roadway Safety, \$72K School Bus Safety. |

FISCAL YEAR 2000 SECTION 2003B CHILD PASSENGER PROTECTION EDUCATION GRANTS

| State | Grant amount | How state is using grant funds |
|-------------------|--------------|---|
| Alabama | \$135,237 | Education and outreach activities to reach rural and African American populations, establish fitting stations, train new child passenger safety (CPS) technicians. |
| Alaska | 37,500 | Multi-cultural and multi-lingual messages to reach Alaskan Natives, Spanish-, Korean-, and Tagalog-speaking Alaskans, materials for children with special transportation needs, car seat clinics, establish at least one fitting station, conduct NHTSA standardized CPS training course. |
| Arizona | 109,097 | Pilot a Judicial Program in Phoenix courts to educate violators about child passenger safety, certify technicians and instructors, diverse populations to be targeted are African American, Hispanic and Native Americans. |
| Arkansas | 97,748 | Use pediatric health care professionals and child-care professionals to deliver CPS information to low socioeconomic and Hispanic speaking populations, conduct CPS training sessions, distribute new TV public service announcements (PSA's). |
| California | 746,132 | Develop educational programs which are culturally sensitive, diverse populations to be targeted are African American, Hispanic, Native American, Chinese, Japanese, Vietnamese, Hmong, Korean, Arabic, and East Indian (India), train instructors, technicians and specialist. |
| Colorado | 114,260 | Brief CPS educators, professionals and law enforcement on new tether requirement and increased use of booster seats, targeted families and care givers in low income and rural communities, conduct CPS courses using NHTSA curricula. |
| Connecticut | 83,547 | Educate low usage populations and non-English speaking communities, train social workers, special needs providers, workshop on transporting children with special needs, CPS technician training, child safety inspection clinics, statewide central clearing house. |
| Delaware | 37,500 | Public information campaign to increase booster seat use, CPS training, child safety seat check up events, loaner program. |
| DC | 37,500 | Increase the number of fitting stations, conduct NHTSA Standardized CPS courses, workshops and training on installation of special needs seats. |
| Florida | 344,855 | Focus education and outreach efforts in African American, Hispanic and other diverse populations, establish state diversity coalition and statewide occupant protection resource center, increase booster seat use, training workshops for Head Start employees, establish fitting stations, conduct child safety seat clinics. |
| Georgia | 199,066 | Mini-grants to community organizations to promote child safety seat use among low income, rural and minority populations (African American and Hispanic), promote booster seat use, child safety seat/booster seat clinics, recruit African American and Hispanics as certified CPS technicians and instructors. |
| Hawaii | 37,500 | CPS clinics and fitting stations, conduct CPS training classes, diverse populations to be targeted for education and outreach are Pacific Islanders, Philippine, Chinese and Japanese. |
| Idaho | 45,735 | Conduct NHTSA Standardized CPS courses, child safety seat clinics, work with EMS to establish permanent rural child safety seat fitting stations. |
| Illinois | 321,705 | Conduct CPS training courses, purchase three checkpoint trailers, establish two child passenger resource centers/fitting stations (one rural, one urban), establish a toll-free number for CPS information, statewide booster seat campaign, target education and outreach to African American, Hispanic, Asian and low-income populations. |
| Indiana | 168,549 | Continue statewide CPS training, purchase convertible seats for minority and low-income families, expand fitting station project. |

FISCAL YEAR 2000 SECTION 2003B CHILD PASSENGER PROTECTION EDUCATION GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|---------------------|--------------|--|
| Iowa | 115,678 | Develop PSA's on misuse of child safety seats and booster seats, establish fitting stations, conduct checkup events, CPS training. |
| Kansas | 118,918 | Conduct NHTSA Standardized CPS course, develop statewide newsletter, Bilingual (English and Spanish) brochure, billboards, television and radio PSA's, develop CPS Checkup Event "How TO" packages, hold check-up events. |
| Kentucky | 117,521 | Employ a full time CPS specialist, establish statewide CPS committee, conduct child safety seat clinics, CPS training. |
| Louisiana | 123,414 | Train CPS advocates using the NHTSA Standardized CPS course, serve ethnic and low socioeconomic groups, develop printed materials, conduct CPS clinics. |
| Maine | 38,260 | Target misuse and lack of child restraint use in rural and low-income areas, fund state CPS coordinator, CPS training, fitting stations, establish state clearinghouse for CPS public information. |
| Maryland | 121,547 | Fitting stations, including mobile fitting stations, conference on transporting children with special needs, CPS training. |
| Massachusetts | 151,645 | Targeting high risk populations with materials, PSA's and educational program, increase community checkpoints and fitting stations, conduct CPS training. |
| Michigan | 266,013 | NHTSA Standardized CPS course, convert loaner programs into permanent fitting stations, hire state coordinator. Target education and outreach to African American, Latino/Hispanic, and Arab/Chadian populations. |
| Minnesota | 160,236 | Purchase six trailers for CPS training and as mobile fitting stations supplied with child safety seats, printed materials and training equipment, develop public information materials in Hispanic and among and for lower reading levels, provide mini-grants for community training, clinics, and fitting stations, purchase child safety seats. |
| Mississippi | 92,414 | CPS messages to low-income and African Americans families, PSA's for radio, television and print, billboards, conduct child safety seat checkpoints, establish fitting stations, conduct CPS training. |
| Missouri | 172,933 | Develop statewide public education program, including Child Restraint Resource Guides, establish fitting stations targeting minority and low-income families, conduct CPS training classes. |
| Montana | 51,004 | Recruit fire departments to serve as fitting stations, CPS training for health professionals, law enforcement and child care providers, training, education and outreach targeted to Native American populations. |
| Nebraska | 79,302 | Conduct CPS training, conduct child safety seat checkpoints and seat distributions, activities targeted to African American, Hispanic and Native American populations. |
| Nevada | 48,634 | CPS brochures to medical providers, develop CPS educational videos, train CPS technicians and instructors, conduct checkpoints, education and outreach targeted to African American, Hispanic and Native American. |
| New Hampshire | 37,500 | Update child restraint law poster, brochure on correct child seat usage and the new child restraint law, pilot CPS program/seat distribution in low-income housing centers, conduct CPS training, increase number of checkpoints. |
| New Mexico | 62,343 | Target CPS messages to older children (between the ages of 11 and 16), use peer education model with students, targeting low income and/or minority schools districts (Hispanic, Native American). |
| New York | 456,826 | Create information booklets and cards, posters and billboards targeting low-income and minority populations, conduct CPS clinics and checkpoints, establish fitting stations, conduct CPS training. |

FISCAL YEAR 2000 SECTION 2003B CHILD PASSENGER PROTECTION EDUCATION GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|----------------------|--------------|--|
| North Carolina | 195,356 | Target outreach to rural mountain communities, Hispanic and low-income communities, conduct child safety seat clinics and checkpoints, distribute child safety seats and seats for special-needs children, translate CPS brochures into Spanish, conduct CPS training, launch pilot fitting station program with fire departments. |
| North Dakota | 55,319 | CPS education, outreach and child safety seat distribution program for Native American tribes, develop billboards, pamphlets and posters, conduct CPS training for new technicians, instructors, and for care givers. |
| Ohio | 298,333 | Expand the NHTSA Standardized CPS course, expand number of fitting stations, emphasize booster seats, purchase child safety seats and booster seats for distribution to low-income and minority (African American and Hispanic) communities, establish toll-free number for CPS information. |
| Oklahoma | 123,821 | Child safety seats and booster seats distribution program, establish fitting stations at ambulance facilities across the state, provide seats to low-income families, conduct CPS training. |
| Oregon | 103,952 | Establish state child safety seat resource center, target education and outreach to rural, low-income areas, establish toll-free number for CPS information, train CPS technicians and instructors. |
| Pennsylvania | 322,988 | Establish fitting stations, target education and outreach to minority populations, expand child safety seat loaner programs in minority communities, conduct CPS training. |
| Rhode Island | 37,500 | Conduct bilingual (English and Spanish) CPS campaign including new brochures, billboard designs, and PSA's, conduct enforcement checkpoints, child safety seat clinics, and community safety day events in low-income or minority communities, conduct CPS training courses, recruit bilingual CPS professionals. |
| South Carolina | 108,930 | Improve child restraint use among children living in foster care, conduct CPS training for foster parents and foster care association employees/volunteers, distribute child safety seats and booster seats, conduct enforcement checkpoints. |
| Tennessee | 150,397 | Target African American families and counties with low use rates, conduct child safety seat clinics, seat distribution program (including seats for special needs children), establish mobile fitting stations, conduct CPS training. |
| Texas | 521,422 | Produce new Spanish and English language materials, purchase additional child safety seats for loaner programs and safety seat inspections, conduct CPS training, develop Spanish language CPS course, conduct CPS clinics, distribute CPS materials through Safe Communities. |
| Utah | 58,215 | Target education, training and outreach to Native Americans populations, especially the Navajo Nation, train law enforcement officers from the reservations, provide training on seat installation for children with special needs, conduct CPS training for new technicians and instructors, provide tether update training, conduct enforcement checkpoints. |
| Vermont | 37,500 | Distribute child safety seats to low income families, establish fitting stations, train CPS instructors and technician. |
| Virginia | 171,890 | Establish mobile fitting stations in minority populations and documented low usage areas, train CPS professionals. |
| Washington | 147,143 | Conduct child safety seat clinics targeting low-income, rural and part-time restraint users, and Native American and Hispanic families, establish local CPS teams. Train CPS technicians and instructors. |

FISCAL YEAR 2000 SECTION 2003B CHILD PASSENGER PROTECTION EDUCATION GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|----------------------|--------------|---|
| West Virginia | 57,190 | Target education and outreach activities to low-income communities, provide child safety seats to current loaner programs, conduct NHTSA Standardized CPS courses. |
| Wisconsin | 162,721 | Target education and outreach activities to minority populations (Native Americans, African Americans, Hispanics, and Hmong), conduct state-wide CPS conference, establish fitting stations, purchase CPS trailer for training, checkpoints and to use as a mobile fitting station. |
| Am. Samoa | 18,750 | Conduct fitting stations and child safety seat clinics, design roadside messages to remind parents and care-givers to buckle up their children, conduct CPS training. |
| Guam | 18,750 | Develop and distribute CPS videos for nurseries and day care centers, train CPS technicians, conduct checkpoints. |
| N. Marianas | 18,750 | Expand education and outreach activities, conduct NHTSA Standardized CPS Course for technicians and instructors. |
| Puerto Rico | 85,954 | Develop messages to address child safety seat misuse, conduct CPS clinics and fitting stations, conduct CPS training. |
| Virgin Islands | 18,750 | Develop new CPS booklets, brochures and PSA's, conduct child safety seat clinics and enforcement checkpoints, conduct NHTSA Standardized CPS training for technicians. |
| B.I.A | 56,250 | Conduct train-the-trainer courses for NHTSA Standardized CPS course, conduct CPS clinics, workshops, demonstrations and presentations, develop CPS literature and correct use video, establish CPS fitting stations. |
| Total | 7,500,000 | |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS

| State | Grant amount | How state is using grant funds |
|------------------|--------------|--|
| Alabama | \$173,600 | Complete a Traffic Records Assessment, update strategic plan, implement statewide electronic submission of traffic citations. |
| Alaska | 173,600 | Implement a strategic traffic records plan develop an upgraded crash report, develop health system and crash data linkages and improve traffic records database interface. |
| Arizona | 173,600 | Develop a simplified and timely system for data users to retrieve crash data from traffic data systems and improve the compatibility between the two systems, research the development of a statewide citation tracking system, and support and/or provide access to technology to local police agencies that will improve electronic transfer of traffic data and increase on site data gathering. |
| Arkansas | 173,600 | Improve timeliness and efficiency of the data entry process for crash reports. |
| California | 173,600 | Implemented Department of Motor Vehicles (DMV) Automation of Rural Courts Project that provided automation hardware and software technology to input, send and retrieve traffic conviction and other data electronically, develop a laptop computer system for completing crash reports at crash sites to facilitate the direct entry of data into the crash file, and equip and train Highway Patrol with evidential quality pre-arrest breath testing devices to improve upon the alcohol detection at crash sites and in traffic stops. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|---------------------|--------------|--|
| Colorado | 173,600 | Complete a software upgrades for remote data entry of crash report data, and initiate development of probability matching of crash data and hospital data. |
| Connecticut | 173,600 | Complete a Traffic Records Assessment, update the Traffic Records Strategic Plan, complete an automated crash report form and report analysis package for use by state and local police departments, purchase new software to store the state crash file, develop an electronic ticketing system, complete development of GIS mapping capability, continue development of a data warehouse, and to improve user accessibility to Crash Outcome Data Evaluation System (CODES). |
| Delaware | 173,600 | Create an Emergency Medical System (EMS) data network, develop an automated Crash Reporting System, and create a GIS Crash Database. |
| Florida | 173,600 | Implement regional data centers, revise crash report instruction manual, crash report training. |
| Georgia | 173,600 | Automate crash reporting system, survey & software. |
| Hawaii | 173,600 | Develop file linkage, training for local police departments in crash reporting and alcohol screening devices, and develop electronic data transfer system. |
| Idaho | 96,480 | Develop a strategic traffic records plan. |
| Illinois | 96,480 | Develop a traffic records strategic improvement plan. |
| Indiana | 173,600 | Hire committee coordinator, improve crash data access, pilot test new crash location system. |
| Iowa | 173,600 | Capture of crash reports electronically, review crash report data, technology transfer, emergency response information and mapping. |
| Kentucky | 173,600 | Develop Crash Project Phase IV—Purchase Scanners. |
| Louisiana | 173,600 | Implement data entry, electronic data transfer, networking, and document imaging for crash reports and traffic records in State, parish, and local communities. |
| Maine | 173,600 | Pilot test an automated crash report form, provide training to state and local police, develop a new crash reporting data base with GIS capabilities capable of receiving crash reports electronically, coordinate Strategic Planning among state agencies, and design a statewide system architecture for integrated traffic records files. |
| Maryland | 173,600 | Support a Data Analysis Evaluation Coordinator, improve state crash form, expand scope and use of GIS, and implement statewide training. |
| Massachusetts | 173,600 | Update the traffic records assessment and the traffic records strategic plan. Activity continues to improve the quality of CODES data files and to update the state crash report form to comply with MMUCC (Model Minimum Uniform Crash Criteria). |
| Michigan | 173,600 | Develop an internet access query system. |
| Minnesota | 173,600 | Link two commercial vehicle crash systems, revise crash report form, improve data collection. |
| Mississippi | 173,600 | Purchase Software/Hardware for crash & citation data collection, data linkage for state CODES study, revision of crash report. |
| Missouri | 173,600 | Develop STARS (Statewide Traffic Accident Reporting System) Data Base, conduct annual conference & workshop, Data Base Evaluation and Consultation. |
| Nebraska | 173,600 | Develop Crash file linkage, revise report for electronic transfer, update existing traffic records files. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|----------------------|--------------|---|
| Nevada | 173,600 | Form an interagency subcommittee of the Traffic Records Committee to develop a 2001 legislative proposal to gain support and funding to implement an updated traffic records system, implement Traffic Accident System Planning and Design Project, and to promote a statewide traffic records conference. |
| New Hampshire | 173,600 | Purchase notebook PCs to complete crash reports in the field, revise crash report form to be in compliance with MMUCC, and to develop crash reporting software which can electronically capture driver license/vehicle registration data and Global Positioning System (GPS) location data. |
| New York | 173,600 | Upgrade accident information system. This project would allow direct electronic transfer of crash information from investigation agency to the state DMV file. Another project is scheduled to upgrade the ticket file. This upgrade would establish a ticket file electronically on a client server data base and would allow the courts to data-enter ticket disposition information electronically to a data base. |
| North Carolina | 173,600 | Develop of a new crash reporting form, pilot test for electronic citation in one State Patrol District, and develop a system to retrieve data via Internet. |
| North Dakota | 96,480 | Develop traffic records strategic plan. |
| Ohio | 173,600 | Complete interactive Internet web site, capture and image a redesign crash report form. |
| Oklahoma | 173,600 | Update traffic records strategic plan, address customer/client access to data bases. |
| Oregon | 173,600 | Link health and crash data, DOT crash data retrieval and analysis, crash location upgrade and a Division of Motor Vehicles driver and vehicle files upgrade. |
| Pennsylvania | 173,600 | Conduct a series of regional traffic records symposiums to help determine and refine the information needs of the users/customers. |
| Rhode Island | 173,600 | Complete successful electronic transfer of crash reports from state and local police agencies to a central repository at DOT. All 39 cities and towns will be on line by September, 2000. State crash file will have capability to reference intersection locations and GIS mapping. Mobile data capture and transfer capability from police cruiser laptops will also exist. "Canned" and ad hoc report capability will be available from state crash file. RI will be the first state in the nation with 100 percent of all police agencies participating in electronic transfer of crash data to a central repository. |
| South Carolina | 173,600 | Design/implement an upgraded statewide traffic records system with linked citation and crash data. |
| Tennessee | 173,600 | Improve state crash reporting equipment, establish data collection in local law enforcement. |
| Vermont | 173,600 | Redesign the uniform crash report to be in compliance with MMUCC, develop software for a new crash data storage system which can interface with law enforcement telecommunications systems, pilot test electronic capture of EMS run data, develop software for electronic transfer of data to a central repository at the Department of Transportation, and to provide for Traffic Records System program management capabilities. |
| Virginia | 173,600 | Support statewide coordination, perform equipment and inventory assessments, develop communication standards, and develop a training package. |

FISCAL YEAR 2000 SECTION 411 STATE HIGHWAY SAFETY DATA IMPROVEMENT GRANTS—
Continued

| State | Grant amount | How state is using grant funds |
|-------------------------|--------------|---|
| Washington | 173,600 | Upgrade emergency Medical Services trauma registry, develop a collision reporting system with Wisconsin DOT, conduct a traffic records awareness campaign and a collision analysis reporting system with the Washington State Patrol. |
| West Virginia | 96,480 | Support statewide coordination and strategic planning development. |
| Wisconsin | 96,480 | Develop a traffic records strategic improvement plan. |
| Puerto Rico | 173,600 | Contract data processing of Police Accident Report form, pilot test pen based system to improve data collection and the use of Global Positioning System to improve data related to location of crashes. |
| American Samoa | 173,600 | Develop a 24/7 network link, obtain computer workstation for police dispatch and e substations, and develop pen based citation system and citation form. |
| Guam | 173,600 | Obtain manpower to input crash data, develop pilot project for a pen based citation entry system, and purchase computer system for Traffic Engineering Section. |
| Northern Marianas | 173,600 | Improve driver file system by eliminating double typing of license data and exploring adding a bar code/magnetic strip to driver licenses, provide computers and software for EMS database and connect the driver and EMS files to their main crash reporting system. |
| Total | 7,600,000 | |

SURFACE TRANSPORTATION BOARD

PREPARED STATEMENT OF LINDA J. MORGAN, CHAIRMAN

Chairman Shelby and Members of the Subcommittee, I am Linda J. Morgan, Chairman of the Surface Transportation Board (Board). It is my pleasure to submit the budget request for the Board for fiscal year 2001.

BACKGROUND ON THE BOARD

As you know, on January 1, 1996, the Board was established pursuant to Public Law 104-88, the ICC Termination Act of 1995 (ICCTA). Consistent with the trend toward less economic regulation of the surface transportation industry, the ICCTA eliminated the ICC and, with it, several regulatory functions that it had administered. The ICCTA transferred to the Board core rail functions and certain non-rail adjudicative functions previously performed by the ICC. Motor carrier licensing and certain other motor functions were transferred to the Federal Highway Administration within the Department of Transportation (DOT).

The Board is a three-member, bipartisan, decisionally independent, adjudicatory body organizationally housed within DOT. The rail oversight of the Board encompasses maximum rate reasonableness, car service and interchange, mergers and line acquisitions, and line constructions and abandonments. The important rail reforms of the Staggers Rail Act of 1980 are continued under the ICCTA. The jurisdiction of the Board also includes certain oversight of the intercity bus industry and pipeline carriers; rate regulation involving non-contiguous domestic water transportation, household goods carriers, and collectively determined motor rates; and the disposition of motor carrier undercharge claims. The ICCTA empowers the Board, through its exemption authority, to promote deregulation administratively.

THE BOARD'S FISCAL YEAR 2001 BUDGET REQUEST

The Board's fiscal year 2001 budget request totals \$17.954 million and 143 FTEs, essentially adjusting the fiscal year 2000 level for inflation and pay raises.¹ This re-

¹ Attached (Attachment #1) is a table that presents in more detail the specifics of the Board's fiscal year 2001 budget request.

quest reflects the relatively constant workload that is expected and the statutory and regulatory deadlines associated with the resolution of the cases filed. The workload of the Board at any given time, other than motor carrier undercharge cases, remains relatively constant because, even as cases are resolved, new cases are filed.

The Board is confronted with three concerns involving the resources necessary to adjudicate its constant workload and meet statutory and regulatory deadlines. First, the Board must have a way of ensuring that it can hire new employees in sufficient time to be prepared to replace the 45 percent of experienced employees who will be eligible to retire in the next 3 years. While some of these employees may wish to continue to work after their retirement eligibility date, many will not. Second, the Board must have the necessary resources to accommodate any legislative changes that Congress might approve. And lastly, the funding source for the Board must remain stable to carry out its mandate. In this regard, a debate continues over whether the Board ought to be fully funded through user fees, and the Administration has included such a proposal in its fiscal year 2001 budget. Such an approach would require additional legislative authority and until Congress provides new direction, the financing mechanism of appropriations and offsetting collections is the appropriate way to proceed.

OVERALL GOALS OF THE BOARD

In the performance of its functions, the objective of the Board is to ensure that, where regulatory oversight is necessary, it is exercised efficiently and effectively, integrating market forces, where possible, into the overall regulatory model. In particular, the Board seeks to resolve matters brought before it fairly and expeditiously. Through use of its regulatory exemption authority, streamlining of its decisional process and the regulations applicable thereto, and consistent application of legal and equitable principles, the Board seeks to facilitate commerce by providing an effective forum for efficient dispute resolution and facilitation of appropriate business transactions. The Board continues to strive to develop, through rulemakings and case disposition, new and better ways to analyze unique and complex problems, to reach fully justified decisions more quickly, and to reduce the costs associated with regulatory oversight.

To be more responsive to the surface transportation community by fostering governmental efficiency, innovation in dispute resolution, private-sector solutions to problems, and competition in the provision of transportation services, the Board will:

- Continue to strive for a more streamlined process for the expeditious handling of rail rate reasonableness and other complaint cases, in an effort to provide additional regulatory predictability to shippers and carriers;
- Continue to reduce processing time for all cases before the Board, in particular to ensure that appropriate market-based transactions in the public interest are facilitated; and
- Continue to develop new opportunities for the various sectors of the transportation community to work cooperatively with the Board and with one another to find creative solutions to persistent industry and/or regulatory problems involving carriers, shippers, employees, and local communities.

FISCAL YEAR 1999 ACCOMPLISHMENTS OF THE BOARD

During fiscal year 1999, the Board's workload included 926 Board decisions and court-related work, involving adjudications and rulemakings, dealing with rail and non-rail transportation issues. These decisions pertained to rail carrier consolidations; review of rail labor arbitral decisions; rail rates and service; line sales; line constructions; set terms and conditions for continued rail service; and abandonments. They also related to truck rate undercharge cases, intercity bus merger and pooling matters, motor carrier collective ratemaking oversight, and other non-rail matters such as pipeline rate cases.

With respect to rulemaking activity, the Board issued decisions exempting commodities, services, and other classes of transactions from regulation where regulation is not necessary. The Board also issued a decision in STB Ex Parte No. 385 (Sub-No. 4), *Modification of the Carload Waybill Sample and Public Use File Regulations*, putting forth a proposal to more accurately collect data on rail freight traffic as it pertains to rail contract movements. Stemming from its review of rail access and competition issues, the Board issued new rules in STB Ex Parte No. 628, *Expedited Relief for Service Inadequacies*, permitting shippers and connecting railroads who are receiving poor service from an incumbent carrier to seek temporary service from an alternative rail carrier. Also stemming from its rail access and competition review, in STB Ex Parte No. 627, *Market Dominance Determinations—Product and*

Geographic Competition, the Board eliminated product and geographic competition as considerations in determining market dominance in rail rate cases, and denied a petition for reconsideration in this matter. The Board concluded that removing the product and geographic competition evidentiary standards would expedite rail rate cases in accordance with Congressional intent, and would further level the playing field between railroads and shippers regarding rate disputes. In Ex Parte No. 574, *Safe Implementation of Board-Approved Transactions*, the Board and the Federal Railroad Administration (FRA) have proposed that joint rules be established setting forth procedures for developing and implementing safety integration plans concerning financial transactions presented for consideration to the Board. In STB Ex Parte No. 527 (Sub-No. 2), *Expedited Procedures for Processing Rail Rate Reasonableness Exemption and Revocation Proceedings*, the Board finalized a rulemaking seeking to clarify the exemption and revocation procedures as to when additional information would be sought in response to a petition.

With regard to specific cases, the Board made progress toward resolving pending rail and pipeline rate complaints, including STB Docket No. 42022, *FMC Wyoming Corporation and FMC Corporation v. Union Pacific Railroad Company*; STB Docket No. 42038, *Minnesota Power, Inc. v. Duluth, Missabe, and Iron Range Railway Company*; STB Docket No. 42027, *Northern Indiana Public Service Company v. Consolidated Railroad Corporation*; STB Docket No. 41687, *Grain Land Coop. v. Canadian Pacific Limited and Soo Railroad Company d/b/a CP Rail System*; and STB Docket No. 41685, *CF Industries, Inc. v. Koch Pipeline Company, L.P.*. In addition, STB Docket No. 41295, *Pennsylvania Power & Light Company v. Consolidated Rail Corporation, CSX Transportation Inc. and Norfolk Southern Railway Company*, and STB Docket No. 42034, *PSI Energy, Inc. v. CSX Transportation, Inc. and Soo Line Railroad Company d/b/a Canadian Pacific Railway*, were resolved voluntarily by the parties—it is important to note, however, that the Board had done significant work on these cases by the time they were settled. Finally, the Board defended court challenges to its decisions in the *Bottleneck, McCarty Farms, and Huron Valley* rail rate proceedings.

With respect to rail restructuring, the Board continued its oversight of the Union Pacific/Southern Pacific (UP/SP) merger and the Conrail acquisition. Furthermore, the Board issued a decision approving the acquisition of the Illinois Central (IC) by the Canadian National (CN). The Board also issued various decisions relating to the conditions imposed in the UP/SP merger and the Conrail acquisition proceedings.

The Board issued decisions and participated in court proceedings on various other rail matters, including 378 rail abandonment decisions, 25 rail line construction decisions, and 190 short-line and non-carrier acquisition decisions. In particular, the Board has done significant work on the transportation and environmental issues associated with the construction and operation of a 281-mile segment of the Dakota, Minnesota & Eastern Railroad (DM&E) in Wyoming (STB Finance Docket No. 33407, *Dakota, Minnesota, & Eastern Railroad Corporation Construction into the Powder River Basin*). This project would allow DM&E to extend its existing system westward to access coal mines in the Powder River Basin.

Regarding other rail matters, the Board issued a decision setting the terms and conditions under which Amtrak could reintroduce rail passenger service between Boston, MA and Portland, ME (STB Finance Docket No. 33381, Application of the National Railroad Passenger Corporation Under 49 U.S.C. 24308(a)—Springfield Terminal Railway Company, Boston and Maine Corporation, and Portland Terminal Company). The Board also continued its work on the joint task force with the Department of Agriculture to address shipper and railroad information needs related to recurring seasonal problems affecting grain transportation.

Non-rail decisions included 28 motor carrier undercharge decisions and 22 decisions dealing with intercity bus merger cases and pooling agreements, as well as action related to motor carrier rate bureaus.² The Board also has worked on STB Docket No. WCC-101, *Government of the Territory of Guam v. Sea-Land Service, Inc., American President Lines, Ltd., and Matson Navigation Company, Inc.*, and STB Docket No. WCC-102, *Ocean Logistics Management, Inc. v. NPR, Inc. and Holt Cargo Systems, Inc.*, involving rates in the non-contiguous domestic water trade.

FISCAL YEAR 2000 AND 2001 ACTIVITIES OF THE BOARD

Attached is a table (Attachment #2) that shows workload trends and accomplishments, which form the basis for the Board's request to essentially maintain the current level of funding in fiscal year 2001. As the table indicates, the Board believes

²These numbers are subsets of the decisions included in the workload summary table that follows.

that the number of decisions issued and court-related work are the best measures of workload and performance. In accordance with the Board's continued commitment to resolving matters before it expeditiously, it anticipates a relatively constant workload and output through fiscal year 2001.

During fiscal year 2000 and 2001, the Board will continue to look for ways to streamline or otherwise improve applicable regulations and the regulatory process and will resolve as expeditiously as possible petitions for rulemaking filed by parties. In addition, the Board will continue to monitor the implementation of rule-making decisions and private-sector initiatives and agreements reflecting the Board's directives stemming from its rail access and competition proceedings conducted in fiscal year 1998 and 1999.

Regarding major restructuring activity among larger railroads in general, the Board held public hearings on March 7–10, 2000, on major rail consolidations and the present and future structure of the North American rail industry. This hearing addressed the industry's restructuring that has occurred to date and the prospect for future restructuring. The Board also, among other issues, addressed the effects of railroad consolidations on the financial condition of the railroad industry and the industry's ability to provide responsive service at reasonable prices. As a result of the testimony presented, the Board issued a decision on March 17, 2000, directing large railroads not to pursue for 15 months further merger activities before the Board until it has adopted new rules governing merger proceedings.

With respect to rail carrier consolidations, workload is expected to increase in fiscal year 2000 and fiscal year 2001. The Board will continue to monitor the UP/SP merger, the Conrail acquisition, and the CN/IC merger pursuant to the five-year oversight conditions that the Board imposed as part of its approval of those transactions, and will continue to handle any proceedings dealing with the interpretation of other conditions imposed as part of the Board's approvals. In addition, the Board will be defending its March 17 decision to suspend major rail mergers until merger regulations are revised, and will be working on rail merger rule changes called for in that decision, which are to be finalized by mid-June 2001.

Regarding rail rates and services, the workload is expected to increase in fiscal year 2000 and again in fiscal year 2001, in particular due to the continuing expiration of long term coal transportation contracts, the potential filing of complaints under the Board's non-coal rate guidelines, and the application of the Board's bottleneck decision. These new cases will be complex and require significant staff attention as new standards are tested and shortened timeframes for completion of rate proceedings are met. Also, the Board has a number of complaint cases involving grain car allocation procedures and unreasonable practices involving alleged breaches of common carrier obligation to provide reasonable car service on request, which it will be processing. In addition, the Board will proceed with its 3-year study (Buffalo Rate Study) examining linehaul and switching rates for rail movement into and out of the State of New York's Buffalo area following the Conrail acquisition. The Board also will continue to work on the various pending rate matters previously referenced.

In connection with other rail matters, rail abandonment decisions are expected to increase slightly in fiscal year 2000 and then remain stable through fiscal year 2001, reflecting the increased complexity of abandonment filings requiring more than one decision. The Board will continue to handle several rail line construction projects, which involve significant environmental review issues, and we project that line construction proceedings will increase in fiscal year 2000 and remain constant through fiscal year 2001. For example, the Board continues work on an application filed by Tongue River Railroad for the proposed construction of an alternative route for a line already approved for construction (STB Finance Docket No. 30186 (Sub-No. 3), *Tongue River Railroad Company—Construction and Operation—Western Alignment*). In addition, the Board continues to make progress toward resolving the environmental issues associated with the DM&E case referenced earlier. In Finance Docket No. 33824, *Great Salt Lake and Southern Railroad, LLC—Construction and Operation—in Tooele County, UT*, the applicant has recently filed for permission to construct and operate a 32 mile rail line connected with the interim storage of spent nuclear fuel. Other line transaction activity is expected to remain somewhat constant in fiscal year 2000 and fiscal year 2001 as carriers continue to buy and sell unprofitable or marginally profitable lines as alternatives to service abandonment.

Other rail activities, such as case activity involving passenger rail issues and review of labor arbitral decisions, are expected to increase in fiscal year 2000 and fiscal year 2001. During fiscal year 1999, the Boards saw an increase in cases involving interpretations of labor conditions and arbitration appeals resulting from rail consolidations and other rail transactions. In fiscal year 2000 and 2001, the Board projects that this trend will continue due to recently decided rail mergers. Another

area of possible workload increase involves passenger rail and, in particular, disputes related to the use by Amtrak of tracks of the freight railroads.

Regarding non-rail matters, the truck rate undercharge workload has decreased significantly from pre-fiscal year 1998 levels and will remain relatively constant through fiscal year 2001 as the Board works to close out its undercharge docket. The reduction in undercharge decisions reflects the Board's continuing commitment to resolve its undercharge docket. Other non-rail activities, including intercity bus merger and pooling proceedings and non-contiguous domestic water trade and pipeline rate cases, are expected to increase in fiscal year 2000 and fiscal year 2001. For example, although the WCC-102 proceeding referenced earlier has just been settled by the parties, the Board will be working on two other recently filed water carrier cases, STB Docket No. WCC-104, *Trailer Bridge, Inc. v. Sea Star Lines, LLC*, and STB Docket No. WCC-105, *DHX, Inc. v. Matson Navigation Company, et al.* And in accordance with a Board decision issued in early fiscal year 1999, during fiscal year 2000 and 2001, the Board expects to finally resolve the circumstances under which motor carrier rate bureau agreements should be continued.

SUMMARY

The Board's budget request would ensure the resources needed for the Board to continue to implement its responsibilities expeditiously and effectively as Congress intends. I would be happy to answer any other questions that the Committee may have about the Board's fiscal year 2001 budget request.

ATTACHMENT 1.—SALARIES AND EXPENSES

[Dollars in thousands]

| | Fiscal year | | | Difference from Enacted |
|---|---------------|---------------|------------------|----------------------------|
| | 1999 actual | 2000 enacted | 2001 request | |
| Permanent Positions | 131 | 140 | ³ 143 | 3 |
| Full-time Equivalents | 131 | 140 | 143 | 3 |
| Personnel Compensation and Benefits | \$12,420 | \$13,391 | \$14,122 | \$731 |
| Former Personnel | 14 | 5 | 10 | 5 |
| Travel | 32 | 49 | 49 | |
| Other Costs | 3,481 | 3,495 | 3,773 | 278 |
| Total Budget Resources | 15,947 | 16,940 | 17,954 | 1,014 |

³The requested increase in FTEs will allow the Board to hire entry level staff to replace the tenured, retirement-eligible staff prior to their retirement dates. This would ensure the required transition for current staff to new staff, who can gain working knowledge and expertise necessary to process the Board's workload.

CHANGES IN RESOURCES

For personnel compensation and benefits, \$14,122,000 is requested to support the Board's permanent positions. This is an increase of \$731,000 over fiscal year 2000, of which \$152,000 is required to fund the annual cost of the January 2000 pay raise and \$387,000 is required for the January 2001 pay raise estimated at 3.7 percent. The request also includes \$50,000 for lump-sum leave payments to retiring employees.

Funding for costs for former personnel unemployment payments is requested at \$10,000, which is an increase of \$5,000 from fiscal year 2000. This request is for unemployment compensation payments to former employees who were separated from Federal service.

A travel budget of \$49,000 is requested primarily for on-site visits to railroads to finalize audits and review public accountants' workpapers, for physical inspection of proposed rail abandonment and construction sites and verification of environmental data provided by parties to proceedings, for defense of the Board's decisions in courts across the country, and for the general presentation upon request of issues within the Board's jurisdiction.

Funding to cover other costs is requested at \$3,773,000, a \$278,000 increase over fiscal year 2000. Included in this number is a rental payment increase directed by the General Services Administration (GSA) and regular cost increases in telephone service, copier rental, office supplies, and reimbursable services acquired from other Federal agencies.

ATTACHMENT 2.—FISCAL YEAR 2001 OMB BUDGET JUSTIFICATION WORKLOAD SUMMARY ⁴

| Workload Category | Actual fiscal year 1999 board decisions and court-related work | Estimated ⁵ fiscal year 2000 board decisions and court-related work | Estimated ⁴ fiscal year 2001 board decisions and court-related work |
|---|--|--|--|
| Rail Carrier Consolidations | 117 | 199 | 197 |
| Rail Rates and Service | 60 | 95 | 104 |
| Rail Abandonments and Constructions | 403 | 442 | 442 |
| Other Line Transactions | 190 | 185 | 185 |
| Other Rail Activities | 67 | 102 | 101 |
| Motor Carrier Undercharges | ⁵ 28 | 38 | 26 |
| Non-Rail Activities | 61 | 109 | 113 |
| Total Decisions | ⁶ 926 | 1,170 | 1,168 |

⁴At this time, the Board believes that the number of Board decisions and court-related work are the best measures of workload at the Board. Certain activities performed at the Board that provide direct and indirect support to rulemakings and decisions in specific cases are not reflected in these workload numbers. Such activities not reflected include: enforcement action; rail audits and rail carrier reporting oversight; administration of the rail waybill sample and development of the Uniform Rail Costing System; and case-related correspondence and informal public assistance.

⁵Estimated workloads for fiscal year 2000 and 2001 are based on historical information regarding actual filings and best estimates of probable future filings by parties. Because the Board is principally an adjudicatory body, it does not directly control the level or timing of actual case filings.

⁶The motor carrier undercharge decisions projected for fiscal year 1999 have decreased from previous estimates. This decrease reflects the Board's consolidation of several undercharge case dockets into a single decision.

QUESTIONS SUBMITTED BY SENATOR RICHARD C. SHELBY

BOARD MEMBERS' TERMS AND STAFFING

Question. When do the terms of the current Board members expire? When was Ms. Morgan renominated and confirmed for another term?

Answer. The ICC Termination Act of 1995 (ICCTA) provided that the term for each Member of the Board shall be 5 years and shall begin when the term of the predecessor of that Member ends. Also under the ICCTA, a Board Member can only be reappointed for one additional term and, if not reappointed, cannot serve more than one year past the expiration of his or her term.

Board Members and Expiration of Terms.—William Clyburn Jr., December 31, 2000; Wayne O. Burkes, December 31, 2002; Linda J. Morgan, December 31, 2003.

Chairman Morgan was renominated for a second term by President Clinton on August 6, 1999, confirmed by the United States Senate on November 10, 1999, and sworn in on December 1, 1999.

Question. How many staff are in each Board Member's office? What are the job titles, GS level, and salary for each of these positions? Are there currently any vacancies in the Members' personal staff?

Answer. Each Board Member has a staffing allocation of 3 FTEs, and the Chairman has a staffing allocation of 3.5 FTEs. The allocations include slots for the Board Member, an administrative assistant, and professional staff. The following table reflects the current staffing of each Board Member's office.

| Job title | GS level | Salary |
|-------------------------------------|------------|-----------|
| Chairman Morgan: | | |
| Chief of Staff | GS-905-15 | \$110,028 |
| Special Assistant | GS-301-13 | 66,979 |
| Attorney-Advisor ¹ | GS-905-15 | 110,028 |
| Vice-Chairman Burkes: | | |
| Expert | GS-2110-00 | 101,140 |
| Executive Assistant | GS-301-11 | 44,148 |
| Attorney-Advisor ² | GS-905-15 | 110,028 |
| Commissioner Clyburn: | | |
| Staff Advisor | GS-301-12 | 59,738 |

| Job title | GS level | Salary |
|-------------------------------------|-----------|---------|
| Attorney-Advisor ² | GS-905-15 | 107,207 |

¹ Employee has been shared with Office of the General Counsel and will be returning full-time to the General Counsel's office shortly.

² On full-time detail from the Office of Proceedings.

Based on the allocations, there is technically a staffing vacancy in the Office of Commissioner Clyburn because his professional staff person is on detail from another office.

HIRING PROCESSES

Question. Please describe the hiring practices of Surface Transportation Board staff, either for the Member's personal staffing or in the program offices. What is the average time for hiring a new STB staff person (both in-house hires and promotions and new hires from outside the agency)? Is there any input from the Department of Transportation in this decisionmaking? If so, why?

Answer. There are 3 types of hiring methods at the Board. The length of time to recruit depends on the type of hiring process and whether the Board is hiring experienced candidates or entry-level candidates. In-house hiring or merit promotions, which are limited to Board candidates, can be completed within 2-3 weeks after the process is begun. Outside recruiting of status candidates (current Federal employees) can take 6-8 weeks for a Government-wide dissemination of the job announcement and recruitment for qualified candidates. Outside, open-market recruiting can take 7-12 weeks after the request is made by a program manager. The Board uses the services of the Office of Personnel Management, on a reimbursable basis, to provide the required nationwide staffing, recruiting activities, and evaluation of applicants for the vacancies. Under each method, after a listing of qualified candidates is provided to the program manager, the interviewing process is completed, and a selection is made, a candidate could be expected to begin employment at the Board within 4-6 weeks after selection. The Department of Transportation (DOT) has no input in the recruiting or final selection of the Board's candidates.

RELATIONSHIP WITH DEPARTMENT OF TRANSPORTATION

Question. The Surface Transportation Board is an independent adjudicatory body organizationally housed within the Department of Transportation (DOT). Please describe the Board's relationship with DOT, and describe in detail what being "organizationally housed within DOT" entails, particularly as it affects support services, administration, staff decisions, or other non-adjudicatory functions of the Board?

Answer. The Board and DOT have worked together cooperatively to ease any logistical challenges associated with a decisionally independent body organizationally housed within DOT. The Board's decisional independence is explicitly expressed in the ICCTA. However, the Office of the Secretary is apprised of rulemakings and adjudications as they are served or published. DOT may appear before the Board as a party in the Board's proceedings, just as DOT appeared before the Interstate Commerce Commission (ICC) as a party. Any role or input that DOT might wish to have in a Board proceeding, as with any other party, is through a filing of public record.

Organizationally, the Board is housed in DOT for a variety of administrative and financial reporting provisions. The Board's annual budget request and reporting of obligations incurred are included with DOT's submissions to the Office of Management and Budget (OMB) and the Department of the Treasury; however, the Board is required by Public Law 104-88 to transmit copies of its budget requests to Congress at the same time they are sent to the Secretary of Transportation and DOT is required to provide an assessment of the budgetary needs of the Board in the President's Budget. The Board's personnel statistical data are included with DOT's for reporting purposes to the Office of Personnel Management. However, as the law provides, in the performance of Board functions, the personnel of the Board shall not be responsible to or subject to the supervision or direction of any officer of any other part of DOT. The law also provides that the Board shall perform all functions that, immediately before the effective date of ICCTA, were functions of the ICC or were performed by any employee of the ICC in the capacity as such officer or employee. In order to maintain its adjudicatory independence, the Board performs a few administrative and financial functions in-house. The Board obtains, on a reimbursable basis, those administrative functions that are more cost efficient to be performed outside the Board from other sources.

FUNDING HISTORY

Question. Please update the table found on page 607 of Senate hearing record 106-221, displaying the Board's funding request, the Administration's request, the enacted funding level, and the end of year staffing level for each fiscal year from fiscal year 1996 to that requested for fiscal year 2001. Please display both appropriated funds and offsetting collections.

Answer. The following table displays the funding history of the Interstate Commerce Commission (ICC) and the Board for fiscal years 1996 through 2001.

BUDGET REQUESTS & ENACTED APPROPRIATIONS

| | ICC Fiscal year 1996 ⁷ | STB | | | | | 2001 |
|--|--------------------------------------|-------------------|-------------------|-------------------|-------------------|-------------------|---------------|
| | | Fiscal year | | | | | |
| | | 1996 ⁷ | 1997 | 1998 | 1999 | 2000 | |
| Board: | | | | | | | |
| Appropriation | \$32,892,000 | \$12,344,000 | \$12,753,000 | \$14,190,000 | \$15,821,000 | \$17,054,000 | |
| Offsetting Collections | 8,300,000 | 3,000,000 | 3,100,000 | 2,000,000 | 1,200,000 | 900,000 | |
| Budget Request | 41,192,000 | 15,344,000 | 15,853,000 | 16,190,000 | 17,021,000 | 17,954,000 | ⁸ |
| President: | | | | | | | |

| End of Year: | | | | | | | |
| Staffing Level | ¹² 317 | 132 | 127 | 130 | 137 | 140 | 143 |
| FTE Level | ¹² 86 | 106 | 131 | 129 | 131 | 140 | 143 |

1385

⁷ During fiscal year 1996, the ICCTA was passed, the ICC was eliminated effective December 31, 1995, and the Board was established effective January 1, 1996. The enacted funding levels for the ICC for fiscal year 1996 reflect ICC operational and termination expenses for one quarter of the fiscal year and the Board funding levels for fiscal year 1996 reflect Board operational expenses for three-quarters of the fiscal year.

⁸ The Board's fiscal year 2001 budget request essentially represents the Board's current funding level (for fiscal year 2000) plus inflationary and personnel salary increases.

⁹ Enacted appropriations less enacted rescissions.

¹⁰ Actual offsetting collections. In fiscal year 1997, there was a carryover of \$625,031 over the obligational limitation. In fiscal year 1998, there was a carryover of \$315,586 over the obligational limitation.

¹¹ The fiscal year 1999 and fiscal year 2000 enacted appropriations provided that fees not to exceed \$2,600,000 and \$1,600,000, respectively, shall be credited to this appropriation as offsetting collections and that the sum appropriated shall be reduced on a dollar for dollar basis as such offsetting collections are received.

¹² As of December 31, 1995.

USER FEES AND OFFSETTING COLLECTIONS

Question. Please update the table on page 608 of Senate Hearing record 106–221, displaying in tabular form the level of anticipated user fee income in the Board's fiscal year 1998, 1999, 2000, and 2001 budget requests. Please also include columns displaying the President's budget assumptions for user fee income in each of these four fiscal years. In addition, please display the level of user fee offsets included in the appropriations legislation for the Board in fiscal years 1998, 1999, and 2000. Finally, please include columns displaying the actual amount of offsetting user fees collected in fiscal years 1998 and 1999, and projected through the end of fiscal year 2000.

Answer. The following table displays the offsetting collection of user fees for fiscal year 1998 through 2001.

| | STB | | | |
|---|---------------------------------------|-------------------------|-----------------------|------------|
| | Fiscal year | | | |
| | 1997 | 1998 | 1999 | 2000 |
| User Fee Anticipated Income in Budget Request | \$3,100,000 | \$2,000,000 | \$1,200,000 | \$900,000 |
| President's Budget Assumptions | 14,300,000 | 16,000,000 | 17,000,000 | 17,954,000 |
| User Fee Offsets in Appropriations | | | | |
| Language | 2,000,000 | ¹³ 2,600,000 | 1,600,000 | |
| Offsetting Collections Actual | ¹⁴ ¹⁵ 2,315,586 | 802,883 | ¹⁶ 462,731 | |
| Projected end of fiscal year | | | 765,000 | |

¹³ The fiscal year 1999 and fiscal year 2000 enacted appropriation provided that fees not to exceed \$2,600,000 and \$1,600,000, respectively, shall be credited to this appropriation as offsetting collections and that the sum appropriated shall be reduced on a dollar for dollar basis as such offsetting collections are received.

¹⁴ These figures include \$67,050 in fiscal year 1998 in user fees associated with the Conrail acquisition.

¹⁵ This figure includes \$966,700 in user fees associated with the Canadian National Railway/Illinois Central merger.

¹⁶ User Fees collected 10/1/99–03/31/00.

Question. The Office of Management and Budget has proposed that the Appropriations Committees strike the fiscal year 2000 language providing that any fees collected by the Board be credited to this appropriation as offsetting collections. This provision holds the Board harmless from any shortfall in collection of user fees. Why is the fiscal year 2000 enacted provision necessary?

Answer. The Board prefers the bill language as provided in the fiscal year 2000 appropriations law that allows the user fees to be credited to the appropriation as offsetting collections and to reduce the general fund appropriation on a dollar for dollar basis as the fees are received and credited. Administratively, the tracking of the collection of fees has been simplified as a result of this approach. Under this provision, the Board receives the operating cash from one source and deposits and credits the user fees collected to the general fund appropriation, thereby reducing the overall general fund appropriation required for operating expenses of the Board. Prior to this provision, the Board was required to spend considerable staff hours tracking the user fees collected by category and forecasting the user fee categories monthly to derive an end-of-year projection to ensure that there were sufficient resources to supplement the appropriation. Also, the financial forecasting relating to day-to-day operations constrained fiscal year planning due to the uncertainty of the total resources available for the Board's operation.

Question. Why is the requested and anticipated level of user fee collection in fiscal year 2001 (\$900,000) so much lower than that expected for fiscal year 2000 (\$1,600,000) or fiscal year 1999 (\$2,600,000)?

Answer. Based on the fiscal year 1999 actual user fee collections of \$802,883, the Board projected that \$900,000 would be collected in fiscal year 2001. The basis for this projection presumed the same level of collection activity as in fiscal year 1999 and added the governmental pay raise and inflationary adjustment effects of the 2000 Update and 2001 Update on the fee items. We do not have any updated data to indicate that this estimate for fiscal year 2001 would change significantly.

COMPARISON OF FISCAL YEAR 1999 AND 2000 USER FEE COLLECTIONS

Question. What level of assessed user fees was collected in fiscal year 1999? Please discuss the reasons for any delta above or below the fiscal year 1999 enacted level of \$2,600,000 in offsetting collections. What is anticipated to be assessed in fiscal year 2000? What has been the actual user fee collection level thus far in fiscal

year 2000? Please discuss the reasons for any anticipated delta above or below the fiscal year 2000 enacted level of \$1,600,000 in offsetting collections.

Answer. The Board collected \$802,883 in user fees in fiscal year 1999. The Subcommittee had set the fiscal year 1999 collection level of \$2,600,000 anticipating a major rail merger filing with the associated ancillary filings such as abandonments, trackage rights, and line sales that normally accompany a major rail merger. However, this filing activity did not materialize during fiscal year 1999. Also, user fee collections were averaging \$100,000 per month during fiscal year 1998, which contributed to the base projection for the fiscal year 1999 enacted level.

The Board projects that it should collect an estimated \$765,000 by September 30, 2000. The Subcommittee had set the fiscal year 2000 collection level of \$1,600,000 anticipating that more high-dollar user fees would be collected. However, as shown in the table below, the Board has collected \$462,730 in user fees from October 1, 1999, to March 31, 2000. That collection includes three rail construction applications at \$48,800 each and one rate complaint under the coal rate guidelines at \$54,500. Excluding these four one-time large fees, the monthly average for the six-month period is \$44,000 per month. The Board collected \$401,142 for that same period of time last year. The breakdown is as follows:

MONTHLY USER FEE COMPARISON: YEAR TO DATE

| Months | Fiscal year | |
|----------------|-------------|-----------|
| | 1999 | 2000 |
| October | \$63,199 | \$117,355 |
| November | 45,178 | 58,658 |
| December | 78,255 | 56,351 |
| January | 103,581 | 154,320 |
| February | 69,902 | 46,962 |
| March | 41,027 | 29,084 |
| Total | 401,142 | 462,730 |

Question. What was the amount of carryover user fees from fiscal year 1999 which was available for obligation after October 1, 1999?

Answer. The Board still has the \$940,617 remaining that was carried over from the two fiscal years in which there were Class I rail mergers that resulted in user fee collections exceeding the Congressional limits for those fiscal years. The Board has been able to fiscally manage its workload within the fiscal year appropriation limits provided by Congress. Should the Board require additional funding resources for unanticipated caseload and additional cases requiring processing within tight statutory timeframes, the Board would seek to use the carryover funds.

COMPARISON OF RECENT USER FEE SCHEDULE UPDATES

Question. Has the Surface Transportation Board updated its user fee schedule for 2000? If so, please detail in tabular form the 2000 user fee update schedule, including all fee items or sub-fee items, including both the 1999 and 2000 fee amounts, with a column showing the amount of increase, if any (similar to the table found on pages 611-617 of Senate hearing record 106-221).

Answer. The following table lists the Board's user fee schedule as experienced in Ex Parte No. 542, *Regulations Governing Fees For Services Performed In Connection With Licensing And Related Services*, for fiscal year 1997, 1998, and 1999. The fee increase column reflects the net change between the fiscal year 1997 and 1999 fees. The fiscal year 1999 fee schedule is currently in effect. The fiscal year 2000 fee schedule has not yet been adopted by the Board. When the fiscal year 2000 user fee schedule is adopted, we will provide the Subcommittee with a revised table that includes fee data for fiscal year 1998, 1999, and 2000.

COMPARISON OF STB EX PARTE NO. 542 (SUB-NO. 1 FEE SCHEDULE TO STB EX PARTE NO. 542 (SUB-NO. 3) FEE SCHEDULE

| FEE DESCRIPTION | STB EP 542 (Sub-No. 1) | | STB EP 542 (Sub-No. 2) | | STB EP 542 (Sub-No. 3) | | Diff. | Percent change |

STAFFING AND RETIREMENTS

Question. The STB has requested an increase of 3 FTEs for fiscal year 2001, from 140 to 143. Do you plan to bring on 6 new position for one-half year each, or to hire 3 new people at the beginning of the fiscal year? What workload increases are anticipated that would necessitate increases in the Office of Compliance and Enforcement? Please list the job title, salary, and general responsibilities of each proposed new position.

Answer. The Board is currently recruiting for 7 new entry-, mid-, and senior-level professional staff essentially to replace scheduled employee retirements within the next few years. Two of the recruiting actions are for Attorneys, with target grades of GS-15 (entry salary \$84,638), who would be involved in trial litigation in defense of the Board's decisions in the courts and in analyzing rail filings involving rail operations and compliance actions. Three of the recruiting actions are for Transportation Industry Analysts, with target grades of GS 13-14 (entry salary \$42,724-\$71,954), who would be involved in monitoring rail operations, preparing rail analyses, and reporting on rail operations and changes in carriers' practices. The Environmental Protection Specialist position being recruited for, with a target grade of GS-13 (entry salary \$60,890), would analyze and report on the various environmental issues related to rail abandonment, rails-to-trail, and construction filings; carrier consolidations; and other filings involving rail operations impacting the environment. The clerical recruitment of a Welfare-to-Work employee, with a target grade of GS 4-5 (entry salary \$20,829-\$23,304), would provide clerical support in the rail operations and compliance area.

Question. The STB has stated that a large number of current Board employees are already eligible to retire under current regulations and that an even larger number of employees will become retirement eligible within the next two to three years. How many STB employees retired in fiscal years 1998 and 1999, and have retired or are planning to retire in fiscal year 2000? How many employees will be retirement eligible in fiscal year 2001? Please express the actual and potential attrition rates for each of the years listed as a percentage of on-board staff.

Answer. Between April 1, 2000 and September 30, 2002, 34.3 percent of the Board's employees are eligible for voluntary retirement. There were 2 retirements during fiscal year 1998, 2 retirements during fiscal year 1999, and 7 actual and planned retirements during fiscal year 2000. The following table reflects the retirement eligibility of Board employees.

| Retirement eligible by fiscal year | Number of employees eligible | Percentage of staff eligible to total staffing |
|------------------------------------|------------------------------|--|
| 09/30/2000 | 27 | 19.7 |
| 09/30/2001 | 33 | 24.1 |
| 09/30/2002 | 47 | 34.3 |
| 09/30/2003 | 61 | 44.5 |
| 09/30/2004 | 73 | 53.3 |
| 09/30/2005 | 84 | 61.3 |
| 09/30/2006 | 88 | 64.2 |
| 09/30/2007 | 97 | 70.8 |
| 09/30/2008 | 101 | 73.7 |
| 09/30/2009 | 108 | 78.8 |
| 09/30/2010 | 109 | 79.6 |

FISCAL YEAR 2001 BUDGET REQUEST

Question. The Board's fiscal year 2001 request is for \$17,954,000, \$954,000 more than the enacted fiscal year 2000 level of \$17,000,000. Please detail how much of the personnel-related increases are associated with: the increased fiscal year 2000 pay raise, inflation and the 3.7 percent fiscal year 2001 civilian pay raise, and personnel costs for the 3 new FTEs that the Board plans to hire?

Answer. The following table provides a crosswalk from the enacted fiscal year 2000 level of \$17,000,000 to the fiscal year 2001 request of \$17,954,000.

| | |
|---|--------------|
| Fiscal Year 2000 Enacted Appropriation | \$17,000,000 |
| Annualization of Fiscal Year 2000 Pay Raise | 132,000 |
| Fiscal Year 2001 3.7 percent Pay Raise | 390,000 |
| Mandatory Fiscal Year 2001 Within Grade Increases | 33,000 |

| | |
|---|------------|
| New Compliance/Operations Staffing—3 FTEs | 140,000 |
| Non-Pay Inflation and GSA Rent Increase | 115,000 |
| Records Storage (Federal Records Center) | 80,000 |
| Technical Systems Support | 55,000 |
| Fiscal Year 2001 Budget Request | 17,954,000 |

Question. Please describe the Board's use of reimbursable personnel. What positions are currently being held by reimbursable personnel? What are the advantages to using reimbursable personnel? How do the salaries and benefits costs for reimbursables compare to on-board FTE costs?

Answer. Federal agencies must account to OMB for all FTEs funded by direct appropriation (direct FTEs) and by reimbursable funds from other agencies or offsetting collections (reimbursable FTEs). The Board has permanent on-board employees funded by both direct appropriation and reimbursable or offsetting collections. The number of on-board reimbursable FTEs in a fiscal year is directly determined by the amount of offsetting collections received by the Board in any given fiscal year. The Board also has one employee who provides some services to another branch of DOT and for which the Board is reimbursed.

In addition, the Board pays for certain administrative services provided by other agencies. For example, the Board pays the Environmental Protection Agency to provide payroll services, and the Federal Transit Administration to provide accounting services. The costs of performing these services in-house or reimbursing another entity are comparable.

MONITORING OF DECISION IMPLEMENTATION

Question. Please describe how the Board monitors the implementation of rule-making decisions and private sector initiatives and agreements that reflect Board directives.

Answer. The Board monitors its decisions and directives in various ways. In major mergers or consolidations of rail carriers, the Board normally provides for an oversight period, which generally extends for 5-years. The agency retains jurisdiction during that time to impose new conditions on the merger or to take other actions that might be needed to protect the public. With regard to rulemakings, after the Board issues a decision in a rulemaking proceeding, questions about implementation of the Board's decision are generally raised and addressed in the context of a declaratory order or complaint that is filed.

The Board encourages private-sector initiatives. The Board particularly encourages parties to attempt to resolve their differences by private-sector agreements and can put the force of law behind them. When negotiations are successful and the parties reach agreements in the context of a rail merger proceeding, for example, the agreements themselves are often imposed as conditions to merger approval or the agreements form the basis for other conditions imposed by the Board. If problems or disagreements arise later, parties may seek to have the Board enforce agreements to the extent that they have been imposed by the Board as conditions or requirements. Sometimes the Board strongly urges that a private-sector deal be reached and then indicates that it will monitor its implementation. In this instance, the Board can make the agreement a more formalized requirement if the need arises.

