FEATURE NEWS

It's all about the structure

For more than 20 years, Brian Kobilka worked to create a portrait of a key cell receptor. Sometimes, the slow, steady approach wins.

BY LIZZIE BUCHEN

Brian Kobilka was exhausted when he stepped off the 12-hour red-eye flight from China to San Francisco, California, last May. But after a quick nap at home, he headed straight back to the airport and crammed his long frame into another plane, this time bound for Chicago, Illinois. Over there, he drove to the Advanced Photon Source at Argonne National Laboratory, a source of powerful X-ray beams used for analyzing protein structures. Kobilka, a biochemist at Stanford University in California, was desperate to see the latest data from his lab's effort to make the first atomic-scale, three-dimensional image of a key cell-surface receptor locked with its protein partner. The image marked the last leg of an intellectual journey that he had started some 20 years before.

Nearly every function of the human body, from sight and smell to heart rate and neuronal communication, depends on G-protein-coupled receptors (GPCRs). Lodged in the fatty membranes that surround cells, they detect hormones, odors, chemical neurotransmitters and other signals outside the cell, and then convey their messages to the interior by activating one of several types of G proteins. The G protein, in turn, triggers a plethora of other events. The receptor makes up one of the largest families of human proteins and are the targets of one-third to one-half of drugs. Working out their atomic structures will help researchers to understand how this central cellular communication system works and could help drug-makers to design more effective treatments.

The structure and workings of GPCRs have been overriding obsessions of Kobilka for most of his professional life. For much of this, he had little company, as the proteins were widely considered too complex and unwieldy to be stabilized as crystals, a prerequisite for structural analysis by X-ray crystallography. But his determination has finally started to pay off. In 2007, his team solved the first high-resolution structure of a GPCR that binds to a hormone¹. In January this year he did the same for the receptor poised to activate its G-protein², and last month, he published the results from Chicago, the first structure of any GPCR in the act of turning on its G-protein³.

The latest accomplishment has many in the field buzzing about a Nobel prize. "But if they do give it to him, it'll be the devil to get him to Stockholm," says Henry Hooper, a professor emeritus at the University of California, San Francisco, who worked on G proteins and has known Kobilka since the 1980s. Kobilka loathes the limelight, and is renowned as much for his shy modesty as his ability to crack seemingly impossible protein structures.

When I met Kobilka at his Stanford office, he scribbled a quick doodle, averting his eyes, and reluctantly offered me a seat across from him at his desk. He stared intently at the glowing red light on my watch recorder. He is "desperately fearful" of talking to the press, he says, his voice breaking, and only agreed to talk because he "wanted to make sure that the core findings of my lab and collaborators are recognized."

He is so fearful, in fact, that it is almost impossible to draw much out from him. When asked why he is so captivated by GPCRs, Kobilka at last gives an answer. "I'm just inherently fascinated by these proteins. I don't know. I just want to know how they work," he says. "The only time he becomes animated is when describing the conformation of the receptor gripping its G-protein. 'It's a fantastic structure,' he says, a grin across his face. "It's just amazing. I really enjoy talking about it."

Hooper says that "Brian is a fascinating character. He's so driven, and I

A blue figure is a molecular view of a G-protein coupled receptor (GPCR) bound to a signaling molecule (yellow spheres, top) and activating a G-protein (pink, left and green).

Agenda

8:30	Welcome	
8:45	Overview	Haruki Nakamura

RCSB PDB
2011: 282 million
2010: 159 million

PDBe
2011: 59 million
2010: 34 million

PDBj
2011: 38 million
2010: 16 million

Common Tool for Deposition and Annotation

- Sequence-annotation module v1.0 completed
- Ligand-annotation module v1.0 including new features for oligomers completed
- Workflow engine and management system running with annotation modules
- Validation module on track
- Deposition system in active development
- Cross-site data-sharing architecture in place

Format Discussions

- PDBx addresses limitations in molecular size and complexity and extensibility of existing PDB format
- Software developers committed to the production of PDBx/mmCIF for deposition by early 2013

Task Forces

Collect recommendations and develop consensus on method-specific issues, including validation checks that should be performed and identification of validation software applications.