PUBLIC HEARINGS ON MAJOR RAIL CONSOLIDATIONS

Question. Please summarize the findings of the Board's March 2000 public hearings on major rail consolidations and the present and future structure of the North American rail industry.

Answer. Given the prospect of significant further consolidation within the rail industry, and our concern that the railroad industry and the shipping public have not yet recovered from the service disruptions associated with the previous round of mergers, the Board instituted the STB Ex Parte No. 582 proceeding to obtain public views on the subject of major rail consolidations and the present and future structure of the North American rail industry. As part of this proceeding, the Board took written and oral testimony from all sectors associated with the rail industry: large and small rail carriers; large and small shippers representing various commodity groups; intermodal and third party transportation providers; rail employees; state and local interests; financial analysts and economists; and Members of Congress and other federal agencies.

As a result of the hearing in STB Ex Parte No. 582, the Board issued a decision served on March 17, 2000, finding that the overwhelming weight of the testimony was that, at a minimum, the Board's rail merger policy must be reexamined now,

before any new major mergers are processed. Through that decision, the Board announced a suspension for 15 months of all new rail merger activity before the Board and that, over that 15-month period, it would initiate and complete a proceeding that will provide new merger rules. In a decision served on March 31, 2000 (and published in the Federal Register on April 6, 2000) in STB Ex Parte No. 582 (Sub-No. 1), the Board issued an advance notice of proposed rulemaking seeking comment on various proposed changes to the Board's rail merger rules. The Board expects to complete the rulemaking process by issuing final revised rail merger rules by mid-June 2001. Please see the attached decisions in the STB Ex Parte No. 582 lead proceeding and the (Sub-No. 1) rulemaking proceeding.

RAIL MERGER POLICY DECISION

Question. Please summarize the Board's rationale for its decision to suspend all major merger activity for 15 months (effective March 16, 2000). Justification.

Answer. As indicated already, in a decision served on March 17, 2000, in STB Ex Parte No. 582, the Board found that the overwhelming weight of the testimony was that, at a minimum, the Board's rail merger policy must be reexamined now before any new major mergers are processed. The Board concluded that the rail community is not in a position to undertake what will likely be the final round of restructuring of the North American railroad industry, and that the current rules are simply not appropriate for addressing the broad concerns associated with reviewing business deals geared to produce two transcontinental railroads. To permit the development of the new rules, and to ensure that the industry has had the opportunity to fully recover from service problems associated with recent mergers without distractions associated with consideration of additional mergers, the Board ordered a suspension of all merger activity, categorized as major transactions, until after the final merger rules are issued, or a total period of 15 months.

The Board stated that, not only would it be impracticable to try to act on a final round of mergers while in the process of developing new merger rules, but it would also be disruptive to the rail system and to rail service that remains below acceptable levels in many areas. Carriers whose management should be focused on fixing their service problems would instead be fixated on finding merger partners, defending their proposals, and responding in the regulatory arena to other carriers' proposals. Investors, who have forsaken the railroad industry in favor of businesses that they have come to believe may have more favorable future prospects, could devalue the industry further. And railroads could find it more difficult to finance the capital improvements necessary to provide the better service that is key to their financial revitalization. The disruption would go far beyond the specific interests of Burlington Northern Santa Fe and Canadian National and the carriers that compete with them; it could irreparably damage the entire industry, to the detriment of the interests of shippers, rail employees, and the national economy and defense.

The Board believes that the sheer size of the potential new mergers poses unique risks and leaves no margin for error: if these mergers were to fail, or lead to service problems, the effects could be devastating for both the rail industry and the shippers that depend on rail service. During the process of reexamining the merger rules and making sure that the new merger rules take such risks into account, the Board believes it necessary to maintain the status quo by directing large railroads to suspend merger activity pending the development of the new merger rules.

Question. Burlington Northern and Santa Fe Railway Company and Canadian National Railway Company have filed an appeal with the D.C. Circuit Court of Appeals of the STB's 15-month merger moratorium. What is the schedule for a hearing and decision on this appeal?

Answer. The petitions for review were filed in court on March 17, 2000, and March 20, 2000. On March 29, 2000, petitioners Burlington Northern Santa Fe Corporation and The Burlington Northern and Santa Fe Railway Company filed with the court a motion to expedite judicial review, under which briefing would be completed approximately one month after the court rules on the motion, and under which oral argument would be held as soon thereafter as possible. On April 11, 2000, Canadian National Railway Company filed a similar motion. The court has not yet ruled on the motions, and thus a briefing schedule has not yet been set.

**DEPARTMENT OF TRANSPORTATION AND RE-
LATED AGENCIES APPROPRIATIONS FOR
FISCAL YEAR 2001**

U.S. SENATE,
SUBCOMMITTEE OF THE COMMITTEE ON APPROPRIATIONS,
Washington, DC.

[CLERK'S NOTE.—The following testimonies were received by the Subcommittee on Transportation and Related Agencies for inclusion in the record. The submitted materials relate to the fiscal year 2001 budget request.

The subcommittee requested that public witnesses provide written testimony because, given the Senate schedule and the number of subcommittee hearings with Department witnesses, there was not enough time to schedule hearings for nondepartmental witnesses.

NONDEPARTMENTAL WITNESSES

NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION

PREPARED STATEMENT OF THE COMCARE ALLIANCE

I thank you for the opportunity to provide testimony to your subcommittee on behalf the ComCARE Alliance for the record. ComCARE is a non-profit coalition of more than 50 organizations who are dedicated to building an end-to-end system to enhance public safety utilizing wireless technologies.

Over the past decade, we have seen enormous advancements in the fields of transportation, public safety, communications and EMS. Unfortunately, many of these advancements have occurred on their own and have not been integrated with one another. The ComCARE Alliance is working across America to link technologies to complete a "chain of survival" that will save lives, reduce the impact of debilitating injuries, conserve resources, and improve the efficiency of our nation's highways. Wireless communications is the critical link in this chain. Last year, with the help of Commerce Committee Communications Subcommittee Chairman Burns, and other leaders like Senators Lott, Dorgan, Frist and others, The Wireless Communications & Public Safety Act of 1999 was enacted into law, removing several of the barriers to deploying these lifesaving technologies.

My testimony focuses on two central themes that describe how connecting wireless to transportation, public safety and EMS functions, gives the term "integration" a new meaning. The same communications technologies that are used to locate emergency calls can be used to identify real-time traffic patterns, pinpoint vehicle crashes, and identify the positions of emergency response vehicles. Unfortunately, no mechanism or process currently exists to bring together each of the critical entities together at the federal or state levels to make integration of all the building blocks a reality. Our program request is modest because we believe there are other sources of funding that can be used for integration purposes. Our goal is to leverage significantly more public and private investment beyond what we are asking from you today.

The ComCARE Alliance respectfully requests that this subcommittee appropriate resources for two specific activities. These initiatives will contribute to reducing highway fatalities and injuries, and they will have significant benefits for other

transportation objectives (e.g. quality and efficiency). Our first request to you Mr. Chairman and members of the Subcommittee is to advance trauma research, private sector initiatives, and public understanding of automatic crash notification (ACN). ACN technologies link crash sensors in equipped vehicles to a wireless telephone. In the event of a crash, an emergency call is automatically generated, opening voice communications and sending crash data to help response agencies in deciding what assistance needs to be dispatched to the scene. We request that \$5-\$10 million be included in the fiscal year 2001 Transportation Appropriations bill to support national ACN field testing. Research would be conducted by trauma centers in geographically diverse areas across the country. Trauma centers will partner with other entities to conduct data analysis and crash investigations.

Second, we respectfully request that Congress accelerate the process of deploying integrated emergency communications and transportation systems by launching a national and state-level dialogue on the importance of integration. This will include both incentive grants to states to conduct statewide planning and model deployments, and a grant for a national educational effort with key stakeholder groups. The National Communications & Public Education Program will organize a national "summit meeting" to educate leaders of the various constituency groups (Intelligent Transportation, Traffic Engineers, EMS, 9-1-1, Wireless Carriers) about the value of working together at the state and local levels to enhance public safety and improve transportation efficiency. We request that Congress appropriate \$11.5 million for the State Planning Grant Program and the National Dialogue in fiscal year 2001. \$10 million would be distributed to states to pay for an inclusive, coordinated planning and implementation process, and for specific deployment costs (any part of the end-to-end system). \$1.5 million would fund a two year public education program in conjunction with state planning activities described above. Since this is not a function that the U.S. Department of Transportation currently performs, resources to support this "national dialogue" program should not be diverted from existing program funds. New resources need to be directed for this important effort.

We are presented with an opportunity to work together to upgrade our transportation systems, improve public safety and save lives on America's roadways. The members of the ComCARE Alliance are dedicated to working together with you and your colleagues to build these end-to-end systems across the country.

I thank you for the opportunity to submit testimony for the record. I am honored to represent the ComCARE Alliance. ComCARE is a non-profit coalition of more than 50 organizations including nurses, physicians, transportation officials, emergency medical technicians, 9-1-1 directors, wireless companies, public safety and health officials, law enforcement groups, automobile and technology companies, telematics suppliers, safety groups, and others who are dedicated to building an end-to-end system to enhance public safety utilizing wireless technologies.

Over the past decade, we have seen enormous advancements in the fields of transportation, public safety, communications and EMS. Unfortunately, many of these advancements have occurred on their own and have not been integrated with one another. The ComCARE Alliance is working across America to link technologies to complete a "chain of survival" that will save lives, reduce the impact of debilitating injuries, conserve resources, and improve the efficiency of our nation's highways. Wireless communications is the critical link in this chain.

Last year, with the help of Senator Burns, and other leaders like Senators Lott, Dorgan and Frist, the Wireless Communications and Public Safety Act of 1999 was enacted into law. That Act made "9-1-1" the official number for emergencies across America, reduced barriers to installing lifesaving wireless location technologies, and encouraged the FCC to help get all the right groups get around the table to plan and upgrade 21st century safety systems.

VISION OF INTEGRATED TRANSPORTATION AND EMERGENCY COMMUNICATIONS

Assume for a moment that there was a serious three-car pile-up on I-65, just north of Birmingham, AL, normally a 20-minute ambulance ride to the closest emergency care facility under rush-hour conditions. It's even farther to the advanced care trauma center. During this crash, several of the passengers suffered significant injuries.

In this integrated illustration, an Automatic Crash Notification device located in each of the impacted vehicles would be activated. A wireless emergency call would automatically be dialed and the crash data, how fast the cars were traveling, the principal direction of force, whether the cars rolled over, and the type of cars in the crash would be simultaneously sent to the 9-1-1 center and the nearest trauma center (the latter because data indicated a very serious crash). The 9-1-1 dispatchers would know the exact location of the crash since as it was instantly plotted

on a computerized map in front of them. They would also know that Good Samaritans passing by the incident on I-65 and dialing 9-1-1 on their wireless phones were describing the same emergency scene.

Based on the severity of the crash data, the trauma center and 9-1-1 operator would know immediately whether only to send a patrol car, two ambulances, or a Medi-Vac helicopter to UAB Medical Center. On the same map identifying the location of the victims, the emergency dispatcher would also be able to tell where the nearest police cars were patrolling and where the closest ambulances and fire trucks were currently located, using inexpensive AVL technology. To get a better view, the nearest ITS-deployed camera, identified by this same location data, would automatically be switched on and focused on the crash scene. As EMS arrived on the scene and took the victims to the trauma center (avoiding other tie-ups due to the dispatcher's access to traffic data), the trauma teams would be getting prepared, knowing from the crash data the specific kinds of internal and external injuries that they should expect to treat.

Due to the integration of emergency communications with traffic management, the same location technology would provide traffic managers real-time descriptions of traffic patterns and speeds, and the crash would be immediately reported, along with its effect on traffic. This would allow diversion of traffic, saving time for other commuters heading home to their families and immediate dispatch of equipment to clear the highway. Wireless subscribers to traffic data services and heading towards the incident would have instant access to the clogged traffic situation ahead and be offered alternative routes. The same picture would appear graphically via an Internet delivered service to subscribers and any government official who was given access.

Inside the ambulance, devices would be hooked up to the victims, communicating vital signs in real-time via wireless to the trauma center. Each victim's medical history, blood type, and reactions to medication would also be accessed from a secure database to better prepare caregivers. And on the way to the trauma center, the ambulances would not see a red traffic light, and would be routed along highways with the least amount of congestion.

In addition to saving lives, the trauma center and medical networks might be able to reduce their treatment and insurance costs by providing assistance to these patients in a much shorter time, before they sustained long-term debilitating injuries, and they would be looking for internal injuries that were often missed before.

Unfortunately, no mechanism or process currently exists to bring each of the critical entities together at the federal or state levels to make this picture a reality. At the end of the day, a stronger focus on integration will help get comprehensive systems deployed much, much faster, and also ones that are more efficient and valued by end users.

THE NEED FOR INTEGRATING FUNCTIONS

ComCARE's testimony focuses on two central themes, and outlines a modest program for your Subcommittee to consider. It would leverage significant private and state resources to make these end-to-end systems a reality. Last year's 9-1-1 bill focused on removing barriers to lifesaving technologies. ComCARE's membership recognizes that deployments of these technologies will have enormous transportation benefits.

Mobile Integration

The first theme is that much more integration is possible in a mobile society than ever before. The advent of the wireless phone and ubiquity of mobile communications networks have brought about a significant potential for extending transportation, public safety and medical efficiencies to a traveling public.

More than 85 million wireless phones are used more than 100,000 times per day to report vehicle crashes, reduce crimes, and lower response times to emergencies. According to statistics from the National Highway Traffic Safety Administration, since 1988, EMS notification times concerning vehicle crashes have dropped nearly 30 percent in both urban and rural areas, roughly tracking the growth of wireless phone use. Yet, long or delayed response times to crashes or other life-threatening emergencies are still a major public health problem in the United States, especially in rural areas. Our trauma surgeons and emergency physicians know that faster action is critical during the "Golden Hour" following a vehicle crash or other traumatic emergency.

Wireless technologies also have tremendous benefits to the transportation community. Wireless networks that are upgraded with enhanced 9-1-1 (E9-1-1)¹ capabilities for all phones have the potential to improve transportation systems by providing for the provision of real-time traffic information, utilizing aggregate wireless phones as “data probes,” and providing a low cost platform for supporting automatic crash notification (ACN) and automatic vehicle location services. They can also be used as an early warning system for traffic incidents. Finally, wireless communications also allow for better sharing of information between each entity in the end-to-end system.

integration of the Building blocks

The second theme is that “integration” is badly needed among the building blocks of the end-to-end system: transportation, public safety and EMS. There are a multitude of federal and state programs that are advancing the effectiveness of each of the individual blocks. However, each program is primarily focused only on one block, rather than seeing each as links in a whole chain. For example, the Federal Communications Commission’s Public Safety and Wireless Advisory Committee (PSWAC) is focused on spectrum for law enforcement but not focused on transportation communications. The Department of Justice is making grants for “3-1-1” information systems, but not linking 3-1-1 to 9-1-1. Many states have excellent highway safety and EMS programs, but other states don’t know about them. There have been outstanding “pilot projects” in Virginia and across the country demonstrating the availability of real-time traffic information on primary highways, but that data is not being shared with 9-1-1 centers who could better route emergency vehicles. There is not one state which has an official structure where all of the key stakeholders involved with transportation, public safety, and EMS meet to develop integrated policies and systems.

The term “integration” to transportation policymakers means connecting one form of transportation to another form or another technology. Intelligent transportation integration projects often incorporate an advanced technology and ensure that it is compatible with a national “ITS architecture.” These efforts are productive and are improving transportation systems. But more can be done to promote true integration in terms of sharing information, getting different agencies and sectors working together, identifying synergies, and deploying technologies for multiple purposes. If you use communications, particularly wireless, to connect transportation, public safety and EMS functions, the term “integration” takes on new meaning. The same communications technologies that are used to locate emergency calls can be used to identify traffic patterns, and keep tabs on emergency response vehicles or trucking fleets. The opportunity to improve transportation efficiency, enhance public safety, and save lives stems from the intersection of transportation and emergency communications.

REQUESTED APPROPRIATIONS

The ComCARE Alliance respectfully requests that this committee appropriate resources for two specific activities. These initiatives will contribute to reducing highway fatalities and injuries, and they will have significant benefits for other transportation objectives (e.g. quality and efficiency).

Our goal is to leverage significantly more investment beyond what we are asking from you today. Our program request is modest because we believe there are other sources of funding that can be used for integrated purposes. The value of the funds we request today is that they will encourage and leverage these other investments. Specifically these others include 1) ITS deployment funds; 2) existing federal and state transportation programs; and 3) the private sector.

We respectfully suggest you compliment the U.S. Department of Transportation for its efforts to date in the following two areas, and encourage it to do more of these activities from existing funds, as well as the new funds we request today.

Automatic Crash Notification Research

Our first request to you Mr. Chairman and members of the Subcommittee is to advance trauma research, private sector initiatives, and public understanding of automatic crash notification (ACN). ACN technologies link crash sensors in equipped vehicles to a wireless telephone. In the event of a crash, an emergency call

¹“E9-1-1” refers to wireless Enhanced 9-1-1; FCC Report and Order 94-102 requires wireless carriers to provide a callback number and location of emergency callers to Public Safety Answering Points on a phased in basis. Federal Communications Commission. Revision of Rules to Ensure Compatibility with Enhanced 911 Emergency Calling Systems. CC Docket No. 94-102. RM-8143.

is automatically generated, opening voice communications and sending crash data to assist response agencies in deciding what assistance needs to be dispatched to the scene. Crash data, such as speed of the crash, airbag deployment, point of impact, and seatbelt use is extremely helpful to trauma and emergency medical experts in predicting the severity and type of injuries sustained in the crash. With serious field research based on significant units, we can develop powerful and accurate predictive capabilities.

Currently, U.S. DOT is conducting very limited field testing of ACN technologies in two locations (Buffalo, New York and Rochester, Minnesota) with only a few hundred vehicles. DOT and one of its contractors are paying all the costs, including vehicle equipment. While this research has demonstrated that the technology works and it can be invaluable to emergency response, the number of units in the field does not even begin to approach the number necessary to generate sufficient crash data to verify predictions with actual patient outcomes. Significant national testing is needed incorporating crash data from a statistically significant number of vehicles, and exposing ACN use in both urban and rural settings.

We request that \$5-\$10 million be included in the fiscal year 2001 Transportation Appropriations bill to support national ACN field testing. Research would be conducted by trauma centers in geographically diverse areas across the country. Trauma centers will partner with other entities to conduct data analysis and crash investigations.

ACN field testing would take two basic forms: (a) a national test with crash data collected from the vehicles of one or more auto manufacturers, and/or a retrofit company, and (b) a number of market specific tests in a city or region. In-vehicle equipment would be provided by commercial entities. Grant funds would be used for medical and engineering field research and for establishing information distribution systems among public safety and EMS entities and other government agencies.

National Dialogue and State Planning Grants for Integrated Transportation and Emergency Communications

Second, we respectfully request that Congress accelerate the process of deploying integrated emergency communications and transportation systems by launching a national and state-level dialogue on the importance of integration. This will include both incentive grants to states to conduct statewide planning and model deployments, and a grant for a national educational effort with key stakeholder groups.

Federal, state and local governments have spent significant sums on transportation and emergency communications in recent years, but no state has fully integrated these systems to improve public safety. Most agencies need upgrades (e.g. to provide E9-1-1) and/or more broad deployments (e.g. to provide more comprehensive traffic data). More effectively linking some of the functions of these agencies at the state and local level will save resources.

Because service areas of some of the providers (e.g. wireless carriers) are state and regional, upgrade planning on a purely local basis will not work. Governors need to bring together the key stakeholders to develop and implement coordinated, efficient plans for upgrading wireless emergency communications (E9-1-1), and integrating that with transportation policies (e.g. traffic control and congestion operations). This will serve both efficiency and safety goals.

In addition to planning, grants could be also used by states, in their discretion, for completing any part of the chain of survival. These activities include traffic reporting systems using 9-1-1 location technology; upgrade of local 9-1-1 systems and networks to produce and receive location of wireless 9-1-1 callers; integration with ITS capabilities; and other pre-hospital emergency needs of states.

In addition, a National Communications & Public Education Program is needed to support this state planning. The process of integrating transportation, E9-1-1 and EMS systems will require leadership and participation from members of the transportation, emergency medical, consumer, and public safety communities. Traditionally these groups have seldom worked with each other, and they have not considered integrating communications technologies that can improve the way they handle their respective responsibilities. To show stakeholders around the country what they can do to build an end-to-end system in their area, a national communications and public education program should be established. The ComCARE Alliance and its member ITS America have already begun this activity, but it needs to be expanded significantly.

This program would include: conferences of national, regional and local stakeholder group leaders; workshops to discuss how federal, state, and local funding sources can leverage private funds to pay for infrastructure and staffing costs; research papers on deployment topics and sharing of "best practices;" technology demonstrations; and the development of materials that can be distributed to state and

local agencies, citizen groups and the media about the public safety and transportation benefits.

To date, there is no federal or state program designed to bring these different functions of government together with the private sector and consumer groups to integrate their efforts in transportation and emergency communications. For example, there is no table where the 9-1-1 community, the Department of Transportation, the American Heart Association, and the Brain Injury Association come together to coordinate their efforts to develop emergency transportation systems. If local and state agencies and others work together to incorporate advances in transportation and communications technologies, staff and financial resources will be maximized and systems will be more efficient.

The National Communications & Public Education Program will organize a national "summit meeting" to educate leaders of the various constituency groups (Intelligent Transportation, traffic engineers, EMS, 9-1-1, wireless carriers) about the value of working together at the state and local levels to enhance public safety and improve transportation efficiency. The summit will also include technology demonstrations. Following the summit, the Program will facilitate working groups in 15-20 states to tailor integration models to meet each state's needs. These sessions will bring together all of the local stakeholder groups to determine what resources are available, both public and private, to build an integrated system in their state. To demonstrate different approaches, materials will be compiled and circulated after workshops. These will include a "Report on Best Practices" that will include chapters written by state leaders who are heading up deployments.

We request that Congress appropriate \$11.5 million for the State Planning Grant Program and the National Dialogue in fiscal year 2001. \$10 million would be distributed to states to pay for an inclusive, coordinated planning and implementation process, and for specific deployment costs (any part of the end-to-end system). We estimate this would cover activity in 5-7 states. \$1.5 million would fund a two year public education program in conjunction with state planning activities described above. Since this is not a function that the U.S. DOT currently performs, resources to support this "national dialogue" program should not be diverted from existing program funds. New resources need to be directed for this important effort.

Leveraging Existing Integration Resources

The "Intelligent Transportation System Integration Program" at the Department of Transportation's Joint Program Office was created to encourage integration of advanced transportation technologies. This program (Section 5208 of the Transportation Equity Act for the 21st Century) is an appropriate resource for state, county and municipal governments to obtain some resources to support integration deployments. These ITS deployment grants can serve as incentives, or leverage money to help install a communications platform that can serve multiple purposes, with cost savings to all participants.

We encourage communities across the country to use these ITS Integration Deployment grants for the kind of transportation and emergency communications purposes that ComCARE has outlined above. The more places around the country that demonstrate the value of integrating their local 9-1-1, EMS, traffic, and transportation systems, the better. Communities can design specific applications that address their needs such as improved communications and tracking functions for snowplow contractors in the Northeast, or shared traffic data between traffic control centers and EMS units in urban areas. ComCARE members and others should work at the local level to create partnerships that can use these grants to improve public safety.

CONCLUSION

As we begin the Twenty-First century, it is no longer possible to view transportation and emergency communications in separate boxes. Technologies that have emerged in the information age make it possible to integrate these two functions that affect every citizen's life. We are presented with an opportunity to work together to upgrade our transportation systems, improve public safety and save lives on America's roadways. Modest federal support can leverage significant private and local resources to get this done. The members of the ComCARE Alliance are dedicated to working together with you and your colleagues to build these end-to-end systems across the country.

PREPARED STATEMENT OF THE COMMERCIAL VEHICLE SAFETY ALLIANCE

These comments are submitted on behalf of the Commercial Vehicle Safety Alliance, an international organization of truck and bus safety enforcement officials and industry representatives in the U.S., Canada, and Mexico.

With respect to the fiscal year 2001 budget for the Federal Motor Carrier Safety Administration, we suggest two projects for FMCSA that may be eligible for funding under the category of high priority initiatives. The first relates to the CDL program. The second relates to a new requirement in the Motor Carrier Safety Improvement Act of 1999 to certify motor carrier safety auditors.

In the fiscal year 2000 Transportation Appropriations Conference Report, the then Office of Motor Carriers and Highway Safety was directed to work "work with states to assure that they have the most up-to-date driving record for people that hold a commercial driver's license (CDL) and that this information can be easily transferred . . ." Little or no progress has been made in this effort.

In addition, the MCSIA requires States to address current deficiencies in the exchange of information relating to driver violations that would result in either the suspension or revocation of a CDL.

Thus, we recommend that FMCSA place renewed emphasis on the CDL program and establish a pilot CDL compliance program to assist States in determining what is impeding the speed with which driver convictions are entered into the national system (CDLIS) and to further assist States in taking corrective action to remedy the deficiencies.

This pilot program would accomplish these objectives through a cooperative effort between FMCSA and the state MCSAP agencies. Funds should be provided to the State MCSAP agency to obtain whatever resources may be necessary to first determine any deficiencies within its own operations that may contribute to the problem in obtaining and exchanging the necessary driver conviction information but also to enable the MCSAP agency to assist the State Motor Vehicle Licensing Agency and any other state agency, including local law enforcement agencies, in correcting whatever problems that may exist which impede the efficient and timely posting and otherwise necessary flow of driver conviction information through all appropriate channels so that drivers with revoked or suspended licenses may not operate on our highways.

CVSA believes that without new and creative leadership of the leading commercial vehicle safety enforcement agency at the federal level and of the lead MCSAP agency at the state level, the important national safety objective of improving the CDL program will not be realized.

On the issue of certification, the MCSIA requires the Secretary to complete a rule-making within one year of enactment to improve training and provide for the certification of motor carrier safety auditors, including private contractors, to conduct safety audits. In addition the MCSIA requires that all new motor carrier entrants be reviewed by a safety auditor within 18 months of operation.

CVSA therefore recommends that FMCSA work with those groups and organizations that may already have the experience and expertise in establishing and operating similar certification programs in the vehicle safety area such commercial motor vehicle inspections.

Thank you for the opportunity to provide these comments to the Subcommittee.

RESEARCH AND SPECIAL PROGRAMS ADMINISTRATION

PREPARED STATEMENT OF THE INTERSTATE NATURAL GAS ASSOCIATION OF AMERICA

The Interstate Natural Gas Association of America (INGAA) appreciates the opportunity to share our views on the fiscal year 2001 Transportation Appropriations measure, and in particular, the proposed funding for pipeline safety activities. By way of introduction, INGAA is the trade association that represents virtually all of the interstate natural gas transmission pipeline companies operating in the U.S., as well as comparable companies in Canada and Mexico. Our members transport over 90 percent of the nation's natural gas.

Safety is a primary focus for our member companies. The natural gas pipeline industry is already the safest mode of transportation, according to figures compiled by the U.S. Department of Transportation and the National Transportation Safety Board. Although there are over 2 million miles of natural gas and petroleum pipelines in the United States today, accidents are rare.

The reason the industry is so safe is the fact that INGAA's members take safety very seriously. Accidents are few, but the consequences of any accident can be significant. The American economy needs clean, low-cost energy to grow, and natural

gas is an integral part of that growth. Due to its environmental benefits and low cost, most energy analysts foresee a huge increase in the demand for natural gas over the next 20 years for power generation and industrial processes (see below). If our product is somehow viewed as being unsafe, however, the general public will not accept continued pipeline operations and the significant expansions that will be needed to meet this demand.

Projections of Natural Gas Demand Through 2020

Interstate natural gas pipelines spend about \$600 million annually on safety activities, which is about \$3,400 per mile. We employ a variety of techniques, including internal inspection devices (known as smart pigs), hydrostatic testing, cathodic protection (which prevents corrosion), pipeline right-of-way fly-overs and walking inspections, and public awareness and education programs. Interstate natural gas pipelines are also required to upgrade their pipeline as the population density to the pipeline increases. These "class location" changes result in pipelines either changing to a thicker-walled pipe, or lowering the pressure on the line, to increase the margin of safety.

The Office of Pipeline Safety (OPS), which is part of the Research and Special Programs Administration at the U.S. Department of Transportation, is responsible for regulating the safety of interstate natural gas and hazardous liquid pipelines. OPS is funded almost entirely through user fees which transmission pipelines pay based on the miles a pipeline operator owns. Accordingly, INGAA wants to see that the dollars its members pay to fund OPS are used in ways which enhance safety.

INGAA has several concerns about the Administration's proposed budget for OPS. The Administration request would represent an increase of over 21 percent in the total budget for OPS, from \$38.879 million in fiscal year 2000 to \$47.137 million in fiscal year 2001. This is a significant increase under any circumstances, but it is puzzling given the outstanding safety record of natural gas pipelines and the fact that the number of natural gas transmission accidents has actually decreased, on average, in recent years. INGAA believes OPS should be funded in a manner which allows the current programs to continue.

Regarding INGAA's specific concerns, the Administration request includes sufficient funds to hire four new safety inspectors, although they anticipate using only two new Full Time Equivalents in fiscal year 2001. Since OPS seems to be focusing a great deal of its attention on oil pipelines and improving inspections on those facilities, INGAA believes that the cost associated with these new inspectors should come from the Oil Spill Liability Trust Fund.

Because unintentional “third-party” damage is a leading cause of accidents on natural gas pipelines, INGAA supports the funding for public education and one-call damage prevention programs. We propose that the \$500,000 for public education, and the \$1,000,000 in state one-call grants, be funded through unexpended reserve account funds. This reserve account consists of pipeline safety user fees which were collected in previous years, but remain unspent in the OPS account. Despite a gradual drawdown of this reserve account in previous fiscal years, the balance is still approximately \$18 million, which is much more than is needed for any emergency contingencies.

Although INGAA also supports the state Damage Prevention Grants which were authorized as part of the Transportation Equity Act of the 21st Century (TEA21), we strongly oppose this \$5 million allocation being paid through pipeline safety user fees, as the Administration has currently proposed. In fact, the Administration proposal violates Section 6107 of TEA21, which states that “(a)ny sums appropriated under this section shall be derived from general revenues and may not be derived from the amounts collected under section 60301 (user fee section) of this title.”

Congress was specific on this point for an important reason. Underground damage prevention is not an issue that is unique to pipelines. In fact, pipelines are affected by only about 17 percent of all one-call center activity, with the remainder coming from such entities as telecommunications, cable TV, electric utilities and water/sewer facilities. Rather than have only pipelines pay to fund grants which benefit a wide variety of industries—as well as the general public—the Congress made it clear that damage prevention grants should come from general revenues. INGAA urges the Subcommittee to reinstate the intent of Congress by allocating the \$5 million in one-time damage prevention grants from general revenues.

INGAA is also concerned about the level of proposed funding for state pipeline safety grants. Federal grant funds are made available to those states which adopt federal minimum safety standards for intra-state and local distribution pipelines. Section 60107 of U.S. Code Title 49 states that the Secretary of Transportation “shall pay not more than 50 percent of the cost of the personnel, equipment and activities the (state) authority deems reasonable” in a given calendar year. It is worth noting, however, that the state grants funds are raised from user fees assessed almost exclusively on interstate pipelines, which are regulated by federal rather than state authorities.

In fiscal year 1999, the latest year for which complete figures are available, pipeline safety grants to the states totaled \$13 million. This represented 44 percent of total state expenditures for pipeline safety (see attached chart). In other words, state pipeline safety grants have been close to the statutory limit of 50 percent federal funding. However, the states have received federal grant money from other accounts, and have benefited from the assistance of OPS in obtaining new pipeline safety information systems.

The Administration’s budget proposes \$17.5 million for state grants in fiscal year 2001, up from \$13 million in fiscal year 2000. Based upon the 1999 state requests, and factoring in increases for inflation, the fiscal year 2001 total for state grants needed to reach a 50 percent federal contribution should be about \$15.7 million. In addition, the Administration request includes \$50,000 for state risk management grants, \$1 million for state one-call grants, and the aforementioned \$5 million for state damage prevention grants. INGAA believes that these grants total far more than the 50 percent cap on federal funding of state programs which is currently in force. The \$17.5 million figure, in particular, is too high when you consider that \$13 million covered 44 percent of state expenditures for fiscal year 1999. INGAA believes that a far lower state grant number is both appropriate and consistent with the Pipeline Safety Act.

Finally, INGAA takes note of the proposed \$250,000 increase in research and development. Our members have participated for several decades in two organizations that seek new technologies to improve pipeline safety—the Gas Research Institute and the Pipeline Research Committee International (PRCI). We would welcome having OPS participate in and contribute funds to PRCI, in order to better coordinate industry and government research on natural gas pipeline safety.

In summary, INGAA believes the proposed budget increase of over 21 percent for the Office of Pipeline Safety is not justified. We support the \$5 million in grants to the states for damage prevention, so long as these funds are allocated from general revenues consistent with Congressional intent. INGAA encourages the Subcommittee to draw \$1.5 million from the OPS reserve account for public education activities and state one-call grants. As OPS is focusing more of its attention on liquid pipelines in the coming year, we urge any substantive increases in their funding to be drawn from the Oil Spill Liability Trust Fund—not from natural gas trans-

mission pipeline user fees. Thank you for the opportunity to share our views with the Subcommittee.

U.S. COAST GUARD

PREPARED STATEMENT OF THE NATIONAL ASSOCIATION OF STATE BOATING LAW ADMINISTRATORS

Mr. Chairman and Members of the Subcommittee: I am Paul Donheffner, Boating Law Administrator for the State of Oregon and current President of the National Association of State Boating Law Administrators.

The National Association of State Boating Law Administrators (NASBLA) is a professional association consisting of state officials having responsibility for administering and/or enforcing state boating laws.

Our Association is recognized for its stewardship of "Recreational Boating Safety." We have, over the years, worked closely with the U.S. Coast Guard, the States, and others to insure that the intent of Congress to promote uniformity and reciprocity among the various states was given high priority. Testimonial of this are the many standards, resolutions and model acts that have been generated by our Association and adopted by the majority of the states and territories. In doing this we bring to the table highly qualified personnel in the field of boating law enforcement, education, boating safety, and on the water search and rescue.

Our membership takes pride in their accomplishments and the many words of praise we have received from the Commandant, U.S. Coast Guard, and the Chairman, National Transportation Safety Board over the years.

My testimony today will focus on the Aquatic Resources Trust Fund (Wallop-Breaux) and more specific, the Boat Safety Account of this fund.

The boat safety account of the trust fund is derived solely from the tax boaters pay on their motorboat fuel. This user fee paid by the boaters, is returned to the States to help defray their cost for services provided to the recreational boater. We think this is indeed in keeping with the user fee concept, (ie) user pays-user benefits, thus not costing the general tax payer one cent and especially noteworthy, does not add one penny to the national debt. Allowing the States to recoup the federal marine gasoline tax that boaters pay on marine fuel used in motorboats is a prime example of the user fees helping the user.

The National Association of State Boating Law Administrators is asking this Subcommittee for \$70 million as authorized in Tea-21, the Transportation Equity Act for the 21st Century for fiscal 2001.

Our Association would emphasize that:

- States make the best use of these trust funds. The end product is a major contribution by the States to maintain an overall reduction in boating fatalities. Since the infusion of federal funds in the 1970s, boating fatalities in the United States have dropped from 1,754 in 1973 to 815 deaths in 1998. This drop occurred despite more people using our waters in a wider diversity of craft than ever before.
- The appropriation of federal assistance to the states from this trust fund has resulted in a willingness on the States' part to assume a major share of what is logically and statutorily a joint responsibility.
- Stability in the appropriation process is very much needed to give the states the credibility, consistency and resources to reach the local boating public.
- The financial base provided by the federal government from this user fee generated trust fund allows the states to concentrate on establishing an administrative infrastructure, purchasing equipment and promoting education and enforcement techniques to stimulate increased boating awareness and decrease fatalities.
- The efforts of the states funded from this user fee generated trust fund should result in savings to the federal government rather than additional cost resulting from state curtailment, inaction or indifference.
- The States willingly picked up the additional responsibility when the Coast Guard removed their boating safety detachment teams some years ago for a savings to the federal government of \$10 million plus.
- The States have shown credibility, consistency and resources to reach the boating public with a positive boating safety program directed to make our waterways safer and the boaters experience more enjoyable.

There is no question that state program interventions, made possible with federal funds, are making a difference. Since 1973, when the program began, the Coast Guard estimates that over 23,000 lives have been saved. With full funding we will

strive to keep up with the ever increasing demand to better educate the boaters and further reduce boating accidents and fatalities. The burden for boating safety has shifted from the U.S. Coast Guard to the states, but this would not be possible without federal assistance. We see the states being asked to take an even greater lead role in boating safety, education and boating law enforcement.

Congress is sometimes concerned over the use and effectiveness of these trust funds. Following is a comprehensive listing of how states use Federal Boat Safety Trust Funds:

- Develop new laws and regulations addressing key recommendations by the National Transportation Safety Board in such areas as:
 - Boating while intoxicated.
 - Mandatory wear of life jackets by children
 - Mandatory education and boat operator proficiency
 - Personal watercraft safety
- Increase boating safety patrols.
- Conduct better boating accident investigations. By better understanding accident causes, law enforcement and educational programs can effectively address them.
- Increase enforcement officer training.
- Purchase better communications and enforcement equipment.
- Reach more boaters with free education classes.
- Study the effects of alcohol and boating.
- Construct kiosks to provide boaters information on coastal bar crossings, navigation, equipment requirements, rules of the road and related information including charts.
- Provide weatherproof signage with boater safety information at boat launching ramps.
- Erect wind warning strobe lights across heavily used bodies of water to warn boaters of impending high winds.
- Conduct courtesy boat safety inspections.
- Conduct boating surveys, which provide critical data for assessing boat use, conflict areas and safety courses.
- Distribute free literature on boat noise, sailboarding safety, commercial vessel right-of-way, hypothermia, pleasure craft, use of life jackets (PFD's) and alcohol use.
- Create internet web sites with facilities access, rules, regulations, news, safety, funding, fees, boating and alcohol and other information.
- Mark hazards to recreational vessels.
- Develop school video curriculums and aids.
- Process regatta permits. Some states now process all such permits, completely relieving the Coast Guard of this responsibility.
- Provide boating safety services. States picked up the full responsibility for boating safety after the Coast Guard removed their Boating Safety Detachment Teams (BOSDET) from joint jurisdictional waters.
- Develop and make available boating safety home study courses.
- Develop and place boating information displays at marine dealers.
- Develop coloring books for elementary schools.
- Increase TV and radio public service announcements.
- Implement boating-while-intoxicated program, including purchase of portable testers, training classes and public awareness announcements.
- Computerize boat accident information and arrests, allowing states to respond to public, legislative and other inquiries regarding boating accident and water fatality statistics.
- Improve the integrity of boat registration systems.
- Expand our boating safety education capabilities.
- Purchase special search and rescue boats that are fully equipped for marine law enforcement.
- Add additional full-time and part-time marine patrol officers and boating safety educators.
- Implement special boating investigation teams to handle boat accident investigations.
- Improve cooperation with volunteer groups such as the U.S. Coast Guard Auxiliary by providing boat dock space, communication stations, phone, utilities, etc. This has resulted in much more visibility of search and rescue units and free boat safety inspections.
- Bring together federal, state and local authorities in the interest of boating safety, law enforcement, training and equipment needs.

- Coordinate better with local governments to establish boating restricted zones in heavy activity areas that present safety hazards to the boating public.
- Update film and video libraries with additional programs and equipment to provide to the general boating community and to maintain literature dealing with safety equipment regulations, safe boating information, registration, titling and numbering requirements for statewide distribution. Make products visible and readily available to the boating public.
- Improve communications system to provide for better and extended coverage with waterway enforcement officers. The result is improved response time to marine emergencies and provides greater officer protection.
- Establish new aids to navigation and regulatory marker system for controlled areas.
- Construct and repair boat access ramps.
- Inaugurate programs designed to prevent boating accidents by reaching new generations of recreational boaters in the public schools.
- Implement the Boating Accident Report Data Base (BARD) Electronic Data Transfer Program.

Our joint efforts are paying off. We believe the Administration, Congress, State Legislators and most of all, the boating public that we serve, should recognize the benefits and dividends that are made possible with federal boating safety funds.

In summary Mr. Chairman, We appreciate your continuing support and again ask for your consideration for full funding of \$70 million as authorized in TEA-21 for the states boating safety program for fiscal 2001.

Thank you.

PREPARED STATEMENT OF THE UPPER MISSISSIPPI RIVER BASIN ASSOCIATION

The Upper Mississippi River Basin Association (UMRBA) is the organization created 19 years ago by the Governors of Illinois, Iowa, Minnesota, Missouri, and Wisconsin to serve as a forum for coordinating the five states' river-related programs and policies and for collaborating with federal agencies on regional water resource issues. As such, the UMRBA has an interest in the budget for the U.S. Coast Guard.

Though perhaps best known for its important work in coastal waters and on the Great Lakes, the Coast Guard also provides essential services on the nation's inland rivers. Nowhere are these services more important than on the Upper Mississippi River System, which Congress has designated as a nationally significant commercial navigation system and a nationally significant ecosystem. The Coast Guard helps to ensure that the river can continue to serve both of these important functions.

Of particular concern to the UMRBA is funding for the Coast Guard's Operating Expenses account. The President's fiscal year 2001 budget proposal includes \$3.199 billion for this account, an increase of nine percent from the fiscal year 2000 enacted level. The Operating Expenses account funds activities that are critical to the safe, efficient operation of the Upper Mississippi River and the rest of the inland river system, including aids to navigation, marine safety, and marine environmental protection. Through these missions, the Coast Guard maintains navigation channel markers, regulates a wide range of commercial vessels in the interest of crew and public safety, and responds to spills and other incidents. In calendar year 1999, the Coast Guard's Upper Mississippi River System units inspected 644 vessels; responded to 100 oil spills; and managed 401 other reportable marine casualties, including groundings, injuries, and vessel breakaways. These numbers speak to the Coast Guard's vital role in establishing and enforcing standards, maintaining navigation aids, and responding to various incidents. The beneficiaries include not only commercial vessel operators, but also recreational boaters; farmers and others who ship materials by barge; and the region's citizens, who benefit enormously from the river as a nationally significant economic and environmental resource.

Recent years have brought a number of changes to the way the Coast Guard operates on the inland river system, including elimination of the Second District; closure of the Director of Western Rivers Office; decommissioning the Sumac, the largest buoy tender on the Upper Mississippi River; and staff reductions. The states understand that these decisions have been driven by the need for the Coast Guard to operate as efficiently as possible, and the states support that goal. However, such changes must be carefully considered and their effects monitored. The UMRBA is increasingly concerned that staff reductions have impaired the Coast Guard's ability to serve as an effective, proactive partner. The individuals serving in the Coast Guard are dedicated, hardworking people; but they are spread too thinly. Important regional initiatives are being negatively affected, including a joint state/federal effort to ensure spills preparedness and coordination on the river and an interagency

effort to design and establish mooring buoys to safely limit environmental damage from tows waiting at locks. It is essential for the Coast Guard to retain the capacity to perform its traditional missions on the Upper Mississippi River. Toward that end, the UMRBA supports the President's fiscal year 2001 budget request for the Coast Guard's Operating Expenses account and urges Congress to ensure that sufficient resources from within this account are allocated to the Coast Guard's inland river work.

The UMRBA does not support the Administration's proposed fees for navigation assistance services. The nation's navigable waterways are a critical part of our transportation infrastructure, just as is the national highway system. Providing the basic services required to operate that infrastructure safely is a fundamental role of government. The benefits of buoy placement and maintenance, vessel traffic services, radio and satellite navigation systems, and waterways regulation do not accrue only to the commercial operators who would be subject to such fees. Recreational boaters also directly use these services. Moreover, municipal and industrial water intake operators, farmers and other shippers, consumers, the river's natural resources, and citizens along the river all benefit indirectly from the contributions that these Coast Guard services make to the safe, efficient operation of the navigation system. One group simply should not be required to pay the costs of services whose real benefits are distributed so broadly.

Several other Coast Guard missions and programs are also important to the Upper Mississippi River states. Unfortunately, devastating floods in recent years have given many of this region's citizens direct personal experience with the importance of the Coast Guard's reservists. Reserve forces are a critical part of the Coast Guard's ability to respond effectively to natural disasters and other large-scale events. In addition, reservists perform key staff functions at many of the marine safety detachments on the inland rivers. The role of reservists in the region has become all the more crucial as the detachments' active duty staffing levels have been reduced. The UMRBA supports the President's request of \$73 million for Coast Guard Reserve, an amount intended to support approximately 8,000 reservists nationwide.

In addition, the Coast Guard's boating safety grants to the states have a proven record of success. The Upper Mississippi is a river where all types of recreational craft routinely operate in the vicinity of 15-barge tows, making boating safety all the more important. As levels of both recreational and commercial traffic continue to grow, so too does the potential for user conflicts. Boat safety training and law enforcement are key elements of prevention. The UMRBA asks Congress to appropriate the maximum amount allowed by law to the Boat Safety account to support the states in this important mission.

PREPARED STATEMENT OF THE FLEET RESERVE ASSOCIATION

INTRODUCTION

Mister Chairman and distinguished members of the Subcommittee, the Fleet Reserve Association appreciates the opportunity to present its views with regard to important "people issues" addressed in the fiscal year 2001 Budget for the United States Coast Guard.

FRA's mission is focused on protecting and/or enhancing the pay and benefits for Sea Service enlisted people, and the Association thanks you and members of the Subcommittee for supporting the most significant pay and benefit improvements in nearly 20 years which were enacted by Congress during the First Session of the 106th Congress.

FRA also salutes you for your support, however, the Association is concerned about the availability of adequate funding for these improvements within the Coast Guard budget. FRA believes the Coast Guard should not be required to rely on emergency supplemental appropriations and/or the Department of Defense, or the shifting of precious funds from operations and maintenance accounts to cover these enhancements. As in the past, FRA remains totally committed to ensuring Coast Guard parity with all pay and benefits provided DOD uniformed personnel.

PAY

FRA strongly supports the proposed 3.7 percent active duty pay increase included in the Administration's budget. This follows the higher than Employment Cost Index (ECI) pay adjustment for 2000 (4.8 percent) and subsequent higher than ECI pay adjustments through 2006. These increases are especially important to Coast Guard men and women and positively send a powerful message to service members

about the importance and value of their service to our country. However, at the end of this six-year period, a pay gap in excess of 8 percent will remain between military and civilian pay levels.

Funding the pay increase along with pay table improvements which become effective on 1 July of this year, and the reform of the Redux retirement program so as to maintain parity with DOD is essential to the Coast Guard. FRA is pleased that funds are included in the Administration's budget plan to cover these improvements, however, it cautions that as with pay, these improvements mark a beginning and not the conclusion or solution to the recruiting and retention challenges which determine readiness.

An example of this is the widespread perception within the Uniformed Services enlisted ranks that the career petty officer communities were overlooked in the reform effort enacted as part of the Fiscal Year 2000 National Defense Authorization Act (NDAA). Responding to concerns voiced by its members and other senior enlisted leaders, FRA examined the new pay tables and found that pay rates for grades E-5, E-6, and E-7 are undervalued compared to other pay grades. The Association studied this issue and recently released a report which is endorsed by seven other enlisted organizations and is available on request to FRA's Legislative Team at 703-683-1400, or via the Association's web site at www.fra.org.

It's especially noteworthy to spotlight the growing importance of enlisted leadership and management and the increasing reliance on enlisted personnel to serve in positions of significant responsibility. As is indicated in the FRA study, the Coast Guard has approximately 295 enlisted men and women in grades E-7 through E-9 assigned as Officers in Charge of cutters and stations. The value of these personnel to maintaining operational readiness cannot be overstated.

HOUSING

As of 31 January 2000, there were 34,631 personnel on active duty in the Coast Guard and of this total only about 25 percent live in military housing. The remaining 75 percent reside in communities at or near their duty stations, many of which are high cost areas along our coastlines.

FRA is grateful that additional housing allowance funds were appropriated for fiscal year 2000 to hasten the implementation of new BAH rates at various duty stations throughout the country. New rates were originally protected to prevent reductions during the remainder of current tours of duty. DOD, however, has recently reversed the plan and announced that an additional \$27 million will be allocated to the program to ensure that rates remain at, or in cases of rate increases above the 1999 levels.

Adequate funds are required in the Coast Guard budget to cover these unanticipated costs for not only this year but subsequent years. The cost projection for the current year (fiscal year 2000) to pay for these improvements for Coast Guard members is \$15 million.

A DOD priority for fiscal year 2001 is to further enhance the housing allowance and a request for this is included in the Administration's budget. The initiative includes paying down the average out of pocket cost from 19 percent to 15 percent—the contribution level intended by Congress—with a long term goal to eliminate the remaining 15 percent over the next several years at a cost of \$3 billion for DOD. FRA strongly supports this proposal and urges your support and the appropriation of adequate funds within the Coast Guard budget to cover these enhancements over the implementation period.

While these are solid improvements and funding is included in the Coast Guard's fiscal year 2001 budget, they fail to address the lack of accurate housing cost data in many rural and high cost resort areas where nearly half of all Coast Guard personnel are assigned. The latter remains a significant challenge for all members of the Coast Guard.

HEALTH CARE

Access to quality and affordable health care is characterized by Vince Patton, the Master Chief of the Coast Guard, as "probably the most frustrating quality of life issue for U.S. Coast Guard personnel." FRA concurs and notes that this frustration is cited by some personnel choosing to end their Coast Guard service rather than reenlist for another hitch.

Despite the assumption (and recruiting promise) that all active duty personnel and their families will be provided with free health care, many Coast Guard members have limited access to government health care treatment facilities and face significant out-of-pocket expenses for health care. Only half of these personnel are able to participate in DOD's Tricare Prime managed care program because their duty lo-

cation is close enough to a military treatment facility (MTF). Those who are not close to MTFs must select Tricare Standard for outpatient treatment needs which requires a 20 percent out of pocket cost share along with a \$300 annual family deductible.

Compounding the situation for the latter is the fact that most medical facilities charge more than the Tricare "allowable charge" for care, and service members must pay the difference on top of the deductible and 20 percent out of pocket cost.

A second DOD priority for fiscal year 2001 is improving health care. Although the budget includes no additional funds to address significant health care problems facing military retirees, it does include expanded Tricare Prime Remote coverage for family members (following enactment of coverage for service members last year), and the elimination of co-pays required from active duty families who do not reside near MTFs. FRA strongly supports these enhancements.

The Tricare Prime Remote coverage is especially important to the Coast Guard because so many of its members serve in locations far removed from MTFs. Not only do these personnel face significant housing costs in many of these areas, but also the added burden of these health care costs.

RECRUITING, RETENTION AND RESERVE TRAINING (RT)

Just as its sister services are struggling to make recruiting quotas, so too is the Coast Guard which despite the current environment, achieved its mission for recruiting last year. In 2000, Coast Guard recruiters are behind at the present time and must work hard to enlist 4,700 active duty, 1,100 reservists and around 500 officers. This is a difficult challenge given the state of the economy, declining unemployment rates and the low propensity of young people to consider the uniformed services as an option in their life plans. Equally challenging is effectively competing with the Department of Defense and the individual services' larger advertising budgets.

The retention of seasoned mid-career and senior enlisted personnel is also especially important to sustaining readiness and mission capabilities. The thriving economy is a powerful draw to these service members, many of whom can earn considerably more in the civilian marketplace. This is not only a concern at the mid-career level, but also in the senior enlisted ranks at the 20-year or beyond point. Capable, experienced mid-grade petty officers and more senior chief petty officers are essential to the force and when their ranks are thinned by such departures, readiness suffers significantly. Therefore, it's essential to retain as many of these key personnel as possible through re-enlistment bonuses, benefit improvements and other career incentives.

Unfortunately, the Coast Guard can only offer a fraction of the bonuses and other benefits that the DOD services provide. For instance, the Coast Guard provides \$1,500 per year for individual tuition assistance whereas DOD service members can draw a maximum of \$3,500. Enlistment bonuses for Coast Guard recruits range from \$2,000 to \$12,000 and cannot be combined with a college fund stipend while DOD offers from \$2,000 to \$20,000 combined with college fund amounts that can total up to \$70,000. (Note that the USCG college fund maximum is \$30,000 and DOD's is \$50,000.) Finally, the Coast Guard can offer up to \$45,000 for selective reenlistment bonuses for key skill rates while DOD offers up to \$60,000.

Despite these variances, FRA notes progress in closing the gaps for these and other allowances in recent years, however more must be done to ensure parity.

During the past year Coast Guard recruiters also accessed adequate numbers of reserve personnel to achieve the 8,000 billet end strength—a major accomplishment given the environment discussed earlier. However, funding for reserve training only supports 7,300 personnel in the Administration's fiscal year 2001 budget request. Without an additional \$7 million, the Coast Guard may be required to reduce on board selected reservists to match the funding level—an option FRA believes is unacceptable given the demanding operational requirements assigned to the Coast Guard and the increasing reliance on reservists to augment active duty personnel.

Funding shortfalls are troublesome and can lead to declining operational readiness and capabilities not only in the reserve ranks but throughout the Coast Guard. Adm. James Loy, Commandant of the Coast Guard, stated in his recent State of the Coast Guard address (March 7, 2000), that "More than one quarter of our enlisted members at operational marine safety units have not received the entry-level marine safety course they need to perform their duties efficiently and (they) have not been scheduled to receive this training before the end of this year." Further, he stated that "Our vessel traffic services still face a 21 percent vacancy rate among the Quartermaster and Radarman ratings—a problem that cannot help but introduce excess fatigue to these safety sensitive positions."

CONCLUSION

Again, Mr. Chairman, thank you for the opportunity to present the Association's views. FRA again salutes you for your commitment to the men and women serving today and also to those who've served in the past. As indicated above, the FRA strongly supports the Administration's budget proposal as the minimum necessary to sustain the Coast Guard's current capabilities and its personnel. The five percent increase over last year's budget is warranted and enthusiastically endorsed by FRA and is hopefully the beginning of a trend toward greater funding not only for compensation and other personnel benefits, but also for maintenance, training, recapitalization and other requirements.

The Coast Guard provides tremendous service to our Nation with a minimal investment of roughly one quarter of one percent of the Federal budget. The growth of responsibilities assigned to the service has not been matched with adequate resources and this is imposing an exhausting toll on its people who must sustain demanding operational commitments—often without adequate training and/or equipment maintenance.

A recently published opinion piece by Christopher M. Lehman in the Washington Times (Feb. 24, 2000) offers perspective on the current situation. He wrote, "Just like its sister military services . . . the Coast Guard has been asked to perform more and more missions with fewer resources. Aging ships and aircraft, increased operational tempo, fewer people, inadequate training, spare parts shortages, and insufficient funds for housing, pay and benefits—these are the symptoms of a weakened U.S. Coast Guard. The Coast Guard is losing its edge. It has been stretched to the limit."

This scenario is real. Please support funding to adequately compensate Coast Guard personnel for their tremendous and untiring service to our Nation and fully fund other benefits so as to achieve and/or maintain parity with those offered to DOD uniformed personnel.

Thanks for your strong commitment and continuing support of the men and women serving so magnificently in the United States Coast Guard.

PREPARED STATEMENT OF THE RESERVE OFFICERS ASSOCIATION OF THE UNITED STATES

COAST GUARD RESERVE

We wish to thank this committee for the strong support that it has provided the Coast Guard Reserve in the past. Nevertheless, funding for the Coast Guard is very austere, providing only the minimum level required for basic services. Similarly, funding for the Department of Defense and the Department of the Navy remains constrained. Therefore, it is vital to be farsighted as we cross into the 21st century, to ensure a continued robust sea power.

We further recognize that the Coast Guard is not the Navy, but a distinctive armed force with a separate identity and purpose. Nevertheless, the Coast Guard's people, systems, and platforms provide important national and international capabilities that complement the U.S. Navy. As indicated by the Joint Chiefs of Staff in "Joint Force Capabilities" (Joint Pub 3-33 dated October 13, 1999):

"During deployment and redeployment operations for the joint force, the Coast Guard can provide force protection of military shipping at U.S. seaports of embarkation and overseas ports of debarkation by conducting port security and harbor defense operations with port security units and patrol craft. Major cutters are deployed to participate in maritime interception operations to enforce sanctions against another nation and to conduct peace-time engagement activities. Port safety responsibilities in the continental United States (CONUS) include the establishment, certification, and supervision of ammunition loading operations."

Furthermore, as noted by Dr. Scott C. Truver in his paper, "American Seapower in the 21st Century," the Coast Guard, along with the other Naval Services, has a distinct history of port visits, training and exercising with regional navies and coast guards, working with local maritime agencies and organizations. Likewise, the Coast Guard has played important roles in supporting U.N. sanctions around the world. Coast Guard law enforcement detachments (LEDETs) conducted literally tens of thousands of searches of ships suspected of violating U.N. embargoes. During the U.N. embargo of the former Yugoslavia, Coast Guard LEDETs served in U.S. Navy surface combatants and provided the law-enforcement and search-expertise necessary to conduct boardings and to detect contraband. Such maritime interdiction

operations (MIOs) were also conducted by Coast Guard LEDETs riding Navy warships in the Persian Gulf and Red Sea. In addition, the USCG Cutter Morgenthau (WHEC-722) deployed to the Persian Gulf to assist the U.S. Central Command's enforcement of U.N. embargoes against Iraq.

In recent years, the Coast Guard has deployed three cutters—USCGC Bear, USCGC Dallas and Gallatin—to the Mediterranean, Black and Baltic seas. Coast Guard port security units and aviation squadrons have also been sent to Turkey, the northern Red Sea, and the Persian Gulf.

The demand for high profile, visible overseas presence by U.S. forces will not diminish in the years ahead. This need will almost certainly increase as natural disasters; humanitarian crises, nation-building programs, and threats to U.S. interests generate continuous calls for active U.S. engagement and involvement. But, the Navy will be increasingly challenged in its ability to meet all commitments. This fact of life has significant implications for the Navy, the Coast Guard, and the nation.

Because of the growing sophistication of naval weapons systems, the Coast Guard will not perform "high-end" warfighting missions. This, however, does not mean the Coast Guard will not have a warfighting role. With a Navy of 116 or fewer surface combatants, and in a world plagued with regional instability and strife, the Coast Guard's major cutters—along with several hundred coastal patrol boats—take on new significance. In this regard, the Coast Guard is a force-in-being, trained, capable, and ready for small-scale contingency operations, and force protection in major theater war. Most fundamentally, the president and the unified CINCs require a full spectrum of naval capabilities to meet tomorrow's maritime challenges.

In response to multiple assessments of future mission requirements and a continuous scanning of the long-range planning horizon, the Coast Guard is examining its "deepwater capability" for the next century. From the Coast Guard's perspective, "deepwater" means any operations—civilian or military—conducted more than 50 miles from the coast. These ships would carry C4ISR architecture—especially the Navy's evolving Network-Centric Warfare concept—which will link its surface and airborne systems with shore-based command structures and allow seamless integration of Coast Guard assets with all U.S. Armed Forces.

The Coast Guard, however, currently operates ships with high personnel and maintenance costs. Some ships have been in service for more than 50 years. Simply stated, the continued protection of the public, at a lower cost, requires further investment to enable the Coast Guard to design more capable and less labor-intensive ships and aircraft. Without the necessary investment, pressure will continue to build on the operational account, as anticipated lower personnel and maintenance costs that would be achieved through investment become unachievable.

The need for this investment was recently highlighted in the report of the Interagency Task Force on U.S. Coast Guard Roles and Missions. This report was compiled by senior members of the Clinton/Gore administration. The report concluded that the Coast Guard's roles and missions support national policies that will endure into the 21st century, and that the recapitalization of the Coast Guard's Deepwater capability is a near term national priority. The report further stated that Deepwater Acquisition is a sound approach to modernizing the Coast Guard's aging fleet of assets.

Investment in the Coast Guard's "Deepwater" program, the Coast Guard's plan to modernize its major cutters, aircraft, and command, control, communications, computer, intelligence, surveillance, and reconnaissance (C4I) systems is critical. Adequate investment will sustain the Coast Guard's capability for providing services critical to America's public safety, environmental protection, and national security for the next 30 years—through the replacement of assets that are at, or fast approaching, the end of their service lives. The Coast Guard's medium and high endurance cutters, acquired through the Deepwater program, will be readily available to support critical Department of Defense operations such as maritime surveillance and interception, convoy escort, search and rescue, and enforcement of maritime sanctions, as was the case during Operation Desert Storm. Such options allow Navy "high end" ships to be more effectively employed in higher threat/combat operations. In addition, as the Navy surface combatant fleet grows smaller, the future cutter will provide an extremely cost-effective "dual capability," by providing not only the ability for the Coast Guard to perform its peacetime mission, but the vital operational capabilities vitally needed by the Navy and DOD in the 21st century.

With the Government Performance and Results Act (GPRA), the Congress has said to federal agencies that it supports results-based government. The Coast Guard has whole-heartedly committed itself to results-based government, as much as or more than any other federal agency. The Coast Guard has overhauled its strategic planning and capital asset management processes. The Commandant's Quality

Award is designed to encourage results-based government by using the attributes of the President's Quality Award and the Malcolm Baldrige Award criteria. The Coast Guard is often referred to as one of the taxpayers' best investments. Government Executive magazine published in its March 2000 issue, a segment of its Government Performance Project examining Coast Guard management practices and praising the Coast Guard for its stewardship of the taxpayer's money. This praise is well deserved, and while surely gratifying to members of Team Coast Guard, such accolades alone will not send the signal to other agencies to follow the Coast Guard's exceptional leadership.

Agencies that commit to results-based government must be rewarded in the budget process with adequate funding. ROA urges the Congress to consider most seriously which signal it wants to send federal agencies through the budget process. The federal government is filled with dedicated public servants and service members who applaud the intent of GPRA, but many question the resolve behind it. With the Coast Guard, the Congress has an opportunity to demonstrate its resolve by rewarding this high performance agency example with adequate resources to do its many jobs for the Nation.

COAST GUARD SELECTED RESERVE STRENGTH

The fiscal year 2001 administration request is to maintain the Coast Guard Selected Reserve's authorized end-strength at the 8,000-level, whereas the appropriation's request is for 7,300. As the Coast Guard Reserve's current actual strength is over 8,000, thanks to the \$5,000,000 fiscal year 1999 Readiness Supplemental Appropriation to meet the congressional mandate of 8,000 Coast Guard Reservists, we have very serious concerns regarding the administration's proposal for an appropriated end-strength of only 7,300. We also have concerns regarding an authorized end-strength of only 8,000, in view of the fact that the commandant, as directed by OMB, has conducted an in-depth study that clearly indicates and justifies a requirement nearly 12,300 Coast Guard Reservists. Further, the 1997 Study did not include any maritime security requirements needed to counter more recently identified homeland security risks in U.S. ports and waterways from weapons of mass destruction. In this regard, we would request that the committee undertake a detailed examination of Coast Guard Reserve requirements.

In recent years, the Congress, the administration, and Coast Guard leadership have increasingly recognized the unique capabilities of the Coast Guard Reserve. It is well recognized that the Coast Guard Reserve is a value-added resource for peacetime day-to-day operations, as well as a highly cost-effective source of trained personnel to meet military contingency and other surge requirements. For example, as noted by the House Transportation Appropriations Subcommittee, Coast Guard Reservists provided 25 percent of the total surge needed for the very successful anti-drug initiative Frontier Shield. Furthermore, as the nation faces the ever-increasing threat to homeland security from weapons of mass destruction, it will be necessary to further rely on the Coast Guard Reserve for its unique capabilities to provide a ready trained surge force.

In view of the foregoing, a request to fund only 7,300 Reservists simply makes no sense at a time when the Coast Guard has just succeeded in completely eliminating the end-strength shortfall that has existed over the past several years. The Coast Guard has increased its recruiting capabilities and put into place a multi-year plan to keep the Coast Guard Reserve at full strength. As of February 18, 2000 Coast Guard Reserve strength was at 8,110, having increased from a 2-year low of 7,243 in April 1998. Of further note, there were 183 Reservists, on extended active duty and long-term active duty for special work, filling active duty shortfalls. The number of Reservists on active duty is the direct result of the Coast Guard's solicitation of volunteers from the Selected Reserve to serve on extended active duty to fill full-time active duty billets for periods of 2 to 4 years.

In addition, it must be noted that the Coast Guard has made significant headway in intensifying its Reserve recruiting over the past year. Such efforts have included the designation of at least 38 recruiters to access Reservists. In addition, there has been heightened attention to Reserve recruiting, including intensive efforts to attract more Reserve affiliations from the ranks of Active component members leaving active duty for civilian life. In 1999, 26 percent of eligible members leaving active duty chose to become reservists.

In summary, the Congress and the Coast Guard have made the substantial financial and manpower commitment to rectify the Reserve end-strength problem. As a result, significant progress has been, and will continue to be made. In addition, the Coast Guard is now making it easier for active duty commands to ascertain Reservists' skills and availability for active duty through the newly established Reserve

Availability Pool web site (<http://www.uscg.mil/reserve/respool/respool.htm>). As a result, the demand for Reservists to fill fleet requirements in a Coast Guard that is short of personnel can only be expected to increase. It, therefore, makes little sense at this juncture to reverse course and force the Coast Guard Reserve end-strength downward. This would amount to nothing less than squandering the Congress' fiscal year 1999 Readiness Supplemental investment, which resulted in the successful restoration of the Coast Guard Reserve Force to its full 8,000 authorized strength.

COAST GUARD RESERVE FUNDING

The administration has requested \$73.3 million for the Reserve Training (RT) appropriation for fiscal year 2001, with \$26.2 million in reimbursement to operating expenses. Given the present procedures for reimbursement for operating expenses and direct payments by the Coast Guard Reserve, this is the minimum needed to fund a full training program for 7,300 personnel. Even at this minimal funding level, Coast Guard Reservists would continue to receive only 12 days of annual training (AT) each year (all the other armed services prescribe to 14 days' AT as required by statute).

The funding required in fiscal year 2000 to support the full 8,000-level authorized is approximately \$77.4 million. It should, however, be noted that the fiscal year 2000 appropriations bill, in appropriating \$72 million for the Coast Guard Reserve, limited the amount of Reserve training funds that may be transferred to operating expenses to \$21.5 million, giving the Reserve an effective budget of \$73.65 million. This resulted in an approximate \$3.75 million operating shortfall, which requires the Coast Guard Reserve to either reduce strength or to cover by implementing painful current year cuts in accession/retention bonuses, training, and support.

The Conference Report noted that although the appropriation was constrained that: "The conferees agree that all efforts should be made to achieve and maintain a Selected Reserve level of at least 8,000 during fiscal year 2000."

Given the continuing high OPTEMPO/PERSTEMPO stress on the entire Coast Guard workforce and the congressional language to hold strength insofar as possible, the Coast Guard Reserve is trying to maintain its strength for this year. The ROA urges the Congress to consider a readiness supplemental appropriation for fiscal year 2000 to enable the Coast Guard Reserve to restore these cuts in training, recruiting and support otherwise required to maintain their full-authorized strength.

ROA thanks the Congress for its recognition of the significant capability provided by the Coast Guard Reserve and for the provision of this additional funding through the limitation in reimbursement for operating expenses. In this regard, the Coast Guard is the only component among all the armed services that reimburses operating expenses to the Active account. The Coast Guard is reviewing its procedures for reimbursement with a view toward modification in fiscal year 2001, and we agree that the proposed modification is fair and equitable. We would, however, note, that the bottom line is that the Coast Guard Reserve must have sufficient funding for 8,000 Reservists and that the reimbursement cap has over the past 3 years provided over \$4 million of this much needed funding. Accordingly, we would ask that any proposed change in procedures be closely examined and meticulously monitored—to ensure that the Coast Guard Reserve strength is fully funded at a level of 8,500 (\$85 million, or \$88.3 million with the refund issue resolved).

Just as the Coast Guard has whole-heartedly committed itself to results-based government, the Coast Guard Reserve has led the way through the concept of Team Coast Guard. The Coast Guard Reserve spearheaded this concept of AC/RC integration in 1994. With the goal of increasing the taxpayer's return on investment, the Coast Guard Reserve and Coast Guard took on the cultural challenge of creating Team Coast Guard. There are no longer AC missions and RC missions, there are only Coast Guard missions. There is one command structure, one support structure, and one administrative structure. Coast Guard integration is held as an effective model to DOD components. As the Coast Guard Reserve continues to evolve AC/RC integration, ROA urges the Congress to consider what signal it sends to other AC and RC components if it does not fully fund the Coast Guard Reserve or funds it at the expense of the Active component.

TEAM COAST GUARD

We continue to support the goals and objectives of Team Coast Guard. The Coast Guard Reserve has become the "bench-strength" of the active duty force. In this regard, a strength of 8,000 Coast Guard Reservists equates to only 506 full-time equivalent positions. Of further note, the Coast Guard Reserve provides the ability to surge the Coast Guard by an additional 23 percent, at a cost of just 2 percent

of the Coast Guard's total budget. In this respect, the Coast Guard Reserve is extremely cost-effective. Furthermore, the Reserve component provides double benefit because Reservists are only paid when on duty and because Reservists obtain their training for emergency response by assisting the Coast Guard in its peacetime functions.

Simply stated, the Reserve leverages the entire organization and stands ready to go in response to both domestic and national emergencies. As a result, the Coast Guard is readily able to surge its forces to meet domestic emergencies in an extremely cost-effective manner, as well as to respond to national emergencies, including vital harbor security for the Department of Defense with the Coast Guard Reserve Port Security Units. At the same time, the failure to meet Reserve end-strength requirements adversely affects the Coast Guard and, therefore, adversely affects the safety of those operating on the nation's ports, rivers and waterways and off the shoreline of the United States.

In an effort to assess the progress of Team Coast Guard and its impact on Reservists, we canvassed our membership in December 1999, asking for their views. Of the many responses we received, several issues emerged. These issues are as follows:

Travel reimbursement.—Many Reservists, including enlisted Reservists, must travel long distances to drill. The following quotations from drilling Reservists provide additional insight into this issue.

“In many instances drilling Reservists have to travel upwards of 330 miles one-way to reach their duty sites. This issue of auto-travel-reimbursement is particularly problematic for junior enlisted personnel whose drill pay is already relatively small.”

“We currently have a number of enlisted traveling in excess of 350 miles one-way to drill. One (junior officer) is traveling 650 miles one-way to drill.”

“I have an E-3 who pays more for his transportation to monthly drill than he gets paid. In other words, he is paying cash in order to be able to drill.”

Meaningful billets and lack of flexibility upon advancement.—This issue was addressed in the 1998 Coast Guard Reserve Policy Board report that was approved by the Secretary of Transportation on December 1999. The report states:

“When most Reserve command cadre billets were eliminated by integration, senior Reserve officers and senior enlisted lost their traditional management roles. The force structure and roles for senior Reserve personnel need to be reviewed as program requirements are established. [This issue]—is about appropriately using personnel in whom taxpayers have invested heavily. Furthermore, it is about ensuring that Reserve personnel perceive they can engage in fully satisfying and challenging work throughout a full career in the Reserve Component.”

The following quotation from drilling Reservists provides additional insight.

“I am still concerned that senior Coast Guard officers and enlisted Reserve personnel may not have much to aspire to . . .”

“A major issue still unresolved is how the Coast Guard will more effectively utilize its senior officers and enlisted Reservists consistent with their rank.”

“Due to many active command structures, there don't seem to be as many opportunities as in the past. There certainly do not seem to be as many opportunities for command or senior executive staff positions. With the noted exception of port security units, career paths for Reserve officers are not as clear as previously.”

“With very few senior billets and minimum flexibility (allowing senior people to fill lower ranking billets), many see no real career path. We have seen at least two first class petty officers that have refused to take the examination for chief petty officer because there is not a chief's billet available. In their cases, they had well in excess of 10 years of service and were concerned that they would not be able to maintain a billet long enough to finish 20 years if they were selected as chief petty officers. The same situation applies to lieutenants and to lieutenant commanders. There are many who are seriously concerned about achieving 20 years' service.”

The 1998 Coast Guard Reserve Policy Board report, approved by the Secretary of Transportation on December 9, 1999, also provides further insight into this issue. It states as follows:

“Reserve force employment is not consistent throughout the Coast Guard. It has evolved over the years based upon the personalities and interests of commands, and the personalities and capabilities of individual Reservists. The current Reserve Personnel Allowance List (RPAL) was developed in 1996–97 largely upon then-existing Reserve assignments. As a result, one unit may have a dozen RPAL billets while a similar unit may have no billets. Even when Reserve billet structures are consistent between or among similar commands, units often have different philosophies on employing Reservists. Some commands use Reservists interchangeably with Active duty personnel. Other commands use Reservists primarily to replace Active duty personnel when billets are vacant during the transfer season or leave periods. Some assign Reservists to work independently on special projects. We recognize that field units need flexibility in employing Reserve forces. Yet headquarters, areas, and districts need to identify program requirements for Reserve employment, and to provide guidance to field units on employing Reserves. Based on these program requirements and guidance, the RPAL then can be revised to better reflect service needs. When the workforce structure has been redefined by a revised RPAL, Reserve personnel can be recruited, trained, and assigned to meet established requirements. Reserve personnel will have more meaningful assignments; they will not have to create their own niches at each command.”

Difficulty in meeting Reserve-unique administrative and training needs.—The following quotation from a drilling Reservist provides additional insight into this issue.

“—for enlisted Reservists—many of their Reserve-unique administrative and training needs are not being as adequately addressed as—in the past. Ultimately, junior enlisted personnel do not seem to be receiving the same level of attention and direction needed for retention and advancement.”

COAST GUARD RESERVE EQUIPMENT

Like the other armed services, the Coast Guard is in need of equipment for its Reserve Component. In fiscal year 1998, the Congress provided over \$13 million for the much needed refurbishment of its existing three port security units and the establishment of three additional port security units. Today, the Coast Guard Reserve is in need of equipment for its Mobile Support Units, as well as chemical, biological, and radiological defense equipment.

Mobile Support Units (MSUs) are Reserve units designed to be a limited deployable logistical and maintenance support and repair facility service for one, and under certain circumstances, for up to two co-located squadrons of Coast Guard 110-foot patrol boats. These units are staffed by Reservists and will support the Active component (and the combatant commanders-in-chief) when deployed for operations overseas. The MSU provides on-site repair facilities for hull maintenance and engineering and electronics systems for use by support personnel assigned for operational maintenance.

Mobile Support Unit Equipment

| <i>Item</i> | <i>Cost</i> |
|---|-------------|
| TRUCK, TRACTOR TRAILER | \$105,000 |
| TRAILER, CONNEX BOX | 30,000 |
| TRUCK, PICK-UP | 25,000 |
| FORKLIFT, 10,000 LB | 20,000 |
| GENERATOR SET 160KW & SPARE PARTS KIT | 23,000 |
| WELDER, GAS POWERED | 3,000 |
| TOOLS | 148,000 |
| ADMIN SUPPORT KIT | 5,500 |
| COMPUTER HARDWARE | 18,000 |
| COMMUNICATIONS HARDWARE | 23,000 |
| EQUIPMENT, GENERAL | 14,000 |
| GENERAL U.S.E/CONSUMABLE ITEMS | 5,000 |
| <hr/> | |
| TOTAL | 419,500 |

Chemical, biological, and radiological defense is required for Coast Guard Reserve personnel assigned to the Marine Safety Offices who have Department of Defense strategic load-out responsibilities. The current mobilization requirements call for a Reserve personnel requirement in excess of 3,500 personnel.

Chemical, Biological, and Radiological Defense Equipment

| <i>Item</i> | <i>Cost</i> |
|----------------------------|-------------|
| Mask, Mark 40 A-1 | \$1,080,000 |
| CBR-D Gear | 1,656,000 |
| Canister, CBR-D Mask | 57,600 |
| Kits, CBR-D antidote | 295,200 |
| Decon Kits | 46,800 |
| | |
| Total | 3,135,600 |

LEGISLATIVE ISSUES

There is one legislative issue we would appreciate Congress' examining. The fiscal year 1999 National Defense Department Authorization Act included a provision prohibiting Selected Reserve end strength fluctuations among the DOD reserve components of greater than 2 percent. This legislation did not apply to the Coast Guard Reserve. We believe 10 U.S.C 115(c) should be amended to specifically include the Coast Guard Reserve. This would improve parity among the Coast Guard and the other military services while helping eliminate the ongoing mismatch between authorized and funded Coast Guard Selected Reserve end strength.

CONCLUSION

Thank you for this opportunity to present the association's views on the fiscal year 2001 Coast Guard Reserve Budget. I also thank you again for your past support of the Coast Guard Reserve. With your continued support the Coast Guard Reserve will continue to play a key role in the our national defense.

MISCELLANEOUS

PREPARED STATEMENT OF THE LOVELACE RESPIRATORY RESEARCH INSTITUTE (LRFI)

Support from the U.S. Department of Transportation is requested for the National Environmental Respiratory Center to conduct research and provide information on the contributions of transportation sources to the respiratory health risks from in-haling mixtures of air pollutants from multiple sources.

THE NATIONAL ENVIRONMENTAL RESPIRATORY CENTER IS A NEW MULTI-STAKEHOLDER RESEARCH PROGRAM

The National Environmental Respiratory Center was established by Congress through the fiscal year 1998 EPA appropriation. The mission of the Center is to facilitate and participate in a long-range national initiative to understand respiratory health risks from complex mixtures of environmental air contaminants from many sources. The Center will help place the respiratory health risks from variable, mixed pollutant atmospheres in their appropriate context as a basis for strategic, regulatory, and technological decision making. The work of the Center is relevant to the interests of a broad range of government and non-government stakeholders. From the outset, the Center was intended to meet the needs of multiple stakeholders by building on core funding from EPA as a joint effort among multiple federal and state agencies, corporations and industry associations, and health and environmental advocacy groups. The Center is operated by the independent, non-profit Lovelace Respiratory Research Institute in Albuquerque, New Mexico.

THE CENTER WILL PRODUCE NEW INFORMATION IMPORTANT TO DOT

DOT Does Not Know the Contribution of Transportation Sources to the Health Impacts of Air Pollution

We do not currently have a satisfactory understanding of the relative contributions of emissions from transportation sources, air pollutants from other man-made sources, and natural air contaminants to the aggregate adverse health outcomes associated statistically with air quality. This deficiency creates uncertainty in strategic and regulatory decisions about choices among different transportation technologies. For example, we do not have a solid understanding of the total health gains or losses that might accrue by choosing between new generation petroleum-based fuels and engines and alternate motive power technologies such as natural gas or biodiesel-fueled internal combustion engines or electric motors powered by batteries charged by power from remote generation stations.

We do not even have, at present, a satisfactory understanding of the relative contributions of the individual constituents of single emission mixtures (such as engine exhaust) to the total effects of that mixture. This deficiency is impeding the evolution of technology (such as changes in engines, fuels, or exhaust after treatment) to mitigate health risks by reducing emissions of specific classes of air contaminants.

This Information Gap is Becoming More Critical with Time

As air quality in the nation improves, understanding the health effects of mixtures of air contaminants is becoming progressively more important. It is becoming less likely that the adverse health effects observed in populations are attributable to single pollutants or sources. We face an increasing difficulty in making strategic choices and investments, and an increasing likelihood of making ill-advised decisions.

The "mixtures" problem is not a new issue. It has long been recognized, but has never been brought to the forefront of debate or research focus. Many organizations have considered the issue and consciously avoided making it a central theme because of its complexity and because of financial incentives to focus on the "pollutant of the year". The recent debates on the health effects of ozone, airborne particles, and diesel exhaust have focused increasing attention on air pollution mixtures and our ignorance concerning them. In contrast to the past, few discussions about the health effects of air pollution occur today without mention of the mixtures dilemma and our lack of knowledge.

No Other Research Program has Focused on Air Pollution Mixtures

Our present regulatory and research approaches tend to steer attention away from the truth that all exposures to air pollutants are exposures to mixtures. Under the present Clean Air Act and other regulatory mandates, the focus has been on debating the effects of single pollutants and pollutant sources in a "one-at-a-time", "revolving door" manner. This approach results in the conduct of reactive research focused on single pollutant classes. Thus, the pressures of single-pollutant issues result in little emphasis being given to work aimed at understanding the relationship between air quality and health in an integrated manner.

The Center was Created Specifically to Meet these Needs

The National Environmental Respiratory Center was created by Congress through the EPA appropriation in response to Lovelace's proposal to develop a significant research and information program that would join multiple federal, state, and non-government stakeholders together in an effort to substantially improve our ability to place the respiratory health risks of air pollution mixtures in their proper context. Although the Center can not meet the full spectrum of mixtures-related information needs, it was intended to play a leadership role in integrating the support of multiple sponsors into a substantial, multi-year program of focused research designed with broad input and providing knowledge needed by the full range of stakeholders.

There are many possible approaches to mixtures research, and no single program can encompass them all. The strategy for this Center was selected to take advantage of the unique research strengths of Lovelace to conduct work that will move our understanding of the importance of key man-made pollution significantly forward. The strategy selected could not be funded through typical grants programs and would not, and perhaps could not, be undertaken by any other organization.

THE CENTER'S WORK HAS BEGUN AND DOT SUPPORT IS CRITICAL

The Center's Research Strategy Has Been Developed and Work Has Begun

By express intent, Lovelace involved a cross-section of stakeholders and technical experts in developing the scope of the Center's activities and the specific research strategy to be undertaken. This strategy will not only ensure that the Center's efforts are guided by the best current thinking, but will also facilitate broad acceptance of its findings. A highly qualified External Scientific Advisory Committee was developed with members from academia, government, industry, and the health and environmental advocacy sector. This Committee was integral to the process of defining the Center's agenda as: (1) a highly-focused multi-year research program; and (2) a source of information and a catalyst of cross-disciplinary communication in the mixtures field. The first studies of the Center's initial five-year research effort are now being initiated. The complex atmospheres to be studied include heavy-duty and light-duty engine emissions and paved and unpaved road dust. Although sufficient support has been developed to initiate the work, there is not yet a sufficient commitment to ensure that the work will continue, or continue at a rate that fulfills the

strategy or meets DOT information needs in a timely manner. A commitment from DOT would ensure that the information relevant to the Agency is produced, and within the Agency's strategic timelines.

The first multi-year series of studies will generate a matrix of data by applying identical, detailed, contemporary laboratory assays of respiratory health effects to several real-world, man-made, complex exposure atmospheres. The atmospheres will include engine exhaust (diesel, old and new; gasoline, catalyst and non-catalyst), wood smoke (hardwood and softwood), tobacco smoke, cooking fumes (meat and vegetable), road dust, and power plant emissions (including secondary transformation products). Importantly, these complex atmospheres will provide an array of overlapping, but different compositions. A range of predictive health assays was selected to span the types of health impacts thought to be associated with air pollution. These effects assays encompass the general categories of inflammation and tissue toxicity, asthma and amplification of allergic responses, respiratory defenses (particle clearance and resistance to infection), lung and heart function, and cancer potential. The atmospheres will be characterized in great detail, as a basis for determining the health impacts of individual constituents.

The information resulting from the multi-year research matrix will serve three principal purposes. First, the studies will produce contemporary toxicity information on transportation-related emissions of current concern. Second, the studies will make available, for the first time ever, information allowing the direct comparison of the health impacts of these atmospheres by identical health assays. Finally, the identical health assays and the different, but overlapping, compositions of the atmospheres will allow, for the first time, the use of statistical and modeling procedures to identify the contributions of individual mixture constituents, and classes of constituents to the different health effects.

The Financial Commitment Required to Conduct the Work Has Not Yet Been Achieved

As intended by Congress, the Center's agenda was developed by identifying the most critical information needs and the best strategy for meeting those needs, rather than constraining the plan to the amount of resources provided through the EPA appropriation. Because the information to be produced is important to a broad range of stakeholders, it was intended from the beginning that other federal agencies, states, and industry would also be recruited to support the effort. If the research described above is conducted over a five-year period beginning in early fiscal year 2000 and the statistical analyses are completed within the following year, it is estimated that the total six-year (fiscal years 2000–2005) cost of Center operations will be over \$24 million (in fiscal year 2000 dollars), or over \$4 million per year. Therefore, if EPA support continues at the fiscal year 2000 level of \$1.8 million per year, the level of funding must more than double.

The Department's Support will be Highly Leveraged by Other Stakeholders

The leg-work has already been done that creates an opportunity for the Department to get information it badly needs cost-effectively by sharing the cost with other stakeholders who need the same information. Lovelace has undertaken the task of complementing the support from EPA as necessary with support developed from other stakeholders. Considerable effort is being expended to discuss the mission and strategy of the Center with several federal and state agencies and a wide range of non-government organizations and trade associations. This effort has been successful, but is still far short of the goal. In addition to support from EPA, the Department of Energy began funding the Center during fiscal year 2000. Lovelace has developed approximately \$0.5 million in funding from industry, much of it from the transportation sector. Contributing organizations include (alphabetically) American Trucking Association, California Trucking Association, Caterpillar Inc., Chemical Manufacturers Association, Cummins Engine Co., Detroit Diesel Corp., Exxon Corp., Ford Motor Co., Navistar International, Phillips Petroleum, and the Southern Co. Discussions are underway with numerous additional companies and trade associations. Among states, the California Air Resources Board has committed support, and discussion with other state agencies is underway.

Lovelace Requests Support From the Department Of Energy

Financial support is growing, but falls short of the level required to get the job done. We will need over \$4 million per year over the next six years to follow the consensus advice we have received. The Center's work is relevant to the policy interests of the Department regarding the nation's long-range transportation strategy, and the influence of air quality issues as a driver of strategic choices. Participation in this program can, in part, fulfill the Agency's environmental mandates as well as meet strategic information needs. Several discussions have been held with De-

partment officials, and there is agreement that the mission of the Center and the information it will produce are relevant to the Department.

Lovelace respectfully requests that \$2 million be allocated in the fiscal year 2001 Department of Transportation budget to support work of the National Environmental Respiratory Center relevant to transportation-related issues.

PREPARED STATEMENT OF THE STYLIN' CONCEPTS CORPORATION

My name is John Milos. Together with my wife, I am the owner of Stylin' Concepts, a small business located in Independence, Ohio, that sells automotive accessories for safety, fuel efficiency, and other uses. It is my privilege to testify today before you about the adverse impact that a reduction in the availability of information from motor vehicle records, let alone a total cut off, will have on my business.

As a direct marketer that mails to millions of Americans every year, we applaud your spirit to protect the individual. In fact, responsible direct marketers like Stylin' Concepts and others all over this nation have taken extreme and costly efforts on our own for decades to insure our customers' privacy. Privacy is nothing new to us. As direct marketers, we really don't want to market to someone who doesn't want to receive our material. It's just not good business sense to be throwing money away. However, last year's amendments to the Driver's Privacy Protection Act requiring an opt in for use of motor vehicle record data for marketing purposes will do great damage to consumers and employees in the direct marketing business. We are a small business of approximately \$8 million in sales and 75 percent of our business comes from the Auto Registration records this law would make unavailable.

We produce an automotive accessories catalog that features products for safety, fuel efficiency, comfort and style. Other than the auto registration records, there is no other source for this information. This law, if it becomes effective, will eliminate 75 percent of our business and force the layoff of dozens of employees, many of which are single parents, college students, or handicapped.

It's important to understand that our interests are for consumers who have a particular vehicle. When we know what type of vehicle a consumer owns, we send them a catalog specific to that vehicle. The names are gathered by Polk, the main compiler in the U.S. Polk then sends the names to our printer, who puts the labels on the catalogs and mails them. We never see the name nor do we keep it unless someone calls us, decides to purchase something from us, and gives us their name and address.

Ultimately, that consumer has the final choice of privacy. First, by just throwing our catalog away, and secondly, any consumer can put their name on the DMA's "suppression" list. Responsible mailers, like Stylin' Concepts, run their prospect lists, such as the Motor Vehicle Registration information, through this suppression list before every mailing, at our cost, and that person never gets mailed to. In addition, we maintain an internal suppression file for anyone that tells us they do not want to receive our catalog.

We are only looking for the interested consumer who has the specific vehicle that we have catalogs for. There is a high likelihood this person will be interested in our products. Studies show the average person in America overwhelmingly wants to receive direct mail about products of interest to him or her. For example, if Jane Doe is a gardener, she enjoys receiving gardening magazines and catalogs. If John Smith enjoys gourmet cooking, he would welcome receiving a catalog of the latest kitchen gadgets. These catalogs give the consumer great ideas and deals they wouldn't otherwise have. If we cannot get specific vehicle information, then we will be forced to take a more scattershot approach, which is a waste of money and resources. In the process, many people who don't want our catalog will get it anyway.

What harm is there to the consumer if this law goes into effect?

Safety and Convenience

Catalogs provide a consumer one-stop shopping for a wide variety of products. Products that improve the safety, fuel economy, and convenience of their vehicles.

- Safety products that we offer include a children's seat belt adjuster that makes it more comfortable for a child to use (which means the child will use it—and that saves lives), a backup alert that warns children when a vehicle is backing up, and products for people to keep in their vehicle in case of emergencies.
- We have several products that improve fuel economy, such as programmers that can actually reprogram a vehicle's computer to increase mileage up to 25 percent, products that create less wind drag and thus improve mileage, and improved air filters and air intake systems. All these items save fuel, which is extremely important with today's high fuel prices.

—Much appreciated convenience products include running boards that make it easier for an elderly person, or a mom with a baby, to get into their vehicle, as well as many items that make traveling easier.

One of the most common responses we get from our customers is “We didn’t even know this product existed!” Unaware of the availability of our products, and of our need to know about their vehicle registration data, most of our customers probably would not have opted in had they been required to do so.

Restriction of Competition

If this vehicle information is not made available to responsible marketers, then the automakers will have a monopoly on direct marketing to consumers that buy their vehicles. We all know what happens in a monopoly situation. Prices increase and innovation decreases. We currently charge 30 percent to 50 percent less than the car manufacturers for the same products. Our marketing costs would increase substantially under this law and these increases would have to be passed on to the consumer. That’s assuming we could even stay in business. If businesses like ours are not able to stay in business, then innovation will also surely decrease. Reduced competition always results in reduced innovation—ultimately the consumer is the one who gets hurt.

Increased Waste

If this law goes into effect, consumers will receive additional mail that is not specific to them. We will have to start mailing our catalog to consumers who might have the appropriate vehicle instead of being sure that we’re putting our catalog in the right hands. This is a waste of paper and resources as well as additional expense and a true bother to more Americans.

What is the effect of this law on businesses, such as ours, and the people who are employed by them?

Effects on Employees

This industry, by its very nature of needing assemblers, packers, and data entry personnel, lends itself to hire unskilled employees who have a difficult time finding good jobs to support their families. At Stylin’ Concepts, of those employees who have children, 50 percent are single parents, another 25 percent are students working their way through school, and others are handicapped. The call center where we receive calls from customers (we only receive calls, we never call prospective customers) is perfect for those who need flexible hours and a handicapped-friendly work environment that our company, and others like ours, offers. These people are trained well by us and all they want to do is keep their current job. The fact is, most of them will lose their job under the new law.

Effects on Business

The impact on our business and others like ours will be huge. We are aware of no other way to get this vehicle specific information. 75 percent of our business depends on it. The only way to maintain our sales would be to mail out 10 times as many catalogs, at an enormous increase in expense. Prices would have to be raised considerably, and frankly, we doubt that the consumer would be willing to pay the higher prices. Thus, the net effect would be to drastically reduce our sales and the sales of other businesses like ours.

What other options are available?

Other options to protect the privacy of the individual are available without hurting workers, consumers, and business. Some of these are:

1. Fine tune the law so that information that is truly private (such as driver’s license photographs) is prohibited from sale, but allow the sale of information that would not unduly harm the privacy of the consumer and provide a benefit as well.

2. Create standards by which the information is used. As an example, responsible direct marketers, at their cost, provide easy and effective ways for the consumer to let the marketer know they don’t wish to receive mailings anymore. Continue to let consumers opt out of allowing their information to be released. This seems to be a very effective method for communicating this information. Only .002 percent of consumers who receive our catalogs feel the need to contact us to request they not get our catalog.

3. At the very least, we need time to assess the impact this law will have on direct marketing workers and the businesses that employ them. Given time, we may be able to minimize the impact of the law. But right now, we can’t, and too many people will be hurt.

We believe the opt-in choice, as stated in the law, is not a practical solution for this issue. Most states seem to believe the revenue received from this method would not offset the cost involved in the changeover. It would require costly changes to

their forms, procedures, and computer systems. The states are saying they will simply not make any data available anymore.

In summary, we agree the privacy issue needs to be addressed. We have no desire to send our catalogs to anyone who does not wish to have them. However, the impact of this law needs to be seriously considered before it's implemented. We urge you delay the implementation of this law until a sound economic impact study can be made, as too many innocent and responsible businesses, workers, and consumers will be hurt by this law as it currently stands. With some modification, the law can make great strides in protecting the consumer from release of sensitive information without hurting a great many companies and their employees.

PREPARED STATEMENT OF THE DISABLED AMERICAN VETERANS

My name is Max Hart and I am the Director of Fundraising of the Disabled American Veterans ("DAV"). The DAV is a membership service organization of more than one million members with an additional 177,000 Women's Auxiliary. Founded in 1920 and Chartered by Act of Congress in 1932, DAV carries on service programs for all of America's 2.3 million disabled veterans and their dependents. These services are totally funded by contributions from a generous American public raised 100 percent through the mail. Direct mail is the only medium through which we can sustain our program service-all others are not viable.

I appear before you today on behalf of both the DAV and the Direct Marketing Association Inc. ("The DMA"), of which we are a member. I serve as chairman of The DMA's Nonprofit Council, which consists of 290 nonprofit organizations and their suppliers with interests in raising funds through direct marketing. The National Easter Seals, the Arthritis Foundation, the American Cancer Society, the March of Dimes, and Consumers Union are among the organizations who are members of The DMA Nonprofit Council. With scarce resources with which to make our fundraising appeals, we all rely upon the ability to tailor our messages to specific audiences by using lists from databases. Many of these databases are updated and corrected through the use of motor vehicle record information.

DAV's 65 million fundraising solicitations last year raised 83 percent of the organization's total revenue. That is, the DAV's fundraising solicitations last year grossed \$98 million in charitable contributions and \$2.9 million in bequests, trusts, and gift annuities.

Motor vehicle records have proven to be one of the single most reliable sources of certain demographic information, including age information, which we use in our targeted fundraising. This information is particularly useful in narrowing our fundraising target mailings to individuals that fall within a particular age range. Through the use of age and other demographic information that originates in motor vehicle records, we are able to better ensure that our messages will be heard by the most responsive audiences.

The future success of our fundraising efforts depends, in large part, on continued access to information in the motor vehicle records. Requiring an opt-in for use of motor vehicle information potentially threatens the ability of charitable organizations to raise the sums they need to continue providing the services that they have traditionally offered. Total cut off of all marketing uses of motor vehicle records would only exacerbate the difficulties we will have in obtaining lists that contain data derived from motor vehicle records.

INTRODUCTION

Good morning, Mr. Chairman and members of the subcommittee. I thank you for the opportunity to appear before your subcommittee as it examines implementation issues surrounding positive notification requirements for the Driver's Privacy Protection Act ("DPPA").

My name is Max Hart and I am the Director of Fundraising of the Disabled American Veterans ("DAV"). I appear before you today on behalf of both the DAV and the Direct Marketing Association ("The DMA"), of which we are a member.

My remarks today will concentrate on the extent to which an opt-in requirement for marketing uses of motor vehicle records could drastically impact DAV's fundraising efforts and programs, and those undertaken by other nonprofit organizations. As I will illustrate, such an approach will effectively deprive nonprofits of vital information that is critical to the fundraising programs of many nonprofit organizations. A decision by the states to cut off all marketing uses of motor vehicle records rather than implement last year's changes only serves to exacerbate our problems with an opt-in requirement.

After providing a brief background on the work of both the DAV and the DMA's nonprofit council, I will explain: (1) how the DAV and other nonprofits use motor vehicle information to most effectively tailor our message in connection with fundraising efforts; and (2) the importance of continued access to lists developed using certain demographic information that is updated and corrected through the application of motor vehicle record information.

THE DAV

The DAV is a membership service organization of more than one million members with an additional 177,000 Women's Auxiliary. Founded in 1920 and chartered by Act of Congress in 1932, DAV carries on service programs primarily for the benefit of America's 2.3 million disabled veterans and their dependents. These services, provided free of charge to all veterans and their dependents, are totally funded by contributions from a generous American public raised 100 percent through the mail. Direct mail is the only medium through which we can sustain our service programs—all others are not viable.

The DAV was founded on the principle that this nation's first duty is to care for its wartime disabled veterans, their dependents, and survivors. In fulfilling our mandate of service to America's service-connected disabled veterans and their families, the DAV employs a corps of 260 National Service Officers (NSOs), located throughout the country. Last year, these men and women, all wartime service-connected disabled veterans, represented almost a quarter of a million veterans and their families in their claims for VA benefits, obtaining for them more than \$2.2 billion in new and retroactive benefits.

We are extremely proud of the services DAV volunteers provide to our nation to assist it in fulfilling its mission to sick and disabled veterans. Between October 1, 1998, and September 30, 1999, these men and women continued to serve this great nation by providing more than 2.4 million hours of critical service to hospitalized veterans, saving taxpayers more than \$35 million in employee costs.

The DAV also employs 187 Hospital Service Coordinators at VA facilities around the country to assist our nation's sick and disabled veterans and their families. The DAV transportation program provides essential transportation to and from VA health care facilities to those veterans who could not otherwise access needed medical care. As of September 30, 1999, DAV volunteer drivers transported more than half a million veterans more than 19 million miles to and from VA medical appointments during a 12-month period. From its inception in 1987, the DAV's National Transportation Network logged in nearly 200 million miles and transported almost five million veterans to VA health care facilities. Since our transportation program began in 1987, DAV has donated 890 vans at a cost of more than \$17 million. This June, DAV will donate an additional 102 vans at a cost of \$2.4 million.

As you can see, as we have done for the past 80 years, the DAV devotes its resources to the most needed and meaningful services for our nation's disabled veterans. These services aid veterans directly support and augment VA programs. We are able to do so only with the continuing support of an American public that is grateful for all that our veterans have done.

THE DMA NONPROFIT COUNCIL

The DAV is a member of The Direct Marketing Association. The DMA is the largest trade association for organizations and businesses interested in direct, database, and interactive marketing and electronic commerce. The DMA represents more than 4,600 companies in the United States and 54 foreign nations. Founded in 1917, its members include direct marketers from more than 50 different industry segments, as well as the non-profit sector.

As chairman of The DMA's Nonprofit Council, I preside over a body that consists of 290 nonprofit organizations and their suppliers with interests in raising funds through direct marketing. They include organizations such as the National Easter Seals, Arthritis Foundation, American Cancer Society, March of Dimes, Consumers Union, Special Olympics, and Boystown, just to name a few. Our reliance upon lists and databases to raise funds for our service programs is one of the things that all of these non-profit organizations have in common. A good many of these lists and databases are updated and corrected through the use of motor vehicle records.

These nonprofit organizations are among the thousands of DMA members who have signed on to the Privacy Promise. This initiative requires that, as a condition of membership to The DMA, companies participate in The DMA's mail and telephone preference services. These services are offered free of charge to consumers, giving them the ability to remove their names from the lists of national marketers, substantially reducing their unsolicited commercial mail and telephone marketing

calls. Members must provide notice to consumers if they transfer data to others and must provide the consumer with the ability to opt out of such transfers.

THE SERVICE PROGRAMS FOR ALL OF AMERICA'S DISABLED VETERANS AND THEIR
DEPENDENTS ARE TOTALLY FUNDED BY CONTRIBUTIONS FROM DIRECT MAIL

Last year DAV mailed 65 million fundraising solicitations which grossed \$98 million in charitable contributions and \$2.9 million in bequests, trusts, and gift annuities. This figure represents 83 percent of DAV's total revenue from all sources including membership dues, investment income, and sale of fraternal items. Of the 65 million pieces mailed, 35 million were sent to DAV's 8 million active donors and 30 million to outside mailing lists prospecting for new supporters to DAV. Because we have an attrition rate of 20 percent each year, we need to replace 1.6 million donors in order to maintain the active donor file at its present level of 8 million.

As these figures attest, contributions from direct mailing activities are critical to ensuring adequate funding to support our service programs. The use of information from lists updated through the use of motor vehicle records is instrumental to achieving our fundraising goals, and to ensuring that we are able to continue to provide our services.

ACCESS TO CERTAIN INFORMATION GLEANED FROM MOTOR VEHICLE RECORDS IS CRITICAL TO ENSURING THE CONTINUED VITALITY OF MANY NONPROFIT SERVICE PROGRAMS THAT ARE DEPENDENT UPON DIRECT MAIL CONTRIBUTIONS

Although the DAV and other charities do not use driver's license and motor vehicle information directly, the ability to access lists from commercial databases with accurate and current information revealing particular demographics is extremely important to the nonprofit sector's fundraising efforts. Naturally, accurate name and address information is important. But so is demographic data. Accurate and complete data helps ensure that we direct our fundraising solicitations to the members of the public most likely to respond to them.

Motor vehicle record information is used in conjunction with other demographic data to identify the characteristics that distinguish an organization's best donor candidates. These characteristics are then applied against outside lists for new donor acquisition mailings. This is accomplished through predictive models and statistical regression analysis which are commonly used on large direct response lists such as Readers Digest subscription lists.

For example, our experiences indicate that age and income are two of the most significant selection criteria in the use of outside lists. The prime audience for most charities is the 50 years of age and older market. Also, our supporters are typically middle income; high and low income households have proven unproductive. Being able to identify individuals that fall within these age and income categories helps to ensure that our message is being most effectively communicated. List owners rely substantially upon motor vehicle records because they are excellent sources of both of these types of information.

Use of age information is also invaluable to fundraising efforts in determining when to propose planned giving as a means of charitable contribution. Our experience indicates that individuals over 70 years of age respond at a much higher rate on Gift Annuity promotions. It is most cost effective, therefore, to target this age range for this type of fundraising solicitation. Similarly, age information is also an accurate predictor of candidates likely to set up Charitable Remainder Trusts. As a pre-retirement function, individuals who fall within the early to mid-60's age range, often establish these trusts. Having access to age information enables us to more effectively our efforts to reach this segment of the population.

Through the use of this age information, the DAV and other charitable organizations are able to expend their limited fundraising resources in a cost effective manner by ensuring that we target our solicitations at the most responsive audiences.

Certain financial information gleaned from motor vehicle information also is important for fundraising associated with these Charitable Remainder Trusts. Because these trusts typically involve significant dollar amounts of \$100,000 or more, the ability to target more affluent individuals helps contribute to a better response rate. Car model and year information have proven to be highly accurate indicators of wealth information. Owners of late year model Cadillac, Lincoln, Lexus, and BMW cars, in high income areas represent better prospects for larger trusts. The ability to access this information through the use of motor vehicle registration is thus an important tool in these efforts.

Our discussion so far has focused upon solicitations from new donors. But age and wealth information are also used to identify from an organization's own donors those individuals who are the best prospects for a "planned gift" (i.e., bequests, gift

annuities, and charitable remainder trusts). Organizations often overlay age information from a database where age is derived from driver's license information and wealth indicators where a part of the mathematical equation is the make and year information from vehicle registration information to help target their messages to the most responsive audience.

Based upon studies that show that a majority of Americans do not avail themselves of either opt outs or opt ins, we anticipate that last year's opt-in requirement will result in far less information being made available from motor vehicle records. This will make it more difficult for us to obtain the highly reliable demographic information available from motor vehicle records upon which we have come to rely, and erode the quality of the lists upon which we rely upon for fundraising. This in turn may require nonprofits and others to send greater volumes of less targeted solicitations to compensate for the loss of age and other predictor demographic data. This will raise our costs and will result in more of our solicitations directed at the wrong consumers. This, in turn, could adversely impact our ability to provide our services.

I understand that many states may decide to cut off all marketing uses of motor vehicle records rather than implement an opt in. This will only serve to exacerbate our problems because it will block off information from even those individuals who through an opt in would agree to the use of the data in their motor vehicle records for solicitation purposes.

CONCLUSION

The future success of our fundraising efforts depends, in large part, on continued access to information in the motor vehicle records. Requiring an opt-in for use of motor vehicle information potentially threatens the ability of charitable organizations to raise the sums they need to continue to provide the services that they have traditionally offered. Total cut off of all marketing uses of motor vehicle records would only exacerbate the difficulties we will have in obtaining lists that contain data derived from motor vehicle records.

PREPARED STATEMENT OF FINANCIAL SERVICES, INC.

Mr. Chairman, Members of the Committee, I am Charles W. Taylor, President of Financial Services, Inc. d/b/a www.vidnet.org. Thank you for this opportunity to present our statement in support of the Video Conferencing and Telecommuting in the 21st Century—Test and Evaluation, proposed for the U.S. Department of Transportation (USDOT). I want to share with you our thoughts about an undertaking that can produce significant savings in USDOT travel expenses, traffic congestion relief, improvements in public safety, as well as contribute to the economic future and quality of life for federal employees and the public of our region and nation.

Significant improvements this past summer and fall in video conferencing—telecommuting, and distance learning technology have been made, particularly with the user interface and ease of connection, which now make it possible for just about anyone to use this technology. Cost wise, on the low end, a desktop or laptop personal computer (PC) can be video conference—telecommute enabled for less than \$100, bringing the user cost within the reach of just about everyone.

My technology will allow each user to easily see, talk with, collaborate, and share data in real time with up to a dozen other people, or more, at the same time on their own video conference—telecommute enabled desktop/laptop PC, from their offices, homes, or where ever, regardless of their location, worldwide via network, Internet, or both, essentially by clicking on a web page link.

My proposal is to equip and enable a minimum of 1,000 USDOT desktop and/or laptop PC's for high quality video conferencing and telecommuting capability. The cost to enable video conference/telecommute capability per desktop/laptop PC is expected to be between \$100.00 and about \$400.00 each, depending on user preferences, quality of service needs, and USDOT system requirements. The system proposed includes desktop/laptop PC software, color digital PC cameras, PC telephony devices (i.e. microphones or headsets), servers, server software, and could enable IP broadcast capability to a USDOT web page, if desired, on an internal or external, secure, USDOT network.

According to an analysis I completed earlier this year, assuming a 2 hour round trip commute, telecommuting only one day per week would save a worker about 100 hours on the road, and about \$250.00 in out of pocket travel expenses over a year's time. A recent study by MCI-Worldcom, "Meetings in America," suggests that for an average business meeting, an employer would save over \$1,000.00 per employee, per meeting, if the employee used video conferencing instead of the traditional face to

face—travel and time intensive method. In addition, according to the study, the employer would recoup more than 12 hours in lost productivity per employee, per meeting due to meeting travel and preparation time savings. On an annual basis, video conferencing has demonstrated a cost benefit ratio of about 4 to 1.

In addition, low cost desktop video conferencing has particular mobility implications for our elderly, homebound, travel limited, and isolated persons. This new technology now makes it possible to see, hear and talk with a dozen other people, or more, share text and data, and collaborate on projects with business associates, neighbors, friends, and relatives . . . or take a course at a world class university . . . without leaving the home, or from any location worldwide.

For our men and women in uniform, who must spend months away at sea and in foreign lands defending our freedoms, they will now be able to see, hear, talk with, and visit with their loved ones, friends, and relatives, no matter where they are. They deserve no less.

My technology is proven. In fact, the proposed server software was recently selected as part of the US Army's—First Data Division—command and control communication system upgrade for it's superior performance, lip sync quality, and ability to link servers for world wide connectivity.

The Internet is no longer faceless, nor silent.

Given the high cost of fuel, horrific traffic congestion, and extraordinary travel costs, it seems to me that it is long past time to consider proven, cost effective technologies as part of the transportation solution.

Secretary Slater has said that transportation is more than "asphalt, concrete, and steel." We've talked the talk. It's time to walk the walk.

The attached materials describe systems proposed. Additional information is available on my website: WWW.VIDNET.ORG.

Thank you for the opportunity to present this statement. I would be pleased to answer any questions you may have.

FEDERAL TRANSIT ADMINISTRATION

PREPARED STATEMENT OF THE ELECTRIC VEHICLE ASSOCIATION OF THE AMERICAS

INTRODUCTION

This testimony is submitted on behalf of the Electric Vehicle Association of the Americas (EVAA or Association), a national non-profit organization of electric utilities, automobile manufacturers, state and local governments and other entities that have joined together to advocate greater use of electricity as a transportation fuel. A membership list is attached.

THE ROLE OF ELECTRICITY IN THE NATIONAL TRANSPORTATION SYSTEM

The Association believes that utilization of electricity offers significant advantages in transportation applications. Electric transportation technologies present our nation with an important means for reducing our dependency on foreign petroleum and increasing the diversity of fuels relied upon in the transportation sector. During the last gasoline price and availability crisis in 1973, the United States was only 36 percent dependent on imported oil. Today, the U.S. Department of Energy reports that net imports of petroleum in the year 2000 will account for 52 percent of total U.S. petroleum demand. Clearly the need for this country to transition to the use of alternative fuels is more critical than ever. According to the Energy Information Administration (EIA), crude oil prices have pushed regular gasoline prices to \$1.50 per gallon, the highest level in nominal terms since 1981. (In fact, EIA predicts that average retail gasoline prices could reach a monthly average of \$1.75–\$1.80 per gallon some time during the summer peak driving season.) A wide variety of transportation modes—individual passenger and light-duty vehicles; heavy-duty vehicles, like buses and trolleys; light rail; commuter rail; maglev technologies, high speed rail; and heavy rail services—can be powered by electricity—an abundant, clean, and domestically produced energy resource generated from a variety of sources. All of these technologies will reduce pollution, reduce our dependency on imported oil, and improve the quality of life in many of our cities and towns, while maintaining our high degree of mobility.

In addition to diversifying sources of transportation "fuels", air quality considerations also are requiring municipal transit operators to consider the use of alternative fuel technologies as a means to reduce emissions and achieve air quality goals. For many urban areas, electric transportation may be a particularly important means to substantially reduce emissions of mobile source pollutants, including

volatile organic compounds and oxides of nitrogen, that are the precursors of smog. Electric vehicles, electric buses and maglev technologies are truly “zero emission” transportation modes in operation. They produce no tailpipe emissions and generate insignificant emissions during operations. They also have the benefit of being very quiet and energy efficient.

FEDERAL PROGRAM TO SHOWCASE ELECTRICITY AS THE 21ST CENTURY INTERMODAL FUEL

The EVAA supports the establishment of a significant federal program to demonstrate the environmental, energy security and economic benefits of alternatively fueled, intermodal transportation networks in our nation’s urban centers. Vehicular traffic in “center city rings” has become a significant environmental and transportation problem not just in the U.S., but around the world. Global trends toward increased urbanization mean that current problems associated with transporting people and goods will worsen. In Europe, Mexico and parts of Asia, cities are imposing drastic measures; closing center city rings to all vehicular traffic and/or imposing “no drive” days. In the U.S. local officials and transportation authorities are examining various means to relieve congestion, reduce emissions and noise from the transportation sector, while still assuring urban residents and commuters convenient and ready mobility.

The Association believes an industry and government partnership should be created to demonstrate that people and goods in urban areas can be moved cleanly, quietly and efficiently without using petroleum. To demonstrate the versatility of electricity, and more importantly, to focus upon alternative clean, efficient mechanisms to quickly move people and goods in our country’s urban centers, the EVAA recommends the authorization and funding of a nationwide intermodal transportation program. This national effort should be designed to demonstrate the environmental, energy security and economic benefits of creating electric-powered intermodal transportation networks in urban centers. Such a program would provide highly visible ways to demonstrate emerging technologies; evidence the value of electric-powered transportation options in creating “livable communities”; address urban sprawl; and, encourage sustainable development and “smart growth”. Examples of model projects could include the use of electric bikes and neighborhood electric vehicles by police and/or parking enforcement officials; the use of electric/hybrid electric buses for mass transit; EV “station car” connections to electric commuter rail; and/or the use of electric ground support vehicles, shuttle buses and/or EV rental car demonstrations at airports.

As envisioned, the proposed program would encourage energy diversity by showcasing a variety of transportation modes in several demonstration projects around the U.S. Such a program also would further determine the best applications for many of these emerging clean technologies. The demonstration program also would support the increased development/use of supporting infrastructure which will assist communities both in the near and long-term as they continue to transition to the use of clean, alternative transportation modes.

EVAA SUPPORTS THE FISCAL YEAR 2001 BUDGET REQUEST FOR THE CMAQ PROGRAM AND THE CLEAN FUELS FORMULA GRANT PROGRAM

It is vitally important to fund transit programs, which encourage innovative technological development with regard to electric, hybrid-electric and fuel cell transportation applications. Therefore, the Association urges funding—to the fullest extent authorized under the Transportation Equity Act of the 21st Century (TEA-21)—of public transit programs. In particular, the Association encourages funding for the following:

Congestion Mitigation and Air Quality Improvement Program (CMAQ)

The CMAQ program provides critical funding for projects and programs that reduce transportation-related emissions in nonattainment and maintenance areas. EVAA encourages DOT to give priority to those projects that have the greatest positive impact on air quality. An important dimension to the CMAQ program is the Public/Private Partnership Program that provides a mechanism through which the private sector may access CMAQ funding. The Association is supportive of full funding for the CMAQ program.

Clean Fuels Program

In TEA-21, Congress authorized a \$60 million electric and hybrid electric bus deployment program as part of the Federal Transit Administration’s (FTA) Clean Fuels Formula Grants program. During the fiscal year 1999 and fiscal year 2000 appropriations processes, funding for the Clean Fuels program was merged with

funding for the bus and bus-related facilities program. Combining these programs allowed Congress, during the appropriations process, to substantially increase the pool of authorized funds that could then be designated to specific projects. The Association encourages the Committee to appropriate funds, as authorized, for the conduct of competitive solicitations to test and demonstrate electric and hybrid electric buses.

The EVAA also believes that it is important for the Federal Transit Administration to issue guidance on the implementation of the Clean Fuels Program. The issuance of guidance documents would help to focus attention on the jeopardy to technology development if projects are designated specifically for funding and then implemented without regard to standards, common goals or technology transfer.

CONCLUSION

The Association appreciates the opportunity to make its concerns known to the Subcommittee and to submit for the record its funding priorities for the upcoming fiscal year.

PREPARED STATEMENT OF THE REGIONAL TRANSPORTATION COMMISSION OF CLARK COUNTY, NEVADA

INTRODUCTION

The Regional Transportation Commission of Clark County, Nevada (RTC) is pleased to have the opportunity to submit this testimony to the Transportation Appropriations Subcommittee in support of our fiscal year 2001 funding requests.

The RTC is a public entity created under the laws of the State of Nevada with the authority to operate a public transit system and administer a motor fuels tax to finance regional street and highway improvements. In addition, the RTC is the Metropolitan Planning Organization (MPO) for the Las Vegas Valley. As the public transit provider, the RTC operates Citizens Area Transit (CAT), a mass transit system that now carries more than 51.6 million annual passengers and recovers nearly 50 percent of its operating and maintenance costs from the farebox.

COMMUNITY

The Las Vegas community is currently home to over 1.3 million permanent residents. With 17 of the world's largest resort hotels adding over 32 million annual visitors, the actual population of Las Vegas on any given day exceeds 1.5 million persons. Meanwhile, the Las Vegas metropolitan area continues to experience explosive growth. The economy of the Las Vegas Valley is characterized by a favorable business environment, a strong job market, an absence of a business and personal income tax, and a comparatively low property tax by national standards. This environment has fostered an era of extraordinary growth that, since 1990, has fueled the creation of over 175,000 new jobs and has witnessed the influx of over 500,000 new residents to the valley. Current projections indicate that population and employment will continue to increase, exceeding 2.1 million residents and over 1 million jobs by the year 2020. Ensuring adequate mobility is essential to maintaining a superior quality of life for residents and a pleasant visitor experience.

CITIZENS AREA TRANSIT

Citizens Area Transit (CAT) began service on December 5, 1992. At that time, CAT represented the largest single start-up of new bus service in North America. Annual CAT ridership has grown from 14.9 million riders in 1993 to over 51.6 million riders in 1999; a growth rate of over 246 percent in only 7 years, catapulting CAT to the 25th largest bus system in the nation. Las Vegas is the fastest growing city in the United States, but the CAT system is growing at a rate faster than any other local economic indicators, including population, employment, hotel rooms, visitor volumes, airport passengers, vehicle miles traveled, and auto registrations.

With 42 routes operating throughout the greater Las Vegas Valley, as well as routes in the rural communities of Laughlin and Mesquite, Nevada, CAT is now servicing over 4.5 million passengers per month. While the CAT routes operating along the high-profile Las Vegas Boulevard provide service to up to 900,000 passengers per month, these routes account for only 25 percent of the total monthly ridership. Clearly, many Las Vegas residents rely heavily on the CAT system to get to work, school, shopping, medical services and recreational facilities. Providing mass transit services throughout the Las Vegas Valley, CAT has become essential to the fabric of the Las Vegas community.

To address the ever increasing demand for transit services, the RTC has continually increased bus service. Since startup, total annual hours of revenue service have almost doubled, from 585,134 hours in 1993 to over 1.1 million hours in 1999. Similarly, annual vehicle miles have also doubled; from 6,384,660 miles in 1993 to over 14,500,000 miles in 1999. In addition, the CAT system has continued to successfully increase ridership while remaining operationally efficient. Costs per passenger have dropped consistently since startup, to approximately \$1.29 per passenger. In 1997, CAT was recognized by the American Public Transit Association (APTA) as the winner of the Outstanding Achievement Award—Bus System of the Year for the 151–600 bus category. In 1998, and again in 1999, APTA again recognized the CAT system by awarding it the William T. Coleman Silver Safety Award for outstanding performance in traffic and passenger safety. For the past four years, the annual University of North Carolina, Charlotte Comparative Performance Report has also recognized CAT as one of the nation's top bus systems in terms of system performance.

Although the CAT system has doubled service availability since startup, the demands for even more service continue to escalate. The urban boundaries of the Las Vegas Valley continue to push in all directions, creating new areas of growth and transit demand. In addition to under served areas, the frequency of service on most existing routes serving the residential base of the valley is substantially less than desired. The single largest constraint faced by the RTC to providing more service continues to be fleet availability. When compared to other peer cities, CAT transports up to 3 times the number of passengers per vehicle.

BUS PASSENGER FACILITIES (HENDERSON INTERMODAL FACILITY)

The RTC is requesting \$6 million in Section 5309 bus discretionary funds for land acquisition and facility construction for an Intermodal facility located in Henderson, Nevada.

With over 51.6 million annual passengers using the CAT system, passenger comfort and convenience are essential components to maintaining transit's viability as an alternative mode of transportation. To enhance customer amenities and facilitate transfers between routes, the RTC plans to build a network of terminal/transfer facilities throughout the Las Vegas Valley. These facilities will provide locations where passengers have the opportunity to easily transfer between routes, passengers have shelter from the elements, and coach operators have access to necessary amenities. In addition, terminal/transfer facilities will provide opportunities for a reasonable interface between fixed route and paratransit services. In addition to the Downtown Transportation Center (DTC), the RTC is in the process of siting a second terminal transfer facility at the southern end of the Las Vegas Strip. An Environmental Analysis has been performed on the South Strip site and RTC has received a Finding Of No Significant Impact (FONSI) on the site. RTC is now engaged in the land acquisition process and will soon be moving forward with final site design and construction.

In the southeast area of the Las Vegas Valley, five CAT routes provide services in the Henderson area. Until recently, these five routes utilized private property belonging to a local casino as a "de facto" terminal area. However, new ownership at the property recently refused CAT's continued use of the property. Currently, the five CAT routes are now using on street parking as a layover/transfer area, with no nearby amenities or facilities. Clearly, a dedicated facility in the Henderson area has become a priority for CAT services.

RTC has issued an RFP for consulting services to locate an appropriate site for a dedicated CAT terminal in Henderson, as well as to perform all necessary environmental analysis. By the end of calendar year 2000, a preferred site will be identified. Acquisition and construction funding will allow RTC to proceed with this project as expeditiously as possible.

BUS RAPID TRANSIT AND EMERGING TECHNOLOGIES

The RTC also requests \$7 million in Section 5309 bus discretionary or Research and Technology funds for the implementation of a Bus Rapid Transit (BRT) project in the Las Vegas Valley.

Overall ridership on CAT has increased by over 246 percent since its inception in 1992 and some CAT routes have shown even greater increases, operating in excess of 200 percent of available capacity. This significant ridership demand, coupled with the unique Las Vegas environment and climate, create a distinct opportunity for the implementation of new bus technologies and transit services.

The RTC is interested in the use of new and innovative technologies to improve capacity, increase efficiency, and meet the ever increasing needs for mass transit in

the Las Vegas Valley. Toward this end, the RTC is beginning the process of planning for the deployment of new Bus Rapid Transit services. Specifically, RTC is developing operational plans to deploy a high capacity vehicle with low floor accessibility, perimeter seating, and off vehicle fare collection. In addition, RTC is focusing on emerging technologies that utilize alternate fuels and provide opportunities to reduce roadway spaces and minimize costly traffic engineering improvements. From a research perspective, the most significant element of the BRT project is the potential usage of an automated guidance system. This guidance system will assist coach operators in the approach to a bus stop and aligning the actual stopping point of the vehicle at the bus stop. The service advantages of such a system in BRT operations include maintaining close curb distances, ensuring that vehicle doors are aligned with loading/exiting areas, and eliminating gaps between the vehicle and the platform stopping area.

The development of a reserved right of way for bus rapid transit technologies is a new concept for the Las Vegas Valley. Las Vegas Blvd North has been identified for the project due to the high demand for transit in this corridor, the available right of way, as well as the ability to determine the impacts of the reserved lane on automotive traffic. In fact, CAT route 113 which serves Las Vegas Blvd North is a key link in getting workers to the new jobs being generated in the rapidly growing resort industry.

FLEET EXPANSION—CLEAN FUEL VEHICLES

The RTC requests the sum of \$6 million in Section 5309 bus discretionary funds or Clean Fuels program funds for the purchase of 25 CNG powered 40 foot vehicles to be dedicated to fixed route service. The CAT fleet consists of 297 fixed route vehicles and 120 CNG powered Paratransit vehicles. In its role as the MPO and transit operator, the RTC is constantly promoting additional methods to help improve air quality. When CAT paratransit services were initiated in December 1994, the RTC mandated the entire paratransit fleet use an alternative fuel. As a result, the RTC is currently the largest single sponsor of an alternative fuel fleet in the State of Nevada. The RTC directly contracts with a CNG wholesaler for the purchase of CNG fuel at the lowest possible cost.

In 1999, the CAT fixed route fleet provided over 14,500,000 miles of revenue service throughout the Las Vegas Valley. The fixed route fleet currently provides almost double the operating miles per vehicle than most other transit agencies. In addition to the need for vehicles for fleet expansion, RTC aims to diversify the fixed route fleet to also include alternative fueled vehicles.

FIXED GUIDEWAY

The RTC is requesting \$2.5 million in Section 5309 new starts funding for continuing environmental studies and engineering for the Resort Corridor Fixed Guideway project. During the past year, the RTC continued to engage in project definition activities, technical studies in support of an environmental document, and preliminary engineering activities. Most notably, the RTC adopted a Financial Plan that utilizes STP and CMAQ funds, and capitalizes on local private equity investments and the expected substantial ridership levels and revenues.

CONCLUSION

The Subcommittee has been very helpful in the past in recognizing the ever increasing transit needs in Clark County. Consistent with that past history, the RTC requests that the Subcommittee give positive consideration to the projects described in this testimony. Specifically, the RTC requests funding from Section 5309 in the amount of \$6 million for Bus Passenger Facilities; \$7 million for a Bus Rapid Transit emerging technology project, \$6 million for transit bus alternative fuel fleet expansion, and \$2.5 million for continuing activities related to the Resort Corridor fixed guideway project. As shown in this testimony, these projects are indispensable to the comprehensive development of an integrated intermodal transportation system capable of meeting the needs of the fastest growing city in the United States.

PREPARED STATEMENT OF THE DALLAS AREA RAPID TRANSIT AUTHORITY

Senators Kay Bailey Hutchison and Phil Gramm jointly submit this written testimony on behalf of the Dallas Area Rapid Transit (DART) Authority. It is indeed a pleasure to reaffirm our support of DART and to recommend to the Subcommittee their fiscal year 2001 appropriation request of \$100 million for the North Central Light Rail Transit (LRT) Extension, purchase of transit buses, acquisition of property

for the Southeast Corridor, and DART's ITS Program. The request is for inclusion in the Federal Transit Administration (FTA) and the Federal Highway Administration Intelligent Transportation Systems portion of the fiscal year 2001 Department of Transportation and Related Agencies budget.

For fiscal year 2001, DART is requesting from the Federal Transit Administration (FTA) discretionary funding program, \$70 million for the North Central Light Rail Transit (LRT) Extension, which is an installment of the \$333 million Federal Share for the North Central Corridor Full Funding Grant Agreement between DART and FTA. The \$70 million of New Start funds will be dedicated to the North Central LRT Extension of the 20-mile DART LRT Starter System. The funds will be used totally for construction elements, light rail vehicles, and real estate. Completion of the 12-mile North Central LRT Extension and the companion 12-mile Northeast LRT Extension (100 percent local funds) will more than double light rail coverage, to 44 miles, and penetrate the DART suburban cities of Richardson, Plano, and Garland.

DART is requesting \$10 million in FTA capital funds for the purchase of transit buses. DART's Business Plan approves the multi-year replacement of 740 buses under three contracts. The first contract has been awarded for 489 buses which are currently being delivered to DART. In fiscal year 2000, two additional contracts will be awarded for the remaining 251 buses with deliveries in fiscal year 2001. The \$10 million appropriation will be immediately obligated and expended for the fiscal year 2001 bus deliveries.

Nine stations are planned for the Southeast Corridor of DART's LRT System Project, seven of which will require the acquisition of additional real estate in order to provide for patron parking areas and/or busbays. The acquisition of this real estate is estimated to cost approximately \$10 million. DART is requesting \$10 million for property acquisition.

DART's approved Transit System Plan calls for deployment of Intelligent Transportation Systems (ITS). DART is requesting \$10 million from the Federal Highway Administration Intelligent Transportation Systems funding program.

WHY THE SUBCOMMITTEE SHOULD APPROPRIATE \$100 MILLION TO DART

Full Funding Grant Agreement Approved.

—DART and FTA agreed on a \$333 million Federal Share for the North Central Corridor.

—The President's fiscal year 2001 FTA budget contains a line item of \$70 million for the North Central Corridor, which is an installment of the \$333 million Federal Share for the North Central Corridor Full Funding Grant Agreement between DART and FTA.

The North Central LRT Extension is under construction.

—The \$70 million is needed immediately to meet cash flow requirements for contracts authorized under a FTA Letter of No Prejudice (LONP).

—DART has already awarded contracts totaling more than \$298 million for the NC-3 Line Section, 21 new light rail vehicles, real estate, welded rail and fasteners, special trackwork, the vehicle maintenance facility, and yard expansion.

—By the end of fiscal year 2000, virtually all the contracts, valued at close to \$1 billion for both the North Central and Northeast (100 percent local funds) LRT Extensions will have been awarded.

DART initiated construction before executing the Full Funding Grant Agreement because of a citizen-approved sales tax.

—The citizens of the DART service area in 1983 voted to impose a 1 percent sales tax dedicated to DART for public transit.

—A total of \$3.18 billion has been collected through December 31, 1999, with \$332.7 million received in fiscal year 1999.

—DART uses sales tax receipts and short-term borrowing to finance the initiation of construction; but, The timely receipt of federal funds is critical to repaying these short-term notes and minimizing the additional expenses associated with borrowing funds before receipt of the federal funds.

DART continues to overmatch.

—The \$860 million LRT Starter system was financed with 19 percent (\$160 million) federal and 81 percent (\$700 million) local DART funds.

—The combined \$992 million construction cost of the two LRT extensions continues DART's philosophy of providing a substantial local overmatch, as was done on the LRT Starter System.

—DART local funds (\$659 million) represent 66 percent of the total project cost, with federal discretionary new start funds accounting for just \$333 million (34 percent).

Solid elected official and business support.

—Richardson Mayor Gary Slagel, Dallas Mayor Pro Tem Mary Poss, and several business executives DART member cities have met with most of the Delegation Members to voice their strong support for the investment DART is making to bring major mobility improvements to North Texas.

—DART member cities and service area chambers of commerce have shown their support by writing letters and passing supporting resolutions.

—DART, the City of Richardson, Hunt Petroleum, and Northern Telecom are incorporating a rail transit plaza in the Galatyn Park expansion of the Telecom Corridor.

DART is an economic engine to North Texas and the state.

—DART is providing a hefty boost to the North Texas and state economies, with a total regional impact estimated at \$3.7 billion and more than 32,000 jobs through 2003.

—The new study prepared by the Center for Economic Development and Research at the University of North Texas looks at three separate DART economic engines: the current \$1 billion light rail expansion, other capital projects, and ongoing DART operations.

DART rail boosts property values and retail sales.

—Values of property near DART light rail stations are 25 percent higher than for similar properties not served by the growing rail system, according to a new study. DART has also helped occupancies and retail sales, especially in Downtown Dallas.

The LRT Starter System was built on time and within budget.

—DART has shown that it can capably manage a large, multi-million dollar project, keep it on schedule and within budget through strong project management and strict cost control.

—DART has proven to be a cost-effective manager of both local and limited federal funds through conservative financial policies instituted and approved by the DART Board.

Since the opening of Light Rail in June 1996, private developers have invested more than \$800 million of private funds along the 20-mile Light Rail System.

SUPPORTING INFORMATION

Major Accomplishments

DART operates a highly successful 20-mile light rail transit system within Dallas, and a 10-mile commuter rail line between Dallas and Irving. In addition to the rail services, DART operates a variety of transportation alternatives including high occupancy vehicle (HOV) lanes, 130 bus routes, paratransit services for the mobility impaired, rideshare programs and corporate trip-reduction programs. These multi-modal systems are the result of thorough corridor planning and implementing the right mode to match the corridor characteristic and ridership. A mix of high capacity systems is being implemented and operated in the Dallas area. This mix includes HOV lanes that are planned, designed, built, and operated in partnership with the Texas Department of Transportation.

Exceeding Expectations

DART's new LRT and commuter rail services are generating ridership well beyond initial projections, with more than 41,000 passengers per day. DART rail is generating extensive economic development around stations and along rail corridors as it increases mobility choices for workers. Consequently, business and community leaders are actively supporting efforts to expand the rail system in a timely manner, in accordance with the DART Transit System Plan. The citizens of North Texas are eager for DART to complete these major transportation projects in a timely and fiscally responsible fashion.

DART Rail Generates Major Real Estate Impact

The investment in DART is paying off. Through early 2000, more than \$800 million in private funds has been invested in development along DART's \$860 million, 20-mile Light Rail Starter System. Throughout the DART Service Area, investors and developers are following DART rail lines for the fastest track to successful developments.

DART is an economic engine to North Texas and the State of Texas

According to a February 1999 study prepared by the Center for Economic Development and Research at the University of North Texas, DART is providing a hefty boost to the North Texas and state economies, with a total regional impact estimated at \$3.7 billion and more than 32,000 jobs through 2003. The study looks at

three separate DART economic engines: the current \$1 billion light rail expansion, other capital projects, and ongoing DART operations. Quoting from the study, "By any measure, DART is a key economic engine for the North Texas region, generating jobs and economic activity just in the amount of money it spends on building new facilities and operating activities. If we factored in the benefits DART brings by providing inexpensive transportation to work and improved traffic and air quality, the number would be even higher."

Miles to Go

DART's Transit System Plan calls for the development of 93 miles of light rail, 22 miles of commuter rail, and 110 miles of HOV lanes. The Financial Plan portion of the fiscal year 1999 Business Plan projects the sources and uses of funds for DART's projects through the next 20 years. The Financial Plan projects \$7.3 billion in locally funded operating expenses and a total of \$4.6 billion in capital costs. Because of DART's one-cent sales tax, it has been Board policy to use the local funds for transit operations and DART has never sought or received Federal operating assistance. Therefore, federal funding accounts for only 19 percent of capital investments and 9 percent of overall expenditures.

CONCLUSION

The citizens of the DART service area have invested their sales tax dollars to implement the Transit System Plan. The \$100 million request is realistic based on the Board-approved DART fiscal year 1999 Business Plan, which also has been examined by many of the finance directors of DART's member cities.

As the Subcommittee deliberates the hundreds of funding requests, remember:

- DART and FTA agreed on a \$333 million Federal Share for the North Central Corridor.
- The North Central LRT Extension is under construction.
- \$298 million in contracts have been awarded.
- DART initiated construction before executing the Full Funding Grant Agreement, because of sales tax revenues.
- DART continues to overmatch (66 percent local, 34 percent federal).
- There is solid elected official and business support.
- DART is an economic engine to North Texas and the State of Texas.
- The LRT Starter System was built on-time and within budget.

These are very compelling reasons to honor DART's \$100 million request that has our complete support. We urge your endorsement of DART's fiscal year 2001 funding request of \$100 million in order to keep the momentum we have collectively gained. DART is planning, building, and operating transportation services now for the future mobility of the region.

PREPARED STATEMENT OF THE COLORADO DEPARTMENT OF TRANSPORTATION (CDOT)
AND THE DENVER REGIONAL TRANSPORTATION DISTRICT (RTD)

Mr. Chairman and members of the subcommittee, we appreciate this opportunity to submit written testimony, as prepared by the Colorado Department of Transportation (CDOT) and the Denver Regional Transportation District (RTD), to discuss important transportation issues in the Denver metro area. It is with pleasure that we present to you our fiscal year 2001 Transportation Appropriation needs.

First, we want to thank you for the subcommittee's continued support for the Denver Regional Transportation District's Southwest Corridor Light Rail Project. The project is scheduled to open July 2000. Its Full Funding Grant Agreement (FFGA) requires a final appropriation of \$20.4 million to complete the project's federal funding, and we would urge you to provide these remaining funds. It is a project that is on time and on budget.

Second, we are grateful for the \$2.94 million in funding you provided in fiscal year 2000 for the Southeast Corridor. These funds were used for preliminary engineering. An appropriation of \$63 million is requested for the Southeast Corridor Multi-Modal Project for fiscal year 2001. The Southeast Corridor Multi-Modal Project team is working aggressively to meet project readiness criteria, as established by the Federal Transit Administration (FTA), so that an approval of the FFGA can be accomplished by the summer of 2000.

The \$63 million requested in fiscal year 2001 for the Southeast Corridor Multi-Modal Project light rail transit line will cover critical right-of-way acquisitions, early utility relocation, and critical items for federal funding. Last November, voters overwhelmingly approved both state and local bond initiatives to provide local funding

for the multi-modal project to decrease traffic congestion on Denver's transportation system.

There are two elements to this multi-modal project—highway and transit. The highway element of the project will include additional lanes and safety single project, single design and single construction improvements. The project will also include 19 miles of new double-track light rail which will run on the west side of Interstate 25 for 15 miles from the existing Broadway station in Denver to Lincoln Avenue in Douglas County and within the median of Interstate 225 for four miles from Interstate 25 to Parker Road.

The Southeast Corridor Multi-Modal Project connects the two largest employment centers in the region and the State. Together the Denver Central Business District and the Southeast Business District employ over 230,000 people. The Southeast Business District alone generates 25 percent of the annual sales revenue of the State.

The Southeast Corridor Multi-Modal Project is a joint effort and partnership of four agencies. Interagency agreements are in place between CDOT, RTD and additionally between the Federal Transit Administration and the Federal Highway Administration. It is a single design and single construction of both highway and transit. We are working cooperatively and collaboratively together on a "ONE DOT" approach to ensure that we deliver this project on time and within budget.

Completion of the Southeast Corridor Multi-Modal Project is vital in helping Colorado address the challenges we face from rapid growth. Moving forward with the Multi-Modal Project will go a long way in demonstrating the Federal Government's commitment and support for communities that look toward the future in meeting the long-term mobility needs for the people of Colorado. We seek your support for our fiscal year 2001 Appropriation Requests of \$20.4 million to complete our FFGA for the Southwest Corridor Light Rail Project and \$63 million for the Southeast Corridor Multi-Modal Project.

Mr. Chairman and members of the subcommittee, we thank you for this opportunity to provide you with this written testimony regarding these significant Colorado transportation projects.

PREPARED STATEMENT OF THE CHATHAM AREA TRANSIT AUTHORITY

Mr. Chairman and Member of the Subcommittee, on behalf of Chatham Area Transit Authority (CAT), I appreciate the opportunity to present this statement in the hearing record for outside witnesses.

First I would like to thank the Subcommittee for the funds provided over the past four years for CAT's transit needs. CAT officials and riders sincerely appreciate your efforts on our behalf.

At this point, it is anticipated that CAT will obligate the bulk of prior year appropriations before the end of this calendar year.

For fiscal year 2001, CAT is requesting \$8 million for (1) Renovation and refurbishment of CAT's existing administrative and service/repair facility (\$1,000,000); and (2) Desperately needed bus replacement funds (\$7 million). In addition, CAT requests that \$750,000 be allocated to the CAT system under the Access to Jobs provisions of the fiscal year 2001 Transportation Appropriations Bill. Each component is discussed below.

CENTRAL FACILITY REPAIR

The CAT central facility, which houses both administrative offices and our bus repair and service functions, is in desperate need of renovation and refurbishment. The facility has not received any major improvements since CAT began operating from this location in 1984. The needed improvements include the following: Safety and Code improvements; Lighting and security improvements; Utilities upgrades (water and natural gas); Pavement repairs; Improved operational sequence; Drainage improvements; and Roof repairs.

BUS REPLACEMENT

Currently over half of CAT's bus fleet have accumulated over 500,000 miles per vehicle. This puts these buses beyond their useful and designed life. None of the buses that require replacement meet the requirements of the Americans with Disabilities Act (ADA). The fiscal year 2000 Appropriations of \$2.5 million for the beginning of CAT's bus replacement needs will permit less than 50 percent of the replacement goal to be met. As each year passes, the percentage of CAT's bus fleet that becomes outmoded increases significantly. The total funding needed to replace

these buses is now in excess of \$12 million. CAT is seeking \$7 million of the total need in fiscal year 2001. Without this infusion of additional funds for escalating bus replacement needs, CAT will (1) fall behind capability to deliver existing service to our riders, much less meet the growing ridership demand we have been experiencing for the past three years, and (2) fail to provide service required under the Americans with Disabilities Act.

ACCESS TO JOBS

CAT provides transportation to and from work for a large segment of the service area. The use of mass transit for these purposes makes CAT eligible for additional funding under the Job Access funding category. In prior years, this category had been available on an application basis. Recently, only those systems identified in the appropriations conference agreements have been recipients of these funds. In fiscal year 1999, CAT received a competitive grant for access to jobs. These funds are used under a public/private partnership to provide transportation to CAT riders traveling to and from work. These funds will expire soon, and the community has expressed its desire to maintain this program. CAT requests that \$750,000 be identified for CAT in this funding category for fiscal year 2001.

CONCLUSION

Mr. Chairman, thank you for this opportunity to present CAT's needs before your Subcommittee. CAT's Board and I thank you for your efforts on CAT's behalf last year. We earnestly and sincerely request that you consider carefully CAT's defensible and justifiable request for \$8 million for buses and bus related facilities, and \$750,000 for Access to Jobs from the Federal Transit Administration for fiscal year 2001.

PREPARED STATEMENT OF THE CITY OF MIAMI BEACH, FLORIDA

Mr. chairman and members of the Transportation subcommittee: On behalf of Miami Beach, I thank you for the opportunity to present testimony to the subcommittee.

The City respectfully submits a transportation-related project for a discretionary earmark through the Federal Transit Administration, within the fiscal year 2001 transportation appropriations bill. The City-proposed earmark of ten million dollars will be used toward the construction of a storage and maintenance facility/intermodal transit station that will support the existing and future electric shuttle service, known as the Electrowave. FTA funds may also be used for right-of-way acquisition, if needed.

Miami Beach is internationally known as a major tourist and convention destination, as well as a successful and economically healthy island community—which is undergoing a true renaissance. This renaissance, however, has also brought congestion to our limited roadway system. The City's response to the increasing congestion problem is the provision of a reliable and attractive public transit option, the Electrowave Shuttle Service. The existing shuttle route has been operated by a fleet of seven (7) vehicles, carrying over 2.5 million passengers in two years of service. Its success is undeniable and unprecedented.

This fleet will soon grow to eleven (11) vehicles, allowing for the operation of an enhanced route that will extend service to the hotel area of Miami Beach, which has over 20,000 rooms. However, eleven (11) vehicles is the maximum number that the existing shuttle facility can accommodate and maintain. If the Electrowave Service is to expand further and accomplish its mission of reducing congestion citywide, it is essential that a permanent facility be constructed to accommodate, at a minimum, a fleet of twenty (20) vehicles.

The intermodal station component of this project will function as a transportation collector for the area, where commuters and visitors will have access to an information center, and to local and regional transit services. Pending lot size and location, the facility will also accommodate parking that will support a park-and-ride program. The park-and-ride concept was proved successful during the millennium celebrations, carrying 17,200 customers over the holiday weekend.

The City is conducting a site selection study for this shuttle facility/transit station project, which will also explore the potential for on-site economic development and joint mixed-use opportunities.

The electrowave is included in the five-year transportation improvement program of Miami-Dade County, and has the financial support of the City of Miami Beach, the Florida Department of Transportation, the FTA/Miami-Dade Transit Agency,

the Metropolitan Planning Organization, the Florida Power & Light Company, and other clean air and energy agencies.

A \$10 million, fiscal year 2001 discretionary FTA fund earmark toward the shuttle facility/transit center project is critical to the long-term effectiveness of the electrowave program, and to the continued attractiveness and economic vitality of a 21st century Miami Beach.

Your consideration is sincerely appreciated.

PREPARED STATEMENT OF THE CITY OF NEWARK, NEW JERSEY

Chairman Shelby and members of the Subcommittee, thank you for giving me the opportunity to present testimony on projects within your jurisdiction which are critical to the people of Newark, New Jersey and the surrounding region. The support of this Committee has been critical in the past, and we wholeheartedly thank you for your aid to projects that have truly impacted on the people of Newark and our economy. Newark's transportation infrastructure needs are critical to enabling us to maintain our position as a regional center for commerce, government and entertainment.

Newark is truly at a crossroads: we are a City with all of the problems of many major urban centers, but we are also a City with vast potential, and there is a renewed vitality and sense of optimism in Newark. As the physical crossroads of the Northeast Corridor, the future economic viability of Newark is inextricably dependent upon the continued modernization and expansion of our intermodal transportation system. Improvements to our roadway network, our rail system, and our port and airport facilities will directly translate into jobs and economic prosperity for our City, State and Region.

The construction of major new facilities, including the three year old New Jersey Performing Arts Center, our minor league baseball stadium which opened last summer, and the Joseph G. Minish Passaic Riverfront Park and Historic Area—on which the Army Corps of Engineers has begun construction—are all related to the proximity and effectiveness of our transportation network. The repopulation of older office buildings, and construction of new ones, is occurring in large part due to the ease of access for commuters. Your help on transportation funding has improved access to not only the downtown business, arts and entertainment district, but also the rapidly growing Newark Airport/Port Newark complex. The success of University Heights, where four institutions of higher learning provide educational opportunities to over 50,000 commuter students per day, is also directly related to the ease of access to the highway system.

We are working to further capitalize on the existing transportation infrastructure by connecting current and proposed facilities with the Newark Elizabeth Rail Link. The first segment of the Newark Elizabeth Rail Link (NERL) will soon be under construction, thanks to your previous support. The first operable segment will provide the missing link between downtown Newark's two train and bus transportation nodes. It will be a 0.94 mile connection between the Broad Street Station, where trains from the western suburbs enter the City, and Newark Penn Station, on the Northeast corridor line and the central hub for New Jersey Transit trains and buses. There will be three new stations on this segment—Broad Street Station, Washington Park/Riverfront Stadium, and NJ Performing Arts Center/Center Street—which connect sites mentioned above, as well as our renowned Newark Museum and Newark Public Library, that are crucial to Newark's economic and cultural growth. The line then will enter a portal where it will connect with the existing City Subway tunnel to access Penn Station, which I will discuss further in a moment. At full build-out, the NERL is planned to be an 8.8 mile, fifteen station light rail transit line linking downtown Newark with Newark International Airport and the City of Elizabeth.

The NERL is an important and central component of our overall transportation plan. We are proud that a full funding agreement for this first operable segment of the Newark Elizabeth Rail Link has been submitted to the FTA, and the Administration has included funding for it in its budget. I respectfully ask this Committee to add its support to a \$47.5 Million fiscal year 2001 allocation for this vital connection.

An additional related transportation issue is the next critical step in our revitalization of Newark's downtown. Penn Station and the presence of AMTRAK facilities is a central feature of Newark's downtown/riverfront area. This station is the last northbound stop on the Northeast Corridor before New York City, and provides rail and bus linkages to the rest of New Jersey, and the region beyond. New Jersey Transit is doing an admirable job of renovating and modernizing the facility to ac-

commodate increases in demand at the station, but the portion of the overall rail infrastructure that is owned and operated by AMTRAK is in great need of attention.

The renovation and upgrading of AMTRAK property to better serve the City of Newark, its residents and visitors is a key factor in the City's economic development and transportation initiatives. The key property is at the south side of Penn Station, and improvements to it will be a worthy investment.

The extension of the platforms at the southern end of Penn Station will enable passengers to exit the rail facility without having to navigate through passageways to exit through the station itself. This improvement will enable the connection of a pedestrian walkway to a planned economic development project, the new downtown sports and entertainment complex. With this extension, an old abandoned railroad bridge and right of way will be transformed into a productive pedestrian corridor, linking passengers to a recently planned intermodal transportation facility that will be housed adjacent to the new sports facility. The project will help to revitalize the southern portion of Broad Street—which is Newark's main commercial corridor—just as other transportation projects have facilitated the renaissance of the upper Broad Street area. The estimated cost for the platform extension is \$20 million, and I ask your support for funding to plan and implement this exciting undertaking.

The assistance of this committee in funding these projects is vital. The Newark Elizabeth Rail Link and the Penn Station/AMTRAK facilities improvements are critical links in Newark's transportation network, and your support for them is crucial to our continued economic development. Your attention and consideration of the needs of Newark, New Jersey are deeply appreciated, and I thank you for your time.

PREPARED STATEMENT OF METRA

METRA OVERVIEW

Metra, the second largest commuter rail system in the U.S., provides service to north-eastern Illinois on twelve lines that serve more than 120 communities with 240 stations and a stop at O'Hare International Airport. The Metra system covers a territory the size of Connecticut with a population of 7.5 million. Each week, Metra provides nearly 4000 revenue trains and carries more than 1.5 million riders, 96 percent of whom use the system to go to and from work. On-time performance has been well above 95 percent every year of Metra's existence.

Metra has consistently been rated the best commuter rail service in the country. In 1996, Metra was the recipient of the first APTA award as the outstanding commuter rail operation. Metra has always emphasized the development of internal operations that contribute to this overall excellence. In 1995 and 1998, Metra received successive triennial reviews from FTA that had no findings or follow-ups required.

METRA'S FISCAL YEAR 2001 FUNDING REQUEST

In the fiscal year 2001 Transportation Appropriations legislation, Metra is seeking \$75 million in section 5309 New Start funds to continue work on its Metra 2000 Capital program that extends and upgrades three lines on the Metra system. They are the North Central Service (Wisconsin Central), Union Pacific West Line to Elburn, and the SouthWest Service to Manhattan.

For fiscal year 2000, Metra received \$25 million in New Starts funds for all three projects. These funds will be used for engineering and design, track and signal work, and land acquisition. These funds will also enable Metra to enter into Full Funding Grant Agreements (FFGA) with the FTA on all three projects this year, all of which were included in the President's fiscal year 2001 budget.

Of the \$75 million in Metra's fiscal year 2001 funding request, \$35 million is slated for the North Central line. The funds will be used for design, track and signal work and construction of new stations and parking. \$25 million is for the Union Pacific West Line, and will also be used for design, track and signal work, and station and parking construction. \$15 million of the fiscal year 2001 request will be for the Southwest Corridor for engineering and design work, track and signal work, and stations and parking.

FEDERAL/STATE COST SHARE

The total cost of the three projects is \$735,348,000. The federal share of this project is \$343,215,000, or 47 percent. The local share is \$392,133,000, or 53 percent. This is a very favorable federal/state cost share, with the recognition by Metra to utilize as much of their own local resources as possible to build these three very vital transportation projects.

NORTH CENTRAL CORRIDOR PROJECT

Since the initiation of service in this corridor in 1996, the line has experienced unprecedented levels of ridership. Between 1997 and 1998, ridership increased by almost 27 percent, the greatest increase on the Metra system. There is an acute need to double track the line and provide more frequent full day and weekend service to meet the demand. In addition, the freight traffic on the Wisconsin Central Railroad has also seen dramatic increases, exacerbating the problem for Metra. The corridor is experiencing rapid employment growth that is expected to continue over the next 20 years.

The scope of the project on the North Central line will be an upgrade of commuter service from the existing ten trains per weekday schedule with only two mid-day trains and no weekend service to twenty-two trains per weekday and provide increased train service during off-peak periods. It also is hoped that limited weekend service will be achievable as part of this alternative.

Capital improvements needed to provide the expanded service will include the following:

- Twenty-six miles of new main line track on the Wisconsin Central, Ltd. between the O'Hare Transfer Station and Mundelein;

—Twelve miles of track, signal and station upgrades on three main line tracks of the Milwaukee-West between Franklin Park and Union Station in Chicago;
 —Four new stations at Franklin Park, Schiller Park, Rosemont, Grayslake, and a transfer station at Deval Junction;
 —4,500 new parking spaces at proposed and existing stations;
 —Expansion of the Antioch and Western Avenue rail yards; and
 —One new train set (locomotive and coaches).
 The fiscal year 2001 funding request for the North Central line will begin work on station construction and track and signal work. The following is a detailed funding chart that outlines the scope of the project.

UNION PACIFIC WEST LINE EXTENSION

The western suburbs of the Chicagoland area have been experiencing tremendous growth over the last 20 years. They are expected to grow by nearly 60 percent by 2010. At the present time there is severe overcrowding at existing stations on the UP West line, especially in Geneva.

The Union Pacific Railroad and Metra are planning long-term signal improvements to the major access route (UP West line) to Chicago. Great benefits will accrue to Metra commuter operations, as well as to freight operations. Some of these

improvements will be included in the New Start project costs; the remainder will be paid for by the UP and Metra using their own funds.

The project will provide an extension of commuter service to Elburn on the UP West line. It entails the same level of service to Elburn as currently available in Geneva, namely thirty-seven trains per weekday and weekend service.

Capital improvements needed to extend service to Elburn will include the following:

- Seven miles of a new third main line track on the Union Pacific West line between Randall Road and Elburn;
- Upgrades of train control systems and at-grade crossings along the seven miles of track;
- Two new stations at Elburn and LaFox;
- 1,600 new parking spaces at the proposed stations;
- New train storage yards in Elburn; and
- One new train set (locomotive and coaches).

The fiscal year 2001 funding request for the UP West extension will be used for track and signal work, storage yards, and land acquisition. The following is a detailed funding chart that outlines the scope of the project.

SOUTHWEST SERVICE EXTENSION AND UPGRADE

The SouthWest Service project will bring the line up to a full service route, providing double-tracking of the line and an eleven mile extension to Manhattan, serving Will County. This corridor, perhaps more than any other Metra service, has a continuing problem with freight interference. Metra has already undertaken a study of possible actions that might be taken to ease some of this interference. Metra has utilized \$12.6 million of CMAQ formula funds and local monies for improvements to some of the bottlenecks with freight traffic. In 1999 Metra included \$20 million of its own funds for implementation of recommended improvements that arose from the study.

The project provides for an upgrade to the existing service and extension of limited service to Manhattan in Will County. The upgrade of service on the SouthWest Service will provide approximately thirty trains per weekday to Orland Park. This will improve the frequency of trains during peak periods of travel and provide bi-hourly train service during off-peak periods. Four trains per weekday will be provided on the extension to Manhattan. Weekend train service to Orland Park will also be provided as part of the service upgrade.

Capital Improvements needed to implement service expansions on the SWS will include the following:

- Four miles of a new second main line track on the Norfolk Southern between Palos Park and 143rd Street in Orland Park;
- Rehabilitation of bridges between 40th and 74th Streets;
- Upgrades of track, train control systems, and at-grade crossings over 32 miles of right-of-way between 74th Street in Chicago and Manhattan;
- Two new stations and parking in the Manhattan area;
- Improvements to existing stations and added parking capacity;
- New train storage yard in Manhattan and expansion of existing yard at 47th Street;
- Relocation of the Chicago terminal to LaSalle Street Station;
- Additional locomotives and coaches; and
- Commuter and freight train interface improvements.

The fiscal year 2001 funding request for the SouthWest Service extension will be used for engineering and design, track and signal work, and land acquisition. The following is a detailed funding chart that outlines the scope of the project.

PREPARED STATEMENT OF BI-STATE DEVELOPMENT AGENCY

Mr. Chairman I am pleased to report to you that your past support for the Missouri/Illinois MetroLink Light Rail system continues to be strongly vindicated. In 1992 the Bi-State Development Agency provided 40 million rides to the public. In 1999 the combined bus and rail system provided over 53.6 million rides demonstrating that the bus system benefits greatly from MetroLink and that the combined bi-state system continues to attract a new discretionary market becoming more and more willing to use public transit. As you may recall, our original line was projected to attract 17,000 riders. The first year the system opened we far exceeded that number and today are attracting in excess of 44,000 riders a day that continues to grow.

Since your committee has emphasized the importance of inter-modal connections we are also pleased to report that the two St. Louis Lambert International Airport Metro Link Stations were expected to generate about 800 riders a day and are instead generating over 3,200 a day and has proven to be a major tool being used by the St. Louis tourism and business community.

This overwhelming acceptance and demand for additional service brings us to our fiscal year 2001 appropriations request of \$60 million to continue the vital expansion of Metro Link into St. Clair County Illinois. This amount tracks the amount designated for the extension in our Full Funding Agreement with FTA. An early look at the popularity of this extension is evidenced by the fact that on the existing system, the most east-ward stop in East St. Louis, Illinois has generated so many riders trying to escape the bridge congestion into Missouri that the parking lot originally designed for 150 cars has been expanded to over 1,000 cars. Over 30 percent of the downtown St. Louis workers reside in Illinois.

Finally, Mr. Chairman, MetroLink has increased bus ridership by 6 percent with the average age of our bus fleet exceeding nine years resulting in a tremendous need for assistance in modernizing our fleet. Therefore we are seeking a bus discretionary earmark of \$15 million to continue our important modernization program.

We thank you Mr. Chairman and all of the Members of the Committee for your past support as we strive to continue expanding this highly successful new rail start program.

PREPARED STATEMENT OF METROPOLITAN TRANSIT AUTHORITY OF HARRIS COUNTY,
TEXAS

INTRODUCTION

My name is Robert Miller. I am Chairman of the Board of Directors of the Metropolitan Transit Authority of Harris County, Texas, more commonly known as Houston METRO. I am pleased to report on the progress METRO has made in the past year to expand and enhance its public transportation services. METRO's fiscal year 2001 appropriations request builds on our past success while moving forward with aggressive plans to enhance the service we provide to our customers.

1999 marked METRO's twentieth year as the Houston region's public transit agency. We are proud of the service we provide in the city of Houston and Harris County with our extensive network of buses, HOV lanes, transit centers, and park & ride facilities. Because METRO reduces highway congestion by 200,000 cars per day, everyone in the Houston region benefits from METRO regardless of whether they use the system.

While METRO is proud of its current bus system, we have a real and immediate need to enhance our high capacity transit infrastructure in certain corridors. It is projected that our region will grow in population from 4.4 million in 1998 to 6.6 million in 2025, with employment increasing from 1.5 million to 2.5 million. These dramatic increases will put pressure on the public transit system that METRO must anticipate and address. METRO's ridership has grown twelve percent in the past two years alone. We believe our proposed capital projects and service enhancements will draw additional riders to our system.

METRO, in partnership with the City of Houston, Harris County and the Texas Department of Transportation (TxDOT) also operates a high-tech transportation and emergency management center called Houston TranStar. This consortium was formed to prevent the duplication of traffic congestion efforts and coordinate the resources of the participating agencies.

Houston TranStar is a control center that monitors and tracks traffic using Intelligent Transportation System (ITS) devices. Some of these include: a Computerized Freeway Transportation Management System, a Regional Computerized Traffic Signal System, a Motorist Assistance Program, and the HOV lane network and modernizing projects.

One program that is part of Houston TranStar that helps elevate truck accidents is the Truck Safety system. This system identifies unsafe speed conditions for various vehicle sizes and weights, and initiates warning devices to prevent out-of-control accidents by these vehicles.

METRO recognizes the importance of a strong transportation network to the economic vitality of the Houston region. As we begin the 21st century, METRO will complete construction of the various projects comprising the Regional Bus Plan ("RBP") and move forward with the follow-on project—known as the Advanced Transit Program or the "ATP."

In 1999, METRO completed its Major Investment Study (MIS) for enhancing mobility in the Downtown to Astrodome Corridor. The MIS concluded that light rail in the corridor was the locally preferred Houston alternative, and the METRO Board of Directors unanimously adopted these findings. I can report to you firsthand that local enthusiasm for the rail project is overwhelming. METRO looks forward to working with Congress and the Federal Transit Administration (FTA) to

build a rail line that will carry thousands of passengers to and from major business centers, medical facilities, universities, and cultural attractions. We believe the rail line will have an added benefit—it will reduce congestion in a city where pollution is a real issue. The seventeen planned stations along the corridor will serve major destinations, including downtown, midtown, University of Houston Downtown, the Texas Medical Center, Rice University, Hermann Park, the Museum district, and the Astrodome. We expect the rail project to trigger economic development along the corridor and, accordingly, local businesses led by the Main Street Coalition, have voiced strong support for this project. Residential and commercial developers see the potential for light rail to spur housing and commercial development. Over 60 local organizations have endorsed METRO's Millennium Mobility Plan and voiced support for the light rail transit project.

Without Congress, METRO could not have made such significant progress on the rail project or many of its transit improvements. Congress voiced its support for the RBP by providing the full funding specified under the full funding grant agreement. Congress has also provided ATP funding which METRO has used for the LRT the MIS and preliminary engineering.

METRO seeks to build the rail project with funds already appropriated under the RBP. In that regard, last fall the Federal Transit Administration entered into a Memorandum of Understanding (MOU) with METRO agreeing to amend the full funding grant agreement to include rail, when the project meets all of the statutory and regulatory requirements and after giving Congress the notice required under the law. We are confident that the Members of this Committee will recognize the tremendous benefits of the light rail project and support the full funding grant agreement amendment.

Last year, I used the opportunity of submitting testimony to introduce our new President, Shirley A. DeLibero. As you can see from our progress this past year, Shirley's leadership, management skills, and enthusiasm have benefited both METRO and our customers. We are lucky to have Shirley to lead METRO in building our first rail line and continuing to build infrastructure to support our extensive high capacity bus system.

FISCAL YEAR 2001 FEDERAL LEGISLATIVE PRIORITIES

Regional Bus Plan—\$10.86 million.—In fiscal year 2001, METRO seeks final payment under the RBP full funding grant agreement. METRO appreciates the overwhelming congressional support for this project, comprised of high capacity transit projects including an HOV lane, park & ride facilities, transit centers, buses for service expansion, and related infrastructure. The METRO Board of Directors initially adopted the RBP in 1992 as the comprehensive public transportation program for the region. We continue to work toward the objective of implementing approximately 40 individual projects whose independent utility provide incremental improvements in facilities and services as projects are completed. These projects include park and ride facilities, ramps and other street improvements, and transit stations connecting the light rail line to the network of bus routes.

As I discussed earlier, we look forward to working with Congress and the Federal Transit Administration to incorporate construction of the Downtown to Astrodome light rail project within the Regional Bus Plan. This change to the full funding grant agreement is easily accomplished, will have no effect on the cost of either the RBP or ATP projects, and will not result in delays to any of the planned projects. In fact, the idea for the change arose when the local community decided it preferred a tollroad in Houston's Westpark Corridor instead of an HOV lane as included in the full funding grant agreement. Because METRO cannot build a tollroad with FTA funds, it sold a portion of the Westpark Corridor to the Harris County Tollroad Authority. This change freed up the bulk of the federal money needed to construct the rail project under the existing RBP full funding grant agreement. A tremendous benefit of this project substitution is that the funds are already appropriated.

The federal share of the RBP full funding grant agreement is \$500 million. With a final payment of \$10.86 million, the federal government will satisfy its commitment to the project.

We at METRO are excited about the many benefits of the RBP, which is an example of how different projects work in different corridors. We have always involved the community in the planning process, this has resulted not only in an extensive and well-utilized HOV system, but in a light rail project, which has independent utility because of the many destinations it will serve and the potential home-to-work utilization. METRO remains committed to working with Congress and the local community to determine the most effective and efficient transit options to meet the region's growing needs.

Advanced Transit Program—\$28.1 million.—With RBP funding almost complete, METRO is excited to move forward with the ATP. The ATP builds on the successes of the RBP. Like the RBP, it is a program of individual projects which will each have independent utility. Because the ATP is a series of projects it will benefit many segments of our service area. Projects include transit centers and other improvements. While the Westchase Park & Ride facility construction and the clean fuel engine project were originally in the RBP, METRO now plans to construct them under the ATP without any compromise in schedule.

Congress has recognized the importance of the ATP to the Houston region and appropriated almost \$6 million in New Start funds for the project in fiscal years 1998 through 2000. METRO has used this funding for the Major Investment Study and to initiate PE on the light rail project, and to initiate the clean fuel engine project. For fiscal year 2001 METRO is requesting \$5 million in New Start funding to allow us to advance desperately needed transit improvements on the Katy Freeway and the West Loop. The improvements will insure that METRO can provide transit access which will complement TxDOT planned freeway improvements in this corridor.

In addition, METRO is requesting \$23.1 million in Section 5309 Bus funds for design and construction of several key ATP projects that are scheduled for implementation in fiscal year 2001–2003. These projects include the Gulfgate Transit Center, Hobby Transit Center, Westchase Park & Ride, and the Clean Fuels Engine Program.

CONCLUSION

1999 has been an exciting year for Houston METRO and we look forward to building on our success as we embark on the new millennium. We operate a public transit system used by over 117 million people per year, and are constantly adapting our plans to best meet the future mobility needs of the people of Harris and surrounding counties. The federal investment in transit in Houston continues to benefit the millions of users who reach their destinations efficiently and the rest of the community by spawning economic growth in the downtown area and reducing congestion and pollution. As a business, METRO remains on sound financial footing with no debt and is committed to seeking innovative ways to operate more efficiently and contribute to the growth of the economy.

Thank you for the opportunity to offer these remarks. METRO is prepared and looks forward to responding to any questions the Committee may have.

PREPARED STATEMENT OF THE TRI-COUNTY COMMUTER RAIL AUTHORITY

Mr. Chairman, on behalf of the thousands of daily commuters who use the Tri-County Commuter Rail Authority (Tri-Rail) in the South Florida region, I (Linda Bohlinger) would like to express my sincere appreciation of your support in funding the South Florida Rail Corridor Improvement Program in the past years.

We are now requesting that the Subcommittee on Transportation and Related Agencies Appropriations provide \$30.0 million in New Starts funds for Segment 5 of our Double Track Corridor Improvement Program as part of the fiscal year 2001 appropriations bill for the Department of Transportation. This request is consistent with our Full Funding Grant Agreement (FFGA) financial plan for the Segment 5 Project. Tri-Rail's FFGA request is currently under review by your committee and other committees of jurisdiction. We are hopeful the committee will recommend FTA approve our request shortly. In addition, we are requesting \$2.5 million in Bus Program funds (Section 5309) be allocated to Tri-Rail.

ABOUT TRI-RAIL

Mr. Chairman, the development of Tri-Rail must be understood within the context of the demographic changes occurring throughout South Florida since the 1970's. The South Florida region consists of the counties of Palm Beach, Broward, and Miami-Dade. As a region, South Florida's population has more than doubled since 1970 to more than 4.7 million people, and is expected to grow at a rate of 2 percent annually.

As residential development out paced the provision of infrastructure improvements, public attention increasingly shifted to issues relating to regional mass transit and growth management. In response, the Florida Department of Transportation and the three Metropolitan Planning Organizations in the region formed the Tri-County Transportation Subcommittee in 1985. The subcommittee recommended that a commuter rail line be established and drafted a detailed action plan to implement

the recommendations. In 1986, Tri-County Commuter Rail Organization was formed to begin the task of building a new commuter rail system. The Tri-County Commuter Rail Organization was the predecessor agency of the present Tri-Rail.

In 1988, the State of Florida purchased an 81-mile corridor, later to be known as the South Florida Rail Corridor, from CSXT freight railroad for \$264 million. The corridor runs from West Palm Beach to Miami. In a flurry of activity during 1988, rail vehicles and temporary funding was quickly assembled, and the Governor signed a bill creating Tri-Rail. On January 6, 1989, commuter rail service between West Palm Beach and Miami was initiated. This was the first commuter rail start-up in North America in over 20 years.

Today, Tri-Rail operates commuter rail service along 71.7-miles of the South Florida Rail Corridor. The Tri-Rail system is currently comprised of 18 stations, five in Miami-Dade County, seven in Broward County, and six in Palm Beach County. Services to these stations are provided by 28 weekday trains, 14 Saturday trains, and 12 Sunday trains. Additional trains are occasionally furnished for special events.

DOUBLE TRACK CORRIDOR IMPROVEMENT PROGRAM

During the first five years of Tri-Rail operations, ridership increased at a steady rate. During the initial year of operations, ridership averaged approximately 3,000 riders each weekday. In 1991, system ridership increased to approximately 7,200 weekday riders and by 1993, average weekday ridership had grown to approximately 9,500.

In 1995, Tri-Rail ridership started to decline. This decline was attributed to the over-capacity of the single mainline track in the corridor resulting in poor on-time performance. Along with Tri-Rail, the corridor is shared with CSXT freight service and Amtrak long-haul passenger service. Under this type of operating condition, Tri-Rail's ability to schedule commuter service is extremely difficult. Tri-Rail can only operate service on one-hour headways during peak periods.

Mr. Chairman, thanks to Congress' investment in the federal transit program, Tri-Rail in 1995 initiated the first of five segments of its Double Track Corridor Improvement Program to address the corridor capacity issues. We are pleased to report, Segments 1 and 2 have been completed, Segment 3 is near completion and Segment 4 is in the final design phase. Today, we are asking the Subcommittee on Transportation to provide \$30.0 million in New Starts funds for the final segment of the double track program—Segment 5.

Once completed, the Double Track Corridor Improvement Program will reduce congestion on I-95, shorten average trip time lengths and provide travel alternatives in the largest travel market in South Florida. Upon completion of the program in March 2005, Tri-Rail will operate 20-minute headways. It is projected Tri-Rail ridership will jump to 43,132 annual new riders in 2015. Finally, the program will result in travel timesavings of 11.2 million annually and a 4.1 million reduction in daily vehicle trips. This program will directly benefit those businesses that rely on Tri-Rail to provide access to customers. It will also benefit the thousands of daily commuters in South Florida.

Segment 5 Project

Tri-Rail is undertaking a major capital improvement program to double track all 71.7-rail miles, with the objective of increasing speed, reliability, and safety along the corridor, and is expected to significantly increase current ridership. The scope of work covered by the Full Funding Grant Agreement consists of 44.31 miles of double track work (Segment 5). It includes the laying of a second mainline track, rehabilitation of the signal system, grade crossing improvements, station improvements, parking expansions, and rolling stock acquisition. The other portion of the overall double track program (approximately 27.39 miles) was divided into four segments, and is either completed, under construction, or under design.

SEGMENT 5 FINANCIAL PLAN

Tri-Rail intends to complete the construction of the \$327.0 million Project through the execution of a Full Funding Grant Agreement with the Federal Transit Administration (FTA), under which FTA will provide \$110.5 million in New Starts funds over the period fiscal year 2000–03. The balance of the funds are derived from the State of Florida (\$70.0 million in gas tax funds and \$35.0 million in federal highway funds); the Miami-Dade, Broward and Palm Beach Metropolitan Planning Organizations (\$22.2 million); Tri-Rail (\$34.2 million in federal formula funds); and a private sector loan or revenue bond issuance (\$55.1 million).

Mr. Chairman, this project is a very attractive and cost-effective new starts project, in that the total New Starts funds sought are 33 percent of the funding

being provided from non-discretionary resources (formula, flexible, and State funds); this is very high.

The Segment 5 Financial Plan calls for \$30.0 million in New Starts funds for fiscal year 2001. Allocation of the full amount will ensure the project's construction schedule can be maintained and our contractual obligations under the FFGA can be met.

RELIABILITY OF PROJECT COST ESTIMATE

The phased approach used by Tri-Rail in the construction of the double track program provides a level of reliability in the Segment 5 Project cost estimate that is unusual in new starts projects. The initial four segments of the Double Track Corridor Improvement Program each involve the design and construction of track, signals, and stations. As a result, the same basic scope of work has been repeated, from segment to segment, in what could be viewed as a series of smaller projects. Segments 1 and 2 have been completed, Segment 3 is near completion and Segment 4 is in the final design phase. With Tri-Rail's past experience with Segments 1 through 4, Tri-Rail knows the actual cost per mile of the track work and the actual cost of specific station improvements.

Tri-Rail has the benefit of having actually incurred construction costs in the same alignment and under the same conditions, which allow Tri-Rail to base its cost estimates for the FFGA Project. This cost experience was supplemented by the analysis done during preliminary engineering for the FFGA Project and has provided Tri-Rail with highly reliable cost estimates.

FEEDER BUS PROGRAM

Mr. Chairman, Tri-Rail is requesting \$2.5 million in Bus Program funds (Section 5309). The funds will be used to acquire buses to support Tri-Rail's Feeder Bus Program. Tri-Rail's feeder bus service was initiated in conjunction with the commuter rail service in January 1989.

The current bus network serving Tri-Rail is a combination of service provided by the three local county bus operators in the South Florida region. In addition, Tri-Rail operates six of its own shuttle routes at various stations. With the requested funds, Tri-Rail will be able to place an additional 20 buses into service. Such service is needed to fully support the commuter rail system and ensure maximum ridership.

The feeder and distribution bus network plays an essential role in complementing and supporting Tri-Rail's service. In many cases, Tri-Rail riders are dependent on bus service to connect to their employment and/or residential destinations. Therefore, in order for Tri-Rail to improve its ridership, increased rail frequency (20 minute headways) will be largely insignificant without corresponding improvements in bus service. These improvements will include matching service frequency while ensuring reasonable wait times between bus and rail connections. Another key element is the balance between adequate area coverage and cost effectiveness.

CONCLUSION

In closing, Mr. Chairman we again thank you for this opportunity to discuss before your Subcommittee the critical role Tri-Rail can and does play in providing transportation service to millions in South Florida. We urge your committee and other committees of jurisdiction recommend to the FTA to approve and to execute our FFGA. This will facilitate completing the double track program by March 2005. Once completed, the South Florida Rail Corridor will increase accessibility and mobility options to all persons, as well as improve freight operations in South Florida.

We are also requesting that the Subcommittee on Transportation and Related Agencies Appropriations provide \$30.0 million in New Starts funds for Segment 5 of our program as part of the fiscal year 2001 appropriations bill for the Department of Transportation. In addition, we are requesting \$2.5 million in Bus Program funds (Section 5309) be allocated to Tri-Rail.

Once again, thank you for this opportunity to testify before the Subcommittee on Transportation and Related Agencies Appropriations. We would be pleased to provide you additional information to assist you in your deliberations.

PREPARED STATEMENT OF THE AMERICAN PUBLIC TRANSPORTATION ASSOCIATION

INTRODUCTION

The American Public Transportation Association (APTA) appreciates the opportunity to testify on the fiscal year 2001 Department of Transportation and Related Agencies Appropriations bill.

APTA's 1,270 member organizations serve the public interest by providing safe, efficient and economical public transportation service, and by working to ensure that those services and products support national energy, environmental, community, and economic goals. APTA member organizations include transit systems; design, construction and finance firms; product and service providers; academic institutions, and state associations and departments of transportation. More than ninety percent of the people who use transit in the U.S. are served by APTA member systems. On the first day of this year, APTA adopted a new name to reflect the broader role that APTA member organizations play in addressing the transportation needs of our nation—The American Public Transportation Association. Our members chose “public transportation” in lieu of “public transit” to better convey the full range of transportation services that APTA members are engaged in—planning how to meet local transportation needs, managing mobility demands, and delivering a range of services in a number of ways, including commuter rail, paratransit, and ferry boats, that are often not considered “transit.”

Transit and TEA 21

Over its first three years, the Transportation Equity Act for the 21st Century (TEA 21) has, with its policy changes and guaranteed funding, been critical in assisting the public transportation industry address mobility issues around the country. We sincerely appreciate what the legislation, and its annual funding through the appropriations process, has meant for our industry. But large unmet needs still exist in the United States' public transportation sector. The U.S. Department of Transportation finds that \$14 billion needs to be invested each year just to maintain and improve transit conditions and performance.¹ With the most recent report from the Congressional Budget Office projecting as much as \$1.92 trillion in potential surpluses over the next decade, we believe that there is no better time than the present to invest in the future of our nation's transportation infrastructure. Therefore, APTA urges the Subcommittee in its fiscal year 2001 Transportation Appropriations Act to fund the federal transit program at the \$7.3 billion level authorized in TEA 21. On a related issue, APTA strongly opposes any efforts to repeal federal motor fuel taxes dedicated to supporting federal investment in our surface transportation infrastructure. In that regard, on March 12, 2000, APTA's Board of Directors unanimously adopted a resolution opposing any revision to the existing federal motor fuels tax.

ADMINISTRATION'S BUDGET PROPOSAL

Mr. Chairman, we are pleased that the Administration's fiscal year 2001 Budget proposes to increase funding for transit by more than 9 percent. This proposal keeps us on track to improve mobility for millions of Americans while easing traffic congestion and improving the quality of life in communities throughout the U.S. Moreover, APTA agrees with the Federal Transit Administration's (FTA) assessment that the vitally important Job Access and Reverse Commute Program should be funded at the fully authorized level of \$150 million as provided in TEA 21. However, we believe that this program should be fully funded by using discretionary spending authority rather than by reopening TEA 21.

Some 94 percent of welfare recipients attempting to move into the workforce do not own cars and must rely on public transportation to get to work. And while 60 percent of welfare recipients live in central cities, the majority of new jobs are in the suburbs. If we as a nation wish to continue the positive trends in getting more people into decent, productive employment, we must provide the necessary funding to get them there. Not only do these programs get people to jobs, but they also provide America's employers with access to the services of thousands of new employees. This program is a non-traditional one that needs to be implemented creatively. We commend FTA on its outreach efforts to date, and urge it to continue its efforts to streamline the program administratively and to focus on increased program coordination at the federal, state, and local levels.

¹ 1997 Status of the Nation's Surface Transportation System: Condition and Performance; U.S. DOT.

While certain transit welfare-to-work activities have been enormously successful, more needs to be done. In October 1998, the APTA Access to Jobs Task Force was created in an effort to coordinate and assess APTA member welfare-to-work activities. Frequently described new services include new routes to employment locations outside the existing service area; more direct service to reduce very long trip times; late night and early morning service; so-called reverse commute service; and shuttles from rail stations and the ends of bus routes to dispersed job locations. Regardless of the type of service made available, APTA's 1999 Access-To-Work Best Practices Survey Summary Report reveals that a number of welfare-to-work projects have been hampered by funding deficiencies. That is why we believe increased funding is warranted for this program.

In fact, Mr. Chairman, we strongly urge the Subcommittee to appropriate the TEA 21 fully authorized level for all parts of the federal transit program. Again, Mr. Chairman, transportation experts agree that it would take \$14 billion each year—nearly twice the amount authorized under TEA 21 for the coming fiscal year—to effectively preserve and expand our public transportation infrastructure. Therefore, if Congress adjusts the spending caps put in place as a result of the 1997 Balanced Budget Agreement, APTA strongly urges the Subcommittee to use this additional spending authority to fund the federal transit program at the \$7.3 billion level authorized in TEA 21. With an fiscal year 2001 Non-Social Security surplus projected to reach as high as \$69 billion, we can think of no better time to maximize investment in our public transportation infrastructure.

PUBLIC TRANSPORTATION RIDERSHIP AT RECORD LEVELS

Mr. Chairman, the latest numbers are in, and they indicate that more and more people are choosing to use public transportation. Thanks to Congress' investment in the federal transit program, improvements in the transit commuter benefit tax law, and a healthy economy, approximately 9 billion transit trips were recorded in 1999. Over the last four years, transit ridership in the United States has grown by 16 percent, an average of 4 percent per year.

U.S. transit ridership was up 4.9 percent through the first nine months of 1999.² Ridership is on the rise in every mode, led by more than a 7.3 percent increase in trolleybus passengers and a 6.6 percent increase in heavy rail passengers. In the bus category, ridership continues to grow in areas across America. For example, the following areas experienced significant bus ridership increases: New York City, 10 percent; Buffalo, 13 percent; Cincinnati, 7 percent; Minneapolis, 10 percent and Canton, Ohio, 41 percent.

Public Transportation Growing in Rural America and Small Cities

Moreover, Mr. Chairman, public transportation ridership is not just growing in large cities and suburbs. Through the first nine months of the year, bus ridership increased by the greatest percentage in areas with less than 50,000 people.

Thanks to this Subcommittee, the Intermodal Surface Transportation Efficiency Act, and TEA 21, transit funding for rural communities and smaller cities has increased significantly. For example, in fiscal year 1993, the Rural Capital and Operating Program was funded at \$91 million. In contrast, during the most recent fiscal year, the transit Rural Formula Program received more than twice that amount, nearly \$194 million. Moreover, the fiscal year 2000 appropriation for rural areas is 195 percent higher than it was only a decade ago.

Small urbanized areas have also seen dramatic increases in federal transit funding over the last decade. In 1990, small urbanized areas received approximately \$150 million in federal transit funding. In contrast, nearly \$268.5 million was appropriated to these cities during the current fiscal year. That's an increase of 79 percent over the ten-year period. Thanks to this dramatic investment in public transportation infrastructure in smaller cities, transit is now also seen as a crucial mobility solution in areas outside America's traditionally transit dependent regions.

As a result of this increased investment, bus systems across small-town America were able to implement major expansions in service during the last year. For example, Knoxville Area Transit has introduced new antique-style trolley-replica buses, one of which connects the University of Tennessee with downtown Knoxville. The agency has also increased frequency of service and extended hours of operation. Trolley operators have been trained as city ambassadors who can inform visitors of attractions throughout the downtown Knoxville area. In State College, Pennsylvania, the Centre Area Transportation Authority recently began operating free

²APTA Transit Ridership Report, Third Quarter 1999.

LOOP service on two routes serving the Pennsylvania State University and downtown State College.

PUBLIC TRANSPORTATION DELIVERS

Public Transportation Has Significant, Positive Impacts On the U.S. Economy

Beyond the increases in transit use, public transportation generates a real return on the federal investment. In addition to the 300,000 people employed directly by the \$27 billion-a-year public transportation industry, thousands of other people employed in the engineering, construction, manufacturing and retail industries rely upon transit investment for their livelihood. A recent study prepared by Cambridge Systematics, Inc. finds that transit capital investment is a significant source of job creation. Every \$10 million of transit capital investment creates approximately 314 jobs and a \$30 million gain in sales for businesses. Furthermore, the changes in travel patterns caused by transit investment remove vehicles from the traffic stream, saving time for both transit and highway users. The increased productivity caused by this significant timesaving serves to stimulate the economy.

Public Transportation and Traffic Congestion

Mr. Chairman, there is no disputing the fact that traffic congestion in the U.S. has reached epidemic proportions. However, as bad as it is, imagine what it would be like without public transportation! Regions like Washington, D.C. and Los Angeles would require nearly 300,000 more cars on the road without transit. Chicago would need approximately half a million more cars. But who would have thought 20 years ago that places like Memphis, Tennessee would require between 10,000 and 30,000 extra vehicles if there were no transit?³

INCREASED PUBLIC TRANSIT INFRASTRUCTURE INVESTMENT IS NEEDED

As noted, Mr. Chairman, transit ridership is up and public transportation delivers significant benefits. Even though highway and transit spending has increased under TEA 21, transportation experts agree that our capital investments still fail to keep pace with the annual \$14 billion needed for public transportation infrastructure in the U.S. An unprecedented level of travel is taking place, and will continue to take place, throughout this country. If current trends continue, over the next 15 years alone, highway travel is expected to increase by 40 percent, and transit use by 60 percent. In order to accommodate such growth, it is critical to provide maximum investment in all forms of surface transportation, including public transportation.

More Investment Needed to Provide Mobility Choices

Mr. Chairman, traffic congestion has become a major political issue. The average person need not be reminded of the size of the problem; they are surrounded by it weekdays, weekends, no matter what the time of day. Here in Washington, there have been countless briefings, seminars, conferences and round table discussions focusing on the issue of congestion, and possible solutions to enhancing our mobility.

A new study released by the Texas Transportation Institute (TTI) confirms our observations: traffic is bad, and it's getting much worse every year. The study notes that in 1997, congestion cost travelers in 68 urban areas 4.3 billion hours of delay. The financial cost of congestion now exceeds \$72 billion annually, an increase of more than \$6 billion from the previous year. That's the equivalent of \$755 per eligible driver, or \$3 every workday. Cities on top of the list include Los Angeles, Seattle, San Francisco and Chicago. The Washington, D.C. region finished 2nd among very large cities.

Mr. Chairman, it's no wonder that so many American cities are seriously debating the merits of asking local voters to start or expand light rail, commuter rail, or bus service in their communities, including Austin, Texas; San Antonio, Texas; Salt Lake City, Utah; Tampa, Florida; Milwaukee, Wisconsin; Dallas, Texas; and Cincinnati, Ohio.

The need for more public transportation infrastructure is becoming apparent to Americans in all corners of the nation. Last November, by more than 60 percent of the vote, Denver area residents overwhelmingly voted to endorse a light-rail project that will dramatically expand the city's public transportation system along heavily congested I-25. Last month, by a margin of almost two to one, voters in Phoenix, Arizona approved the region's first light-rail system, as well as an expansion of bus service. In addition, 60 percent of the electorate in Sonoma County, California recently voted to increase the county's sales tax to fund local transit improvements.

³Dollars & Sense: The Economic Case for Public Transportation in America. Donald Camph, 1997, p. 77.

While the TTI study advances a number of possible solutions to America's traffic congestion crisis, one of the obvious proposals to increase mobility is very clear: offer citizens mobility choices. We believe that public transportation can and will play an enormous role in doing just that. In this regard, consider the New York City area. APTA believes that it is no coincidence that the transit oriented New York City-Northeastern New Jersey region, one of the most densely populated areas in the entire world, ranks low on the TTI study's list for annual congestion cost per eligible driver (number 27). If there was no transit in that region, up to two million additional personal vehicles would have to be added to the already crowded roads in that area.⁴

Increased Funds are Required to Maintain ADA Compliance Standards

Since the enactment of the Americans with Disabilities Act, transit agencies have made significant progress in the effort to ensure that all forms of public transportation are accessible to individuals with disabilities. According to an APTA survey of 300 transit agencies, there were approximately 25,000 U.S. transit buses in 1993 that were not wheelchair accessible. In 1998, that number was less than 14,000. Similarly, commuter rail operators reduced the number of non-accessible rail cars by more than half over the same period. However, as the population ages, the need for demand response and paratransit service will continue to rise. Public investment for these services and further on-vehicle lift, ramp and station improvements must keep pace for transit to meet mobility demands.

New Study: People Will Use Quality Public Transit Where it is Available

The steady increase in ridership figures reported above is consistent with a new study released last spring by Paul M. Weyrich and William S. Lind of the Free Congress Foundation. In their report regarding the ability of public transit to get people out of their cars, *Does Transit Work? A Conservative Reappraisal*, they dispel the myth that a large percentage of people choose not to take public transportation. Weyrich and Lind point out that this is simply not the case. The authors explain that measuring transit ridership based on the percentage of total trips taken throughout the United States is simply wrong, and misleading. This is because there are large portions of the U.S. where people do not have the option of taking the bus or the train, because it is not readily available.

However, when given the choice between taking quality public transportation and driving, many people are more than willing to leave their cars at home. This is especially true with respect to those trips where transit can compete, namely, trips to work and recreation. In fact, in areas of the country where these criteria are met, public transportation use reaches significant levels, even in areas where people are entirely new to public transportation. For example, a recent poll by the Dallas Morning News found that 8 out of 10 people said Dallas Area Rapid Transit (DART) is worth the 1 percent sales tax it collects. That simply wasn't the case only a few years ago.

Investment in Rail Safety

Finally, Mr. Chairman, as the federal transit program becomes increasingly intermodal, all aspects of transportation appropriations have become important to APTA. This includes programs funded through the Research and Special Programs Administration, the Federal Highway Administration, the Federal Railroad Administration (FRA), and the Federal Aviation Administration, among others.

In this regard, APTA commends the Subcommittee for providing funding through FRA's research and development program to perform crash tests of rail passenger equipment at the Transportation Technology Center in Pueblo, Colorado. The initial tests conducted provided data that will be very useful in enhancing the safety of rail equipment. We also commend the Subcommittee for providing funds for the development of positive train control (PTC) systems, though we do urge that special consideration be given to the applicability of these systems to commuter rail operations. Crash avoidance systems such as PTC are a key to the continued development of safety in rail passenger services.

CONCLUSION

APTA supports funding the respective components of the federal transit program consistent with the full authorization levels and program structure as embodied in TEA 21. Predictable funding levels as provided through TEA 21 help America's transit agencies facilitate long term capital planning and development. This has been especially important in America's rural and small urbanized areas, where tran-

⁴Dollars & Sense, p. 77.

sit agencies are taking full advantage of the transit formula distribution set forth in TEA 21.

As we enter a new century, there has been much thinking about what we would like our future to be. In order to keep pace with our nation's growth, more than \$14 billion in capital investment is needed every year to preserve and expand our public transportation infrastructure. Taking advantage of the favorable budgetary climate and surplus, now would be an opportune time for Congress to step forward as the catalyst for the ongoing renaissance of public transportation and its many benefits. Let's get the job done! We believe that public transportation has many positive impacts on the nation's economy, delivering an enormous return on your federal investment. We urge the Subcommittee to fund the federal transit program at the \$7.3 billion level authorized in TEA 21.

APTA appreciates the opportunity to testify on the development of the fiscal year 2001 Transportation Appropriations Act. We would be pleased to provide additional information to assist you in your deliberations.

PREPARED STATEMENT OF THE NIAGARA FRONTIER TRANSPORTATION AUTHORITY

INTRODUCTION

My name is Lawrence M. Meckler and I am the Executive Director of the Niagara Frontier Transportation Authority (NFTA). NFTA is a regional multi-modal transportation authority responsible for air, water and surface transportation in Erie and Niagara Counties. NFTA businesses include a bus, rail and ADA paratransit system, two international airports, a small boat harbor, and transportation centers in Buffalo and Niagara Falls. I am pleased to testify today regarding NFTA's federal legislative priorities for fiscal year 2001.

NFTA recognizes the importance of a strong transportation network to the economic vitality of Buffalo and Western New York. As a result, NFTA has aggressive plans for capital and operating improvements to its surface and aviation systems. These improvements include projects to enhance and increase transit ridership and projects to expand and enhance operations at the Buffalo Niagara International Airport (BNIA) and the Niagara Frontier International Airport (NFIA).

METRO BUS AND RAIL

NFTA operates the combined bus and light rail rapid transit system. The system carries 83,000 bus passengers and 22,000 rail passengers each day over a 1,575 square mile service area. Annual system ridership totals 26.9 million passengers. The transit system's 1,100 employees operate 330 buses, 18 paratransit vehicles and 27 rail cars.

NFTA and the City of Buffalo have received discretionary bus capital fund allocations in recent years to construct an intermodal transportation center and Amtrak passenger facility. NFTA and the City of Buffalo have begun design of the project, an intermodal transportation center for NFTA buses and Amtrak as well as an intermodal connection to the Buffalo light rail system and Inner Harbor project. NFTA has begun obligating previously earmarked funds for the project.

New Bus Acquisition

NFTA seeks \$5,400,000 in section 5309 discretionary funds to purchase sixteen 40 foot and two 30 foot transit buses. The new buses will replace buses purchased in 1988, which have exceeded their useful life. NFTA's total bus and rail capital assistance needs exceed the amount available to the NFTA under its annual section 5307 formula apportionment. To assist NFTA to meet its capital needs, we request priority consideration for an allocation of discretionary bus capital funding for bus purchases. The new buses will enable NFTA to continue to provide safe and reliable mobility to the Western New York Community, achieve service standard goals for rolling stock replacement, and succeed in its job access and reverse commute efforts.

Job Access And Reverse Commute Grant

NFTA seeks \$500,000 in fiscal year 2001 funds under section 3037 of TEA 21 for operational expenses associated with NFTA's Job Access and Reverse Commute program. This program provides late night and extended weekend service on seven existing bus routes and improved peak hour service to address reverse commute needs on four existing routes. The service was designated, through a collaborative planning process, as a high priority for low-income individuals and welfare recipients to access jobs.

BUFFALO NIAGARA INTERNATIONAL AIRPORT

BNIA is the NFTA's second largest business center. Eight major air carriers—AirTran, American Airlines, Continental Airlines, Delta Airlines, Jet Blue, Northwest Airlines, United Airlines and US Airways—service the area, supplemented by the regional services of seven commuter carriers. The airport averages 108 daily flights and provides nonstop service to 21 cities. BNIA served approximately 3.6 million passengers in 1999.

Hold Harmless Provision

BNIA is currently undergoing major airport expansion and safety improvement projects at the airport, including the addition of seven gates. BNIA has been successful in attracting competitive air service to Buffalo, which has resulted in significant growth in air travel. As a result, the number of passenger enplanements has increased dramatically and we expect BNIA will graduate from a small hub to a medium hub in fiscal year 2001. While we are excited about BNIA's successes and the benefits of competitive air service to Western New York, BNIA will be in a serious predicament as a result of its change in hub status.

NFTA developed its financial plan for the BNIA expansion program that is under construction on the assumption that the federal government would fund 90 percent of the eligible costs of the projects undertaken at the airport, which is the federal participation for small hub airports. Because the federal participation is reduced to 75 percent for medium hub airports, BNIA will lose over \$4.4 million in federal funding eligibility for the terminal expansion project alone, when BNIA transitions to a medium hub. Additionally, NFTA will lose over \$1.9 million in federal funding eligibility on the acquisition of the Buffalo Airport Center property, acquired for both safety improvements and the expansion program, and as much as \$2.5 million on the apron expansion and access improvement projects of the expansion program. The total funding loss will depend on the amount of federal funds NFTA receives in fiscal year 2000 before the airport transitions to a medium hub.

NFTA requests that Congress include a provision in the fiscal year 2001 transportation appropriations legislation providing that the federal share of allowable project costs for any airport project given priority consideration in either the House or Senate Report or Conference Report on Public Law 106-69 shall be no less than the federal share in effect for the airport at the time of enactment of such Public Law. NFTA also seeks to clarify that the term project means the total project and not simply the individual grant applications for a project.

BNIA Projects for Which NFTA Seeks Priority Consideration

Consistent with its expansion plans, BNIA has begun new projects that will enhance safety and improve operations. NFTA seeks priority consideration for AIP funding in the fiscal year 2001 transportation appropriations legislation for the following projects:

Runway 14-32 Safety Improvements

NFTA seeks discretionary funds to extend Runway 14-32, the crosswind runway, by approximately 1,790 feet to 7,163 feet and upgrade runway instrumentation to make the runway safe for use by commercial airlines. The extended runway will be a safe and viable alternative to the main runway, Runway 5-23, when runway 5-23 is closed or if wind conditions make takeoff from or landing on Runway 14-32 preferable. The total project cost is \$43 million.

ILS & MALS Installation on Runway End 32

NFTA requests \$3,848,000 in the FAA Facilities and Equipment (F&E) budget for fiscal year 2001 for the procurement and installation of an Instrument Landing System (ILS) and Medium-intensity Approach Landing System (MALS) on Runway End 32 at the Buffalo Niagara International Airport. These navigational aids will enhance the operation of Runway 14-32 and provide for safer navigation.

BNIA Projects Which Congress has Given Priority Consideration

BNIA received priority consideration in previous years for two projects that are currently underway—The Buffalo Airport Center (BAC) Acquisition and Demolition project and the airport's terminal expansion and access improvements. The BAC project will optimize clear zones, and improve protection of transitional surfaces enhancing the safety of Runway 14-32. NFTA financed the acquisition and demolition of the BAC in anticipation of FAA and New York State grant award. In January 1999, NFTA acquired the BAC property. It completed demolition of the BAC, with the exception of the removal of the slab, in December 1999. FAA has awarded grants totaling \$7,720,041 for Phase I of the project and \$5,602,041 for Phases II

through IV. NFTA will seek \$11,486,113 in fiscal year 2001 AIP discretionary funds to complete the federal contribution to the acquisition and demolition of the BAC.

BNIA also received priority consideration for AIP funding for Phase II of the east access improvements and expansion of the east terminal apron. The terminal extension project adds seven gates to serve air service passenger demand, while the access improvements will provide safe and convenient access to the new east airport entrance and parking areas. The apron expansion is required to serve the terminal extension. NFTA will seek \$2,430,900 in AIP discretionary funds to make improvements to the circulatory road system to provide convenient access to the new east airport entrance and parking areas. NFTA will seek \$12,605,175 to expand the apron associated with the East Terminal expansion.

NIAGARA FALLS INTERNATIONAL AIRPORT

The Niagara Falls International Airport (NFIA) serves as a reliever airport for the BNIA. It is operated under a joint-use agreement with the U.S. military. The airport has a 9,130 square foot runway, making the airport suitable for non-stop long haul service. Air Force Reserves cargo transport units are based at the airport. One of NFIA's primary goals is to develop business in charter, cargo and general aviation markets.

NFIA Project for Which NFTA Seeks Priority Consideration—Taxiway "D" Rehabilitation

NFTA requests priority consideration for AIP funding for the rehabilitation of Taxiway "D" at the Niagara Falls International Airport. The project, which is currently underway, involves the rehabilitation of the original taxiway pavement, including drainage and lighting improvements. NFTA recently extended Runway "D" to 9,130 square feet. That project received priority consideration in the fiscal year 1998 and 1999 transportation appropriations legislation. The importance of rehabilitating the original pavement is underscored by the fact that FAA rated the pavement fair to poor in its Pavement Management Study. The total cost of the taxiway rehabilitation project is \$925,000.

Thank you for the opportunity to testify regarding NFTA's federal legislative priorities. We have an aggressive agenda, which will result in improved transportation services for residents of and visitors to the Buffalo region and will benefit the Western New York economy.

PREPARED STATEMENT OF THE STATE OF NEW JERSEY

Mr. Chairman and Members of the Subcommittee: Thank you for the opportunity to submit testimony. I am Jim Weinstein, Commissioner of Transportation for the State of New Jersey and Chairman of the Board of New Jersey Transit.

To begin, I wish to express the appreciation of the people and State of New Jersey for the hard work and fine efforts of this Subcommittee, its leadership, its members and its staff, which are so critical to the annual appropriations process. Your good work makes possible considerable financing which is key to the safe, effective and efficient transportation network so important to our nation.

I want to provide you with a short overview of what we are doing in New Jersey to address the very real transportation challenges of the nation's most densely populated state, and to indicate where federal appropriations in transportation provide a significant impact and role in meeting those challenges which affect us all.

New Jersey is not big geographically, but our transportation needs are great. We realize that traffic congestion and aging infrastructure are two major issues demanding our attention, so that commerce—international, national, regional and local—continues to prosper. We recognize our responsibility not only to the residents of our state, but also to the many visitors, users and beneficiaries of transportation in New Jersey.

We have some of the worst traffic congestion in the nation. This is taking its toll on our infrastructure, our economy, our air quality and our citizens. Our success in dealing with this challenge depends on the ongoing partnership between the State and the Federal Government. The State of New Jersey has dedicated a full 40 percent of our state Transportation Trust Fund to public transit this year. We match the federal contribution to our transit capital program on a dollar-for-dollar basis, and the financing for our new start transit project in southern New Jersey is entirely state money.

We are making great strides in New Jersey to alleviate our traffic problems. Public transit ridership in our state is at an all-time high, with approximately 360,000 daily riders on our bus and rail system. The Hudson Bergen Light Rail System be-

tween Bayonne and Exchange Place in Jersey City will open this Spring. A new station on the Northeast Corridor will serve Newark Airport starting in 2001. Our Secaucus Transfer rail project will be completed on time in 2002. Our MidTown Direct service, which opened in 1996, has attracted significantly more riders than anticipated.

We have more work to do, and I ask for your continued support so that we can achieve our goal of a single, seamless intermodal transportation network. This year, we are seeking funding for several important transit and rail projects that will further the connectivity of our state's transportation network.

First and foremost is the Hudson Bergen Light Rail Line. New Jersey is seeking, consistent with its Full Funding Grant Agreement, \$121 million for fiscal year 2001 for the first segment of the project. When completed, this new rail line in the nation's sixth-most-densely-populated county is expected to carry 100,000 daily riders. The project complements and serves the tremendous economic growth this area is experiencing.

As construction of the first segment is nearing completion, we intend to move directly into design and construction of the second segment. We are currently negotiating a Full Funding Grant Agreement with FTA which will enable us to finance the second segment. While we will not actually be seeking federal funding for the second segment this year, this Committee's support is critical if we are to get the Full Funding Grant Agreement signed this year so that we do not lose momentum on this important effort. Your support in this endeavor is greatly appreciated.

Additionally, we are requesting \$47.5 million in fiscal year 2001 for construction of a new light rail line connecting Newark's Broad Street Station with Newark Penn Station. A Full Funding Grant Agreement with FTA is pending. The construction of this vital link will allow riders on our Morris and Essex lines to transfer to the Northeast Corridor, which will also allow connection to our new Newark International Airport Station. It will provide 13,000 daily riders from both rail lines with access to offices, shopping and other destinations in downtown Newark—and alleviate congestion.

We have also identified a significant rail connection needed to improve the national and regional flow of freight rail through New Jersey, which until recently had been focused on an east-west orientation but is now increasing its focus on north-south. A major bottleneck has developed in New Jersey at Marion Junction (Jersey City)—an impact directly related to the national rail mergers of recent years. Built to provide a smooth flow of traffic from the north, this single-track structure must now also provide for flows from the south destined to northeastern markets, as a result of the recent takeover of Conrail by the Norfolk Southern and CSX Railroads. To accommodate these bi-directional flows by two railroads, the structure must be "twinning." Additionally this project will enable the railroads to vacate the former Conrail River Line east of the Palisades, in order to free up that right-of-way for the future phase of the previously described Hudson-Bergen Light Rail Transit System. The Marion Junction rail improvements are estimated at \$30 million over the course of the project, and we seek your consideration of this because of its national implications.

An additional transit request is an earmark in the bus category to assist in purchasing new buses to replace aging ones currently operated by both NJ TRANSIT and private carriers in our state. We need approximately 300 new buses to serve the large commuter market between New Jersey, New York and Philadelphia. I ask that you consider an earmark for the purchase of new buses at \$400,000 per bus.

While we are asking for significant monies for public transit in New Jersey, that investment has impacts throughout the country. We are purchasing buses produced in Roswell, New Mexico, with engines built in Columbus, Indiana. Another fleet of buses is assembled in Pembina, North Dakota, with engines built in Pontiac, Michigan and transmissions made in Indianapolis, Indiana. We have major bus components and systems produced in Alabama, California, Georgia, Illinois, Kansas, Minnesota, Ohio, Pennsylvania and Texas, and we have a contract for rail cars to be built in Hornell, New York. So you can see that the federal investment in New Jersey's public transit system employs workers and builds local economies all over the nation.

Let me again emphasize New Jersey's commitment to our own transportation network. Governor Whitman recently announced her plan in our state budget to provide one billion dollars in funding for transportation in the next fiscal year alone.

New Jersey DOT is about to begin construction on the first projects of its Portway initiative—a series of freight system improvements that will strengthen direct access to and between the Newark-Elizabeth Air/Seaport Complex and intermodal rail, truck and warehouse/transfer facilities located within or near a linear corridor of about 12 miles. We have allocated State funding on the order of \$50 million to re-

place a significant truck route bridge and related improvements in the City of Newark. Multi-billion dollar transportation investments are planned for the area by the State and the region's transportation authorities, most notably the Port Authority of New York and New Jersey. By properly coordinating the many transportation projects of Portway, the nation will benefit from the resulting regional improvements in this critical corridor.

We have a vision of a single transportation network that is the backbone of an economy—seamless, integrated systems from air travel, to rail, to ferry, to bus and to car; moving large numbers of people and goods fluidly through an intermodal network; alleviating congestion, de-stressing our citizens and improving our environment. This network is within our grasp, and I ask that you help fuel its creation by funding its construction.

In conclusion, we look forward to the opening of the first part of the Hudson Bergen Light Rail Transit System in the next few months. On behalf of the State of New Jersey, I am sure I am joined by our senior Senator, Frank Lautenberg, in inviting the members and staff of the Subcommittee to visit New Jersey to see this new light rail system, as well as the Portway district, and to personally view the first results of what you have made possible in our transportation system in New Jersey, that serves our region and the nation.

PREPARED STATEMENT OF THE COLONIAL WILLIAMSBURG FOUNDATION

Mr. Chairman and members of the Senate Transportation Appropriations Subcommittee, I want to thank you for the opportunity to submit this testimony on behalf of the Colonial Williamsburg Foundation.

As many of you may know, Colonial Williamsburg is America's largest outdoor living history museum spread over 170 acres with more than 600 original and reconstructed buildings. I hope many of you have been part of the three million visitors Colonial Williamsburg attracts annually . . . coming to hear the voices of Washington, Jefferson, and Henry remind us all of America's rich history, while educating and exciting our visitors about our country's democratic principles and ideals.

Ever since John D. Rockefeller, Jr.'s vision of the restoration of Williamsburg began in 1926, the Foundation has been faithful to Mr. Rockefeller's mission statement, "that the future may learn from the past." We are active stewards of our American culture and principles, and we consider this a responsibility we owe to all the people of our nation as well as nations struggling to create democratic republics.

In the next five years, Colonial Williamsburg will be engaged in the largest preservation effort since the restoration of the Historic Area living museum began in 1926. This second restoration effort is being undertaken to ensure that we are ready for our 75th anniversary and the 400th anniversary of Jamestown in 2007.

As part of the more than \$150 million dollar effort, we must upgrade and expand our visitor center. This project has the enthusiastic support of the Jamestown/Yorktown Foundation, the National Park Service, the Association for the Preservation of Virginia Antiquities, Busch Enterprises, the Hampton Roads Partnership, the College of William and Mary, as well as the local Chamber of Commerce, the three local municipalities, and the local hotel and motel association.

Part of this visitor center project involves the construction of an intermodal bus hub that will be the center for a new bus service that will carry passengers to Jamestown, Yorktown, and Colonial Williamsburg via the National Park System's Colonial Parkway. The National Park System has already agreed with our proposal for this bus system and approved the use of the parkway for this purpose. Since there are only two, two-lane roads to Jamestown, a bus system will be essential to ease traffic congestion and potential environmental impacts from increased numbers of visitors to this important national Historic Triangle area. Our plans call for increasing our parking area to provide spaces for 3,000 cars and 250 tour buses at one time. Families will be able to leave their cars and travel to the three historic sites, and to other local attractions, such as Busch Gardens and Water Country. Plans are also being made to provide for bus service from this intermodal hub to other museums and attractions throughout the lower Virginia peninsula. In addition the hub will be used as a link for the bus systems of James City County, the College of William and Mary and Colonial Williamsburg for the purposes of an integrated transit system for the greater Williamsburg area.

While the Colonial Williamsburg Foundation is engaged in a comprehensive fundraising campaign to secure private funds to cover much of the cost of this restoration and expansion for 2007, we are also seeking public funds as part of a private-public partnership. It is our hope that federal funds could be made available to cover part of the cost of the intermodal bus hub. We will also need help in replacing

8 diesel buses that have far outlived their expected life span. We have been slowly replacing our buses with more environmentally friendly and efficient natural gas buses. We will, however, have to purchase 10 additional natural gas buses in order to meet the needs for the service we want to provide from our intermodal bus hub. New natural gas buses are, as you know, initially more expensive, but in the long run more efficient and less polluting. The cost for each bus is approximately \$230,000.

In order to assist Colonial Williamsburg in this significant effort and to ensure the restoration work can be accomplished on time, we will be seeking \$3 million. This funding will allow us to purchase three natural gas buses in the next year and cover part of the costs associated with developing the intermodal bus hub. We will appreciate any assistance that you may be able to recommend.

Thank you for your consideration. We hope to have you as our guests at Colonial Williamsburg in the near future.

PREPARED STATEMENT OF THE CITY OF GAINESVILLE, FLORIDA

Mr. Chairman: On behalf of the City of Gainesville, Florida, I appreciate the opportunity to present this written testimony to you today. The City of Gainesville is seeking federal funds in the fiscal year 2001 Transportation Appropriations bill to assist with the following two projects: (1) an innovative Joint Communications Technology Project the City is undertaking to improve public safety, and (2) continuation funding for our Bus and Bus Facilities Project.

JOINT COMMUNICATIONS TECHNOLOGY PROJECT

The City of Gainesville is seeking \$5.4 million for a joint communications technology project to enhance public safety. The goal of this effort is to facilitate communication between our urban area public safety agencies through the use of system-wide communications software and technology upgrades. The City and Alachua County have initiated a joint communications system for the future. The impact for the entire region is considerable, since this county serves as the regional center for much of rural north Florida's medical care, disaster management, and criminal justice services.

The agencies involved in this project are: Alachua County Government (14 internal user agencies), Alachua County Sheriff (includes Corrections Facility and Civil Division); Cities of Gainesville (8 internal user agencies), Archer, Newberry, High Springs, Alachua, LaCrosse, Waldo, Melrose, Hawthorne, and Micanopy; School Board of Alachua County, Santa Fe Community College, University of Florida, Gainesville-Alachua County Airport Authority, Gainesville Regional Transit and Gainesville Regional Utilities (electric, gas, water, wastewater, telecommunications).

To continue the Joint Communications Technology Initiative to the next step requires the purchase of enhanced software and new equipment. The urban area public safety agencies will need the following:

- Mobile Lap Top Computers /Data Terminals for urban area public safety agencies (\$4.8 Million)
- Crash Reporting Software for urban area law enforcement agencies (\$120,000)
- System-Wide Communications Software (\$200,000)
- Geographical Information System (GIS) Software and WEB Software (\$280,000)

The need for the addition of lap top computers to this system is partially driven by the Federal Government's "re-farming" of radio frequencies through the Federal Communications Commission. Due to this "re-farming" and the high cost of radios, law enforcement agencies will no longer have radios mounted in department vehicles. Radios "mounted" in vehicles traditionally have a much higher wattage output and therefore are more reliable and robust than portable radios. Additionally, portable radios can be lost or damaged during emergency incidents. This creates a critical need for an alternative means for officers to be able to communicate with the dispatch center. Mobile lap top computers with the additional communication and software components can become the secondary means of communication utilizing the infrastructure currently being developed for the Alachua County Joint Communication Center.

The use of lap top computers can fulfill the critical need for a second communication device, and at the same time help accomplish several other public safety objectives, including in-car computer aided dispatch, automated report writing and the use of a GIS (Crime Mapping, etc.).

RESULT # 1 MOBILE COMPUTER AIDED DISPATCH

Utilizing lap top computers as in-car computer aided dispatch terminals significantly increases public safety officers' communications ability. Computers used in this manner can perform many important tasks.

First, the computers can send and receive information between the officer and the dispatcher, including calls for service. Non-emergency calls are forwarded from the dispatcher to the appropriate unit without the need to transmit the information verbally over the radio, thus saving "air-time" for use in emergency situations. This also improves the reliability of the information communicated and virtually prevents the need for the information to be repeated. This also decreases the need for additional dispatchers even when the number of calls for service increases.

Secondly, officers and supervisors can find the location of other officers and check on their current status. This eliminates the need for officers to request this information from a dispatcher and gives all members of the agency a complete picture of the availability of officers for calls for service. Officers can also refer to information about calls that have not yet been dispatched in addition to information regarding previous calls for service.

Third, officers can communicate vehicle-to-vehicle. The computers can be used to send messages from one officer to another. This also eliminates the need for officers to waste "air-time" for less important transfer of information.

Fourth, law enforcement officers can conduct FCIC/NCIC checks on wanted persons and stolen vehicles without having to tie up a dispatcher. This allows officers to check a large number of persons and vehicles, which will significantly increase the number of people who are arrested for warrants and the number of recovered stolen vehicles. A single dispatcher can only handle 1 request at a time, while the computer system, can handle numerous request all at the same time.

RESULT # 2 MOBILE AUTOMATED REPORT WRITING

Area law enforcement officers currently hand write law enforcement reports that are manually filed. A small portion of that report is then entered into a computer database at some later date. The benefits to public safety of mobile automated report writing are numerous.

First, the time lapse between when a report is started and the time that is entered into the computer is virtually eliminated. As a result, analysis of the information is immediately available for enhancing resource utilization.

Second, the time now spent on satisfying requests for copies of paper-based reports and completing those requests can be better spent on activities directly impacting public safety. Once filed, electronic reports could be forwarded to anyone electronically as appropriate.

Third, the amount of storage space now required to house all of the completed law enforcement reports could be freed up for better use. Now, for example, reports are only kept at the police department for 3 years. The reports are then removed from the file one at time by a records technician. The reports are then re-filed in a new folder and transported to a storage warehouse. Any report over three years old, must be retrieved from a storage company warehouse. Electronically filed reports take up virtually no space at all and can be electronically backed up for security purposes and stored on some form of optical disk. This would eliminate the need for an entire room to store reports.

Fourth, electronic reports can be created that will take the data required for one report and automatically enter it on subsequent or additional report forms. Now, an officer might be required to enter the information on several report forms, including the original report, a sworn affidavit, a vehicle tow sheet, a forfeiture request, an ATF firearms report, etc. Thus filing the reports electronically would save the officers significant time more urgently needed for public safety-related activities.

Finally, many handwritten reports are nearly illegible and have numerous spelling and grammatical errors. Some of the current report forms are also 4 or 5-part NCR paper. Usually only the first one or two copies of the NCR forms are legible. Filing reports electronically would drastically reduce the number of spelling and grammatical errors, it would allow officers to easily correct errors in reports, and it would eliminate the need for NCR paper.

RESULT # 3 GEOGRAPHICAL INFORMATION SYSTEM (GIS)

For years Law Enforcement Agencies have tracked crime using pin maps to geographically show where crimes were occurring. This method of tracking crime has become impractical and too time-consuming for all but the smallest of law enforcement agencies. The advent of computerized geographical information programs, like

“ArcView” has enabled law enforcement agencies to return to the pin map method of displaying crime patterns, but in a much more effective manner. Additionally, mapping programs can contain several hundred data layers that can be utilized by numerous public and private agencies. The following objectives are examples of how a GIS system will enable us to use the information immediately entered on mobile lap top computers.

Electronic Pin Maps.—Once a GIS system is established, all reports that are generated will be mapped in several formats. Maps will be generated for calls for service. This enables agencies to properly decide where to deploy their limited resources. Electronic pin maps also can be made time sensitive as well as location sensitive. Officers working various shifts can identify hot spots by time and location. A hot spot during the day, may not be a hot spot at night, or visa versa. Additional maps can be generated for UCR (Unified Crime Reports) crimes, Crime Analysis identified crimes, and calls verified by Florida State Statutes. Information that is not immediately available is of little or no use when it is entered at a later date.

Management of Resources Utilizing Computer Statistics.—Many law enforcement agencies have begun to use a method of management which utilizes crime data. Law Enforcement supervisors are being held accountable for the level or increase in crime in their assigned geographical area. The Gainesville Police Department has begun the process of dividing the City into districts. Each District Commander will be held responsible for the criminal activity and the utilization of resources in that geographical area. GIS information will be used to manage the department’s limited resources.

WEB Mapping.—Sharing the information gathered in an effective manner is another key component to this process. Many of the Law Enforcement Agencies in Alachua County currently have a WEB site on the Internet. In the future, crime maps developed by the GIS system will be used to display maps over the Internet. Maps will be made available to other law enforcement and governmental agencies and the public at large.

Integration with other Agencies.—In order for a geographical information system to be truly effective, it requires the cooperation of several agencies. GIS systems with hundreds of layers of data can be a useful tool for all the cooperative agencies. Law Enforcement personnel will be able to view maps and aerial or satellite photographs of any given area of the city. Crime data and analyses can be placed on top of those maps and/or photographs at specified points that will be available to all users. Law enforcement personnel will provide numerous layers of data to the system and will in return be able to access the layers from other agencies. Alachua County already has begun the process of developing a GIS and the Gainesville Police Department is currently working with the University of Florida to develop a method of converting data to a format used by “ArcView”.

BUS AND BUS FACILITIES PROJECT

Pursuant to the fiscal year 2000 Transportation Appropriations Bill, approximately \$0.5 million was reserved for Gainesville. The City continues to pursue the \$5.5 M that represents the remainder of the original funding request. (The original request was for funding assistance to purchase 25 new buses at an approximately cost of \$7.5 million.) The balance will be used to purchase 19 ADA accessible buses. The City is continuing to work with Alachua County, the University of Florida and the Florida Department of Transportation to enhance bus service in the metropolitan area.

Nineteen buses will replace used buses acquired from several other transit systems to demonstrate the feasibility of this major expansion of service to the University of Florida. The operation of these buses will be supported by a unique partnership of the City of Gainesville, Alachua County, the University of Florida, the Florida Department of Transportation and the University of Florida Student government.

The University of Florida Presidential Task Force on Parking and Transportation recommended an increase of 25 buses to serve the commuting needs of UF students, faculty, and staff. The University of Florida student population is currently estimated at 50,000 students.

The City of Gainesville through its Regional Transit System has brought together the University of Florida, Alachua County, and the Florida Department of Transportation to implement the recommendations of the University of Florida Presidential Task Force. Service utilizing eight buses was implemented to enhance several routes serving the UF campus from Southwest Gainesville.

The enhanced service has already resulted in record-breaking ridership for RTS during the past year. Express service utilizing two additional buses from an off-cam-

pus park-and-ride lot is currently operational. The University of Florida Student Government has implemented a student transportation fee that allowed unlimited access to all RTS routes by all 50,000 current UF students. In addition, a fee increase has been approved for the upcoming year. The University of Florida, the City and the County will be implementing a bus pass program for City and County employees as well as University of Florida faculty and staff to allow unlimited free access during the current year.

In closing, federal support is critical for these initiatives. As a result, we respectfully request that the Subcommittee give funding assistance for our projects every consideration throughout the fiscal year 2001 appropriations process.

PREPARED STATEMENT OF THE MEMPHIS AREA TRANSIT AUTHORITY

The Memphis Area Transit Authority (MATA) respectfully requests that the Senate Appropriations Subcommittee on Transportation make provision for an allocation of \$14,174,990 in "New Start" funds for the Memphis Medical Center Rail Extension in its fiscal year 2001 bill making appropriations for the Department of Transportation and Related Agencies. The Clinton Administration has proposed this level of funding for the project and is working to draft a Full Funding Grant Agreement (FFGA) to submit to Congress later this year. We also request the support of the Committee in execution of the FFGA.

OVERVIEW

The Medical Center Rail Extension is a two-mile rail project in downtown Memphis, Tennessee. The project represents an eastward expansion of the existing 5-mile Main Street Trolley/Riverfront Loop rail system. This project is proposed as the last segment of the downtown rail circulation system as well as the first segment of a regional light rail line. The two-mile extension will add six new stations and a park-and-ride facility.

The Medical Center Rail Extension has been designed to link the two largest employment centers in the region—the Central Business District and the Medical Center—and accommodate increased trip demand generated by new development along the line. Examples of new development include a new Triple AAA baseball park (opened on April 1), a new elementary school (under construction), and a major new apartment complex of 375 units (under construction). Existing development in the Medical Center area includes seven hospitals, four colleges and universities, and various related businesses and retail establishments.

Ridership on the two-mile extension is projected to be 2,100 per day in the year of opening (2004) and will increase to 4,200 in the forecast year (2020).

The Medical Center Rail Extension is expected to be a catalyst for redevelopment and a tool to enhance the livability of the Medical Center area in much the same way as the Main Street Trolley/Riverfront Loop has helped to transform the Central Business District.

BACKGROUND

Since implementation of the Main Street Trolley in 1993 and Riverfront Loop in 1997, ridership has grown steadily each year. In calendar year 1999, 922,475 riders were carried representing an increase of 13 percent over 1998. Data for January–March 2000 show usage up by 30 percent over the first three months of last year.

The Main Street Trolley/Riverfront Loop has been credited with playing a major role in the rebirth of downtown Memphis and its emergence as an entertainment center and focal point for urban residential development. The limits of activity have been stretched north and south in part as a result of implementation of joint use transportation terminals at each end of the line.

STATUS AND SCHEDULE

Preliminary Engineering has been completed. MATA expects Final Design approval and a Finding of No Significant Impact (FONSI) from FTA in early April. The project schedule calls for development of 60 percent engineering plans and determination of cost estimates by July 2000 with submittal of the FFGA package to Congress by August 1, 2000. Construction will be done in phases, with utility relocation beginning late in calendar year 2000, followed by bridge construction in early 2001, and general construction in mid-2001. Revenue operation is projected to begin in early 2004.

The project was rated "Recommended" by FTA in the Annual Report on New Starts for fiscal year 2001.

FUNDING AND COST

The Medical Center Rail Extension has received earmarks from Congress in the past several years, as follows:

| | |
|--------------------|------------------|
| Fiscal year: | |
| 1996 | \$1,250,000 |
| 1997 | 3,039,000 |
| 1998 | 1,000,000 |
| 1999 | 2,200,000 |
| 2000 | 2,500,000 |
| TOTAL | 9,989,000 |

The Administration's fiscal year 2001 Budget proposes an FFGA and funding totaling \$14,174,990 in fiscal year 2001. The complete funding schedule for the project is as follows:

| | |
|---------------------------------------|-------------------|
| Funds Appropriated ¹ | \$8,932,176 |
| Fiscal year: | |
| 2001 | 14,174,990 |
| 2002 | 14,826,027 |
| 2003 | 17,334,958 |
| TOTAL FEDERAL | 55,268,151 |
| TOTAL COST | 69,085,189 |

¹Less monies expended for Preliminary Engineering and allocated to FTA's Project Management Oversight (PMO) program.

SUMMARY

We urge the committee to appropriate the recommended funding of \$14,174,990 in fiscal year 2001 in order to allow MATA to continue to build on the past success of the downtown rail system. A substantial appropriation is needed in fiscal year 2001 in order to maintain our broad base of local support and keep the project on schedule. Your past assistance is greatly appreciated and we look forward to continuing the partnership.

PREPARED STATEMENT OF EASTER SEALS

Mr. Chairman, I am Courtland Townes, III, Director of Services for the Boston Center for Independent Living, Inc. in Boston, Massachusetts. I am pleased to have the opportunity to submit testimony on behalf of Easter Seals in support of Project ACTION. I currently serve on the Project ACTION National Steering Committee. The National Steering Committee is comprised of members of both the transit and disability communities who support Project ACTION and work to ensure that the Project's resources are devoted to the most critical transportation accessibility issues facing the transit and disability communities. On behalf of the people with disabilities and transit operators that we represent, I want to say that we are grateful for the Senate Transportation Appropriations Subcommittee's ongoing support for Project ACTION.

I work at an Independent Living Center in Boston and am also active on the national level promoting disability issues as the Chair of the Civil Rights Subcommittee of the National Council on Independent Living. I know that many people are not yet familiar with the Independent Living movement so please permit me to provide some brief background. Independent Living is a philosophy and a movement of people with disabilities who work for self-determination, equal opportunities and self-respect. At the most basic level, Independent Living means that people with disabilities expect and deserve the same choices and control in our everyday lives that our non-disabled brothers and sisters, neighbors and friends take for granted.

We want to grow up in our families, go to the neighborhood school, use the same bus as our neighbors, work in jobs that are in line with our education and abilities, and start families of our own. Just as everybody else, we need to be in charge of our lives, think and speak for ourselves. To this end we need to support and learn from each other, organize ourselves and work for political changes that lead to the legal protection of our human and civil rights.

This is the movement and philosophy that you and your congressional colleagues embraced nearly 10 years ago when you enacted the landmark Americans with Disabilities Act of 1990 (ADA). In passing the ADA, you and your colleagues recognized that, without access to transportation, people with disabilities could not benefit from

the promise of full participation in society. I am submitting this statement to thank you and to let you know how important Project ACTION is in the march toward full integration and equal participation of people with disabilities.

As we approach the ADA's tenth anniversary in 2000, we should take note of the tremendous progress we have made in recent years in terms of transit access. The 1998 Survey conducted by Louis Harris & Associates polling firm for the National Organization on Disability demonstrated some of this progress. In 1986, 31 percent of people with disabilities who were unemployed stated that lack of access to accessible transportation prevented them from working. In 1998 this percentage dropped to 24. It is too early to declare victory. Still one quarter of the survey participants say that the lack of access to transportation is an important reason they were not working, but we are clearly headed in the right direction.

Accessibility is increasing all across America: bus fleet accessibility has grown; rail station access has increased; and most importantly the disability and transit communities have learned to work together instead of meeting only in street protests and in costly courtroom battles. Project ACTION is the singular, most positive force bringing the transit and disability communities together. In recent years you have heard testimony in support of Project ACTION from both transit and disability leaders. The Project's broad-based support from groups that have historically had an adversarial relationship is a testament to its success at seeking cooperative solutions.

Despite this progress there are still issues to resolve. But thanks to Project ACTION the disability community and the transit community have a forum to work toward solutions in a cooperative fashion. Through this cooperation we in the disability community have learned that many, though not all, transit operators are earnestly working toward compliance with the ADA and trying to provide the best quality service to all Americans—those with disabilities and those without. But these transit operators need ongoing assistance and guidance on transportation accessibility issues. And people with disabilities need to understand their rights and responsibilities under the ADA. This is where Project ACTION has played and can continue to play a vital role.

With the support of this subcommittee in recent years, Project ACTION has become the principal resource of tools, training and procedures to make the ADA work. Since this subcommittee established Project ACTION, it has sponsored innovative research, funded demonstration projects, provided technical assistance to hundred of transit providers, and developed an impressive resource center with information on the most cost-effective ways to achieve accessibility.

Let me briefly describe some major initiatives that the Project completed since we last submitted testimony to this subcommittee. In June 1999, Project ACTION hosted two National Technical Assistance Conferences, one in Dallas and the other in Portland, Oregon. These conferences provided transit operators with every available resource to implement cost-effective ADA compliance strategies. Conference topics included:

- Reducing paratransit costs by transitioning riders from paratransit to fixed route service
- Solving rural transportation issues
- Ferry and other water vessel accessibility
- Serving passengers who use seeing eye dogs and other service animals
- Training transit operators to make stop announcements
- Dispute resolution principles.

This brief overview of these topics demonstrates that accessible transportation encompasses so much more than just bus lift operations for passengers in wheelchairs. Project ACTION has developed tools and resources in all areas of accessibility. These conferences succeeded in getting tools directly in the hands of the transit operators that need them.

Last year we told you that we would reach out to the Over the Road Bus companies to bring this industry into compliance with the ADA and to open up intercity, cross-country and tour and charter travel to people with disabilities. And this has and continues to be a primary focus for Project ACTION. In conjunction with the American Bus Association and a core group of operators, we have developed an educational package and scheduled training events specifically tailored to the unique needs of motorcoach operators.

The demand for Project ACTION information is strong and continues to grow. We have new products on many of the significant issues facing the transit and disability communities. We have developed guidance for AMTRAK to help meet the needs of disabled rail passengers and also created web-based software to assist rail systems in evaluating the ADA accessibility of their facilities. We have also developed a best practice guide to providing accessible water transportation on passenger ferries.

We are meeting much of the demand from customers for information through the Project ACTION website. We now have an Accessible Travelers Database online. One of the challenges for passengers with disabilities when they travel from place to place is not knowing what level of accessible service exists in any location. To help prevent the unpleasant surprises many disabled passengers face, we now have over 1,400 accessible transportation providers listed online for trip planning purposes. The Project ACTION website has received over 212,000 visitors in calendar year 1999.

In the first quarter of fiscal year 2000, Project ACTION:

- Handled orders for 2,000 documents
- Responded to over 3,000 calls for assistance of various kinds
- Produced and distributed the Project ACTION Update to over 14,000 individuals and transit agencies
- Received 85,000 visits to the Project ACTION Webpage.

As this subcommittee has requested, we continue to work closely with officials at the Federal Transportation Administration to coordinate and plan project activities. Working with FTA, Project ACTION is developing a 5-year strategic plan that will guide the activities of the organization.

In February, Easter Seals submitted its fiscal year 2000 federal application to the Federal Transit Administration. This document outlines how Project ACTION will spend the \$3.0 million in support that this subcommittee approved in the fiscal year 2000 appropriation bill. The funding that you provided will enable us to greatly expand our activities. New activities that Project ACTION will undertake in the near future based on requests from the field include:

- Hosting an event to teach transit professionals how to measure the benefits of accessible public transit
- Creating a “turnkey” package for transit systems that will allow them to assess, train and mentor new fixed route customers with disabilities. And also provide driver sensitivity training and customer service monitoring
- Providing direct technical assistance to motorcoach operators to help them serve passengers with disabilities.

On behalf of the millions of people with disabilities who rely on public transit, Easter Seals thanks this subcommittee for its past support of Project ACTION. As we look toward the future, Project ACTION’s main focus will be to continue to find and implement creative and cost-effective methods to promote ADA compliance and to reduce the rising costs of paratransit. As a person who works on a full time basis to promote civil rights for Americans with disabilities, I want to emphasize how important the march toward 100 percent transit accessibility is and to recognize the vital role that Project ACTION plays in this struggle.

On behalf of Easter Seals, I respectfully request this subcommittee to provide \$3.0 million dollars to fund Project ACTION in fiscal year 2001. This funding level will ensure that Project ACTION can continue to develop and disseminate workable solutions to the most critical issues facing transit operators as they implement the ADA. We understand the fiscal constraints under which this subcommittee operates. However, Project ACTION is a credible, cost-effective, and creative program that has strong support in both the disability and provider communities and with the Federal Transit Administration. The spirit of cooperation would not be possible without the leadership of this subcommittee. Easter Seals is grateful for your support and we look forward to continued collaboration.

Thank you.

PREPARED STATEMENT OF THE PORT AUTHORITY OF ALLEGHENY COUNTY

Chairman Shelby and members of the subcommittee, it is my pleasure and honor to submit testimony on behalf of Port Authority of Allegheny County, the principal public transportation provider in the Pittsburgh urbanized area. Port Authority carries over 76 million public transportation riders annually over a 730-square mile area including the City of Pittsburgh. We operate and oversee a variety of services including bus, busway, light rail, incline, and the nation’s largest specialized paratransit system known as access.

As chief executive officer of Port Authority of Allegheny County, it is my privilege to present this testimony regarding Port Authority’s request for fiscal year 2001 transportation appropriations “earmarks” for two very exciting and important projects for the Pittsburgh urbanized area—the north shore connector and the stage II light rail transit projects, both of which are major components of Port Authority’s “rail 21” program.

I will also be including in my testimony a funding request for the purchase of buses.

For fiscal year 2001, Port Authority is requesting \$25 million of section 5309 "new start" funds for the north shore connector and \$40 million for the stage II light rail transit projects. Port Authority is also requesting a section 5309 "bus/bus facility" earmark of \$20 million to be used to acquire approximately 80 buses in fiscal year 2001. Procurement of new buses will enable Port Authority to continue modernizing its fleet and ensure the continuation of quality transit service to its customers.

"RAIL 21" PROGRAM

North Shore Connector

The heart of the Pittsburgh metropolitan region is its golden triangle, the center of business, employment, cultural and sporting events, tourism, and government services. In order to accommodate and facilitate its continued growth and vitality, there is pressing need to better integrate the north shore area with the golden triangle by providing much improved transit service along the downtown's Allegheny River corridor. This corridor encompasses the north shore, cultural district and strip district areas of downtown and is the region's premiere tourist destination with three rivers stadium (the home of the Pittsburgh Steelers and Pirates), the Carnegie Science Center, the International Andy Warhol Museum, the National Aviary, the David L. Lawrence Convention Center, three performing arts theaters, and the Senator John Heinz Pittsburgh Regional History Center all located within this approximately one-square mile corridor.

Within this corridor, there are also significant levels of downtown commuter parking and private and public development projects. During the day, a large reservoir of parking on the north shore provides much needed fringe parking for the golden triangle. In turn, the golden triangle provides a significant amount of needed parking for north shore events. Providing a better connection between the two areas will fortify and enhance this relationship.

Development projects in the corridor include the Aluminum Company of America's (ALCOA's) new corporate headquarters, a 240-unit apartment complex, a new baseball park, a new football stadium, a new and expanded convention center and hotel, an office building, a new theater, parking facilities, and an accompanying retail and entertainment complex.

Absent in this corridor are pedestrian friendly and efficient transportation connections tying together these various attractions and development projects and linking the corridor with the region's transportation infrastructure. Overall, improved linkages between the north shore, central business district and the station square area, will help ensure the continued vitality and accessibility of the region's core and enhance and support the private and public development currently underway.

Since 1985, downtown Pittsburgh has been served from the south hills as part of an overall 25-mile light rail transit system. A fixed guideway transit connection from the north shore to Port Authority's existing light rail system would enhance transit service to the north shore area and better integrate golden triangle, north shore and station square activities including regional attractions. the north shore connector will:

- Support the economic development activities of the north shore, such as the new ALCOA headquarters, a 240-unit residential development, a riverfront park and the new baseball and football stadiums.
- Improve access to current job and activity centers, such as the Carnegie Science Center, Andy Warhol Museum, convention center, the national aviary, cultural district and other entertainment and cultural destinations on the north shore.
- Provide a direct transportation connection between north shore job and activity centers and the south hills job and activity centers serviced by Port Authority's light rail transit system, the "T".
- Tie the north shore, downtown and station square together in a way that would benefit all three business districts.
- Improve transportation for the one million annual visitors to the cultural district in downtown Pittsburgh and the more than three million people who annually visit the north side, including fans of the pirates and steelers.
- Provide convenient transfers to other public transit service and facilities, including the Martin Luther King, Jr. east busway, the west busway/Wabash hov facility, Port Authority's bus service network, the I-279 hov lanes and Amtrak and Greyhound service.
- Continue to improve and expand public transit services for the citizens of Allegheny County.

—Further Port Authority's effort to expand its LRT system into the north side, strip district and other areas in the Pittsburgh region.

The Draft Environmental Impact Statement (DEIS) is currently being reviewed by the Federal Transit Administration (FTA) with approval expected within the next 30 days. The DEIS includes cost of the most likely alternative at \$390 million.

LIGHT RAIL TRANSIT STAGE II SYSTEM

Port Authority's light rail transit system, also known as the "T", is a 25-mile light rail transit system serving the City of Pittsburgh and the south hills communities of Allegheny County.

The south hills light rail system, part of an extensive trolley network formerly operated by the Pittsburgh Railways Company and its predecessors, was acquired by Port Authority in 1964. Between 1980 and 1987, Port Authority completely reconstructed 10.5 miles of the system, a project referred to as stage I.

Stage I entailed construction of the downtown Pittsburgh subway and rehabilitation of Port Authority's panhandle bridge over the Monongahela river, modernization of the old trolley line through Allegheny County's south hills via Beechview and Mount Lebanon, construction of a new Mount Lebanon transit tunnel, construction of a new rail car maintenance facility and operations control center and purchase of 55 articulated and air-conditioned light rail cars. Also included in stage I was the completion of the 2.5-mile Allentown line in 1992.

The stage II light rail transit system which was designated a "new start" project in the Intermodal Surface Transportation Assistance Act of 1991 (ISTEA) involves the reconstruction of 12.5 miles of the overbrook, library, and drake trolley lines to modern light rail standards. Preliminary engineering was completed for the project in spring 1998. Rebuilding the three lines on their existing alignments includes double-tracking the overbrook line, replacing bridges, stabilizing slopes, adding retaining walls, constructing new stops and stations, and installing signal, communications and electrical power systems. All three lines are also to be built to modern light rail standards. The project includes the acquisition of 28 new light rail vehicles, and approximately 2,400 new park and ride spaces. The current project is estimated to cost a total of \$512.5 million. Among other benefits, the reconstruction of the stage II line would promote economic development opportunities, offer shorter travel time, add much needed capacity for customers, provide safety enhancements, implement park and ride expansion and improve operational efficiencies. We are requesting \$40 million for this project.

BUS PURCHASE

Port Authority is also requesting \$20 million of section 5309 bus/bus facility funds in the fiscal year 2001 transportation appropriations to be used toward the procurement of approximately 80 buses. The new buses will replace buses which have completed their useful service lives and are eligible for retirement by virtue of age or mileage standards. The buses will be used in Port Authority's overall route network, which serves 260,000 riders each day, or about 76 million annually.

It is our fervent desire that your subcommittee will continue increasing the overall level of investment in transportation infrastructure, which is of national importance. As a result of your work, this subcommittee has enabled public transportation systems in our great cities, suburban communities, and rural areas to be rejuvenated. Your work has also helped create an interstate highway system and an airport network that is the envy of the world. It is imperative that we sustain this momentum and that all levels of government continue to develop our transit and surface transportation networks in order to keep American mobile and growing.

Finally, I want to thank you Mr. Chairman for your personal leadership and all of the subcommittee members for their past support and commitment to surface transportation programs, particularly for those that affect public transportation.

I look forward to an active and ongoing dialogue with the subcommittee and all of its members in the coming years. I would be pleased to submit any additional information at this time as would be useful to the subcommittee. Thank you.

PREPARED STATEMENT OF THE REGIONAL TRANSIT AUTHORITY

Thank you for the opportunity to provide this statement to the subcommittee on behalf of the Regional Transit Authority (RTA) of New Orleans and Jefferson Parish.

Before proceeding, the Regional Transit Authority extends its sincerest appreciation to the members of this subcommittee for the support demonstrated towards our

requests for the last fiscal year. As you may recall, upon enactment, the fiscal year 2000 transportation appropriations bill included \$3,300,000 for RTA's bus lease maintenance program from Louisiana's \$5,000,000 statewide bus appropriation, and \$1 million for the canal streetcar project. We are very grateful to the subcommittee for its role in providing that critical funding.

In summary, for fiscal year 2001, the Regional Transit Authority is requesting Federal funding for the following projects:

- \$76,000,000 for the canal streetcar project
- \$40,000,000 for RTA's lease/maintenance program
- \$10,000,000 for the desire corridor project

CANAL STREETCAR PROJECT

The canal street corridor project will restore light rail transit service to the city's most important transit corridor. For fiscal year 2001, the Regional Transit Authority is requesting up to \$76,000,000 of FTA section 5309 new start rail funding to construct the project.

The project completed the major investment analysis phase in the fall of 1995 and the Environmental Impact Statement (EIS) was completed in August of 1997. The FTA issued the favorable "record of decision" on August 28, 1997. Currently, the project is undergoing final design. The prototype streetcar has been completed and is operating regularly as part of its testing. Construction is expected to begin in 2001.

The total cost of the canal streetcar project, including the proposed city park spur, is approximately \$156,600,000. To date, Congress has appropriated \$55.5 million towards the project.

The Regional Transit Authority recently took two major steps towards ensuring the fiscal viability of the project as it strives to obtain a full funding grant agreement. Unfortunately, both actions occurred after the update submittal to the FTA to affect the project's current "not recommended" status per the annual report on new starts for fiscal year 2001 issued earlier this month.

While the project continues to enjoy positive ratings under the project justification criteria, it suffers under the financial rating criteria. To that end, as well as to ensure the financial stability of both the project and the RTA system, the RTA enacted a fare increase and obtained an additional source of sales tax revenues.

The fare increase was implemented in the fall of 1999 when the base fare rose from \$1.00 to \$1.25. The expected decrease in ridership was not as severe as projected while the revenue increases has done much to reverse the negative operating budget outlook the RTA faced previously.

The additional sales tax will be the result of a settlement between the RTA, the local hotel/motel industry, and tourism officials to share in the proceeds of a previously unlevied sales tax on hotel and motel rooms in New Orleans. The RTA will receive 60 percent of the collections while the other two parties will split the remaining amount. The new levy, which is expected to begin on May 1st, is projected to generate an additional \$6-\$7 million per year for the RTA. Those proceeds will be dedicated for both the canal streetcar and desire corridor new start projects.

The canal street corridor connects with 70 percent of the Regional Transit Authority's 59 transit lines and seven suburban routes. In the future, the route could connect with Amtrak and the local Greyhound bus terminal at the New Orleans union passenger terminal.

The streetcar's track will be placed primarily within existing medians, which will allow the RTA to remove buses from the currently congested traffic stream. The EIS analysis predicts 20 percent growth of ridership over the 18,000 per day currently utilizing the bus service within the corridor.

In a major effort to reduce the overall cost and scope of the project, the RTA has implemented two strategies, both during construction and operation:

First, the canal streetcar track will match the recently regauged track of the riverfront streetcar and the historic St. Charles streetcar line. The common gauge will allow the RTA to use the existing Carrollton streetcar facility of the St. Charles streetcar as a heavy duty maintenance facility for all three lines as well as the proposed desire corridor line. Thus, the RTA will avoid the cost of duplicating a similar facility. However, a separate storage and inspection facility for daily maintenance and cleaning of the streetcars will be built due to capacity constraints at Carrollton.

The second part of the strategy will be to assemble the streetcars in New Orleans by the technicians and craftsmen at the RTA's Carrollton facility whom recently built seven streetcars for the revamped riverfront streetcar line and overhauled the entire 36 car St. Charles fleet. This facility and its workers are uniquely suited to construct the canal streetcars competently and economically. The RTA will be able

to save approximately \$400,000–\$600,000 per vehicle by taking this approach. Estimates are that for an outside firm to bid on the streetcars, which are a one-of-a-kind design, it would cost the taxpayer anywhere from \$1.6 to \$1.8 per vehicle. RTA approximates its cost at \$1 million to \$1.2 million.

The streetcars will be basically replicas of the venerable, and no longer available, Perley Thomas type that now traverses the St. Charles line. However, the canal streetcars will be ADA accessible and air conditioned.

LEASE/MAINTENANCE PROGRAM

As its highest priority request under the FTA bus and bus facility program, the Regional Transit Authority (RTA), is seeking \$40,000,000 representing five years of payments under its innovative lease/maintenance program approved by the Federal Transit Administration.

The RTA has entered into a lease and maintenance agreement with a commercial leasing company for the lease and maintenance of 175 new buses. The agreement will allow the RTA to benefit from the Federal regulations that permits the treatment of maintenance costs under a lease as an eligible capital expense. Penske truck leasing, through the RTA's RFP selection process, is the lessor of the buses as well as being responsible for the maintenance of the buses. The financing will be by ABN-AMRO.

With 446 vehicles, the RTA operates the largest system in Louisiana by providing service to nearly 180,000 riders per day in a city that is 20 percent transit dependent. The new buses has significantly reduced the operating expenses of the RTA and has enhanced its ability to provide dependable service.

This request will once again be a part of the fiscal year 2001 Louisiana statewide request for FTA bus program funding. That effort is led by RTA staff and is coordinated through the Louisiana Public Transit Association. We hope our cooperative attempt will yield additional support once more to benefit the state's other transit systems as well as the RTA.

DESIRE CORRIDOR PROJECT

The RTA is requesting \$10,000,000 of FTA section 5309 new start funds for the corridor once occupied by the fabled streetcar named desire. The funding will allow the project to proceed to final design. The major investment study (MIS) was completed in May of 1999. The RTA is currently seeking approval from the FTA to proceed to preliminary engineering and the environmental impact phase. To date, Congress has appropriated \$6 million of FTA new start funding to the project.

The completion of the major investment study (MIS) with extensive public input resulted in the selection of the former St. Claude streetcar route as the light rail alternative. Utilizing N. Rampart Street and St. Claude Avenue, the four-mile (8 miles round-trip) would travel through the historic New Orleans neighborhoods of Bywater, Fauborg Marigny and the Vieux Carre (the French Quarter).

The project also includes a number of transportation systems management (TSM) improvements including bus route changes, smaller buses, intelligent transportation system (ITS) innovations, and bus turn lanes.

The proposed streetcar line will allow the RTA to consolidate a number of bus routes away from the historically and structurally sensitive French Quarter. The line is expected to improve the overall efficiency of the RTA system by allowing for higher operating speeds and shorter travel time for buses now forced to use congested French Quarter streets. The streetcar will provide direct service to the French Quarter, Faubourg Marigny and Bywater neighborhoods that are otherwise inaccessible to regular transit service. In addition, the line will serve two major defense facilities; the U.S. Coast Guard support center and the Navy's F. Edward Hebert defense complex.

Thank you for your time and consideration with these requests on behalf of the regional transit authority.

PREPARED STATEMENT OF THE LOUISIANA PUBLIC TRANSIT ASSOCIATION

Thank you for the opportunity to submit a statement to the house subcommittee on transportation appropriations on behalf of the 120 transit providers represented by the Louisiana Public Transit Association. Due to the difficulty in obtaining section 5309 funding for bus and bus related facilities through the Federal Transit Administration (FTA) application process, the LPTA presents its statement to this committee in an effort to meet the state's long-standing transit needs.

Before explaining our project requests, the LPTA wishes to thank the subcommittee for its role in appropriating \$5,000,000 towards the \$35.7 million fiscal year 2000 request. That funding will go a long way in helping the Louisiana Transit providers.

The total Louisiana request for fiscal year 2001 under FTA section 5309 bus and bus related funding is \$65,551,000. The request is for 14 projects of varying size and cost from nine transit agencies. Briefly, those requests are for:

The City of Alexandria, Alexandria Transit (ATRANS), is requesting \$1,030,000 for replacement vehicles. ATRANS needs to replace four thirty foot buses and three vans for its ADA paratransit service. The replacement vehicles will include surveillance cameras, two-way radios, and fareboxes. The vehicles being replaced will soon exceed their useful life.

The City of Baton Rouge, Capitol Transportation Corporation (CTC), is requesting a total of \$1,200,000 for two projects important to the capital region.

Funding of \$1,000,000 is being requested to begin the replacement of seven buses and three vans that have exceeded their useful life. CTC will have an additional ten buses that will need to be replaced after 2000. In addition, because of recent and well-received upgrades to the transit service in the Baton Rouge area, CTC will also have to increase its paratransit fleet to meet demand and ADA requirements.

CTC is also requesting \$200,000 of funding to replace radio equipment throughout the CTC system including base stations, bus radios, van radios and supervisors' radios. The replacements are necessary due to the recent purchase of a new regional 800 mhz system. The replacement equipment will permit the coordination of communications between police, transit dispatch, emergency medical service, and the regional transportation management center.

Jefferson Parish, which funds and oversees two private transit systems on each side of the Mississippi River, Louisiana transit on the east and westside transit on the west, is seeking funding of \$500,000 to begin the preliminary planning of an eastbank transit terminal. The proposed site is located on airline drive near the intersection of Causeway Boulevard, an area near several major transfer points. The terminal would greatly improve the efficiency of the eastbank system by providing easy access to transfer among three routes. The facility would provide for better security, conveniences, and connections for riders utilizing the system.

The City of Lafayette, through the City of Lafayette Transit System (COLTS) is seeking the remaining \$6,200,000 of Federal funds needed to reconstruct and reconfigure a site currently operating as a postal facility adjacent to an Amtrak station. The Lafayette multimodal transportation center will serve as the terminal for the COLTS system, a Greyhound station, and as an enhanced Amtrak stop for the sunset limited. The postal service will also continue to use a portion of the site. The city will house its traffic and transportation department's development, transit, parking and planning divisions at the center. The \$10,500,000 project already has been designated with a positive environmental impact statement and is in the design development phase. Construction is scheduled to begin in late 2000.

COLTS is also seeking \$1,600,000 to replace eight transit buses, 25 percent of the COLTS fleet, that have exceeded their useful life of twelve years and are not accessible under ADA. By the end of fiscal year 2001, over seventy-five percent of the transit fleet will have reached the end of their useful life.

The Louisiana Department of Transportation and Development, specifically the Office of Public Transportation, is in need of another \$2,300,000 of Federal funding to allow the replacement of 78 vans for both rural and specialized transit providers across Louisiana. All the vans to be replaced are inaccessible under ADA, exceed the useful life standard of 5 years by 2-4 years, and are far beyond the 100,000 miles cited as the mileage standard. Obviously, safety and dependability problems with vehicles of this size is a growing concern for the rural, elderly and disabled community across Louisiana. Additional demands for vans are expected to meet the needs of welfare-to-work.

In order to meet the increasing demand for transit service in Louisiana's rural areas, the LPTA is requesting another \$1,200,000 of section 5309 funding for expansion of the state's rural transit systems by 35 vehicles. Currently, many of the state's rural parishes do not have rural transit providers due to the LA DOTD's backlog of replacement needs for existing operators. In addition, many current rural operators need to expand to meet the demands of welfare-to-work, jobs access, and other basic transportation needs as the population expands and ages in those rural areas. The program would be administered through the existing rural transit program of the Louisiana Department of Transportation and Development.

The City of Monroe, through the Monroe Transit System (MTS), is requesting funding to renovate, expand, and update their aging maintenance facility in the amount of \$2,000,000 for the \$2,500,000 project. MTS will renovate the 15 year-old

facility by adding bays to be dedicated to conduct cost saving preventative maintenance checks and to equip the facility with modern and safer equipment. In addition, MTS is planning to reconfigure the facility to allow for drive-through capability and space for added inventory. The facility is MTS only maintenance garage and the work proposed will make it much more efficient and economical to operate.

In addition, MTS is seeking \$1,700,000 to replace seven forty-foot transit buses that have exceeded their useful life. Currently, the average age of the MTS fleet is 10 years.

The City of New Orleans, through the Regional Transit Authority (RTA), is requesting \$40,000,000, which represents five years of payments under its innovative lease/maintenance program approved by the Federal Transit Administration. This program allows the RTA to enter into a lease and maintenance agreement with a commercial leasing company for the lease and maintenance of 175 new buses. The agreement permits the RTA to benefit from the FTA regulations that allow for the treatment of maintenance costs under a lease as an eligible capital expense. Penske truck leasing, through the RTA's RFP selection process, was selected as the lessor of the buses as well as provide for the maintenance of the buses. The financing will be by ABN-AMRO.

With 447 vehicles, the RTA operates the largest system in Louisiana by providing service to nearly 180,000 riders per day in a city that is 20 percent transit dependent. The buses leased will significantly reduce the operating expenses of the RTA and enhance its ability to provide dependable service.

Finally, as you are probably aware, the RTA has pending two new start rail requests, one for the Canal Street corridor project (undergoing final design) for \$76,000,000 and another \$10,000,000 for the desire corridor project. The RTA will provide detail of those projects in a separate statement.

The next request is on behalf of the City of Shreveport and its Sportran Transit System for funding of \$7,680,000 to replace thirty-four transit buses. The vehicles have exceeded their useful life of twelve years and are not accessible under ADA requirements.

The last request is on behalf of St. Tammany Parish that is requesting \$300,000 for a park and ride facility to be located in Mandeville, located within western portion of the parish. The park & ride facility is proposed for a half-acre site in the vicinity of Gerard Street. It will be near the Lake Pontchartrain causeway and is expected to draw local residents which should help limit the expansive growth of traffic on the causeway.

The proposed project will provide parking for up to 50 automobiles including the required disabled spaces. There will be a bus pad capable of handling a fully loaded 40-foot bus with proper ingress and egress to the site. Amenities to the site will include lighting and landscaping consistent with the surrounding natural environment. The project will renovate an existing building to provide a transit terminal containing telephones, water fountains and benches.

St. Tammany Parish is directly north and northeast of the City of New Orleans across Lake Pontchartrain. It is the fastest growing area of the region. The park-and-ride will reduce traffic impacts associated with commuter traffic in St. Tammany Parish and help ameliorate air quality concerns for the New Orleans region now designated as an air quality maintenance area. This project will be the second park & ride facility for the residents of St. Tammany Parish.

Thank you for your time and consideration with these requests on behalf of Louisiana's Transit Systems.

For your reference, attached you will find a summary of the fiscal year 2001 Louisiana request.

FEDERAL AVIATION ADMINISTRATION

PREPARED STATEMENT OF IOWA STATEMENT UNIVERSITY, INSTITUTE FOR PHYSICAL RESEARCH AND TECHNOLOGY

INTRODUCTION

The U.S. air transportation system is the best and the safest in the world. It plays a key role in the U.S. economy carrying over 614 million passengers in 1998 alone. That number is expected to climb to 890 million passengers by the year 2008, nearly doubling in two decades the 1998 number when it carried over 450 million. These increases will be met by the continued operation of existing aircraft as well as the introduction of new aircraft into the commercial fleet. The U.S. fleet is expected to grow from 5,200 aircraft in 1998 to 7,200 by the year 2008, a 38 percent increase in only 10 years. The diligence that the Federal Aviation Administration and the aviation industry employed in the 20th century to ensure public safety must be ever-increasing to ensure continued performance as we enter the next century. The aerospace industry also plays a critical role in the U.S. economy, employing almost 5 percent of the manufacturing work force in the U.S.. Congress is urged to continue their support to address the critical safety and economic issues associated with this vital industry through funding for the Aviation Safety budget of the Federal Aviation Administration. The Airworthiness Assurance Center of Excellence (AAACE), established by the FAA in 1997, offers a unique opportunity for the government to work with industry on precompetitive aviation safety research to their mutual benefit and the benefit of the flying public. The AAACE team is comprised of the best talents the U.S. has to offer in technologies critical to the safe design and operation of aircraft. This document provides details of the national importance and the contributions possible through the Airworthiness Assurance Center of Excellence.

BACKGROUND

Several incidents in the last fifteen years have focussed the attention of the aviation community on the needs related to safety, and in some instances provided direction to federally funded research programs managed by the FAA William J. Hughes Technical Center's Aviation Safety Division. A chronology of those events is provided here:

—In 1988, the Aloha incident drew the attention of the industry to issues related to the structural integrity of aircraft systems. The Aviation Safety Act of 1988 directed the FAA to better predict the effects of design, maintenance, testing, wear, and fatigue in the life of an aircraft; to develop methods for improving

aircraft maintenance technology and practices, including nondestructive inspection; and to expand general long-range research activities applicable to aviation systems.

- In 1990, the FAA Center for Aviation Systems Reliability (CASR) was established at Iowa State University to support the FAA's research needs in the research and development of inspection technologies. In 1991, the Airworthiness Assurance Nondestructive Inspection Validation Center at Sandia National Labs (AANC) was established as a sister program that supports the validation and transfer of inspection technologies. The resources of CASR and AANC provide the FAA with the full spectrum of research capabilities for inspection technology, spanning from basic research through applied research, which has been fully validated in realistic settings.
- In 1989, a United Airlines DC-10 crashed in Sioux City, Iowa, as it tried to land following a major in-flight malfunction. The cause of the incident was traced back to the presence of a melt-related defect known as "hard alpha". In response to issues identified in the wake of this incident, the Engine Titanium Consortium at Iowa State University was established in 1993 to address the inspection of critical jet engine components.
- In 1996, the White House Commission on Aviation Security and Safety undertook an intensive investigation into improving aviation safety. Several incidents beyond those noted above, including the TWA 800 event in Long Island, the ValuJet incident in Miami, and the Delta incident in Pensacola, precipitated the establishment of the White House Commission. After extensive review, the Commission recommended that a concentrated effort be put in place to reduce accidents five-fold over the next decade. Reductions in the overall accident rate are needed in light of the major increases in air travel and in order to maintain the public's confidence in the air transportation system.

The FAA has focussed its resources on the accident prevention steps that hold the most potential. In April 1998, the FAA Administrator and the Vice President announced the Safer Skies Initiative, which will use the latest technology to help analyze U.S. and global data to find the root causes of accidents and determine the best actions to break the chain of events that lead to accidents. Safer Skies will use partnerships between the FAA and the aviation industry to determine the highest priority issues and develop programs to address those issues. Already in existence, the Airworthiness Assurance Center of Excellence is a model for such partnerships, and it is expected to be a major contributor to achieving the goals of this program.

RESPONSE TO A NATIONAL NEED

The FAA, the airline operators and the aviation systems manufacturers share the responsibility for aviation safety. Each plays a unique and complementary role in the lifecycle of commercial aviation, starting with design, manufacture and certification of aviation products followed by the operation and maintenance of the commercial fleet. In 1997, the FAA established the Airworthiness Assurance Center of Excellence (AACE) to address research, education, and technology transfer and utilization in the area of airworthiness assurance. Specifically, the FAA uses this center to ensure that the most current technology is available to address the safety needs of aviation. AACE, comprised of nearly 100 university and industry partners, offers the full range of technologies needed to address safety issues. Partnerships are already in place, and functioning well. These enable business competitors to put aside competition and to work together to address safety issues to the common benefit of the industry and the flying public. AACE offers a unique opportunity for the government to work with industry and leading research universities to accomplish the following objectives:

- To promote and facilitate research in industrially relevant subjects that will improve aviation safety
- To facilitate utilization of appropriate research results and transfer of technology into aerospace applications
- To develop education and training tools for improving aviation safety including participation of students in industrially relevant research

AACE CAPABILITIES SUPPORT SAFETY NEEDS

Through the concentrated efforts of the industry and the government, the overall commercial aviation safety record has seen improvement from 0.121 fatalities per 100,000 flights in 1989 to 0.036 fatalities per 100,000 flights in 1997. Continued diligence is needed to further improve the safety record and accomplish the goal of a five-fold improvement established by the White House Commission. New technologies are being introduced in the manufacture of commercial aircraft with new

materials, new processes, and new inspections finding their way into structural applications. As the aircraft and their systems age, new challenges are evident in the maintenance, inspection and repair of the commercial fleet. Comprehensive capabilities are needed to address the wide range of technology needs to assure continued safety improvements. AACE has successfully established a team of aviation experts that includes the following expertise:

- Aircraft standards and specifications
- Inspection technology—airframe, propulsion, nonstructural systems, and components
- Reliability and POD methodologies
- Maintenance and repair technology
- Composites development, repair, and certification
- Materials properties, characterization and computational modeling
- Flight loads analysis
- Fuels analysis
- Crashworthiness of aircraft structures
- Personal protection systems
- Propulsion materials and design
- Structural integrity and fracture mechanics

ESTABLISHMENT OF WORLD-RENOWNED SAFETY TEAM

AACE is comprised of eight core universities, Sandia National Laboratories and over 100 other university and industry affiliates. The nine core members, which include Iowa State, Ohio State, Northwestern, Wichita State, UCLA, Arizona State, University of Dayton, University of Maryland, and Sandia National Laboratories, provide expertise in all the major research areas necessary to address FAA aircraft safety needs. Results from the AACE program are already impacting the aerospace industry and the safety of its operations. Major accomplishments of AACE include:

Inspection development.—Tasks are under way at ISU, Northwestern University, Ohio State University, and Wayne State University through the CASR program. University researchers cooperate with engineers at Sandia National Laboratories to transfer the results into industrial use as part of the AANC. Efforts are under way to transfer thermal wave, ultrasonic, and eddy current techniques into use at airline maintenance and overhaul facilities.

- New approach to acoustic testing developed by ISU researchers is used for finding delaminations in composite structures. The approach is being developed and tested with Northwest Airlines and Boeing with technical support from Sandia National Labs. Beta site tests are under way with American Airlines, Delta Airlines, and United Airlines; ongoing studies are in place with the Iowa Army National Guard; and commercialization discussions have begun.
- Software tool for optimized x-ray inspection was developed at ISU and is currently being used by Boeing, Pratt & Whitney, Honeywell, General Electric, Allison/Rolls Royce, and Howmet for the evaluation and design of critical aerospace inspections. The tool has been used to determine the effect of inspection angle on the ability to detect cracks in structural elements of airframes, to determine the detection sensitivity for detrimental particles in jet engine components, and many other safety-critical inspections.
- Crack detection for aging aircraft has been the focus of research at Northwestern University. An approach to detect cracking in hidden layers has been implemented by Northwest Airlines, Delta Airlines and USAirways for inspection of the DC-9. This one inspection has saved the industry over \$1M and led to the successful detection of cracking and corrosion.

Propulsion inspection research.—The Engine Titanium Consortium Phase II program was established in 1999. The ETC includes research efforts of ISU in partnership with the three major U.S. engine manufacturers, General Electric, Honeywell, and Pratt & Whitney. Efforts are under way to improve the detectability of critical flaws in the titanium and nickel alloys that are commonly used in jet engines. Tools for use in manufacture and operation of jet engines are under development along with quantitative methodologies to assess the reliability of the inspection processes.

- Improved inspection of titanium billet was the focus of the ETC Phase I production efforts. The multizone system, optimized by the ETC team, has been implemented at three inspection labs, used to inspect millions of pounds of billet, and has prevented hard alpha defects from entering jet engine parts
- Inservice inspection of critical jet components can now be accomplished more rapidly and with improved sensitivity using tools developed by ETC. The Portable Scanner is available as a commercial tool and is being used in commercial

and military applications. Over 15 units have been sold for use in ensuring safe operation of critical jet engine disks.

—Quantitative assessment of ultrasonic inspection is now possible using methodologies developed by ISU and the partners of ETC. Statistical approaches to assess the effectiveness of an inspection enable the industry to make engineering decisions about the method and frequency of inspection.

Jet engine materials improvements.—The Special Metals Processing Consortium, headed by Sandia National Laboratories, working with the major U.S. suppliers of jet engine alloys and the engine manufacturers, develops improves melting processes for titanium and nickel alloys. Their efforts are directed at reducing the occurrence of melt related defects such as hard alpha, the defect that led to the Sioux City crash.

Fuels safety.—Work is under way at Stanford Research Institute, University of Dayton, and Arizona State University to understand the source, nature, and potential hazards of copper and silver sulfide deposits in aviation fuels. Results will have implications for understanding the cause of the TWA 800 incident.

Materials research.—Today in the aviation industry, the use of composite structures is more widespread. To fully realize the weight-saving potential of composites, one must first understand the damage tolerance of such structures. This understanding is essential first in the design process in order to develop structures that are more efficient and second, in serviceability to reduce the extent and frequency of repair. Work is under way at Wichita State University, University of Maryland, Northrop Grumman, and UCLA to understand the damage mechanisms and provide data to the FAA in evaluating the safety of composite materials.

AEROSPACE IS A KEY ELEMENT OF U.S. COMPETITIVENESS

The aerospace industry employed 893,000 people (\$32.9M payroll) in 1998 down from a high of 1,314,000 (\$34.2M payroll) in 1989 which represents 4.8 percent and 6.8 percent of the overall manufacturing employment respectively. Aircarriers employed another 621,000 people in 1998. In addition to its role as a major employer, the aerospace industry also accounted for 9.4 percent of U.S. exports in 1998 with nearly \$35 billion exported through aircraft and engines sales. Given the economic importance, continued research and development activities for the overall safety of the industry are needed. AACE is uniquely positioned to support the research efforts that enhance economic competitiveness. The leading aviation research universities in the country are partnered with national laboratories such as Sandia National Laboratories and the Ames Laboratory to provide research solutions to industry defined problems. This is the real advantage—the industrial users and partners help define the needs and the preeminent research organizations in the world are partnering to work toward their shared results. Industry partners have defined the following goals for AACE research:

- Reduce failures by order of magnitude
- Improve efficiency of operations and support to reduce cost
- Reduce certification time and costs These goals were arrived at through the efforts of aircraft and engine OEMs, major U.S. airlines, and aviation systems manufacturers, working with Iowa State University, Northwestern University, Wichita State University, Ohio State University, and Sandia National Labs.

OPPORTUNITIES BUILT UPON EXPERIENCE

Economic and competitive forces are changing the way aircraft are developed, certified, and operated. These same forces impact the operational life span of the aircraft. Factors affecting the future of aviation include shorter design and certification cycle times, a shrinking (and retiring) workforce, and increased outsourcing and use of third party support. Preeminent FAA safety goals must be reconciled with industry business needs to fully address the challenges ahead for the aviation industry. The Airworthiness Assurance Center of Excellence, established in 1997, combined the talents of the Center for Aviation Systems Reliability at Iowa State University and the Airworthiness Assurance NDI Validation Center at Sandia National Labs with the capabilities of other major universities and industry partners. CASR and AANC have considerable experience in the development, validation, and implementation of inspection technologies. Building on that experience base, AACE is uniquely positioned to address the full range of safety and economic research needs of the government and the industry. Opportunities to apply the best available technology to the highest priority needs are in place.

Congress is strongly urged to continue their support for these critical safety and economic issues through funding for the Aviation Safety budget of the FAA. The Airworthiness Assurance Center of Excellence offers a unique opportunity for the gov-

ernment to work with industry on precompetitive aviation safety research to their mutual benefit and the benefit of the flying public.

- AACE is in place, and it is working.
- It is doing exactly what it was designed to do, and the need it serves is growing.
- It is providing demonstrable benefit to the aviation industry.
- It is a model of government, industry, and academic collaboration to address the overriding safety concerns of the public.
- It is a vehicle enabling the best minds to work on major concerns, and to do so while distanced from the competitive forces of the normal workplace.
- It should be strongly supported as it continues the successful performance of the work it was asked to do.

PREPARED STATEMENT OF THE FLIGHTSAFETY INTERNATIONAL

This is in support of the justification by the City of Vero Beach, Florida for \$5.2 million in funding from the FAA Facilities and Equipment fiscal year 2001 appropriations account to relocate and replace the Air Traffic Control Tower at the Vero Beach Municipal Airport.

URGENT SAFETY ISSUE

Air traffic controllers at the existing tower, built in 1973, have their visibility limited by obstructions for about 30 percent of the nearly 240,000 annual operations at the airport. For certain areas of the airport they have no visibility at all of aircraft ground movements.

Since 1973, the City has lengthened the main runway, improved the secondary runway, added a third runway, and developed the central and west areas of the airport. Vero Beach Airport traffic is projected to grow to 270,000 operations annually in the next few years.

At Vero Beach, FlightSafety International operates 90 aircraft that fly about 90,000 hours annually. Roughly 25 percent of the pilots trained at Vero Beach, or about 1,000 pilots annually, are from foreign-speaking countries worldwide who are being trained for international airlines and international general aviation. This situation demands the utmost in airport traffic control.

The existing tower is located just to the north of the main east-west runway. Landing aircraft approaching this runway from either direction after sunrise and before sunset are often difficult to see, particularly in hazy conditions. Furthermore inbound traffic from the south entering the landing pattern for either runway are equally difficult to see for the same reason. (See attached airport diagram.) The proposed location of the new tower, to the south of the east-west runway, will alleviate this potentially dangerous situation.

The present tower has no radar, and control by tower personnel of visual or instrument traffic can be daunting. With no approach control, the tower cannot release aircraft for takeoff or clear the instrument traffic for landing until visual contact is established.

The possibility of a mid-air collision is a very real danger despite the controllers' continuing valiant efforts.

FlightSafety International, a U.S.-owned company, operates over 40 Learning Centers around the world and is the largest provider of flight and simulator training in the world. The FlightSafety Academy at Vero Beach is the only location operated by the Company that provides ab initio pilot training.

RECOMMENDATION

We urge the Subcommittee to support the \$5.2 million in fiscal year 2001 funding from the FAA Facilities and Equipment Account for the construction of the Air Traffic Control Tower replacement at the Vero Beach Municipal Airport.

PREPARED STATEMENT OF THE AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES AND AIRPORTS COUNCIL INTERNATIONAL—NORTH AMERICA

Mr. Chairman, members of the subcommittee, we are pleased to offer this testimony regarding fiscal year 2001 appropriations for the Airport Improvement Program (AIP) and other appropriations-related issues on behalf of the American Association of Airport Executives (AAAE) and Airports Council International—North America (ACI-NA). AAAE is the world's largest professional organization representing the men and women who manage airports; ACI-NA members are the

local, state and regional governing bodies that own and operate commercial service airports in the United States and Canada.

Before looking forward to fiscal year 2001, we want to first offer our sincere appreciation to the subcommittee for its long-standing support of airports and its continued commitment to airport funding. The \$1.896 billion AIP obligation limitation for fiscal year 2000, which is now being released with enactment of recently passed reauthorization legislation, will undoubtedly make a big difference in helping tackle much needed safety, security, capacity and noise mitigation projects at airports nationwide.

These investments are critical to keeping pace with the significant growth in aviation activity, which is projected to explode from approximately 650 million passengers annually to more than one billion within a decade. The subcommittee deserves a great deal of credit for working to address these increasing demands, a task not easily accomplished given the inadequacy of the Administration's recent budget requests for AIP and in light of the subcommittee's obligation to other programs under its jurisdiction.

Despite the subcommittee's dedication to increasing AIP funding levels, much more is required from the federal government. According to the General Accounting Office, there is an annual \$3 billion gap between existing airport needs and available capital for investment. Continued under-investment of this magnitude is beginning to take a toll on the aviation system as evidenced by the significant delays experienced last summer and at numerous airports throughout the year.

In reality, those delays are only one symptom of a much deeper problem that threatens to cripple the nation's air transportation system, a system that Americans rely on to create economic growth locally and to compete internationally. In 1997, the National Civil Aviation Review Commission warned Congress that without prompt action, the United States' aviation system would hit gridlock shortly after the turn of the century, jeopardizing safety, harming the efficiency and growth of the domestic economy, and hurting the nation's position in the global marketplace.

Congress has taken action to secure additional resources for aviation as part of FAA reauthorization legislation. That bill, which was passed overwhelmingly by both Houses of Congress in March, significantly increases investment in FAA capital accounts, particularly AIP. We believe this increase in AIP funding is absolutely justified and in the best long-term interest of airports, the travelling public and the nation.

We commend the members of both the subcommittee and the full committee for the critical role you played in shaping the final compromise on the FAA reauthorization bill and for bringing the conference committee to its successful conclusion. In the end, the bill offered a fair and reasonable approach that provides desperately needed capital while ensuring that those funds are wisely spent. Among other things, the legislation provides important management changes at the FAA and maintains the critical role of the subcommittee and the full committee in maintaining oversight of the Agency.

Given the overwhelming needs of airports nationwide and with important safeguards in place, we believe it imperative that the subcommittee fund AIP at not less than the fully authorized \$3.2 billion level in fiscal year 2001. The increase in AIP to \$3.2 billion combined with a modest increase in the federal cap on locally imposed Passenger Facility Charges (PFCs) will help narrow the current airport funding gap and enhance the safety, efficiency and capacity of the nation's aviation system.

In addition, we urge you to carefully consider provisions in the reauthorization legislation that allow the subcommittee to shift funds from the facilities and equipment account to AIP, when appropriate. Although Administrator Garvey deserves high marks for gaining a better grip on the Agency's modernization program, it is clear that much remains to be done to ensure that scarce federal resources are wisely spent in this area. Given the "bang for the buck" that accompanies AIP expenditures, we believe that there may be instances when funds will be better spent for airport improvements.

We are aware of the concerns expressed by some about the strain the newly enacted FAA reauthorization bill may place on the FAA operations account and other federal transportation programs. While we are sympathetic to those concerns, we oppose shifting funding from AIP to other areas of the FAA's budget.

Unfortunately, efforts along those lines have already begun with the current year's funding of the administration of the FAA Airports Office from AIP and the President's proposal to do so again in fiscal year 2001 along with \$50 million from AIP for funding Essential Air Service (EAS). While we support full funding of both the Airports Office and EAS, we are adamantly opposed to raiding AIP for purposes for which the program was not intended to support.

The reauthorization bill acknowledges the importance of the FAA operations account in funding these types of programs and fulfilling the FAA's critical safety mission. The bill calls for funding the operations account at the President's requested level, to be paid for in part from the general fund, as has been the case historically. Since all Americans benefit from the aviation system, we believe a continued general fund contribution is appropriate and necessary.

We have trouble accepting the premise that FAA operations will somehow become abandoned with the enactment of the reauthorization bill. The operations account has grown significantly from \$3.8 billion in 1990 to nearly \$6 billion in fiscal year 2000, with most of the increases coming at the expense of the capital accounts, which have not enjoyed similar growth rates. The reauthorization bill simply stops the constant chipping away at the capital accounts in recognition of their importance to meeting future demands.

Further, we agree with the Department of Transportation Inspector General that the passage of the reauthorization bill should move the Agency forward in containing operations costs, developing a cost accounting system and developing a strategic business plan. Those efforts combined with the management reforms contained in the bill should produce increased efficiencies and cost savings in FAA operations.

One specific area for air traffic control cost savings the Inspector General has touched on is the FAA Contract Tower Program. In addition to providing approximately \$30 million in ATC savings, the program improves ATC safety, enhances regional airline service opportunities and increases economic productivity in smaller communities across the country. We appreciate the subcommittee's past support of this program, which continues to receive high marks from the IG.

We urge the subcommittee to continue its support of full funding (\$55.3 million) for the Contract Tower Program as requested in the President's budget request. We also ask for an additional \$5 million to be used exclusively for the continuation of the Contract Tower Cost-Sharing Program supported by the subcommittee last year.

As we approach the delay-prone summer season it is important to recall the role of airports in supplying the much-needed capital investment in infrastructure to help address the serious and worsening problem of delay. At the same time, there is significant investment necessary by FAA in the new technologies needed to modernize the National Airspace System.

Although FAA has acknowledged difficulties fielding advanced technologies, it is enjoying the support of the industry in successful programs such as Free Flight Phase I. Nevertheless, a reliable and adequate funding stream is essential if this success is to be repeated across the entire NAS modernization effort. We urge your support of the follow-on Free Flight Phase 2 projects. We also want to emphasize how important the satellite navigation programs are to our members' ability to increase capacity and safety at their airports.

Despite the recent setbacks in the Wide Area Augmentation System (WAAS), it is an essential tool to providing basic instrument approach procedures at many of our smaller airports with no approaches at all. WAAS will also provide important new safety margins by supplying vertical guidance on the many existing non-precision approaches where controlled flight into terrain has been a continuing threat. Development of WAAS should continue at a funding level commensurate with FAA's current implementation schedule.

The Local Area Augmentation System (LAAS) promises greatly improved navigation precision, which will be of tremendous value to our larger airports. Development of this program is being carried out by innovative Government-Industry Partnerships (GIP's) made possible by the FAA acquisition reform flexibility provided by Congress. In these GIP's, avionics and airframe manufacturers, airlines and airports are jointly developing the basic, Category I precision landing capability. However, in view of the delayed schedule for delivery of a Category I capability by WAAS, it is essential that this effort be accelerated. FAA needs sufficient funding to expedite their role in the development of LAAS: provision of timely standards and certification, development of the Category II/III LAAS system, and procurement of Category II/III LAAS at more than a hundred airports.

A final new technology of importance to airports is Automatic Dependent Surveillance—Broadcast Mode (ADS-B). When coupled with augmented signals from WAAS and LAAS, ADS-B holds significant promise for reducing delay. In last summer's Ohio valley trials, ADS-B demonstrated a real safety benefit by improving situational awareness. It also showed that aircrews were able to safely maintain existing visual separations, resulting in higher airport capacity, rather than adding a several miles margin, as is current practice.

When coupled with high precision signals from LAAS, ADS-B promises to revolutionize airport operations in instrument weather conditions. If controllers and pilots can "see" each other and the landing runway with accuracy of a few feet, as has

been demonstrated with LAAS, then the reduction in capacity at our member's airports during bad weather can be finally be addressed. We believe that independent simultaneous approaches to closely spaced parallel runways permitted by LAAS and ADS-B will solve the bad weather delay problem at some of our nation's most delay-prone airports. When coupled with the ability to "see" traffic on the airport surface (which several of our member airports have already installed in ARFF and operations vehicles), LAAS will provide a valuable tool for preventing the worst kind of runway incursions—a blunder into an oncoming airplane by a large air carrier aircraft.

Another area that merits the support of the subcommittee is the recently created Air Service Development Program, which requires DOT to establish a pilot program to help improve air service to communities not receiving sufficient air service. If fully funded (\$20 million in fiscal year 2001), this program will go a long way toward providing communities across the country with valuable assistance that will likely result in improved airline service at more reasonable prices.

This program will be particularly beneficial to many smaller communities that currently suffer from infrequent air service at high prices. These problems are not only an inconvenience for local travelers, they also hamper the ability of these communities to attract and maintain businesses and develop economically. As any local chamber of commerce will tell you, one of the first things any potential business asks when looking at a new site is the availability of reliable and reasonably priced air service.

The Air Service Development Program is designed to give communities or consortia of communities modest funding for worthwhile projects aimed at improving the current situation. Given the severity of the problem in many areas throughout the country and the promise this program offers in enhancing service and lowering prices, it is our sincere hope that you will move forward with full funding.

In the safety area, the newly authorized Wildlife Mitigation program and ATC Modernization pilot program will provide important safety benefits, and they deserve funding from your subcommittee.

Another area of concern for many airports is the recent decision by the FAA to reverse its decades old practice of paying below market rates for FAA facilities located on airport property, choosing instead to push airports to furnish space without cost. While airports are not averse to providing the FAA land for ATC facilities without cost, we feel strongly that the FAA should continue to pay reasonable rental rates for FAA space occupied in airport sponsor-owned buildings.

For smaller airports in particular, the potential loss of rental revenue—even at below market rates—will have a significant impact on their financial situation. This new interpretation is completely at odds with the requirement that airports have a fee and rental structure that make the airport as self-sustaining as possible. On one hand they are told by the FAA to be self-sufficient, and on the other they are told that they can no longer expect the Agency to help foot its own share of the bill, even for FAA facilities located on airport-owned property.

In addition to being a significant financial burden, this situation has become a cost-avoidance issue for the Agency at several locations across the country. Rather than building facilities appropriately located off airport property—such as TRACONS—the Agency is instead choosing to build on the airport, knowing that they can expect to get the land and use of the facility at no cost. Saddling airports with these burdens is unfair and unwise.

In light of the significant financial burden the proposed FAA policy change would impose on airports, it is our hope that the subcommittee will be willing to work with both the Agency and airports to find a solution that best serves both group's long-term economic interests. Continuing the long-standing policy in that regard, rather than applying a new standard that would allow the FAA to require airports to furnish space for buildings without cost appears to be the best option, in our view. Specifically, we ask you to include a general provision in this year's bill forbidding the FAA from expending any funds on the implementation or enforcement of new policy standards in this area.

Finally, we would like to raise our concerns about language included in last year's transportation appropriations legislation that limits FAA's multi-year leasing authority to five years. The shift to the five-year limit from the previous 20-year limit seriously hampers the ability of airports to gain long-term financing for FAA buildings given the short-term commitment. We hope you will revisit this issue and grant multi-year leasing authority up to the previous 20-year level.

There is great opportunity this year to provide America's airports with the resources they need to meet the significant challenges they face in enhancing safety, security, capacity, competition and noise mitigation. This subcommittee has been instrumental in leading us to this point, and we look forward to working with you,

the full committee and the staff to move forward. Thank you for the opportunity to provide this testimony.

PREPARED STATEMENT OF INVISION TECHNOLOGIES, INC.

BACKGROUND

Terrorism is a threat to National Security that requires constant vigilance. Acts of extreme cowardice, such as the downing of Pan Am flight 103, aimed at innocent members of a targeted entity are punctuated by extended periods of seeming inactivity. While public awareness of the specific acts of terrorism fades over time, our national responsibility never fades. With regards to Aviation Security, as one looks closer at the periods of apparent terrorist "inactivity", one finds a much different picture. Specific examples exist of foiled plans far more evil than ever anticipated, technical blunders that created apprehension opportunities, successful test cases that confirmed new vulnerabilities and nothing short of continued preparation by the terrorist enemy. Terrorists continue to advance their capability to murder U.S. citizens in the name of their cause. Therefore, at no time can we let our vigilance fade. We must always push to maintain or improve our readiness to anticipate, prevent and respond to thwart the menace of terrorism.

FUNDING

The tragedy of TWA 800, though thankfully not the apparent result of a terrorist act, served to create a call to arms in aviation security. Shortly after TWA 800, the GAO reported in Aviation Safety and Security on March 5, 1997 that the ". . . FAA is just beginning to purchase explosives detection systems to deploy at U.S. airports, although the Aviation Security Improvement Act of 1990 set an ambitious goal for FAA to have such equipment in place by November 1993." "The (Gore) Commission recommended that the federal government devote at least \$100 million annually to meet security capital requirements-leaving the decision on how to fund the remaining security costs to the National Civil Aviation Review Commission."

The "expeditious deployment" of FAA certified Explosive Detection Systems (EDS) was mandated and funded according to the recommendations of the Gore Commission on Aviation Safety and Security. Indeed, the mandate called for a security initiative involving multiple years at funding levels never before experienced. It marked the creation of a Security Equipment Integrated Product Team (SEIPT or IPT), staffed and managed by the FAA to include airline and airport participation thereby assuring industry access to the process. As a groundbreaking initiative in aviation security and considering the enormity of the task, consensus, efficiency and results were all hard fought successes.

However, some myths exist. Some four years after the Gore commission, one might think, 'the job is done!' Not so, in fact it has only just begun. Some four years after the Gore commission, one might think that InVision Technologies Inc., the primary manufacturer of certified EDS has enjoyed four consecutive years of expenditures at the rate of \$100 million per year for EDS equipment. This too is not so. In fact, in the year following the initial Gore Commission funding, no funds were available in the 1998 FAA F&E account for EDS. In the 1999 budget, it took an emergency supplemental to fund the recommended \$100 million. Not until the current 2000 budget has EDS or aviation security in general, been part of the regular funding of the F&E account.

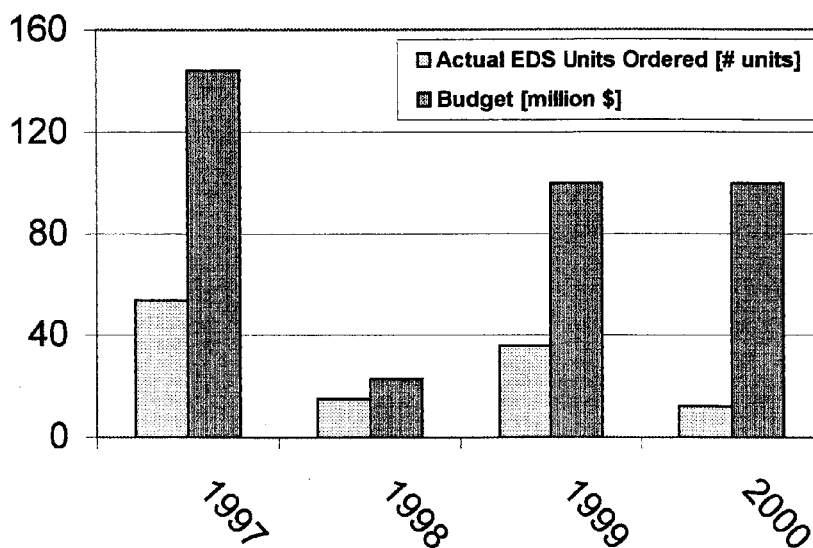

In addition, the portion of the annual funds actually spent to procure certified EDS has continually decreased. This is true for several reasons. The funding recommendation of \$100 million per year for EDS has been diluted by expenditures on other activities including K-9 teams, enhancements for existing passenger X-ray machines and hand-held "sniffers". The cost of integrating EDS products began to increase as equipment integration contractors learned from the system manufacturers about the planning requirements for integration, utilization and optimization. While this cost is significant and routinely underestimated it is more cost effective when the EDS system manufacturer is tasked to perform the integration work. Due to the decrease in funding, the equipment deployment goals of the Gore Commission, let alone the 1990 Aviation Security Act, have not been met. Too few bags at too few airports are being scanned today. The gap between the goal and the reality is staggering and grows each day that traffic to and from these airports increases.

It is time to change the direction of EDS funding. The FAA has a plan to implement a security baseline by the year 2004. At that time a small percentage of all bags will be scanned by certified EDS because the use of CAPS, an automated profiling system greatly reduces the quantity of bags that require certified EDS

scanning. Even with that, conservative estimates place the number of EDS units required at approximately 400. That means approximately \$100 million per year for budget years 2001 through 2004 will need to be spent on the EDS equipment alone and that achieves only about 5 percent of all bags being scanned! The task from that point forward is the implementation of a plan to move to 100 percent scanning of all bags. To accomplish both the security baseline and the prudent plan to move beyond the baseline, we must:

- Resolve to assure adequate funding to protect the public from the national security threat posed by terrorists.
- Spend funds intended for EDS, on EDS, in the most cost-effective way possible.
- Fund separately those programs that were not part of the assessed requirements to secure checked baggage.
- Understand that while their quest for competition is commendable, the FAA and Congress has failed to provide adequate funding to stimulate and enhance the productivity of a single EDS manufacturer, let alone provide the funding that can assure a healthy, competitive marketplace.

The chart below graphically illustrates the lack of sustained funding and acquisition of certified EDS.

TECHNOLOGY AND THE OPERATOR

Along with the funding issues mentioned above, the experience gained over the past few years help us determine the best path for system development currently underway and anticipated for the future. First, it is well understood that the security opportunity provided by certified EDS is significant. It is also understood that the role of the equipment operator, as verified through years of experience in check-point screening, is also crucial. Second, it is further understood that the perfect system would require no operator intervention, have a 100 percent detection rate and no alarms that require operator resolution. It is not likely that technology will produce this "silver bullet" capability any time soon. So, while the early criticism of EDS products was that they were not fast enough, the salient fact that emerges is, the validity of EDS as a technology solution is equally dependent on its performance in the reduction of alarms, as it is on detection and throughput. Therefore the FAA and Congress must remain vigilant to assure that certification standards are never compromised to allow for systems that will increase bag alarms, increase dependence on operator threat resolution and decrease end to end system performance.

To further substantiate the significance of FAA certification standards, it is well known that the FAA plans to reduce the threat quantity detection requirement in its standards. New intelligence is available everyday that directs the FAA in the establishment of standards and technology requirements that get the job done! If ma-

chines with non-certified False Alarm Rates (FAR) are considered deployable now, one can only imagine the negative impact on the aviation security system, if a technology that “misses the mark” of current certification requirements, is deployed and further erodes the nation’s commitment to certified EDS.

In the area of operator training and performance, while our knowledge base has increased, optimization remains elusive. Many factors exist, but recent congressional inquiry has identified and debated the issue of responsibility as an important factor. Should the responsibility to provide operators remain with the airlines, shift to the airports or become a government responsibility based on the aviation threat as a national security issue. As always, all points have supporters and detractors, but one thing for sure is that no current plan exists to accurately quantify the true potential of EDS technology with regards to delivered value.

As a solution, InVision urges the FAA and Congress to recognize the extensive experience InVision has gained domestically and internationally in the manufacture, integration and operator training requirements of certified EDS in checked baggage screening. Authorization and funding should be available to the FAA to contract with InVision to provide as a test case for a total “turnkey” solution. With airline/airport partners InVision plans to use its collective experience to optimize end to end system security. The turnkey solution requires InVision to provide operators, plan and implement equipment integration, provide the most cost-effective mix of systems from its family of products in a 100 percent checked baggage scanning initiative. This would allow the all parties to fully assess the true cost and ramifications of a true solution. This would provide the necessary data to understand the challenges we face after the attainment of the security baseline by 2004 and the progression towards the 100 percent screening by the end of the decade.

THE OPPORTUNITY

In spite of the difficulties faced in the mission to secure checked baggage, the FAA, Congress and the traveling public are currently provided more opportunity to advance the deployment of certified EDS than ever before. As of this writing, the FAA has contracted with InVision to provide a complete family of EDS products to satisfy the variety of application requirements in our US aviation system. InVision provides a family of EDS products covering a wide range of price/performance ratios assuring a competitive supply of certified equipment. The CTX 9000DSi is the fastest certified EDS in the world featuring the largest belt size and scanner opening in the industry making it perfect for integrated, high speed solutions, even if 100 percent scanning is necessary. The 5500DS remains the industry workhorse with more than 150 systems delivered worldwide. The newest member of InVision’s family of products, the CTX 2500 is the smallest, most cost-effective certified EDS available and is ideally suited to smaller airline operations with low throughput requirements. A truck mounted, mobile version of the 2500 is also available and will be in Washington for demonstration in the month of May. As always with InVision products, performance capabilities with regards detection and low false alarms are never compromised. To the benefit of all, as many as 180 systems are available under contract to expedite the attainment of FAA goals and to combat the menace of terrorism in checked baggage. This is an opportunity that should be adequately funded by Congress and expeditiously implemented by the FAA.

PREPARED STATEMENT OF THE AIR TRAFFIC CONTROL ASSOCIATION, INC.

The Air Traffic Control Association, Inc. (“ATCA”) is a professional association of forty-four years standing dedicated to advancement in the science and profession of air traffic control and aviation safety. Its membership is worldwide in scope, and represents all aspects of the air traffic control discipline, from air traffic control specialists and airway facilities technicians who operate and maintain the air traffic control system, to those individuals and companies who develop and manufacture the technology, equipment, and services which support the system, to the citizens, government agencies and airlines who use the system.

ATCA appears before you to urge increased funding for operations and capital improvement programs of the Federal Aviation Administration—activities that are fundamental to maintaining and improving the safety and efficiency of the national air transportation system.

At the dawn of a new millennium, the air transportation community is facing intensifying challenges, as well as unprecedented opportunities for improvements, in air traffic control and aviation safety. Among the most significant challenges—both domestically and globally—is relentless increase in the demand for aviation services which will require more and better facilities to satisfy.

At the same time, however, aviation infrastructure is in dire need of updating and improvement. Although this need has long been recognized, years of deficit economics, budget capping, belt tightening, down sizing, rationalizing, doing more with less, and just plain doing less have taken their toll. Aging ATC equipment is increasingly unreliable, expensive and difficult to maintain. Replacement and modernization projects, starved for resources, are extended or postponed, and the benefits of those improvements are delayed or foregone. Staffing and support resources are so lean that day to day operational needs are all-consuming, leaving little if any time or energy for exploring innovative, efficiency enhancing procedures and operating concepts.

Moreover, the effects of funding deprivation are cumulative. Expert personnel departing through retirement or attrition are very difficult to replace with people of equivalent expertise, especially when resources for employee training and development are scarce, and hiring freezes are the norm. Infrastructure improvement projects are repeatedly interrupted, revised, and re-baselined in conformity with artificial budget restraints; completion horizons recede; potential benefits dwindle relative to cost; and good projects become obsolete or are overtaken by events and scrapped. As refurbishment and improvement is postponed, aviation infrastructure continues to crumble, users and passengers more and more often are delayed and frustrated, and the job of making needed improvements gets bigger and more difficult. No one wants this—not the FAA, not aviation users, not the general public.

The good news, however, is that today's technology—high speed computers, intelligent software, realistic displays and simulation, satellites, advanced sensors and communications equipment—is bringing dramatic improvements to air traffic control. Science and human creativity pose few impediments. The real challenge is assuring that funding, both for the technology, and for the people and support services needed to implement it, is applied to aviation needs in a timely way, and in amounts sufficient to get the job done. A related challenge will be to devise ways and means for commercial, private and military aircraft operators to make corresponding avionics improvements in keeping with FAA's modernization timetable.

The Administration is requesting \$11.222 billion for FAA activities in fiscal year 2001, an increase of \$1.281 billion (11 percent) over the fiscal year 2000 enacted level. The Air Traffic Control Association urges the Congress to fund the Administration's request in full. This is the very least amount necessary to sustain the current level of activity. But more than that, the Association recommends that the Administration, Congress and the aviation community work together to increase the level of funding for FAA in fiscal year 2001 above the amount proposed, in an amount sufficient for FAA to really address the backlog of deferred needs, and to explore promising concepts and technologies for meeting aviation needs of the new century. ATCA states no position on how FAA needs should be accommodated relative to other budget demands, but the Association does strongly urge that budget relief be provided by some means.

The Administration is seeking \$6.592 billion in fiscal year 2001 for FAA Operations, \$698.8 million (11 percent) more than the fiscal year 2000 enacted level. This amount includes funding for 202 additional field maintenance staff, 64 new certification/flight standards staff, 35 oversight and assessment staff, and 94 security related staff. It also includes an increase of \$135.4 million to make operational new equipment being delivered to support the NAS.

This proposed increase, although significant, is not enough to sustain the current level of operations, much less ensure excellence for the future. Demands on FAA's Operations funding are multiple and growing. The Operations account pays for day-to-day provision of ATC services, maintenance of ATC and other facilities, certification and regulation, security, all administrative services, training, travel, and payroll and benefits related to virtually all FAA personnel. Needs in all of these areas are increasing in keeping with relentless growth in demand for aviation services, and it is important for FAA to be competitive for skilled personnel in a very robust job market. Additionally, accommodating the greater financial burden of a large union contract labor force is putting increased pressure on operations resources.

Moreover, years of austerity budgeting including buy outs, attrition and hiring freezes has depleted FAA's work force of its most experienced and expert staff. As new equipment and systems are delivered in the modernization effort, even the most experienced of staff require education and training. The need for significantly increased funding for personnel hiring and development activities including training has never been greater.

Additional activities such as realistic cost accounting, ATC system performance evaluation, and stepped up collection, analysis, sharing of aviation safety and operations data all require substantial new resources. Globalization of aviation requires increased safety surveillance, more information collection, and collaboration with

aviation partners around the world, requiring more personnel, more travel, and better tools for FAA personnel.

No one wants FAA to have to reduce the level or excellent quality of the services it now provides. After years of belt tightening, the aviation community has come to the conclusion that there is no margin left in the ATC system for more economizing. To the contrary, the aviation community universally agrees that FAA must undertake significant additional activities to satisfy predicted increases in the amount and complexity of air traffic foreseen for the future. Although ATCA cannot say precisely what amount of Operations funding in fiscal year 2001 would allow FAA to launch a full scale, vigorous effort to build capabilities adequate for 21st Century aviation, the proposed 11 percent increase over current funding clearly will not do it. The Association recommends that this increase be at least 20 percent in fiscal year 2001, and that FAA be required to provide the Congress with its estimated funding requirements unrestrained by budget caps.

The Administration is requesting \$2.495 billion for FAA Facilities and Equipment in fiscal year 2001, an increase of 22 percent over the fiscal year 2001 enacted level. Even this increase, although substantial, falls far short of the amount required.

Facilities and Equipment funds are used not only for ATC system modernization, but also for sustaining and refurbishing current equipment and systems, many of which will remain in place for the foreseeable future. In 1998, FAA estimated that modernization costs alone based on the National Aviation System Architecture Version 3.0 in effect at that time would be approximately \$3 billion per year.¹ Adding to this the annual costs of sustaining and refurbishing equipment already in use, it becomes clear that the true necessary level of F&E funding for FAA in fiscal year 2001 and for the foreseeable future is more in the order of \$4.0 billion per year. Because FAA's first priority is maintaining and replenishing equipment and systems already in use, funding below this amount necessarily will impact modernization activities in proportion to the shortfall. At the proposed \$2.5 billion level there would be very few modernization projects immune to down scaling, schedule stretch, or interruption.

The Administration is proposing significant amounts of funding for major projects which are central to modernization. Among these items are the Standard Terminal Automation Replacement System (\$178.7 million), which will replace antiquated ATC terminal equipment with uniform displays, workstations and software, which is needed to support future ATC requirements. The Wide Area Augmentation System (WAAS) (\$111 million) will make the Global Positioning System (GPS) useable for en route, terminal, non-precision, and near Category 1 precision approaches. \$105 million is proposed for Terminal ATC facilities replacement, \$198 million for Terminal Digital Radar (ASR-11), \$77.6 million for replacement of ATC Beacon Interrogator, and \$75.5 million for Terminal Automation. All of these are large undertakings with substantial resource requirements. They are absolutely necessary for meeting future needs and will deliver significant benefits both in terms of safety and efficiency. Funding requests for these items must be fully supported.

In addition to these major items, numerous smaller scale projects are vital to modernization. Not only must the Administration's funding requests for these items be fully funded, but additional resources in these areas could accelerate delivery of safety and efficiency benefits to the system. Among these classes of items are projects directed toward improving detection and management of air traffic on the airport surface (e.g. AMASS, ASDE-X), technologies to improve detection and dissemination of aviation weather information (WARP, NEXRAD, TDWR, LLWAS, ASOS, ITWS), communications improvements such as NEXCOM and the FAA Telecommunications Infrastructure project (FTI), and Flight Service Station improvements such as OASIS. Perhaps no one project promises more significant benefits for the price than Controller Pilot Data Link Communications (CPDLC), which provides controllers and pilots the option of communicating through data exchange as well as voice. In test and evaluation, this technology has proved the most effective, quickest way to relieve radio frequency congestion, improve safety and increase system capacity, while at the same time reducing controller workload, and merits strong financial support.

Equally worthy of full funding are FAA's efforts to accelerate implementation of technologies that will yield significant immediate operating benefits. This activity, designated Free Flight, is very important for maintaining user support for mod-

¹ Version 3.0 of the Architecture reflected a consensus view of the aviation community on ATC modernization needs and priorities for new operating capabilities in the National Airspace System. Subsequent versions of the Architecture were revised downward to conform with Administration funding projections for FAA in fiscal years 2000 and beyond, and therefore do not necessarily reflect total modernization needs or accelerated project schedules.

ernization, and to garner near term safety and efficiency benefits for both users and FAA. Products of this effort already successfully fielded include sharing of schedule and ATC data to reduce delay and improve system efficiency (CDM), better sequencing and metering tools for controllers in terminal areas (CTAS), better management of traffic on the airport surface (SMA), and a tool for evaluating airline routing requests for potential air traffic conflicts (URET). In Phase 2 of this activity, FAA plans to intensify implementation of CPDLC, and initiate Reduced Vertical Separation Minima (RVSM), both of which have positive implications for capacity enhancement. The Administration is seeking \$221 million for these activities. ATCA urges that this request be fully funded.

The Association also believes that there is a large, unrecognized financial burden to be borne as the transition period between the advent of new capabilities and the retirement of the old (e.g. GPS navigation replacing VOR/DME) stretch out beyond past assumptions. These costs will continue to be substantial and not subject to deferral.

In short, FAA cannot possibly maintain the present ATC system, refurbish current equipment, and continue full scale modernization/replacement of NAS equipment with the current level of funding. When only partial funding trickles down each year to crucial modernization projects, implementations get delayed, costs increase, priorities are readjusted constantly—in short, the entire effort suffers. ATCA urges the Congress to assure that funding enacted for FAA in fiscal year 2001 and future years take into consideration all of the agency's F&E requirements, and be sufficient to sustain a vigorous modernization effort over and above sustainment of current capabilities.

The Administration is requesting only \$184 million for Research, Engineering, and Development in fiscal year 2001. The Air Traffic Control Association estimates that the real RE&D funding needs of FAA are more in the order of \$500–\$600 million in fiscal year 2001 and future years.

The Association is concerned that funding levels for FAA RE&D over the past two years signal an alarming reversal of the Nation's historical commitment to robust aeronautical research and development, particularly R&D that keeps the United States on the forefront of advancements in the science of air traffic control. With more than half of this account earmarked by law for safety, security and related research, funding at the level the Administration proposes will provide very little at all for the RE&D associated with implementation of the NAS Architecture. In draft version 3.0 of the Architecture, FAA estimated this need alone to be \$348 million in fiscal year 1999, increasing to \$560 million in fiscal year 2000. Even these amounts understate the overall cost of aviation RE&D that should be occurring, because FAA activities traditionally have emphasized applied research. As with all organizations having a highly technical mission, significant funding should be appropriated for basic research—the type of inquiry that can yield breakthrough concepts and technologies that will bring significant long-term benefits. Without generous, continuous support for this type of activity, scientific advance of the quality the United States has heretofore achieved will become a thing of the past.

The Association acknowledges a new level of cooperation between FAA, NASA, DOD, and supporting organizations in achieving long term research goals, embodied in the National Research and Development Plan for Aviation Safety, Security, Efficiency, and Environmental Compatibility, issued November 1999. These efforts certainly are promising, but the Association does not envision them as substituting for a vigorous, focused R&D program within FAA. These multi-organization efforts will complement FAA programs, not substitute for them. Both NASA and DOD recognize that FAA's role as system architect dictates that FAA retain the leadership role in R&D activities feeding into the NAS.

The Administration proposes \$1.950 billion in fiscal year 2001, equal to the fiscal year 2000 enacted level, for Airport Improvement Grants. The Air Traffic Control Association urges the Congress to fund this request in full.

The traveling public increasingly experiences the inconvenience and frustration and of delays associated with inadequate system capacity. The need is becoming more and more urgent for more runways, taxiways, and other airport facilities, especially in growing communities. Localities, especially small communities, are hard pressed to pay for airport improvements that keep pace with the expanding aviation marketplace, and yet their residents need to be fully integrated with an economy that is increasingly global. Inadequacies in airport infrastructure, no less than failings in other elements of the air transportation system can become a limiting factor on trade, tourism and local economic activity. Systematic and healthy Federal investment in airport development is an essential component of a balanced plan to meet aviation needs in the future. Certainly, during this time of economic vigor, the Nation should be sustaining and increasing its investment in airport infrastructure.

There is a continuing need for the aviation community and policy makers to pursue consensus on a structure that will assure funding for aviation that is reliable and predictable, as well as sufficient in amount.

The Air Traffic Control Association has long advocated legislation that would separate the Airport and Airway Trust Fund from the unified Federal budget. Such legislation would improve the ability of the Federal government to fund aviation infrastructure improvement projects by eliminating any incentive to maintain positive balances in the trust fund to offset funding deficits in other programs. Moreover, it would facilitate more generous and reliable funding for capital improvements, helping managers plan investment on multi-year basis.

The Association also supports a substantial contribution—at least 25–30 percent—by the Federal general fund toward the costs of FAA Operations. This is right and fair because FAA is responsible not only for operation of the air traffic control system, but also for safety oversight, regulation, certification, and security. These latter activities are inherently government functions necessary to protect the public welfare. Moreover, the general public, even infrequent travelers, benefit from a National Air Transportation System which moves goods, products and mail efficiently and economically, stands ready to assist the Department of Defense in times of crisis, and supports the commerce and tourism that are fundamental to the Nation's robust economy. These benefits are more than worth the public dollars expended.

Research and discussion is ongoing among policy makers and the aviation community about whether additional structural reforms could make the provision of air traffic serves more economical and efficient. Views on these issues at this point are various and divergent, and no one perspective should be permitted to overcome others. ATCA is however confident that deliberations will converge on practical, achievable, consensus recommendations, provided the discussion continues to take into account the needs of all stakeholders, and remains candid, cordial, and positive.

At the dawn of the 21st Century there is great reason for optimism in aviation. Although the challenges are significant—expanding demand, pressing need for infrastructure expansion and modernization, advanced technology is available to meet those challenges. What is needed is consensus within the aviation community—the Administration, Congress, users, the traveling public—about the importance of modernization for meeting air transportation requirements of the future, and the political will and commitment to funding it. Let us fail of neither.

PREPARED STATEMENT OF THE INTERNATIONAL LORAN ASSOCIATION

On behalf of the International Loran Association (ILA), I am submitting this Statement for the Record and respectfully request it be added to the Senate Transportation Appropriations Subcommittee on Federal Aviation Administration fiscal year 2001 Appropriations Bill.

In recent years the Committee has supported numerous steps and provided more than \$25 million in additional resources to ensure the Loran-C system will be maintained and upgraded to meet ongoing navigation and timing needs and to meet national transportation and infrastructure safety objectives. In conjunction with work on the fiscal year 2001 DOT Appropriations bill, we urge the Committee to continue its critical support for Loran by providing \$30 million in fiscal year 2001 Federal Aviation Administration (FAA) Facilities and Equipment resources for Loran system improvements and revitalization to meet existing and future user requirements.

There has been considerable good domestic and international news about Loran recently, which I am sure the Committee will find of interest when considering our request. First, domestic Loran support from its millions of users and beneficiaries has continued to be strong and vocal. These individuals support Loran because it is a proven, cost-effective, multimodal system and because it is uniquely complementary to satellite technology. Users and groups as diverse as the Aircraft Owners and Pilots Association (AOPA), BOAT/US, and American Association of State Highway and Transportation (AASHTO) have stood firmly behind Loran for years, and even Motorola has written Secretary Slater to endorse Loran for telecommunications timing applications essential to the stable operation of our national infrastructure.

This widespread domestic support has also been validated by recent Loran cost/benefit and performance studies conducted by Booz-Allen & Hamilton (BA&H) and other independent groups for the DOT and FAA. These studies document Loran provides a very positive cost/benefit to the nation, and furthermore, new Loran technology offers important opportunities to complement and enhance satellite system performance. In fact, it is now generally acknowledged that GPS and Loran are actually synergistic, i.e. a combined system integrating both technologies can perform better than either alone, even with the planned augmentation programs.

The FAA has recognized the opportunity to combine GPS and Loran, and announced a new Loran program at the recent International Civil Aviation Organization (ICAO) meetings in Montreal. For the first time, the FAA will flight test new Loran technology and develop/evaluate a combined GPS/Loran receiver that offers tremendous promise for aviation applications. This news was announced almost immediately after installation of the Loran Aviation Blink System (ABS), which was completed upon direction contained in earlier Committee actions.

It is also important to note the United States Coast Guard (USCG) is well on its way to upgrading the Loran system. These improvements have included the purchase and installation of new Cesium clocks and the development of new monitoring receivers to improve performance of the system. These and other planned enhancements will not only assure improved Loran operations, but also reduce annual operations and maintenance (O&M) costs by about 44 percent.

Overall, the truly multimodal benefits Loran currently provides our nation are now broadly recognized and appreciated. For example, tens of millions of Americans use wireless telecommunications networks for functions as diverse as 911 calls, stock trades, and E-business, and these networks utilize GPS as the primary timing reference. In such applications, Loran provides a necessary backup timing reference of equal quality to GPS, and ensures continued function of these national infrastructure systems in case of GPS disruption.

The 1999 Federal Radionavigation Plan (FRP) explicitly states Loran will be continued. In further acknowledgment that Loran has an important role within the future global navigation and timing infrastructure, the DOT also requested that the Administration's fiscal year 2001 budget include \$30 million to continue revitalizing the U.S. Loran system. In this context, the Committee should be aware that the 1998 BA&H studies indicate the costs to upgrade or decommission Loran were virtually identical; now that significant upgrades have taken place due to the Committee's actions, decommissioning this national asset would actually cost more than the remaining upgrades.

Unfortunately, the Administration's budget includes a request for only \$20 million for Loran modernization, but the ILA hopes the Committee remains convinced of the long term cost, performance and safety benefits the \$30 million will provide. Once the upgrades are complete, the entire annual Loran O&M cost is expected to total \$15 million, and years of operational experience substantiate that estimate. This is a remarkably small cost for such a valuable national asset—some even refer to Loran as a national insurance policy—and represents less than 0.04 percent of projected DOT budgets.

Internationally, the Loran situation looks even brighter, and I am pleased to report that future US exports of Loran-based products should be able to address substantial global markets. For example, Europe is proceeding with the distribution of differential GPS information using their Loran system (i.e. the Eurofix system). A European initiative has been formed entitled Global Augmentation for Satellite Systems (GAUSS), and consists of a number of European Union (EU) government officials, European manufacturers, and user groups. This GAUSS initiative will support the global integration of Loran with satellite systems, and assist in opening major new markets in Europe, Russia, and Asia. I also expect GAUSS will help to grow international GPS markets for US industry, as integrated GPS/Loran systems provide local autonomous control for one part of the system, and alleviate international concerns with U.S. control of GPS signals.

Another major international event was a March 22–23 Loran meeting in Bonn, Germany that was organized by the German Institute of Navigation and sponsored by the German Ministry of Transport, Building, and Housing. Government and industry representatives from 15 European countries and the US attended the conference, and interest in Loran and private/public partnerships to develop systems was extremely high. In addition, it is virtually assured the United Kingdom will now join the Northern European Loran System (NELS), and discussions with Italy and other countries will commence shortly.

In further support of prior Committee actions and increased funding for upgrades, I am also pleased to convey Loran is now expected to play a major role in US telecommunications exports to China. China has recently opened its markets to US telecommunications technologies, but did not want those systems dependent on GPS. As indicated above, GPS is extensively used as the primary timing reference to synchronize vast telecommunications networks in the US, where Loran is often used as a backup to GPS. Since Loran can perform that same role indefinitely, it plays a fundamental role in supporting our national infrastructure and ensuring continuity of service. However, China also has a modern Loran system, so Loran can replace GPS in this essential role and simultaneously support U.S. exports and trade balance. Exports of U.S. telecommunication equipment based on Loran as the

primary timing reference are expected to total a half billion dollars in 2000 alone, with much greater future potential.

In summary, the last two years have been extremely good for Loran, and with the Committee's help, the next decade looks much better. Simply continuing the Loran upgrade program will not only save millions of future taxpayer expenditures, but moreover, create substantial domestic and international business opportunities for US companies. Perhaps most importantly, upgrading the Loran infrastructure will ensure our essential national navigation/timing infrastructure, which literally affects nearly all Americans today, can continue to function in case of a GPS failure, regardless of the cause. The Committee's support will establish Loran as a national insurance policy for all Americans, and at \$15 million annually, this policy could not be more cost effective.

In conjunction with your work on the fiscal year 2001 DOT Appropriations bill, we respectfully urge the Committee to continue its critical support for Loran by providing \$30 million in fiscal year 2001 Federal Aviation Administration (FAA) Facilities and Equipment resources for Loran system improvements and revitalization.

PREPARED STATEMENT OF THE HELICOPTER ASSOCIATION INTERNATIONAL

The Helicopter Association International (HAI) submits this statement to Congress to add its unqualified support for Loran-C navigation infrastructure. HAI is the professional trade association for the civil helicopter industry. Its 1,500-plus member organizations and 1,400-plus individual members, in more than 70 nations, safely operate more than 5,000 helicopters approximately 2 million hours each year. HAI is dedicated to the promotion of the helicopter as a safe, effective method of commerce and to the advancement of the civil helicopter industry.

Every day in the United States, helicopters save lives. Because of their unique flight capabilities, rotorcraft are used extensively for public safety missions, natural resource management, energy exploration, security transportation, emergency medical evacuation, law enforcement, and for numerous other functions which add tremendously to America's quality of life.

The Loran-C signal has been used extensively by both commercial and government helicopter operators. The rotorcraft industry has invested millions of dollars in navigation equipment that depends on the Loran-C signal. This fact is a bold testament that Loran-C is effective and reliable. Loran-C is a companion to the future navigation system of U.S.-GPS. It is important to recognize that the Loran-C signal is qualitatively different from the GPS signal in these significant ways:

- GPS is a straight "line-of-sight" signal whereas Loran-C signals are stronger and follow the curvature of the earth and its topography. This is why Loran-C is perfectly suited not only for ships at sea level, but for low-altitude aviation operations.
- GPS can be lost due to aircraft position or Department of Defense needs. By contrast, Loran-C is operated by the Department of Transportation.
- GPS is a space-based system; maintenance requires multi-million-dollar missions to repair. Loran-C is a ground-based system; technicians drive themselves to the equipment.
- Ionospheric phenomena affect each system differently. Thus while one system may be unusable the other is usually available.
- Not only is Loran-C supplementary to GPS, it is capable of serving as a fully independent backup system.

These qualities make Loran-C the perfect compliment to GPS. HAI fully supports GPS-based navigation as the principle navigation source with Loran-C as a supplemental and backup system. GPS, WAAS, and LAAS also will contribute substantially to helicopter safety and efficiency, thus enabling them to conduct more life-saving missions, particularly in marginal weather conditions. HAI envisions a future in which aircraft use inter-operable navigation systems that function by incorporating both GPS and Loran-C signals. When events of nature or politics result in loss of the space-based signal, even for an isolated region of airspace, Loran-C can sustain aviation operations. But with the proven performance of Loran-C, it is fully capable of supporting aviation operations, including the public safety missions of helicopters.

HAI urges Congress to fully support Loran-C navigation infrastructure. Sufficient funds should be made available for both maintenance and performance enhancement of this time-proven system which is uniquely adaptable and beneficial to cutting-edge technology. For more information, please contact Bill Wanamaker, HAI Senior Congressional Liaison at (703) 683-4646.

PREPARED STATEMENT OF THE UNIVERSITY CORPORATION FOR ATMOSPHERIC
RESEARCH

On behalf of the University Corporation for Atmospheric Research (UCAR) and the university community involved in weather and climate research and related education, training and support activities, I submit this written testimony for the record of the Senate Committee on Appropriations, Subcommittee on Transportation.

This year UCAR, a university membership consortium composed of 63 North American institutions that grant the Ph.D. in atmospheric, oceanic, and related sciences, celebrates its fortieth anniversary of scientific discovery and university partnerships. The UCAR mission is to support, enhance, and extend the capabilities of the university community, nationally and internationally; to understand the behavior of the atmosphere and related systems and the global environment; and to foster the transfer of knowledge and technology for the betterment of life on earth. UCAR is a non-profit, Colorado-based corporation that manages and operates the National Center for Atmospheric Research (NCAR) and the UCAR Office of Programs (UOP). It is supported by the National Science Foundation (NSF) and other federal agencies including the Federal Aviation Administration (FAA), the National Oceanic and Atmospheric Administration (NOAA), the National Aeronautics and Space Administration (NASA), the Department of Energy (DOE), the Environmental Protection Agency (EPA), and the Department of Defense (DOD).

According to the National Transportation Safety Board, approximately 35 percent of aviation fatalities occur in weather-related accidents. Last year almost 72 percent of recorded commercial flight delays were caused by weather. To achieve the federal government's goals of reducing fatal accidents by 80 percent and delays by 20 percent, improved weather forecasts and dissemination become critical. Regarding the fiscal year 2001 budget for the Federal Aviation Administration, I would like to comment on aviation weather research, an extremely important initiative to our nation and the flying public:

Within the FAA's Research, Engineering and Development (RE&D) account, I urge you to support the request of \$28 million for the FAA's Weather Program. This is an increase of \$8 million over fiscal year 2000 that will support a number of research programs within universities and laboratories. Although much progress has been made, weather today continues to be a major factor in causing aviation delays and safety hazards. The FAA's aviation weather program focuses on conducting applied research in partnership with the weather research and user communities, and in transferring advanced weather detection and prediction algorithms into operational use. The proposed increase would support such new initiatives as hazardous weather forecasting and the establishment of a national ceiling and visibility program. This increase in funding also reflects strong support across the entire user community for the broad focus and effectiveness of this critical safety research.

NCAR, funded in large part by the National Science Foundation (NSF), receives FAA Weather Program support to apply NSF-funded weather research to aviation safety problems. NCAR's Research Applications Program (RAP) conducts research and develops products for the aviation industry and airports by utilizing NCAR and university community meteorological research results and technology. During the past 15 years, the work of RAP and collaborating universities and industries has resulted in major improvements to the safety of airports and aircraft in the United States. FAA sponsored programs have improved weather information for pilots, dispatchers, and controllers through research and the development of technology related to the hazards of thunderstorms, wind shear, turbulence, en route icing and ground deicing, en route turbulence, terrain-induced turbulence, and in-flight visibility.

The Aviation Digital Data Service (ADDS) is just one example of the FAA funded weather aviation technologies being developed at RAP to enhance aviation safety. Available on the Internet (at <http://adds.awc-kc.noaa.gov/>), ADDS provides pilots, dispatchers and air traffic control with real-time digital and graphical analyses of weather data, forecasts, and observations of flight weather variables. An inter-agency effort, it is being developed through a cooperative effort between RAP and the National Oceanic and Atmospheric Administration (NOAA).

On behalf of UCAR, as well as our nation's frequent flyers, I want to thank the Committee for the important work you do for U.S. scientific research, education, and training. I appreciate your attention to the recommendations of our community concerning the fiscal year 2001 budget.

PREPARED STATEMENT OF THE CITY OF VERO BEACH, FLORIDA

This statement, in conjunction with work on the fiscal year 2001 Department of Transportation and Related Agencies Appropriations Bill, seeks your support and the support of the Committee for \$5.2 million in funding from the Federal Aviation Administration (FAA) Budget for construction of a replacement Air Traffic Control Tower at the Vero Beach, Florida Municipal Airport as an urgent aviation safety initiative.

This is a facility that is operated by the FAA and staffed with FAA controllers. The good news is that we are pleased that the FAA supports this project and much work has already been accomplished on the project. The bad news is every time we seem ready to get construction funding our project is delayed.

We are compelled to seek your help because this is an urgent, long overdue aviation safety project and it is the most important safety enhancement that can be made at our airport to meet current and anticipated future user requirements.

VERO BEACH AND THE TREASURE COAST

Vero Beach is located along the East Coast of South Florida in an area known as the Treasure Coast. The area was named Treasure Coast because of the Spanish galleons sunk along the coast by hurricanes, but we like the name because the area is a true "treasure" to the local residents.

We are the home of the Los Angeles Dodgers Spring Training facility, the Vero Beach Disney Resort, and other well-known business ventures. Vero Beach is a conservative community made up of working professionals, young families, long-time residents, retired business owners, and others who enjoy the lifestyle that South Florida has to offer. Corporate executives have located homes and businesses in Vero Beach both because of our quality of life and because of our access to major metropolitan areas in Central and South Florida.

VERO BEACH MUNICIPAL AIRPORT

The airport is owned and operated by the City of Vero Beach and located in the heart of Indian River County, close to major highways and modern business infrastructure. There are over 110 businesses located at the airport, inside our Airport Industrial Park, and surrounding the commercial center, and about 250 aircraft are based at our facility. A recent update to our last economic study indicates that businesses at the airport contribute almost \$300 million annually to the local economy. Our two largest aviation businesses, The New Piper Aircraft, Inc., and FlightSafety International, Inc., contribute significantly to our being a very busy general aviation airport.

According to the FAA's Terminal Area Forecasts for fiscal year 1998, traffic at Vero Beach has grown from about 180,000 to nearly 240,000 operations annually in recent years, indicating that operations at the facility may rank it among the top 15 percent of towered airports in the United States. In fact, based on the FAA data, our airport—which has no radar—has become the second busiest general aviation airport in Florida and future traffic growth is estimated to reach 270,000 operations annually.

We are very fortunate and delighted that our airport is headquarters for The New Piper Aircraft manufacturing facility and its workforce of more than 1200 employees. Piper is a great partner with the city, and an important economic asset to our community with its payroll of about \$42 million annually.

Also important—and it cannot be overemphasized from a general aviation safety perspective—our airport is the home of the busiest flight training organization in the world. FlightSafety International has 42 locations worldwide, and they train over 65,000 pilots and mechanics per year. Their largest and busiest flight school is at Vero Beach, with a staff of more than 250 employees. Moreover, Vero Beach is unique among all the FlightSafety training facilities because ours is the only location where aircraft—not just simulators—are utilized for training. The company operates a fleet of more than 90 aircraft, which are logging nearly 90,000 hours of student flight training annually. Nearly 1000 international airline cadet and other student pilots from all over the world are taught and trained by FlightSafety every year at Vero Beach, requiring constant vigilance and stringent air traffic control.

Officials from both Piper and FlightSafety have asked that their support for this request be conveyed to the subcommittee. The presence of these two great aviation companies in Vero Beach has been of enormous importance to our community and our airport.

We are also proud of the fact that Vero Beach has enjoyed a long-standing partnership with major league baseball. The Los Angeles Dodgers baseball organization

has, since 1948, maintained close ties to the community, and the Dodgers call Vero Beach home for its extensive spring training operations and facilities, which are practically within walking distance of the airport.

TOWER CONSTRUCTION FUNDING IS ESSENTIAL

We hope our testimony will help convince you and other members of the subcommittee about the need and strong justification for funding this essential aviation project.

At our airport we have an outstanding safety record. For the past nine years we have achieved a perfect record in FAA safety inspections; zero discrepancies on each FAA evaluation. A large measure of the credit for the outstanding safety record goes to the extremely dedicated and very experienced career FAA controllers working in Vero Beach. They are doing an exemplary job at our current tower facility under some very difficult conditions.

There is virtually unanimous agreement in our community among pilots, controllers, airport officials, and airport tenants, government officials and others interested in aviation that a new tower is an essential safety priority for the airport.

Because the modern new tower structure will be considerably taller than the present facility, we even took the important step of gauging, and ultimately winning, community and public support for the FAA tower replacement project through a public referendum that produced 84 percent voter support.

Specifically, we are seeking support from the Appropriations Committee for: Fiscal year 2001 funding of \$5.2 million from the FAA Facilities and Equipment (F&E) Account for the construction phase of a replacement Air Traffic Control Tower at the Vero Beach Municipal Airport as an essential aviation safety priority.

EXISTING TOWER OBSOLETE AND INADEQUATE

The existing tower has been in use since 1973 and simply cannot accommodate current or anticipated aviation safety, user and air traffic controller requirements.

The structure is obsolete, rusting, continually leaks water during rainy weather, equipment space is cramped, the tower cab is inadequate for new technology or equipment, electronic and electrical systems are outdated and the communications system is aging.

Because of continuing airport growth and development over the past 25 years, controllers are limited by obstructed visibility for about 30 percent of our total annual operations and they have no visibility at all of aircraft ground movements in certain areas of the airport.

All the training done by FlightSafety International makes our airport one of the busiest training facilities in the world. It is noteworthy that foreign speaking students comprise about 25 percent of the hundreds of airline cadet and student pilots that are trained at Vero Beach every year. A circumstance creating communications and other challenges that demand constant caution, care and attention.

It is significant that the FlightSafety staff, working in close coordination with our local controller workforce, also has a spotless safety track record. Another remarkable example of the high level of standards maintained by aviation professionals working at our airport.

Finally, there is an increasingly heavy volume of business and corporate aviation traffic at the airport in the winter as pilots try to avoid possible delays and congestion at other South Florida airports. Then, again in the spring because of spring training baseball activities at the Dodgers complex.

PROJECT STATUS

The FAA, in 1988, first identified an aviation safety need for a new Air Traffic Control Tower at the Vero Beach Municipal Airport as a result of growing traffic, increased line-of-sight problems caused by airport development, human factors issues for controllers, and other technology and modernization issues.

We have worked hand-in-hand with FAA Southern Region officials and others since that time to advance this project and, as previously mentioned, the FAA fully supports the project.

The FAA included a request for the tower replacement in a budget request more than five years ago and began project funding in fiscal year 1996. The planning at that time contemplated that tower construction would start in 1998 with a commissioning date expected in 2001. All tasks including engineering, design, site work and an environmental review have been completed. Since then, funding of the construction phase of the project has been deferred because of other priorities. It was first deferred until 2000 and then, this past November, we were informed that construc-

tion will not begin until 2002 and the new tower will not be commissioned until 2005.

CONCLUSION

We have tried to be patient and we understand the difficult budget choices that have to be made by the FAA, but pilots, controllers, airport and government officials all believe there is an increasingly urgent aviation safety requirement for a new Air Traffic Control Tower at this extremely busy general aviation airport.

You and your colleagues on the Appropriations Committee have consistently supported steps and added considerable resources to the FAA Budget to accommodate identified general aviation priorities like ours that promise to enhance aviation safety.

The City of Vero Beach, airport staff, and all who share responsibility for aviation safety at and around our airport are equally focused on the goal of enhancing aviation safety in view of anticipated future traffic growth estimated to reach about 270,000 operations annually at the facility.

We stay in constant communication and discussions with the FAA staff in the Southern Region. We collaborate with pilots, controllers and many of our tenants and concessionaires to keep a close eye on opportunities to find any additional aviation initiative that will offer constructive, cost-effective benefits.

At the same time, we will continue to do all possible to be responsive to expressed needs and concerns in our community with respect to airport issues.

Completing our new tower construction project, promises to substantially enhance aviation safety, capacity and efficiency at our airport; it has the full support of pilots, controllers, the community, city and airport officials, the FAA and others interested in aviation and; it is a prudent, cost-effective use of FAA resources that warrants your support.

We respectfully urge the Committee to fully support our request for \$5.2 million in fiscal year 2001 funding from the FAA Facilities and Equipment Account for the construction phase of the Air Traffic Control Tower replacement project at the Vero Beach Municipal Airport.

FEDERAL HIGHWAY ADMINISTRATION

PREPARED STATEMENT OF THE CALIFORNIA INDUSTRY AND GOVERNMENT CENTRAL CALIFORNIA OZONE STUDY (CCOS) COALITION

Mr. Chairman and Members of the Subcommittee: On behalf of the California Industry and Government Central California Ozone Study (CCOS) Coalition, we are pleased to submit this statement for the record in support of our fiscal year 2001 funding request of \$250,000 from the Department of Transportation (DOT) for CCOS as part of a Federal match for the \$8.6 million already contributed by California State and local agencies and the private sector.

Ozone and particulate matter standards in most of central California are frequently exceeded. In 2003, the U.S. Environmental Protection Agency (U.S. EPA) will require that California submit SIPs to for the recently promulgated, national, 8-hour ozone standard. It is expected that such SIPs will be required for the San Francisco Bay Area, the Sacramento Valley, the San Joaquin Valley, and the Mountain Counties Air Basins. Photochemical air quality modeling will be necessary to prepare SIPs that are acceptable to the U.S. EPA.

Central California Ozone Study (CCOS) is designed to enable central California to meet Clean Air Act requirements for ozone State Implementation Plans (SIPs) as well as advance fundamental science for use nationwide. The CCOS field measurement program will be conducted in the summer of 2000 in conjunction with the California Regional PM10/PM2.5 Air Quality Study (CRPAQS), a major study of the origin, nature, and extent of excessive levels of fine particles in central California. CCOS includes an ozone field study, a deposition study, data analysis, modeling performance evaluations, and a retrospective look at previous SIP modeling. The CCOS study area extends over central and most of northern California. The goal of the CCOS is to better understand the nature of the ozone problem across the region, providing a strong scientific foundation for preparing the next round of State and Federal attainment plans. The study includes six main components:

- Developing the design of the field study (task already underway)
- Conducting an intensive field monitoring study, scheduled for June 1 to September 30, 2000
- Developing an emission inventory to support modeling
- Developing and evaluating a photochemical model for the region

- Designing and conducting a deposition field study
- Evaluating emission control strategies for the next ozone attainment plans

CCOS is directed by Policy and Technical Committees consisting of representatives from Federal, State and local governments, as well as private industry. These committees, which managed the San Joaquin Valley Ozone Study and are currently managing the California Regional Particulate Air Quality Study, are landmark examples of collaborative environmental management. The proven methods and established teamwork provide a solid foundation for CCOS. The sponsors of CCOS, representing state, local government and industry, have contributed approximately \$8.6 million for the field study. In addition, CCOS sponsors will provide \$4 million of in-kind support. The Policy Committee is continuing to seek additional funding (\$9.0 million) for a future deposition study, data analysis, and modeling. California is an ideal natural laboratory for studies that address these issues, given the scale and diversity of the various ground surfaces in the region (crops, woodlands, forests, urban and suburban areas).

There is a national need to address national data gaps and California should not bear the entire cost of the addressing these gaps. National data gaps include issues relating to the integration of particulate matter and ozone control strategies. The CCOS field study will take place concurrently with the California Regional Particulate Matter Study—previously jointly funded through Federal, State, local and private sector funds. Thus, CCOS is timed to enable leveraging of the efforts for the particulate matter study. Some equipment and personnel can serve dual functions so that CCOS is very cost-effective. From a technical standpoint, carrying out both studies concurrently is a unique opportunity to address the integration of particulate matter and ozone control efforts. CCOS will also be cost-effective since it builds on other successful efforts including the 1990 San Joaquin Valley Ozone Study. To effectively address these issues requires federal assistance and CCOS provides a mechanism by which California pays half the cost of work that the federal government should pursue.

For fiscal year 2001, our Coalition is seeking funding of \$250,000 from DOT through highway research funds. DOT is a key stakeholder because federal law requires that transportation plans be in conformity with SIPs. The motor vehicle emission budgets established in SIPs must be met and be consistent with the emissions in transportation plans. Billions of dollars in federal transportation funds are at risk if conformity is not demonstrated for new transportation plans. As a result, transportation and air agencies must be collaborative partners on SIPs and transportation plans. SIPs and transportation plans are linked because motor vehicle emissions are a dominant element of SIPs in California as well as nationwide. Determining the emission and air quality impacts of motor vehicles is a major part of the CCOS effort. In addition, the deposition of motor vehicle emissions and the resulting ozone is a nationwide issue.

Thank you very much for your consideration of our request.

PREPARED STATEMENT OF THE COUNTY OF SAN BERNARDINO, CA

Honorable Chairman Shelby and members of The Subcommittee on Transportation and Related Agencies Appropriations, we appreciate the opportunity to present our Application for Grant funding for the Etiwanda Interchange Improvements under the National Corridor Planning and Development Program and Coordinated Border Infrastructure Program—Implementation of the Transportation Equality Act for the 21st Century. We are seeking with this Application a Grant of \$10,000,000 to be applied to the \$5,949,100 in private match from the Kaiser Commerce Center which equates to 37 percent. When funded, the re-construction of the Etiwanda/Valley Boulevard, I-10 Interchange and significantly enhance the overall safety of the existing interchange, as well as provide a much needed 1,276 stall truck stop to accommodate the 43,000 tractor trailer trucks that are presently converging on the I-10 /I-15 interchange on a daily basis.

This project is presented for consideration based upon eligibility Criteria number 5 as presented in the Federal Register. Criteria 5 relates to “construction after review by the Secretary of a development and management plan for the corridor or useable section of the corridor”. The request contained within this application is for construction funding for a “useable section” of the I-10 corridor (Congressional High Priority Corridor Number 34).

The project presented will be developed in conjunction with the adjoining land to the north of the interchange. Two land uses will be constructed which when combined meet all of the selection Criteria set forth in the Federal Register. A 200 acre multi-modal rail served distribution complex is planned to be constructed along with

a 75 acre Truck Plaza offering 1,276 trucks and drivers cargo safety and drivers rest.

With the project's proximity to the I-15 /I-10 interchange (1 mile east on I-10) cargo can be moved by rail and truck from Mexico and the Ports to regional and national destinations. Growth projections for Southern California point to significant increases in the amount of goods that are expected to be moved within and through the region. Projects such as this will aid in relieving congestion and improving the time it takes to move these goods. This is another piece of the infrastructure required to accommodate current demands as well as the projected future needs of Southern California.

In addition, this project provides a significant local/private match of 37 percent of total construction costs to meet the goal of maximum leveraging of Federal funds. Since this is a single project the funds can be quickly obligated with construction commencing in early 2001 and completion by the Spring of 2002, while requiring no additional Federal funding.

The project is in the state of California, County of San Bernardino, and lies within the 42nd Congressional District of the late Congressman George Brown Jr. and the newly elected Congressman Joe Baca. This was a project of special importance to the late Congressman Brown and Congressman Baca is enthusiastically endorsing the reconstruction of the Etiwanda Interchange. Additionally, Senators Dianne Feinstein and Barbara Boxer enthusiastically support the reconstruction of this critical interchange.

PROJECT OBJECTIVES

The project objectives are to: (1) Improve operational efficiency at the existing Etiwanda Avenue Interchange and Valley Boulevard Ramps on I-10; (2) Reduce weaving conflicts on Etiwanda Avenue over I-10 and on the I-10 collector-distributors roads under Etiwanda Avenue; (3) accommodate projected traffic growth due to changes in land use on Kaiser West End Properties north of I-10; (4) minimize effects of construction activities on I-10 traffic; and (5) minimize disruption of existing trucking operations along Etiwanda Avenue and Valley Boulevard.

The project will be constructed concurrent with the development of the adjacent properties to the North known as the Kaiser Commerce Center. The Kaiser Commerce Center will provide a major multi-modal industrial complex served by both major railroads in this region (the BNSF and UP railroads), as well as provide a much needed truck plaza facility offering rest and safety to approximately 1,276 trucks per night.

PROPOSED WORK

The project will reconstruct the Interstate Route 10/Etiwanda Avenue Interchange from the existing four-quadrant full-cloverleaf interchange to a Partial Cloverleaf "A" configuration. The improvement also included realignment of existing Valley Boulevard further north. The existing Valley Boulevard on- and off-ramps would be reconstructed to meet the realigned Valley Boulevard at a new local road, "lag Haul Road" The proposed westbound on-ramp would be elevated over the westbound I-10 Etiwanda Avenue off-ramp. The eastbound exit ramp to Valley Boulevard under I-10 would be reconstructed to provide standard vertical clearance. The proposed improvement would utilize both a realigned Valley Boulevard ramp system and improvements at the Etiwanda Avenue Interchange with I-10, as described above. This configuration would provide easy entrance and exit movements to the area north of I-10 west via the former Valley Boulevard ramps, newly realigned to Slag haul Road. Access to and from I-10 east would be provided via improved Etiwanda Avenue interchange loop ramps.

The project includes the following detailed components:

Partially Reconstruct the Etiwanda/I-10 Interchange.—This component would include the conversion of the existing four-quadrant full-cloverleaf interchange to a two-quadrant partial cloverleaf design.

Widen Etiwanda Avenue North of I-10.—Etiwanda Avenue from the I-10 interchange north to the intersection of Valley Boulevard would be widened to three travel lanes in each direction plus double left-turn lanes at intersections. This widening would be provided to improve weaving conditions for traffic entering and exiting I-10.

Realign and Extend Valley Boulevard.—This component would include reconstruction of Valley Boulevard from east of the UPRR spur track and extend the road west to connect with the realigned I-10 ramps and a future north-south roadway. The relocated Valley Boulevard would be elevated over the Union Pacific Railroad Spur

and the San Sevaine Flood Control Channel, thus significantly improving traffic/railroad safety. Two structures would be included in this segment:

Valley Boulevard Overhead would carry six lanes of traffic, plus a median, sidewalks and traffic barriers over the Union Pacific Railroad corridor.

Valley Boulevard Concrete Box Culvert would carry six lanes of traffic, plus a median, sidewalks and traffic barriers over the San Sevaine Flood Control Channel.

Valley Boulevard would be extended to Etiwanda Avenue, providing a new arterial street parallel to I-10. This alignment would coincide with a future relocation of Ontario Mills Parkway to ultimately provide proper spacing on intersections. (The Valley Boulevard extension from Slag Haul Road to Etiwanda is not part of this project. Kaiser Ventures Inc. will construct this segment as part of the development of the Kaiser Commerce Center. Non-Federal funds will be used to construct this segment.) This extension would provide the major east-west connection for sub-regional traffic and would provide access to properties abutting I-10.

Reconstruct the Westbound Etiwanda/Valley Ramps to and from I-10.—A major component of the project would be the reconstruction of the existing Valley Boulevard ramps to and from I-10 west to become access ramps to and from Slag Haul Road.

Slag Haul Road On-Ramp Separation would carry one lane of traffic, plus shoulders and traffic barriers over the Etiwanda Avenue Off-Ramp from westbound I-10.

Construct and Eastbound Auxiliary Lane on I-10.—In order to improve weaving conditions between I-15 and Etiwanda Avenue, a new 3.6m (12 ft.) wide auxiliary lane would be provided between the I-15 on ramp to eastbound I-10 and the eastbound Etiwanda Avenue exit ramp.

PLANNING AND COORDINATION STATUS

The project is included in the 98/99–2004/2005 Regional Transportation Improvement Program (RTIP) as adopted by FHWA on July 31, 1998. The project reference number in the RTIP is 08–35–450, Page # 173.

TRAFFIC/SAFETY INFORMATION AND PROJECTIONS

The project improvements will considerably improve interchange operations, reduce local street congestion, and accommodate projected growth in the area. The project proposes to convert the existing Etiwanda Avenue Interchange from a four quadrant full cloverleaf to partial cloverleaf configuration. In addition, the project will realign Valley Boulevard on- and off-ramps to the north to intersect with the realigned Valley Boulevard. The Slag Haul Road (Valley Boulevard) on-ramp would be braided over the westbound I-10 Etiwanda Avenue off-ramp, thus eliminating weaving movements in that direction. The westbound I-10 Etiwanda Avenue off-ramp, the existing westbound Etiwanda Avenue loop on-ramp and enter the freeway.

The proposed project would improve safety throughout the interchange. Presently, congestion and increased truck traffic result in excessive delays, increased traffic accidents and operational problems at Etiwanda Avenue interchange with Route 10.

The existing weaving on the westbound Etiwanda Avenue collector-distributor road where the Valley Boulevard on-ramp merges would be eliminated by the proposed “braided ramp” configuration. In addition, the reconfigured Etiwanda Avenue Interchange would also eliminate weaving for both eastbound and westbound on- and off-ramp traffic as the existing loop off-ramps would be eliminated. The northbound Etiwanda Avenue to westbound Ontario Mills Parkway traffic would have a longer weaving distance, since the ramp terminus would be realigned to a signalized intersection. Ultimately, Ontario Mills Parkway would be realigned to coincide with the Valley Boulevard extension. This would increase the distance between the off ramp terminus intersection and the local intersection to 160m (524 ft.).

The realigned Valley Boulevard would be grade-separated over the existing Union Pacific Railroad Spur, which would eliminate the existing at-grade railroad crossing preventing potential rail/auto accidents.

The substandard vertical clearances at the Valley Boulevard under crossings of Route 10 would be improved to meet the federal standard of 5.1m (16.7 ft.). This would be accomplished by lowering the ramp profile.

A three-year Traffic Surveillance and Analysis Survey (TASAS) study for the period April 1, 1994 through March 31, 1997 was made for the project vicinity. The study revealed that there were 98 accidents with 1 fatality and 35 persons injured. The actual accident rates for most of the on- and off-ramps at the interchange were higher than the average rate for similar facilities.

A total of 98 accidents were reported in the interchange ramp system during the three-year study period. Forty-four accidents (45 percent) occurred in the four-loop-ramp system.

It is obvious that the reconstruction of the Etiwanda interchange will dramatically improve safety to motorists and truck traffic. With the development of the Kaiser Commerce Center's 7.8 million square feet of industrial warehouse distribution space over the next six years, this reconstruction is paramount to insure that public safety is at the forefront to this critical transportation corridor.

TOTAL ESTIMATED COST OF IMPROVEMENTS

The total estimated costs for improvements is as follows:

| | |
|----------------------------------|--------------|
| Roadway Items | \$10,108,000 |
| Structure Items | 1,120,000 |
| | <hr/> |
| Sub-Total Construction | 11,228,040 |
| Right of Way & Utilities | 1,100,000 |
| | <hr/> |
| Total Project Construction | 12,328,000 |
| | <hr/> <hr/> |
| Design | 1,921,060 |
| Construction Management | 1,300,000 |
| Fees & Permits | 400,000 |
| | <hr/> |
| Total Project Costs | 15,949,100 |

Previous Funding.—The project was allocated \$1,500,000 in the Transportation Equity Act for the 21st Century (TEA-21).

AMOUNT OF NCPD PROGRAM FUNDS REQUESTED

\$10,000,000 is requested per this application.

Commitment of other Funds.—The project is to be constructed concurrent with the development of adjacent property owned by Kaiser Ventures Inc. The project, known as the Kaiser Commerce Center, will provide additional infrastructure to supplement the interchange reconstruction. Of the Total \$15,949,100 estimated cost for the interchange reconstruction, Kaiser Ventures and its development partners will provide the \$5,949,100 portion of the project not funded through Federal funds. This constitutes the above referenced 37 percent local/private match of total construction costs.

Previous Funding.—The project was allocated \$1,500,000 in the Transportation Equity Act for the 21st Century (TEA-21).

Commitment of other Funds.—The project is to be constructed concurrent with the development of adjacent property owned by Kaiser Ventures Inc. The project, known as the Kaiser Commerce Center, will provide additional infrastructure to supplement the interchange reconstruction. Of the Total \$15,949,100 estimated cost for the interchange reconstruction, Kaiser Ventures and its development partners will provide the \$5,949,100 portion of the project not funded through Federal funds.

PROJECT BENEFITS

The proposed development will transform a marginally productive site, formerly a portion of the Kaiser Steel Corporation steel mill facility, which is used now only for slag recycling, and sand and aggregate operations into a well balanced and carefully planned community of general and transportation related industrial, commercial and business park uses, which can take advantage of the site's excellent highway and rail access. Specifically the project benefits are:

- Increased safety for all motorists and trucks using this important interchange. The new design addresses the key existing deficiencies which have contributed to the increased traffic accidents and will alleviate the weaving and congestion associated with ingress and egress to I-10.
- The project site offers a unique location immediately adjacent to the interchange to the Interstate 10 and Interstate 15 freeways, both of which serve as major trucking gateways for goods entering California from the northern and eastern United States as well as the increased goods which are coming into this major distribution area as a result of the NAFTA legislation. A primary component of the Kaiser Commerce Center and Etiwanda Interchange reconstruction is the Truck Plaza. Located immediately adjacent to the Etiwanda Interchange, the Truck Plaza facility provides the needed services that long haul truckers

seek together with a secure place to obtain the needed rest to insure overall traffic safety on Americas highways.

- The project site also provides ready access to the two main rail lines serving Southern California, The BNSF and the Union Pacific, allowing for an efficient and economic use of existing rail service by the proposed project component of rail-served industrial uses. The close proximity to both major rail lines provides this location with the unique ability to facilitate the intermodal transportation objectives which were envisioned in the National Corridor Planning and Development Program and Coordinated Border Infrastructure Program. will provide the proposed rail-served businesses with an edge to obtain competitive rail shipping rates with timely and efficient access to that service.
- The proponents of the Specific Plan will expend private dollars of \$5,949,100 to correct an existing traffic safety problem at the I-10 Freeway/Etiwanda Avenue/Valley Boulevard on- and off-ramps, in order to provide direct, and safe freeway ingress and egress from the Truck Plaza as well as the entire surrounding areas.

The project will create about 5,200 new, permanent jobs in San Bernardino County: up to 635 jobs at the Truck Plaza and adjacent uses; up to 2,328 jobs at the commercial/business park; and up to 2,326 jobs at the industrial area. In addition, about 1,284 temporary construction jobs will be created during the construction stage. The direct payroll benefit is projected to be \$133 million. For every permanent job created within the proposed project site, it is estimated that an additional 0.80 jobs, or about 4,200 additional new jobs would be created in the County. The total payroll associated with the off-site, or indirect, jobs in estimated to be about \$83 million per year.

The project will create a total of nearly 9,500 new jobs (direct and indirect, at fill build-out), in an area identified as a “job poor” economy, that is, the number of locally-based jobs is low given the number of local household requiring county residents to commute elsewhere for work. Given the County’s current job deficit, it is anticipated that many of the newly created jobs will be filled by County residents who are either unemployed or who must commute to jobs outside of the County. The addition of almost 9,500 new jobs will increase the County’s jobs/housing ratio; thereby improving its current “jobs poor” status. This opportunity for new job formation, together with the direct and indirect payroll benefits of over \$217 million per year will have a dramatic positive effect on the local and regional economy.

PREPARED STATEMENT OF THE COLORADO DEPARTMENT OF TRANSPORTATION

Mr. Chairman and members of the subcommittee, I appreciate the opportunity to submit written testimony, as prepared by the Colorado Department of Transportation, to discuss important transportation issues in Colorado. It is with pleasure that I present to you our fiscal year 2001 transportation appropriation needs.

Our first priority is the Interstate-25 Broadway Viaduct Replacement Project. The interchanges and the bridges were constructed in 1951 and have never been upgraded. A critical component of I-25 reconstruction is the replacement of the viaduct over Broadway, a major Denver arterial, and the Union Pacific and Burlington Northern Santa Fe railroads. Over 50 freight trains a day pass under the viaduct and over 260,000 vehicles travel a day travel on the bridge. The project is nationally significant because all of the Rocky Mountain Region’s north-south traffic, freight, truck and rail, are linked by this bridge. In addition, this viaduct and interchange are a vital connection for the Southeast Corridor Multi-Modal Project. Once completed, this project, along with the Southeast Corridor Multi-Modal Project, will provide an integrated system of moving people and goods through the southern corridor of Interstate-25.

The bridge can be reconstructed in three phases totaling \$75 million. The first major phase will be the replacement of the I-25 viaduct over Broadway. Subsequent phases will complete reconstruction at the Broadway, Santa Fe and Alameda interchanges totaling \$125 million. An appropriation of \$20 million is requested for the Interstate-25 Broadway Viaduct Replacement Project for fiscal year 2001.

Our second priority is the Powers Boulevard Corridor in Colorado Springs. This 36-mile corridor will create a bypass around the eastern part of the city. It provides a direct connection to the Colorado Springs airport, as well as a vital link to five national defense facilities: the Air Force Academy, Fort Carson, Peterson Air Force Base, Shriever Air Force Base, and North American Defense (NORAD). Once completed the project will reduce traffic congestion on both Interstate-25 and the state highway system in that area. Even on the small portion of Powers Boulevard, which

has been constructed, daily traffic volumes have doubled over the past eight years with an average of 80,000 vehicles per day.

The overall cost of the Powers Boulevard Project is estimated at \$650 million. Through its Strategic Transportation Investment Program, the Colorado Department of Transportation has committed \$220 million through the year 2010. An appropriation of \$10 million for completing a 6-lane section of the highway for three miles and the construction of a bridge is requested for the Powers Boulevard Project in fiscal year 2001. There will be savings generated by building six rather than four lanes now instead of later.

Finally, we are grateful for the \$2.5 million in funding in fiscal year 2000 for the Traffic Operations Center. These funds are being used in start-up integration activities for the Interstate-25 Southeast Corridor Multi-Modal Project in Arapahoe County and for integration activities in Jefferson County. An appropriation of \$5.4 million is requested for the construction of a Traffic Operation Center to benefit the people of Colorado and the transportation agencies across the state. The facility will be located in the Denver-metropolitan area.

For years the various agencies have attempted to coordinate daily emergency responses from a non-centralized site. The current practice of attempting to provide coordination has been difficult. The construction of a statewide Traffic Operations Center facility will have a significant impact on the coordination between agencies in the design, construction, operations and maintenance of transportation in Colorado. Increased coordination between agencies means lives are saved, traffic congestion can be reduced, and accident locations can be better identified. In short, the center will act as a primary facility to support Intelligent Transportation System services throughout the state.

Mr. Chairman and members of the subcommittee, we thank you for this opportunity to provide you with this written testimony regarding these significant Colorado transportation projects. We seek your support for our fiscal year 2001 Appropriation requests of \$20 million for the I-25 Broadway Viaduct Replacement Project in Denver, the \$10 million request for the Powers Boulevard Project in Colorado Springs, and the \$5.4 million request for the construction of a Transportation System Traffic Operations Center as a part of Colorado's Intelligent Transportation System.

PREPARED STATEMENT OF THE SQUAXIN ISLAND TRIBE

The Squaxin Island Tribe of Washington State thanks the Senate Subcommittee on Transportation Appropriations for the opportunity to present written testimony regarding the need and use of funding within the Indian Reservation Roads Program. Having served two terms as Chairman of the Squaxin Island Tribe and in other elective positions over two decades, as an educator for 35 years, as a participant in numerous tribal negotiations since 1981, and currently as the Transportation Policy Representative for the Tribe and a Member of the TEA-21 Negotiated Rulemaking Committee, My testimony speaks to the enormous needs for transportation infrastructure improvements within Indian Country.

SUMMARY OF TESTIMONY

Funding for Indian tribes through the IRR program is completely inadequate to meet the needs of Indian tribes to develop transportation infrastructure that promotes economic prosperity on Indian reservations. Indian reservation roads continue to deteriorate at a rapidly increasing rate, because the IRR Program continues lag well behind state transportation programs in funding. This testimony is presented in three sections as follows:

1. General funding concerns regarding the IRR Program.
2. Specific funding concerns of the Squaxin Island Tribe regarding the IRR Program.
3. Recommendations for addressing general and specific funding concerns.

HISTORY OF THE INDIAN RESERVATIONS ROADS PROGRAM

1. Indian Reservation Roads: What are they?

The Indian Reservation Roads (IRR) are those public roads administered jointly by the Federal Lands Highways Office within the Department of Transportation and the Bureau of Indian Affairs within the Department of Interior. These roads comprise nearly 52,000 miles of roads providing access to or located within Indian reservations or other Indian areas. Approximately one half of the IRR System is com-

prised of state and county roads and the remainder are BIA or tribal roads maintained by the BIA.

2. Why are tribes interested in transportation?

Early in its history, the United States gave alternate sections of land to entrepreneurs to build the transcontinental railroad system. The land had been taken from Indian people and Indian tribes to fuel the economic expansion of a nation. In the state of Washington, as in much of the West, railroad companies became a thriving wood products industry, and names like Weyerhaeuser and Rayonier are remembered more for driving the timber-based economy of the Pacific Northwest for more than a century than for their railroad heritage.

Whether harvesting and transporting natural resources or extracting fossil fuels, the foundation of the national economy rests on lands once inhabited by Indian people. Trails and waterways established for eons and used for intertribal commerce became the principal routes for the national highway system and marine transport. Now, as tribal economies emerge and expand into new industries, existing transportation infrastructure will no longer suffice. Private sector investment in Indian industry requires that adequate investment be made in the transportation systems serving Indian lands.

3. How is the Indian Reservation Road System funded?

In fulfilling its trust responsibility under treaties with Indian tribes, the U.S. Bureau of Indian Affairs developed the Indian Reservation Roads System. With the 1982 passage of the Surface Transportation Assistance Act, the Federal Highway Administration initiated its administration of the IRR System and BIA roads became eligible for distributions from the Highway Trust Fund for the first time. Congress recognized that Indian people bought gasoline and paid gas taxes, but prior to 1982 received no benefit from the taxes paid. All subsequent surface transportation legislation adopted by the Congress authorized funding for the IRR System. Maintenance of the IRR System continues to be funded through the Department of Interior appropriations.

4. What funding has been available to tribes to improve the IRR System?

Prior to the 1991 Intermodal Surface Transportation Efficiency Act (ISTEA), the maximum annual funding level for improvements to the IRR System was \$80 million. ISTEA increased the funding authorization to \$191 million and the Transportation Equity Act for the 21st Century increased it to \$275 million. While these increases are substantial, not all of the funding is used to improve Indian reservation roads. In 1996, the last year of ISTEA, \$167 million was distributed to BIA area offices for road design and construction. Bridge construction was funded by an additional 1 percent set aside for Indian tribes through the FHWA Highway Bridge, Rehabilitation, and Replacement Program. Under TEA-21, the Indian Bridge Program is funded within the IRR Program, and the HBRRP set aside no longer exists. A more substantial reduction results from the first-time application of obligation limitation to the IRR Program. For 1999, IRR funding authorization was reduced by \$31.7 million under Sec. 1102(f) of TEA-21 and redistributed to the states at year end under Sec. 1102(d). FHWA and the BIA withheld 1.5 percent and 6 percent respectively for program administration.

Another two percent of the IRR funding is set aside for transportation planning by tribal governments. The net result of the takedowns is to distribute \$203 million to BIA area offices for road design and construction from \$275 million authorized. This represents a funding increase of 21.5 percent between ISTEA levels and TEA-21 levels, an increase that is less than one half of that experienced by state highway programs.

5. What level of funding is needed to improve and maintain the IRR System?

The BIA estimates its current construction needs inventory for BIA roads within the IRR System at \$7.2 billion. This does not include the state or county components of the IRR System. Dirt roads comprise two-thirds of the BIA road system; of these, three-quarters are unimproved earth roads. The remaining one-third of the paved roads receives inadequate maintenance during their life cycle and are often reconstructed and resurfaced well in advance of their design life. Frequently, reconstruction and resurfacing occurs within seven or eight years of the original construction when this activity should occur no more frequently than every 10 to 15 years.

Road maintenance is currently funded through Department of the Interior appropriations, and the need to adequately maintain BIA-owned roads is estimated by the Bureau to be \$100 million annually. Currently, the BIA receives only \$25.5 million per year for road maintenance. This represents less than \$500 per mile for the BIA roads within the IRR System. State highway agencies typically receive \$4,000 to

\$5,000 per mile for their road maintenance programs. Inadequate maintenance continues to plague the Indian Reservation Roads Program and result in premature deterioration of roads and inefficient and wasteful use of construction funding in rebuilding old roads rather than building new roads supporting emerging tribal economies.

UNIQUE CHALLENGES FACED BY THE SQUAXIN ISLAND TRIBE

1. *The Squaxin Island Tribe, as is true for the majority of primarily small tribes, has not received a fair and equitable share of IRR Program funding.*

As many as 350 tribes have received little or no funding for specific construction projects on or providing access to their reservation under the IRR Program. Only recently under ISTEA, did the BIA begin to provide funding for transportation planning to tribes so that they could develop transportation plans and improvement programs quantifying their relative need for transportation assistance. Even when funding was allocated to a tribe under one of the several formulas used by the BIA, tribes often did not receive funding for construction because they lacked the resources to identify a proposed project to the BIA. Since the inception of the IRR Program, the Squaxin Island Tribe has received funding to construct less than one-tenth of a mile of roadway in 1982. Funding was awarded through a "638" contract in 1999 to construct another two-tenths of a mile of roadway in 2000. Although the formula allocation for the Squaxin Island Tribe totaled \$360,000 under ISTEA between 1992 and 1997, the Tribe received only \$12,400 for a small chip-sealing project during the entire authorization period. The Tribe is currently trying to secure IRR Program Funding to design and build a half-mile access road to a planned 36-unit housing development. Multiple layers of federal agency oversight and other bureaucratic delays potentially jeopardizes more than \$2 million in federal, state, and Tribal funding commitments for the project.

2. *The majority of the IRR System for the Squaxin Island Tribe is comprised of state and county roads providing access to the Squaxin Island Reservation.*

The IRR System for the Squaxin Island Tribe includes 3.7 miles of BIA roads built by the Tribe with funding from sources other than the BIA, and 78.3 miles of county and state roads providing access to the Squaxin Island Reservation. While the state roadways serving the Reservation are generally well maintained, county road maintenance is less certain and these roads are often at the bottom of county priority lists for improvements if they are listed at all. Fortunately, the Tribe and Mason County have developed a positive working relationship over the past several years, and the Tribe secured 1997 Highway Bridge Replacement and Rehabilitation Program (HBRRP) funding on behalf of Mason County to rehabilitate an 80-year old bridge on the primary access route to the Reservation. Because of the tribal contribution for the bridge, Mason County is now proceeding with design to reconstruct one mile of substandard roadway that includes the bridge project. The combined projects represent a match of local to federal funds of better than five to one. Although this type of project collaboration is possible between tribes and other governments within the IRR program, this particular project has taken more than five years to bring to fruition, and yet construction is not anticipated to start for another one and one-half years.

3. *Being located in a suburban area of Washington state, the Squaxin Island Tribe faces transit issues that the IRR Program is ill prepared to address.*

An extreme housing shortage on the Squaxin Island Reservation forces many Tribal members to live some distance from the Reservation. Those without dependable personal transportation are dependent on public transportation to access employment, schools, medical care, and other Tribal services. Without reliable transportation, these Indian people are unable to use the services provided by the Tribe or to access employment opportunities. Because of the number of Tribal members finding themselves in this situation, the Squaxin Island Tribe has developed a public transit system in partnership with the state of Washington and the Mason County Transit Authority (MCTA). The Tribe has initiated transit service with its one 15-passenger bus and has built a transit station adjacent to U.S. Hwy. 101. The transit station is used extensively by the Tribe with three daily stops and MCTA with 16 scheduled daily stops. No IRR funding or other federal funding has been used by the Tribe to develop or operate its transit service. Because of the inadequate funding within the IRR Program relative to the construction need, the IRR Program generally has not funded transit projects. There also are no direct Federal Transit Administration Programs for tribal transit systems.

RECOMMENDED APPROPRIATIONS TO CORRECT DEFICIENCIES IN THE IRR PROGRAM

1. *In the short term, use part of the \$3.0 billion in unplanned gas tax collections not anticipated when TEA-21 was passed to increase appropriations to the IRR Program.*

Both the Administration and several United States Senators (see attached White House Senate Plan, American Indian Programs for fiscal year 2001 dated January 12, 2000 and distributed on January 24, 2000) propose to increase funding for the IRR Program above fiscal year 2000 levels by \$117 million to \$392 million. The Squaxin Island Tribe requests that beginning in fiscal year 2001, funding to the IRR Program be increased by \$117 million to \$392 million.

2. *In the long term, work to achieve funding parity between state highway programs and tribal road programs.*

Indian reservation roads make up 2.63 percent of this nation's public highway system; yet, less than one percent of the annual allocations for the highway program are directed at providing transportation assistance for Indian reservation roads. The Squaxin Island Tribe would like to see IRR program funding increased to levels comparable with the states. Repealing the provisions of TEA-21 that applied obligation limitations to the IRR program for the first time is one way to increase direct funding to tribal transportation programs without additional appropriations. Unlike state programs, the IRR program does not recover obligation limitation takedowns when those funds are redistributed.

3. *Boost Interior appropriations for road maintenance.*

On the Squaxin Island Reservation, many roads are approaching 25 years since original construction, but have never received maintenance, reconstruction, or resurfacing by the BIA. The Squaxin Island Tribe requests that Congress increase Department of the Interior appropriations for road maintenance to \$100 million annually to address the deplorable condition of Indian reservation roads.

4. *Appropriate separate funding for transportation planning and capacity building to enable all tribes to participate in the IRR Program.*

Although the BIA is authorize to allocate at least 2 percent of the IRR construction program appropriations for transportation planning, for several BIA Regional Offices that level of funding is inadequate to provide for transportation planning of all the tribes in the region on an on-going basis. For the Northwest Region, less than \$250,000 is all that is available for the region's 44 tribes. Develop a set aside program for transportation planning and capacity building similar to the concept of minimum apportionment employed by the states for nearly every Highway Trust Fund program allocation formula.

On behalf of the Squaxin Island Tribe, I thank this Subcommittee for allowing me the opportunity to submit written testimony on TEA 21—a topic which will greatly impact the future, not only of my Tribe but all Tribes, and our accessibility to others as well as our accessibility to each other.

PREPARED STATEMENT OF THE NEW YORK STATE DEPARTMENT OF TRANSPORTATION

The New York State Department of Transportation (NYSDOT) appreciates the opportunity to present testimony on the fiscal year 2001 transportation appropriations. New York has a truly intermodal transportation system. NYSDOT has responsibility for a \$1.6 billion annual highway construction program, and a \$1.6 billion annual transit operating and capital assistance program. NYSDOT is currently completing implementation of a balanced multi-year highway and mass transportation capital programs valued at \$24 billion, with each mode receiving nearly \$12 billion in Federal and State funds, and is now developing a new comprehensive program to address the State's needs for the next five years. In addition to highways and transit, as part of a larger plan, NYSDOT is working in partnership with Amtrak to invest up to \$185 million in the State's passenger rail system over the next five years to upgrade to 125 mph high speed rail service. New York State is also undertaking an \$80 million freight and passenger rail investment program, and, over the past five years, has provided over \$100 million in assistance to commercial service airports to fund terminal and infrastructure improvements.

In New York State, we have made a strong commitment to our transportation systems. Federal funds comprise about 40 percent of New York State's highway funding and 25 percent of transit capital spending, making us one of the highest self-help states in the nation. Despite these investments, New York's infrastructure, typical of the Northeast, is older than most, very heavily utilized and in need of mod-

ernization to attain the standards of other regions in the nation. We need your continued support in securing Federal assistance, which is so vital to our ability to meet our transportation needs.

In developing the fiscal year 2001 Transportation Appropriations, we ask that you consider our views in the following areas:

Preserve the Structure and Intent of TEA-21

The Transportation Equity Act for the 21st Century (TEA-21) is a carefully crafted bi-partisan agreement that was completed just two years ago. TEA-21 struck a delicate balance between the needs of highways and transit. Further, the bill reflects the results of several years of negotiations over the distribution of Federal funds to the states. Last year, during the appropriations debates, several proposals were put forth that would have upset these hard-fought funding formula agreements, threatening the integrity of TEA-21. New York strongly supports TEA-21 and believes that the consensus reached in this bill, which provides stability to state and local transportation planners, should be honored. We urge you to maintain the structure and intent of TEA-21 by rejecting provisions that would modify TEA-21.

Support Funding for Transportation Programs at the Levels Authorized in TEA-21

TEA-21 provides for historic levels of investment in our surface transportation systems, recognizing the critical role that infrastructure plays in the nation's economic health and growth. Yet even with these significant investments, the United States Department of Transportation estimates that billions of dollars in annual needs will remain unmet.

TEA-21 guarantees that money paid into the Highway Trust Fund will be used for surface transportation improvements, and provides additional general fund authorizations. New York is pleased that Congress has made this commitment to our nation's infrastructure, and asks that you appropriate funds for transportation programs at the maximum levels authorized in TEA-21.

Support Full Funding for TEA-21's Transit Projects & Programs

New York State is pleased that Congress recognized the critical importance of transit to the nation by providing significant increases in transit funding in TEA-21. In New York State, transit provides a lifeline to millions of riders each day, from the very urban areas like New York City to the smallest upstate communities. Public transportation in New York State accounts for nearly one-third of all transit trips in the nation. Each day, more than 25 percent of New Yorkers across the State use public transportation to travel to work—the highest transit share in the nation.

New York State has an historic and continued commitment to public transportation funding. New York State provides over \$1.6 billion each year in operating assistance to our transit agencies. Additionally, more than 70 percent of the State's transit capital investment is from non-Federal sources. Even with this commitment, New York State will be unable to advance critical New Start and bus initiatives without Federal support, as provided in TEA-21.

New Starts—Long Island East Side Access Project.—New York State is pleased that Congress recognized the importance of New York's Metropolitan Transportation Authority's (MTA's) Long Island Rail Road (LIRR) East Side Access project in TEA-21 by authorizing a minimum of \$353 million for the project. In addition, TEA-21 designates that this project be given priority consideration for funds made available under the FTA New Start program. New York supports the MTA's request for \$198 million for this project in fiscal year 2001.

The Pennsylvania Railroad Station is the busiest train station in North America, serving a train per minute during rush hour, and carrying approximately 140,000 Amtrak, Long Island Rail Road and New Jersey Transit passengers every weekday morning. Currently, there is significant crowding at the station. The LIRR East Side Access Project will dramatically reduce crowding in Pennsylvania Station by providing one seat service from points on Long Island to East Midtown. This project will increase ridership by an estimated 109,000 weekday passengers, and save 5.3 million hours of travel time annually for commuters. Further, the project will allow full utilization of the significant Federal investment already made in the 63rd Street Tunnel, and provide a stimulus for economic growth and development. On March 6, 2000, the Federal Transit Administration transmitted to Congress, as required by law, its recommendations for the allocation of funds for new fixed guideway systems and extensions ("New Starts") for fiscal year 2001. In its report, the FTA recommended the LIRR East Side Access project for allocation of New Starts funds. We urge you to honor the commitment made in TEA-21 and support New York's MTA's request of \$198 million for this critical project.

Bus & Bus-Related Requests.—New York State has submitted requests for funds to support critical bus and bus-related initiatives throughout the State. We ask you

to consider funding these projects which will provide valuable assistance in improving and expanding transit facilities and replacing over-age buses with newer equipment that will be ADA accessible and utilize new cleaner burning fuel technology. In addition, TEA-21 provided several authorizations subject to appropriations to support projects in New York State communities. We ask that you support New York's request to fully fund these authorizations.

Fully Fund the Aviation Investment and Reform Act for the 21st Century (AIR-21)

New York congratulates Congress on passage of the landmark AIR-21 legislation and requests support for sufficient budget authority and outlays to fully fund AIR-21, including general fund contributions to ensure adequate resources to fully fund FAA operations.

Resist Earmarking of USDOT Discretionary Programs

TEA-21 created several new and important programs including the \$700 million Coordinated Border Infrastructure and National Corridor Planning & Development programs (Border/Corridor programs), the \$120 million Transportation & Community & Systems Preservation Pilot Program (TCSP), the \$1.0 billion Clean Fuels program, and the \$750 million Jobs Access and Reverse Commute program. In fiscal year 2000, these programs were extensively earmarked. We ask that you provide full funding for these programs, and allow for competitive selection of grant recipients as provided in TEA-21.

Provide Adequate Funding for US Customs on the Northern Border

The United States and Canada have the largest bilateral trading relationship in the world. In 1995, there was \$272 billion in total merchandise trade, exceeding U.S. trade with the entire European Union (\$256 billion) and more than double U.S. trade with Mexico (\$110 billion). One-third of the value of imports from Canada to the US and 20 percent of the exports from the United States to Canada are carried by New York State's transportation infrastructure and across New York's border with Canada.

While billions in transportation infrastructure needs have been identified along the border between Canada and New York alone, even if all these transportation needs are met, until there is adequate staffing by Federal agencies at the border with adequate systems support, there will be significant congestion at the border. New York was pleased to learn that, due in large part to the efforts of Congressman McHugh, staffing will be increased at the northern border. New York urges Congress to provide funds to increase U.S. Customs staffing at the United States-Canada border in fiscal year 2001.

Further, New York supports full funding for Customs automation, including the Automated Customs Environment. New York opposes establishment of a user fee to raise the funds for this project. The current Automated Commercial System has failed several times recently, and can no longer accommodate peak volumes of entry transactions. Replacement of this antiquated system will eliminate a major technical impediment to the further development of innovative technologies such as the Peace Bridge Electronic Commercial Vehicle Crossing System, for which New York received a \$1.8 million grant from the 1999 TEA-21 Border/Corridor programs.

Support Intercity Passenger Rail and Full Funding for High Speed Rail Programs

Intercity passenger rail is a unique asset critical to the mobility and economic well being of New York State and the nation. New York thanks the subcommittee for its past support of Amtrak and High Speed Rail investment, and urges your continued support of Amtrak in fiscal year 2001 at a level equal to Amtrak's fully authorized level. This assistance will help Amtrak continue its progress on the glide-path to operating self-sufficiency by 2002, and make investments critical to the future of a viable national passenger rail network.

Intercity passenger rail service investments beyond Amtrak capital assistance are also important. TEA-21 continues several programs that provide funding for High Speed Rail projects, including the Next Generation High Speed Rail program, and the program to eliminate highway-railroad grade crossing hazards in designated high-speed rail corridors, including the Empire Corridor in New York. New York urges your support of these programs.

New York State is committed to improving passenger rail service within the State and implementing High Speed Rail service in an incremental and achievable manner. While New York State is working with Amtrak to invest up to \$185 million in the State's rail system over five years to provide faster, more convenient passenger train service between New York City and Buffalo, this partnership is only part of a larger \$315 million high speed rail plan. New York State is actively pur-

suings several important rail projects pursuant to our larger high speed rail plan that are not funded within the Amtrak Memorandum of Understanding.

New York State is seeking support for a comprehensive grade crossing risk reduction program along the high-speed Hudson Line of the Empire Corridor between Schenectady and New York's Pennsylvania Station. This program includes grade crossing eliminations, separations and high technology improvement projects to assist in bringing speeds to 125 mph. We are also seeking funding for two rail-related studies (a High Speed Rail Program Station and Land Side Access Study and an Advanced Train Control Study) to further progress work in the Corridor. These important projects will complement our historic funding agreement with Amtrak, increase safety in the corridor and improve our ability to implement high-speed service. We ask your support in securing funding for these important initiatives.

NYSDOT thanks you for this opportunity to present testimony. We appreciate your dedication to and support of the nation's transportation systems.

FEDERAL RAILROAD ADMINISTRATION AND AMTRAK

PREPARED STATEMENT OF THE NORTH CAROLINA DEPARTMENT OF TRANSPORTATION

The North Carolina Department of Transportation (NC DOT) would like to thank the subcommittee for its strong continuing support for the nation's transportation system in general and transportation investments in North Carolina in particular. Three central organizing principles govern our approach to the provision of transportation services: safety first, efficiency, and partnerships.

Rail services are an integral part of our statewide, intermodal system. With a rising population and growth of highway and air traffic in the state, rail is increasingly important as an alternative to auto and air transportation for both freight and passengers.

The state of North Carolina sponsors two Amtrak-operated trains, the Piedmont and the Carolinian. The Carolinian began operation in 1990 and the Piedmont in 1995. The Piedmont makes a daily round trip between Raleigh and Charlotte. The state owns the equipment for the Piedmont and contracts with Amtrak for maintenance and operations of the train. The Carolinian makes one daily trip each way between Charlotte and New York City. The Carolinian uses Amtrak equipment and is Amtrak-maintained. The NC DOT reimburses Amtrak for the in-state prorated portion of Amtrak administrative, operating, station and other costs in excess of passenger and miscellaneous revenues generated by the Carolinian.

The state of North Carolina owns both the North Carolina Railroad and the stations served by both trains. The state recently purchased the minority shares in the NCRR for \$72 million.

Both trains are experiencing significant growth in ridership. The Piedmont service, in particular, posted the second highest percentage increase among Amtrak trains during the first quarter of fiscal year 2000 (October-December 1999). The Piedmont's ridership grew 22.2 percent when compared to the first quarter of 1999. The Carolinian experienced a healthy 5.3 percent increase over the same period of time.

Other Amtrak intercity passenger trains providing service to North Carolina are the Crescent, Silver Star, Silver Meteor, and Silver Palm. The Crescent provides service from New York City, Philadelphia, Washington, D.C. through Greensboro, Charlotte and on to Atlanta and New Orleans. The Silver Star takes passengers from New York City, Philadelphia, Washington, D.C., through Rocky Mount, Raleigh and on to Columbia, Savannah, Jacksonville, Orlando, Tampa and Miami. The Silver Meteor provides service from the Northeast Corridor through Rocky Mount, Fayetteville and on south. The Silver Palm provides service from New York to Miami with stops in North Carolina to Rocky Mount, Wilson and Fayetteville.

Safety is our most important concern. In North Carolina there are 5,000 public grade crossings and over 3,000 route miles. There are an additional 5,000 private grade crossings in the state. In order to increase train speeds and thereby reduce travel times, the overall number of grade crossings must be rationalized.

Grade crossing safety and elimination are part of the development of the Southeast High Speed Rail Corridor (SEHSR) between Washington and Atlanta. The SEHSR Coalition's Report A Time to Act, released by the Governors of Virginia, North Carolina, South Carolina, and Georgia on February 29, 2000, specifically supports this vital effort. (Copies of the report were provided to you and your staff under separate cover.)

In this regard, we value your investment of High Speed Rail Grade Crossing Improvement Program funds (section 1103c) in the SEHSR Corridor. North Carolina

has joined with our partners in a joint request for continued funding in our four states. Because we are increasingly one corridor from Washington to Atlanta, the federal share reaps a much higher return on investment. In addition, we value our partnership with the North Carolina Railroad, CSXT, Norfolk Southern and Amtrak, which make these vital projects possible. We strongly encourage your investment of \$1 million in North Carolina and we support the requests of our partners.

The NC DOT Rail Division has recently doubled the number of staff in this critical area. Further, we have reorganized the administrative responsibilities to ensure better delivery of the product-safety.

In order to improve the efficiency of the intercity passenger rail system we encourage you to continue investment in the development of the non-electric locomotive. The program promises to have broad benefit to the Nation as a whole and North Carolina and the SEHSR Corridor in particular.

We recognize that the state of North Carolina has a strong responsibility to our federal state partnership. Most recently the state worked with the North Carolina Railroad on a \$48 million capital investment program. We are currently working with the NCRR and Norfolk Southern on another list of improvements.

We support Amtrak's request for \$521 million to continue on its "glide path" to operational self-sufficiency. Should additional general revenues be available to fund a greater portion of Amtrak's authorization, we would suggest that the funds be used for life and safety improvements on designated corridors. In this regard, we value the testimony of the US Department of Transportation's Inspector General. Penn Station New York is the most popular destination for North Carolinians.

Notwithstanding these significant fire and safety needs, modest capital investments in adjacent corridors like the SEHSR Corridor could reap benefits as well. Should scarce, additional funds be available, please continue your practice of equitably considering all requests. For example, an investment of \$5.3 million in North Carolina would allow the acceleration of our nationally recognized grade crossing elimination program through the closing of a serious grade crossing between Greensboro and Raleigh. This line is used by 44 freight trains and 6 passenger trains daily.

More than ever the Subcommittee faces serious challenges and constraints. Again, we value your support for a national system. Thank you for your consideration of our request.

PREPARED STATEMENT OF THE COALITION OF NORTHEASTERN GOVERNORS

The Coalition of Northeastern Governors (CONEG) wishes to thank Chairman Shelby and Ranking Member Lautenberg for the opportunity to provide this testimony regarding the fiscal year 2001 U.S. Department of Transportation (U.S. DOT) Appropriations. The subcommittee plays a critical role in providing investments in the nation's vital intermodal transportation system. The Governors commend the subcommittee's efforts to provide increased levels of funding for highways and transit in the fiscal year 2000 U.S. DOT appropriations, and urge continued support in fiscal year 2001 to the levels authorized in the Transportation Equity Act for the 21st Century (TEA-21). We also urge the subcommittee to continue the important federal partnership role in strengthening the nation's passenger and freight rail systems through continued investments in rail safety and capital investment in Amtrak and other critical rail projects. Continued federal investment in transportation research and development is also an essential element of public and private efforts to enhance the safety and capacity of the nation's transportation system.

An integrated, safe, and fully-funded national surface transportation system is critical to the economic, social, and environmental well-being of the Northeast region and the nation. The safety, preservation, and efficiency of the region's transportation assets are primary concerns of the Coalition of Northeastern Governors. As the subcommittee considers the fiscal year 2001 appropriations for the Department, the Governors urge the subcommittee to support transportation investments which have national and regional significance. These investments, implemented in conjunction with state-federal partnerships, contribute to a vibrant economy and improved quality of life for the Northeast and the nation.

INVEST IN SAFETY

Safety on the nation's highway, transit and rail systems continues to be a priority for the Governors. Support for a strong federal-state partnership to correct hazardous conditions on the nation's highway infrastructure and to undertake proactive measures which improve highway safety is critical to reducing injuries and deaths on the nation's highways. Continued support is also critical for successful programs

that contribute to a reduction in the number of highway-rail crossing fatalities. Examples of these programs include grade crossing improvements and education programs such as Operation Lifesaver. As travelers throughout the nation seek alternatives to congested highways, the Governors also strongly support full funding for advanced development of high speed rail corridors by eliminating highway grade crossing hazards, as provided in Section 1103(c) of TEA-21. One example of important steps being taken to make passenger rail travel safer is the successful demonstration of the nation's first quad-gate technology by the Federal Railroad Administration and the Connecticut Department of Transportation, and the movement to install this technology at other grade crossings.

FULL FUNDING OF HIGHWAY AND TRANSIT PROGRAMS

With increasing traffic volumes on the region's highways, the Governors support funding of highway programs to the levels authorized in TEA-21. This increased investment by the federal, state and local governments is beginning to show results in improved conditions, performance and safety of the region's and nation's highways and bridges. The Northeast, with its extensive, heavily used and aging highway infrastructure, has unique transportation needs. As a region which serves as a global gateway and important consumer market for the entire nation, investment in our highway system helps the region remain competitive in the international marketplace by facilitating the seamless flow of people and commerce.

The Governors also urge full funding for the transit programs at the levels authorized in TEA-21. Transit plays a vital role in the lives of millions of residents in urban, suburban, and rural areas of the Northeast. It significantly decreases congestion on roads in metropolitan and suburban areas, mitigates isolation in the region's more rural cities and towns, and brings environmental benefits to the entire region by saving fuel and reducing air pollution. Transit is also the critical link in the region's Jobs Access and reverse commute programs.

In the Northeast, as well as across the country, transportation is a vital tool for economic development. Investments made possible by federal, state and local government and the private sector partnerships fostered by TEA-21 are enriching our communities by creating and preserving jobs, enhancing global competitiveness, and contributing to improved air quality and overall quality of life. Adequate funding levels and flexible use of transportation funds are important to the emergence of innovative intermodal solutions which can alleviate congestion, improve capacity and encourage seamless movement of passenger and freight traffic.

CONTINUE CAPITAL INVESTMENT IN INTERCITY PASSENGER RAIL

Intercity passenger rail makes a unique contribution to the complex fabric of the nation's transportation network. This is particularly true in the Northeast where the region's passenger and freight rail networks are critical assets for the region's economy. If the national intercity passenger rail system is to maintain a safe, efficient network and realize its potential to improve the overall transportation capacity, its extensive capital needs must be addressed. The Governors wish to thank the subcommittee for the funding provided for Amtrak in fiscal year 2000, and urge that Amtrak be funded at its fully authorized level in fiscal year 2001. This increased federal funding, in combination with the significant capital investments being made by state partners, is vital to the future of intercity passenger rail service throughout the nation.

Northeast Corridor Fuels Passenger Rail Development.—The Northeast Corridor is the financial linchpin in the national intercity passenger rail network. Ridership and revenues from the Northeast Corridor service provide essential financial resources used by Amtrak to maintain and expand the entire intercity passenger rail system. Therefore, it is vital that the level of federal capital funding for Amtrak is adequate to ensure the integrity and efficiency of this regional and national transportation asset. Investment by Amtrak, in partnerships with state, commuter and freight users, is urgently needed in such critical projects as life and safety improvements in Pennsylvania Station New York and infrastructure maintenance throughout the Northeast Corridor network.

Growth of Passenger Corridors.—Throughout the nation, states and communities are stepping forward to work with the federal government and private sector to bring about modern, efficient passenger rail service. In addition to the Northeast Corridor, the region's rail system supports important passenger and freight service to communities and businesses. Recognizing the importance of this broader network, the Governors support a strong federal commitment and financial participation in federal-state-private sector partnerships which are working together nationwide to provide high speed rail service in such corridors as the Empire, Keystone, and

Southeast; to improve service in Vermont; and to restore service from Maine to Boston with stops in New Hampshire.

INVEST IN RESEARCH AND DEVELOPMENT

In many congested areas of the country, expanding existing or building new infrastructure is not an option. Technology can greatly enhance the safety and capacity of the existing highway and transit systems. Federal support and investment are pivotal to state and regional deployment of advanced transportation technologies. The Governors support full funding for research and development, specifically the Federal Railroad Administration's Next Generation High-Speed Rail programs which continue to make a valuable contribution to the development of the next generation non-electric locomotive. Intelligent Transportation System (ITS) research and deployment, particularly through institutions such as the I-95 Corridor Coalition and projects such as the northern New England development of a regional intelligent transportation system for rural areas, can effectively increase the safety and mobility of the regional transportation system and lead to economic development.

The CONEG Governors thank Chairman Shelby, Ranking Member Lautenberg, and the entire subcommittee for the opportunity to present this testimony. We appreciate your dedication and support for the Nation's transportation investments.

PREPARED STATEMENT OF THE HIGH SPEED GROUND TRANSPORTATION ASSOCIATION

We thank the Subcommittee for the opportunity to testify regarding the fiscal year 2001 Transportation Appropriations bill. This Subcommittee has been very supportive of the various rail initiatives of the past few years and both the rail capital and rail safety programs have greatly benefited from that support.

As you may know, the High Speed Ground Transportation Association is made up of many parties interested in advancing high speed rail in the United States. We now have over 800 members representing a broad cross-section of private and public entities in the 48 contiguous states and Alaska. Our members include industry suppliers, engineers, transportation consultants, unions, rail operators, utilities, public officials and members of the public. Our advocacy on their behalf falls into three major areas:

- Adequate and appropriate continued funding of Amtrak and the programs of the Federal Railroad Administration
- Creation, funding and construction of high-speed rail corridors throughout the country
- Deployment of Maglev rail technology in the United States.

Before commenting on the proposed budget for fiscal year 2001, some overview of the current status of the programs mentioned above is required. In all of these areas, the situation is changing very rapidly, probably more so than most thought as little as five years ago. The structure of the TEA-21 legislation has quickly produced an extremely energetic effort on the part of the States and metropolitan areas to begin viewing rail options in transportation on a par with traditional highway and airport programs. More and more, rail options are being included in thinking and plans for integrated transportation systems, particularly in the large urban centers of the country. There is a recognition that highway lanes, airspace and landing slots are limited or extremely costly. The existing rail rights of way and emerging technologies in rail have yet to be exploited to a large degree. Contending with the current spike in oil prices and an oil market that is reliable only in its constant fluctuation, has lent greater support for decreasing US dependency on oil in our transportation alternatives. Increasingly, rail options are being considered as an answer to continued public demand for fast, efficient and safe transportation.

There is little doubt that rail ridership is on the rise and that if we can bring higher speeds and safe service to the public, ridership will go up even more. Amtrak reports total ridership for fiscal year 1999 at 21 million, up 10 percent since it began rebounding three years ago. With the advent of high speed rail corridors envisioned in TEA-21, there has been an explosion of interest and commitment on the part of the States to move forward towards deployment of higher speed rail systems. For example, the Midwest Regional Rail Initiative, comprised of nine state Departments of Transportation, represents a cooperative and ongoing effort to develop an expanded and improved rail system in the Midwest. Midwest state legislators have also combined to form a Midwest High Speed Rail Compact to demonstrate their dedication to developing passenger rail. And Wisconsin Department of Transportation Secretary Terence Mulcahy has formed a coalition, States for Passenger Rail, garnering members from 17 states around the nation, to urge federal funding of regional passenger rail initiatives.

The Midwest is only one among many regions actively pursuing expanded passenger rail. California, with a projected population of 50 million people by 2020, is planning the most ambitious high speed rail system in the nation: a 700-mile system spanning the state from Sacramento to San Diego. 64 percent of Californians support the plan and the ¼-cent sales tax that would help to fund it. The Southeast is another region with significant state support for passenger rail. The Virginia State legislature authorized \$76 million in its budget for funding passenger rail projects. North Carolina also approved \$66 million for passenger rail funding.

These are but a few examples of the strong state interest throughout the nation for high speed rail. In addition, there has been a robust response to the TEA-21 Maglev deployment program. There are seven Maglev proposals from around the country undergoing the FRA review process that has been set up. The energy and enthusiasm behind the proposals are impressive and the federal funds committed up to now have been fully matched by the sponsors. On June 30th, detailed plans, both physical and financial, are due from the sponsors to the FRA. We believe these plans will be exciting and innovative in their scope and concept and may well spark additional proposals from other parts of the country.

In light of this movement from around the country, we need to cast a critical eye toward the proposed budget and the future to make sure we are headed on a path that is rational, realistic and that will best serve the public.

AMTRAK

Amtrak is undergoing a significant turnaround as a result of its new leadership team's strategic business plan focused on achieving operational self-sufficiency and building a truly commercial enterprise. In 1999, Amtrak achieved record revenues of \$1.8 billion including a 32-fold increase in revenues from the express business. Commercial ventures achieved a record profit of \$108 million. All of this contributed to Amtrak beating its bottom-line targets for the second straight year.

Amtrak has continued its aggressive business-like approach to providing passenger rail service through several key programs: (1) the implementation of an industry-leading service guarantee program; (2) expansion of the national network to grow market share and improve financial performance (the recently announced Network Growth Strategy); and (3) the introduction of the Acela high speed service in the Northeast Corridor.

Amtrak has requested \$989 million for fiscal year 2001: \$521 million would provide the base level of capital support required to keep Amtrak on the path to operating self-sufficiency, and \$468 million would provide critically needed capital investment funds for the development of high speed corridors all across the country. The Administration also recommended \$989 million for passenger rail funding: \$521 million for Amtrak's basic capital needs, and \$468 million in a separate account for intercity passenger rail improvements. The Association strongly supports the total amount of funding requested by both Amtrak and the Administration, \$989 million, for investment in passenger rail. These funds are absolutely critical to making progress to reach higher speeds along emerging high speed corridors around the country.

We would like to note that the Administration has proposed shifting \$468 million from Revenue Aligned Budget Authority (RABA) to fund their proposed separate account for intercity rail improvements. In order to make such a shift, a change in the authorizing law would be required. It is unclear at this time whether an authorizing bill contemplating such a change will come to the floor of the House or Senate this year. The same amount of funding could be realized simply using the existing Amtrak authorization.

NEXT GENERATION HIGH SPEED RAIL

The Administration has proposed \$22 million for continued development of high speed technologies. The authorized level for these programs is \$35 million. \$25 million of this amount is authorized for technology. \$10 million is authorized for pre-construction activities.

In addition, the Administration has proposed the \$468 million for intercity rail improvements mentioned above.

Once again, the Association strongly urges the appropriation of the \$468 million recommended by the Administration to assure the continued development of next-generation high speed rail. The \$35 million authorization called for in TEA-21 for technology and pre-construction activities is insufficient to meet the strong demand for next-generation high speed rail in this decade. Transportation planners estimate that the planning, development, construction and equipment purchases for high speed rail corridors will require upwards of \$17 billion over a ten year period. This

is less than half of what the federal government will spend on highways and aviation this year and, of course, hefty increases are planned for future years, especially in aviation. The \$17 billion would produce incremental, but important, improvements to achieve moderate successes in speed. For very high speed rail projects, such as the one contemplated in California, heavier investment is essential. These are wise investments that will yield numerous benefits (a cleaner environment, most importantly) and cost savings (increased efficiency and productivity due to decreased congestion) down the line.

GRADE CROSSING IMPROVEMENTS

The \$5.25 million guaranteed funding for this program barely scratches the surface of funding needs. We ask the Subcommittee to reassert its dedication to grade crossing safety by approving a sustained program of funding to eliminate or improve every grade crossing along the designated high speed rail corridors.

MAGLEV

Maglev may hold out the most exciting promise for high speed ground transportation. The advanced technology behind Maglev, allowing for travel speeds only imagined a few years ago, could change the way people move in the 21st century. The public-private partnerships that will build and operate the Maglev systems may set a new direction for how transportation infrastructure is financed and delivered in the future.

The Administration has proposed fully funding the "guaranteed" portion of the Federal Aid Highways program that includes \$25 million for the Maglev deployment program. While this is the fully funded amount envisioned in TEA-21 under the guaranteed funding, it is insufficient to fully evaluate the seven projects around the country. That is why HSGTA asks the Subcommittee for the guaranteed \$25 million, and an additional \$30 million for completion of the seven projects' Environmental Impact Statements.

The Maglev deployment program is quickly reaching a crossroads where decisions have to be made about its long term future and potential. It has become evident that there is great interest among the sponsors to continue to move forward. While final results of current planning work are not yet in, it is clear that at a minimum two or three, and perhaps all, of the projects competing for federal funding assistance will offer a successful demonstration of this exciting new technology. It appears evident that the \$950 million in non-guaranteed funding will not in large part be appropriated during the TEA-21 funding cycle. This is due to budget constraints on the Subcommittee's 302(b) allocation. It also seems unlikely that actual construction of one or more projects can begin by fiscal year 2003. With both of these factors at work, it is clear that long-term decisions about Maglev deployment will be made in the next authorization bill.

In the interim, we urge the Subcommittee to consider the following alternative to allow the authorizing committee to make the best informed decision possible and to best protect the sponsor's and Federal government's investment up to this point. That investment will be well in excess of \$100 million by the end of fiscal year 2001.

The Maglev sponsors will submit their detailed plans to the Federal Railroad Administration on June 30, 2000. While we expect these plans to be thorough, both the sponsors and the Federal government can make better investment decisions if a full Environmental Impact Statement (EIS) can be developed for each of the projects. Informally, we have estimated the federal share of this stage of the program to be between \$42-\$47 million to cover all 7 projects. The guaranteed portion of Maglev funds for fiscal year 2001 is \$25 million. We understand that takedowns and obligation limitations required by law may reduce this amount to \$17 million actually spent in fiscal year 2001 on the program. This would leave a gap of approximately \$30 million to cover the costs of full EIS's for the projects. Matching funds naturally cover some portion of this figure.

Additional necessary funds can be appropriated from the \$950 million authorization in TEA-21. The additional funds are a small amount in absolute terms, and tiny when compared to the size of the investment we have made already and the size of the investment in the future. It is an extremely prudent hedge against poor decision making in the future and will assure a complete picture for those who will be making long-term decisions on the program during reauthorization.

Our estimate of these costs is our own. The Federal Railroad Administration and seven project applicants could probably develop a sharper figure on EIS costs. The important principle involved is that the Congressional intent to deploy Maglev technology in this country, as expressed in TEA-21, be fully realized and that maximum information be available before a multi-year commitment is made on how this pro-

gram can best move forward. We hope that you will agree with us that this is the prudent course of action.

PREPARED STATEMENT OF THE ATLANTA-CHATTANOOGA MAGLEV CONSORTIUM

The Atlanta-Chattanooga Maglev Consortium thanks the Subcommittee for this opportunity to testify regarding the fiscal year 2001 Appropriations bill. This Subcommittee has been very supportive of the various rail initiatives of the past few years for both rail capital, safety and development initiatives. The Atlanta-Chattanooga Maglev initiative has considerably benefited from that support. We need continued support for fiscal year 2001.

The Atlanta-Chattanooga Maglev Consortium's steering committee consists of the following members: 1. Atlanta Regional Commission; 2. Georgia Department of Transportation; 3. Georgia Regional Transportation Authority; 4. Georgia Department of Transportation; 5. Georgia Rail Passenger Authority; 6. The Chattanooga Institute; 7. The City of Chattanooga; 8. Coosa Valley and North Georgia Regional Development Centers; and 9. Cobb County Department of Transportation.

The ongoing Atlanta-Chattanooga Maglev Deployment study is one of seven being conducted simultaneously in the United States to determine which location(s) would best showcase Maglev technology in this country. The transportation corridor to best demonstrate that it can successfully implement and operate a Maglev system will receive up to \$1 billion from TEA-21 for final development and construction of the initial Project.

The Magnetic Levitation Transportation Program is an important and exciting program designed to develop a new and much improved mode of ground transportation. As our nation's, but especially the Greater Atlanta Metro Area's airways and highways, become more and more congested, and our environment and quality of life continue to deteriorate, it is essential that we take advantage of every opportunity to find new and better ways to improve our mobility and enhance our environment.

Available Maglev technology is the fastest, most sophisticated ground-transportation system in the world and has been tested at operating speeds of over 240 mph. The technology selected for the Atlanta-Chattanooga Corridor is Transrapid, a system that has been in research and development in Germany since the late 1960's. Transrapid rides over a fixed guideway supported, guided and propelled by magnetic force alone with virtually no moving parts.

The Atlanta-Chattanooga Maglev project is well underway and on schedule to meet TEA-21 and Federal Railroad Requirements. It brings together two key southeastern cities and states in a collaborative effort to improve future transportation options. It provides economic development opportunities and will create approximately 6,000 new jobs. We believe the Atlanta-Chattanooga region should be the first in the nation to manufacture and deploy this exciting new technology. While the project will not solve all existing transportation and air quality problems in the region, it certainly will provide an option that helps air quality and traffic congestion in both Georgia and Tennessee. In addition, the new transportation system could reduce the investment in infrastructure necessary at the Hartsfield Atlanta International Airport (HAIA), provide a reduction in commuter flights between Atlanta and Chattanooga, and therefore, extend the life of the \$5.4 billion Masterplan improvement program that HAIA is initiating.

Since the study's inception in August of 1999, much progress has been made in defining the details of the proposed Atlanta to Chattanooga Maglev service. First, ridership and fare analysis have shown that the project is indeed feasible, particularly with the level of passenger travel to and from Hartsfield Atlanta International Airport.

Second, it is clear that the portion of the corridor from Hartsfield Airport to the Town Center in north Cobb county would meet the criteria set by the Federal Railroad Administration to comply with all aspects of the Maglev legislation in TEA-21. This section was initially given greater emphasis because it would in essence become the FRA Demonstration Project.

Ultimately two distinct Maglev services will be operated. Initially a local project service will be operated between Hartsfield Airport and Town Center in Cobb County. The 30-mile plus trip will stop at Vine City (central Atlanta) and Galleria stations. Once the line is extended to the Chattanooga Airport, additional service will operate between Hartsfield and Chattanooga, stopping at all intermediate stations or with express service directly between the airports.

While the cost is still being determined, experience demonstrates that the range will likely be comparable to that of the MARTA system in Atlanta on a cost per mile

basis. However, operating cost is expected to be paid by a combination of revenue from riders and the public-private partnership. Federal and or local operating subsidies will not be requested for operations or maintenance support.

The Administration has proposed fully funding the "guaranteed" portion of the Federal Aid Highways program that includes \$25 million for the Maglev deployment program for fiscal year 2001. After all the takedowns and funding obligations are eliminated that will leave about \$17 million for the seven competing projects. This is insufficient to evaluate the seven projects so that an appropriate down select decision can be accomplished. In order to eliminate the risks for both the FRA and the project applicants a full Environmental Impact Statement needs to be completed for each project.

The Maglev deployment program is quickly reaching a crossroads where decisions have to be made about its long term potential and future. There is great interest among the seven sponsors to continue to move forward. While final conceptual results will not be submitted until June 30, 2000 it is clear that at a minimum Atlanta-Chattanooga and perhaps two or three others, maybe all, projects competing for federal funding will offer a successful demonstration of this exciting new technology.

It appears evident that the \$950 million non-guaranteed Maglev funding authorization will not in large part be appropriated during the TEA-21 funding cycle. This is due to budget constraints on the Subcommittee's 302(b) allocation. Also, because of the late start in awarding the programs it seems unlikely that actual construction of one or more projects can begin by fiscal year 2003. With both of these factors at work, it is clear that long-term decisions about Maglev deployment will be made in the next authorization bill.

For example a full Environmental Impact Statement would permit us to fully evaluate the Vine Street station in downtown Atlanta to tie MARTA, commuter rail, bus and taxi into a major intermodal connection, where the whole will definitely be larger than any of its component parts. This station would connect Phillips Arena, the World Congress Center, the Georgia Dome and corporate headquarters of Coca Cola and CNN. The station at HATA would become the "centerpiece" for a truly multi-modal transportation hub linking the future Southern Crescent Transportation Service Center (housing commuter and high-speed rail, local and regional bus systems, a future MARTA station and Maglev) to the new East Terminal at HATA.

Further completing the EIS process would permit us to fully negotiate an agreement that is in process between Georgia Power and Tennessee Valley Authority to work together to supply power for the Maglev system, thus creating a new truly emission free transportation alternative. Also, there are major private Maglev partners that are "on the bubble" that would truly revolutionize the concept of airport travel (to, from and in the sky) in the Atlanta-Chattanooga Region. The commitment of funding for the EIS will signal the resolve to move forward with this new transportation technology. Importantly, all costs under the EIS process will be completely defined as has been tested under the Federal Transit Administration's Full Funding Grant Agreement Process. This is a process that has been proven with over a decade of experience.

We urge the Subcommittee to provide an additional \$7 million for fiscal year 2001 for the Atlanta-Chattanooga EIS to make the best-informed decision possible and to best protect the sponsor's and Federal government's investment. These additional necessary funds can be realized from the \$950 million Maglev authorization in TEA-21. The additional funds are a small amount in absolute terms, and tiny when compared to the size of the investment already made and the great potential for this new, but tested, system in the future. This is an extremely prudent hedge against making a poor decision in the future and will assure a complete picture for those who will making long-term decisions to improve mobility and the quality of life in the Atlanta-Chattanooga corridor.

We would be pleased to respond to any of the Committee's questions and urge your early recommendation of the fiscal year 2001 funding for the Atlanta-Chattanooga Environmental Impact Statement. Please contact Robert McCord at the Atlanta Regional Commission (404-463-3253) for any follow-up that may be required.

PREPARED STATEMENT OF THE SOUTHEAST HIGH SPEED RAIL CORRIDOR

The Southeast High Speed Rail Corridor is a partnership of Virginia, North Carolina, South Carolina and Georgia to provide safe and efficient intercity passenger rail service. Southeast High Speed Rail will link cities where highway and airline congestion is the greatest, providing the region with a much needed travel alternative.

Safety is our primary concern. We request a total of \$5.5 million in section 1103(c) funding in the fiscal year 2001 U.S. Department of Transportation appropriation to be invested: Virginia \$2 million, North Carolina \$1 million, South Carolina \$1 million, and Georgia \$1.5 million.

We will spend the funds wisely and promptly on vital safety projects that will contribute to the mobility of people and goods in our region. We will continue to work closely with our freight rail partners to ensure the maximum return on these investments.

Each of us will also make you and the members of the subcommittee aware of other projects and programs that are vital to our individual states. We also invite your consideration of those activities.

The Southeast High Speed Rail Corridor is a unique, regional transportation asset that enhances the social and economic life of entire corridor. We value your partnership in this effort and we appreciate your ongoing support for this project.

PREPARED STATEMENT OF THE NATIONAL ASSOCIATION OF RAILROAD PASSENGERS

Thank you for the opportunity to submit this statement for the record. Our non-partisan Association—whose members are individuals—has worked since 1967 towards development of a modern rail passenger network in the U.S.

SUMMARY

We strongly support the fully authorized level of funding for Amtrak for Fiscal 2001.

We support full funding of high-speed rail and rail corridor development programs.

Amtrak usage and revenues continue to grow after a decline in the mid-1990's. Many opportunities lie ahead for improved passenger rail service, but they will require a partnership that includes both the public and private sector.

FISCAL 2001 AMTRAK APPROPRIATIONS

We strongly support the fully authorized level of funding for Amtrak as set forth in the Amtrak Reform and Accountability Act of 1997. This Act authorized \$5.163 billion in appropriations for capital and operations, for the five fiscal years of 1998 through 2002. For the first three years (1998–2000), though \$3.219 billion was authorized, the Administration proposed \$1.936 billion and Congress appropriated \$1.774 billion, leaving a total gap (thus far) of \$1.445 billion (see Table 1, next page).

TABLE 1.—APPROPRIATIONS AUTHORIZED FOR AMTRAK, 1998–2002

[In millions of dollars]

| Fiscal year | Amount authorized | Administration proposal | Amount Appropriated | Authorized amount not appropriated |
|-------------|-------------------|-------------------------|---------------------|------------------------------------|
| 1998 | 1,138 | 744 | 594 | 544 |
| 1999 | 1,058 | 621 | 609 | 449 |
| 2000 | 1,023 | 571 | 571 | 452 |
| 2001 | 989 | 989 | n.a. | n.a. |
| 2002 | 955 | n.a. | n.a. | n.a. |

Amtrak and the Administration have said that the amount that was appropriated in 1998–2000 is sufficient toward furthering Amtrak's efforts to achieve operating self-sufficiency by 2003. However, as DOT Inspector General Kenneth Mead has said, if they make it, they won't make it by much. It is also clear that, at this rate, practically nothing would remain for expansions that would let passenger rail further increase its geographical reach and become a more relevant presence in the transportation market in more places. Many states want to help with these investments, but they are frustrated by the current lack of a comprehensive federal partnership in this area. (I will return to this in Section 4.)

We appreciate and support past actions by Congress to give Amtrak the flexibility to spend part of its capital appropriation on items relating to preventive maintenance. As is true for transit, preventive maintenance expenditures can forestall the need for some capital expenditures that are more expensive. They can enhance reli-

ability and help ease operating costs. This flexibility became crucial to Amtrak in Fiscal 1999, which was the first year the Administration proposed no Amtrak operating grant. We support extending this flexibility for both equipment and maintenance-of-way at least through Fiscal 2002.

HIGH-SPEED RAIL FUNDING

We support funding at the authorized level of \$35 million for high-speed rail programs. This will allow the work of the Federal Railroad Administration to continue in areas that will foster future corridor development across the U.S. These areas include continued development of a high-speed locomotive that doesn't require overhead electric power, advanced signal systems, corridor planning, and advanced grade-crossing safety technology.

AMTRAK USE IS GROWING, AND WILL GROW MORE

In fiscal year 1999, Amtrak "core" passenger revenues rose 6.0 percent, ridership rose 2.0 percent, and passenger-miles rose 0.5 percent (see Table 2, next page). This makes 1999 the third year in a row that all three of these measures improved. By "core" we mean intercity passengers; these numbers do not reflect Amtrak's contract commuter operations.

TABLE 2.—AMTRAK CORE RIDERSHIP AND REVENUES, 1996–99

| | Passenger revenues (\$ millions) | System ridership (millions) | System passenger- miles (millions) |
|-----------------|-------------------------------------|--------------------------------|---------------------------------------|
| Fiscal: | | | |
| 1996 | \$850.6 | 19.7 | 5,049.6 |
| 1997 | \$916.3 | 20.2 | 5,166.2 |
| 1998 | \$946.2 | 21.1 | 5,304.2 |
| 1999 | \$1,003.4 | 21.5 | 5,330.1 |
| Percent change: | | | |
| 1996–99 | + 18.0 | + 9.3 | + 5.6 |
| 1998–99 | + 6.0 | + 2.0 | + 0.5 |

Of course, we would like to have seen stronger gains. The Northeast and West business units in fact did post stronger gains. The Intercity unit suffered partly due to serious on-time performance problems. Many of these problems were caused by the after-effects of the Union Pacific meltdown, and—later in the year—by disastrous, new problems as Norfolk Southern and CSX struggled with the complex Conrail transaction.

We expect that all three indicators in Table 2 will increase as a result of Amtrak's attaining a full level of Acela service in the Northeast Corridor. While Congress made significant infrastructure investments in the Northeast Corridor in the 1990's, the increased service levels made possible by these investments are only just beginning. The first increment of added service began January 31, with conversion of two Boston-New York-Washington round-trips to all-electric Acela Regional service, reducing the Boston South Station-New York City running time to just under four hours. The ridership response has been strongly positive. More service will be added throughout 2000 as remaining electrification work is completed, and as new locomotives and new complete train sets are delivered for Acela Regional and Acela Express services, respectively.

FUTURE OPPORTUNITIES EXIST, BUT REQUIRE A FEDERAL PARTNER

This investment in the Northeast, making possible faster, all-electric service possible for the first time beyond New Haven to Boston, is arguably the single-greatest passenger-rail-related infrastructure investment by any agency in the U.S. since the Great Depression. This project will have a direct regional impact on transportation in the Northeast, by enhancing the attractiveness of passenger trains and making them a much better alternative to constrained highway and airport capacity. Also, the entire project (infrastructure and new train sets) will demonstrate to other areas of the country that modern, high-speed rail is not just for the Europeans and Japanese.

We believe the evidence continues to show that Americans are eager to ride good train service wherever it is provided. Whatever the short term holds for oil prices, most experts—including those at the International Energy Agency—believe that the

era of cheap oil has at most 10–15 years to go. The U.S. relies on energy-intensive domestic aviation more than any other nation. Therefore, the stronger our passenger rail system can become, the more it can soften the negative impacts of future energy price increases on our economy and our quality of life.

Public support for expanded service—which would be greatly aided by appropriating the entire amount authorized for Amtrak—was reinforced on February 1 at a Capitol Hill breakfast with the formation of a bi-partisan coalition of state Departments of Transportation to press for federal funding for intercity passenger rail. The confidence this Subcommittee has shown in Amtrak is vindicated by statements like the following from Illinois DOT Secretary Kirk Brown, made on February 1: “Amtrak has done an outstanding job. Three years ago, we would have said Amtrak was a problem. But they’ve changed the way they do business. They have done a great job of building credibility with the local communities.”

At the same meeting, North Carolina Deputy Secretary David King said, “We have been so bold as to rename the NEC [Northeast Corridor]. We call it the ACC. That’s the Atlantic Coast Corridor. Two-thirds of the people who board our trains [in North Carolina] want to go to the Northeast Corridor. It’s not a one-state business that we’re about. It’s got to be national. Like Illinois, we’re pleased at the progress Amtrak has made . . . What really is missing is [meaningful] federal money.” New York DOT Assistant Commissioner Jack Guinan and Wisconsin DOT Deputy Director Terry Mulcahy also praised Amtrak.

Another remarkable sign that passenger rail is popular among states came last December when 26 governors wrote to this Subcommittee and Office of Management and Budget Director Jack Lew asking that Amtrak be funded at the fully authorized level in 2001.

The U.S. lags the world in making it easy for travelers to connect between intercity passenger rail and airlines. Many people will be surprised by the positive impact on Amtrak’s revenues when the station at Newark Airport opens in 2001. We are pleased that T. F. Green Airport in Providence will get an Amtrak station (also in 2001), and that planners in the Midwest are looking at air/rail connections in Gary and Milwaukee and possibly elsewhere. We remain convinced that the greatest untapped opportunity to exploit air/rail lies in extending Amtrak trains—and O’Hare’s Airport Transit (people mover)—to Metra’s O’Hare Transfer commuter rail station.

We strongly support adding key routes to the long-distance network. Among the most important needs we see: Midwest-Nashville-Atlanta-Florida and Seattle-Portland-Denver-Texas. Long-distance trains will benefit from high-speed corridor initiatives, with better reliability and travel times in territory shared by both types of service. This is particularly true in the Midwest, where Chicago-East Coast trains have been severely impacted by the 1999 split-up of Conrail.

PREPARED STATEMENT OF THE AMERICAN PASSENGER RAIL COALITION

Chairman Shelby and Members of the Subcommittee on Transportation Appropriations, thank you for the opportunity to present testimony to the Subcommittee on the importance of the nation’s intercity passenger railroad—Amtrak—and the funding Amtrak needs to continue its success in building ridership and revenues and to partner with states on investments in high-speed rail on corridors around the country.

The American Passenger Rail Coalition (APRC) is an association of the nation’s railroad equipment suppliers and rail-related businesses that are working for a financially strong, efficient and safe U.S. intercity passenger rail system. APRC member companies manufacture railroad cars and locomotives, railcar brakes, doors and lighting, rail signaling systems, rail cable and ties and provide important services such as track repair, computer and networking services, communications, food delivery and other services. APRC member companies have manufacturing plants and businesses in states across the country that employ thousands of U.S. workers and contribute to the economic health of states and communities.

MOMENTUM IS BUILDING NATIONWIDE FOR IMPROVED INTERCITY RAIL PASSENGER SERVICE

Momentum is building in states and regions around the country—in the Midwest, the Northeast, the Southeast, the South, the West and the Pacific Northwest—for improved intercity passenger rail service. States and communities are not only speaking out about the need for improved rail service but are investing substantial amounts of their own money to bring this about. An indication of this momentum was the announcement in October 1999 by the states of Wisconsin, Illinois and

Michigan that they will, in partnership with Amtrak, develop a plan to purchase new rail equipment capable of travelling 110 mph to operate on three Midwest passenger rail corridors. What is becoming apparent is that states from all regions of the country share a conviction that intercity passenger rail must be an essential element of state and national plans to assure future mobility, economic development and a high quality of life.

STRONG FEDERAL LEADERSHIP IS ESSENTIAL

Federal leadership through strong funding of Amtrak and a partnership with the states is essential to ensuring the success of the investments states and communities are making to improve rail service. Partnership between the federal government and states has been basis for construction and expansion of our nation's highways, airports and other modes of transportation. This federal-state partnership enables key capital and infrastructure investments to be made that result in better service, greater capacity and ridership growth. With a federal-state partnership, intercity passenger rail and high-speed rail service will develop and attract a growing ridership.

APRC thanks the Subcommittee for the support it has shown for Amtrak. APRC expresses special appreciation to Senator Frank Lautenberg for his steadfast commitment and untiring efforts to secure the funding Amtrak needs to continue to improve and grow. In fiscal year 2001, APRC asks the Subcommittee to appropriate \$989 million for Amtrak, the full-authorized level Congress approved for Amtrak for fiscal year 2001 in the Amtrak reauthorization legislation. This funding will keep Amtrak on track to operational self-sufficiency by fiscal year 2003 and enable Amtrak to partner with states in making capital investments in the high-speed rail corridors.

More than half of the nation's Governors are on record supporting \$989 million for Amtrak in fiscal year 2001. State legislators, mayors and community leaders, rail business and rail passenger associations, labor and other organizations all have expressed support for funding Amtrak at the full-authorized level in fiscal year 2001. This is a critical time for federal leadership in intercity passenger rail. The return to the nation for its investments in Amtrak and high-speed rail will be high.

AMTRAK'S STRATEGIC BUSINESS PLAN IS YIELDING POSITIVE RESULTS

Under the leadership of the Amtrak Board of Directors and President and CEO, George Warrington, and guided by the Strategic Business Plan they have adopted, Amtrak is increasing its revenues and ridership and entering into partnerships that are yielding increased efficiency and growth. Indications of the positive results in the last fiscal year (fiscal year 1999) include:

- Amtrak total revenues were \$1.84 billion, the highest in Amtrak's history.
- Amtrak exceeded the bottom-line target in its business plan by \$8 million.
- Ridership was 21.5 million, up 2 percent from fiscal year 1998 and nearly 10 percent over fiscal year 1997.
- Passenger-related revenues set a record again, topping \$1 billion.
- Amtrak increased the number of trains operating in many states and reintroduced passenger rail service to Oklahoma for the first time in 20 years.
- Amtrak's mail and express freight service produced \$98 million in revenue, up 18 percent over the prior fiscal year.

In December 1999, Moody's Investment Services, after reviewing Amtrak's finances and Strategic Business Plan, raised Amtrak's credit rating to A3, a rating that means "a stable outlook" and noted that it "reflects Moody's assessment of the financial strength of Amtrak in relation to its unique operations and prominence in the U.S."

Each year, since 1994, Amtrak has presented to Congress a timeline of its "glide-path" to becoming free of federal operating assistance. The glidepath does not include nor has it ever included progressive overhauls or depreciation, a non-cash expense, as federal operating costs. Amtrak is on track to becoming free of federal operating assistance as understood historically by both Amtrak and Congress. Amtrak is fully intent on meeting the financial goals and reforms established by Congress in the Amtrak Reform and Accountability Act of 1997.

AMTRAK'S PUBLIC AND PRIVATE PARTNERSHIPS YIELD NEW REVENUES AND RIDERSHIP

The public and private partnerships, which Amtrak is undertaking, are generating new revenues and opportunities to increase service. Amtrak's mail and express business, which is central to improving the economics of the long-distance trains, has been experiencing double digit growth. On the Chicago-San Antonio

Texas Eagle, which was nearly cancelled three years ago, service has increased and ridership was up 17 percent in the first quarter of this fiscal year (Oct-Dec. 1999).

Amtrak ridership increased last year, reaching record levels on some routes:

- New York-Washington D.C. Metroliner Service set its third consecutive ridership record in fiscal year 1999, with 2.24 million passengers.
- The Philadelphia-Harrisburg Keystone Service, provided in partnership with Pennsylvania, rose 18 percent to nearly 1 million passengers.
- Amtrak's partnership with Washington State and Oregon and the popular European-style Talgo trains operating along the Pacific Northwest Corridor boosted rail ridership to 450,000 in fiscal year 1999. Amtrak ridership in the corridor has quadrupled over the past six years.

On January 31, Amtrak celebrated the inauguration of all-electric rail service between Boston and New York City. The new Acela Regional service will reduce New York to Boston rail travel time by as much as 90 minutes. Completion of the final 156-mile section of the Northeast Corridor electrification system from New Haven to Boston made this all-electric service possible. With this final link, the entire Northeast Corridor from Boston to Washington D.C. now has overhead electrification. New, comfortable upgraded railcars and faster downtown-to-downtown service will draw new business and other customers to the rails. Later this year, Amtrak and the nation will celebrate the launch of the Acela Express high-speed rail service in the Northeast Corridor. The sleek new trainsets, manufactured by the consortium of Bombardier and ALSTOM Transportation, will travel at top speeds of 150 miles per hour, cutting the Boston-New York travel time to under 3 hours, and will provide U.S. rail passengers with a new level of speed, comfort and service quality. The Acela high-speed rail service, the linchpin of Amtrak's strategy to achieve operational self-sufficiency, is projected to attract an additional 2.6 million riders annually to Amtrak and generate net revenues of at least \$180 million. Design and construction of the new trains generated contracts with businesses in 23 states, created thousands of jobs and will yield substantial economic benefits for the Northeast region and the nation.

STATE COMMITMENTS TO HIGH-SPEED RAIL CORRIDOR DEVELOPMENT

States and regions are making substantial investments to improve intercity passenger rail service. Some examples include:

- State transportation officials announced on February 1, the formation of a new "States for Passenger Rail" coalition through which states will work together for strong funding for intercity passenger rail service and funding to advance the designated high-speed rail corridors. Nineteen states have already joined to coalition. Others are expected to join in the weeks ahead.
- Nine Midwestern states, in cooperation with Amtrak and the Federal Railroad Administration (FRA), are developing the Midwest Regional Rail Initiative, a plan to improve intercity passenger rail service on 3,000 miles of track throughout the region.
- A \$185 million agreement was signed between New York State and Amtrak to upgrade seven Turboliner trains that operate on NY's Empire Corridor and for other infrastructure investments on the corridor.
- In November 1999, Amtrak and Pennsylvania DOT announced a \$140 million agreement to fund improvements on the Philadelphia-Harrisburg Keystone Corridor, including electrification of the route, purchase of equipment, upgraded track and other improvements.
- In California, Amtrak made its largest state investment ever—\$125 million for new trains for the popular San Diego-San Luis Obispo rail corridor.
- In the Pacific Northwest, investments by Washington and Oregon to improve intercity passenger rail service are yielding big gains (cited earlier).
- Along the Gulf Coast, Mississippi, Louisiana, Alabama are working on plans to improve rail service along the Gulf Coast high-speed rail corridor.

FUNDING FOR FRA'S NEXT GENERATION HIGH SPEED RAIL PROGRAM AND FOR RAIL SAFETY

APRC also asks the Subcommittee to provide strong funding for the Federal Railroad Administration's Next Generation High-Speed Rail Program, to continue the important contributions this program is making in the development of a high-speed non-electric locomotive, advances in positive train control, development and testing of advanced grade crossing protection technologies and in other areas. Highway-railroad grade crossing elimination programs are crucial to the development of high-speed rail and APCR asks the Subcommittee to continue funding for these important programs.

IMPORTANT LEGISLATIVE OPPORTUNITIES TO IMPROVE INTERCITY PASSENGER RAIL

Finally, APRC would like to express its support for two important pieces of legislation that will provide states with increased opportunities to invest in passenger rail improvements. S. 1900, the High Speed Rail Investment Act, introduced by Senator Lautenberg and co-sponsors would authorize Amtrak to sell \$10 billion in bonds over 10 years and invest the money in designated high-speed rail corridors. A federal investment of \$400 million would leverage billions in capital for high-speed rail investment. The Senate bill has 40 co-sponsors. A House companion bill has been introduced. S. 1144, the Surface Transportation Act, led by Senator Voinovich, would allow states to use flexible federal surface transportation funds (STP, CMAQ and NHS) for intercity passenger rail, where the state believes rail is the best transportation solution. This legislation is supported by many public and private organizations. Enactment of these bills, along with strong federal appropriations for Amtrak and to advance high-speed rail R&D and rail safety, will enable Amtrak and the states to make crucial passenger rail investments that will yield high returns for the nation.

APRC thanks the Subcommittee for the opportunity to present this testimony.