X-ray Validation

- 2008 Workshop
- 2011 *Structure* publication
- Chair: Randy J. Read (University of Cambridge)

3DEM Validation

- 2010 Meeting
- Chairs: Richard Henderson (maps, MRC-LMB), Andrej Sali (models, UCSF)
- 2012 *Structure* publication

NMR Validation

- 2009, 2011 Meetings
- Chairs: Gaetano Montelione (Rutgers), Michael Nilges (Institut Pasteur)
- Report in progress

Small-Angle Scattering

- 2012 Meeting
- Chair: Jill Trewhella (University of Sydney)
- Report in progress

July 2012

Funding

- RCSB PDB competitive renewal funded by NSF
 - January 2009 - December 2013
 - Noncompetitive 5 years renewal due in 2013
- PDBe main funding from EMBL and Wellcome Trust
 - WT: competitive grant (2010-2014)
 - EMBL: core of ~15 posts
- PDBj competitive renewal funded by JST (Japan Science & Technology Agency)
 - April 2011 - March 2014
- BMRB competitive renewal funded from the National Library of Medicine
 - NLM will no longer fund BMRB after 2014

- Established to support specific wwPDB activities
 - Advisory committee meetings
 - Outreach and education activities, including seminars and workshops
- 501(c)3 organization
 - American, tax-exempt association dedicated to scientific, literary, charitable, and educational purposes
- Fundraising on-going

13:30-14:00

Free Admission - Advance Registration not necessary

wwPDB Interactions

- wwPDB leadership
 - Regular wwPDB Foundation phone meetings
 - Additional Skype and phone meetings
 - Yearly and ad hoc face-to-face meetings
- Common Tool for Deposition & Annotation Project
 - Weekly VTC meetings
 - Semi-annual in-person meetings
 - Daily phone, email and Skype meetings
- Regular annotator exchange visits
- NMR
 - Monthly phone/VTC meetings
- EMDB
 - Biweekly phone/VTC meetings

Activities for the Coming Year

- Roll-out of D&A system
- Phasing out of PDB format
- Production of PDBx format for deposition by refinement software
- Limited archive remediation
- Joint *pdb.org* website
- Joint publication about developments
- Continued Task Force activity
- International Year of Crystallography

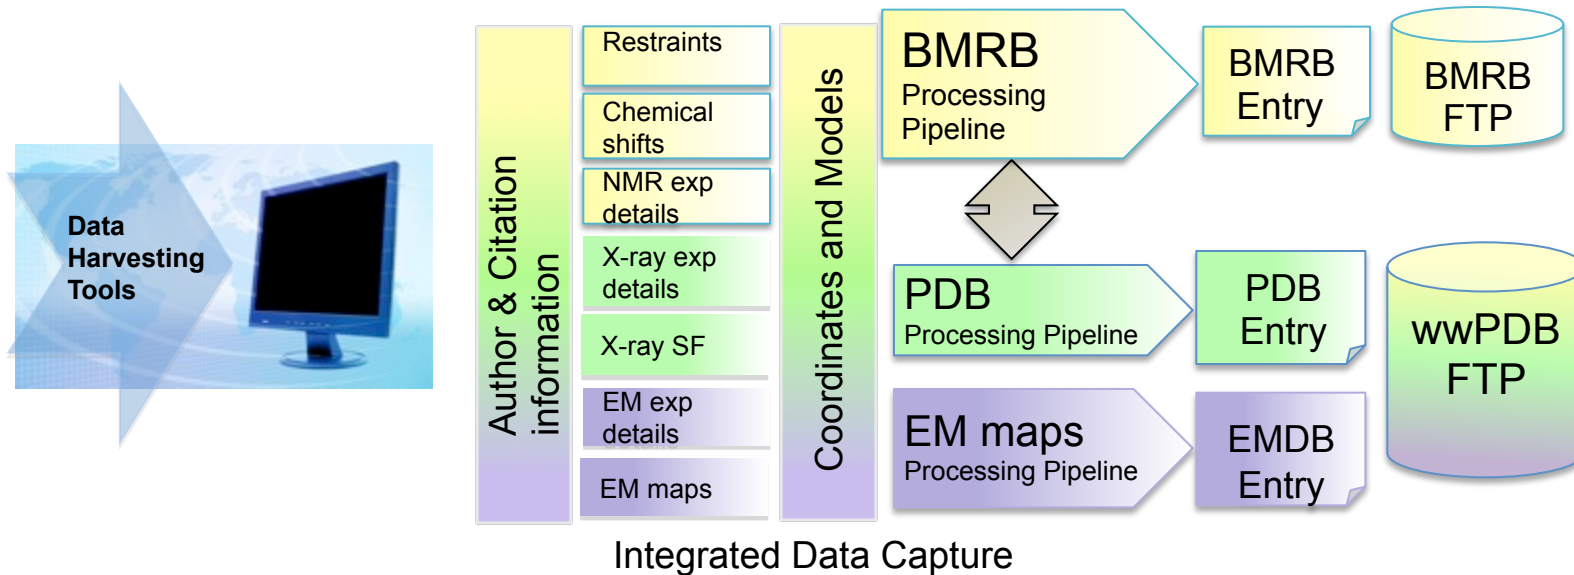

Common Deposition & Annotation (D&A) Tool

Martha Quesada

wwpdb.org

The Vision

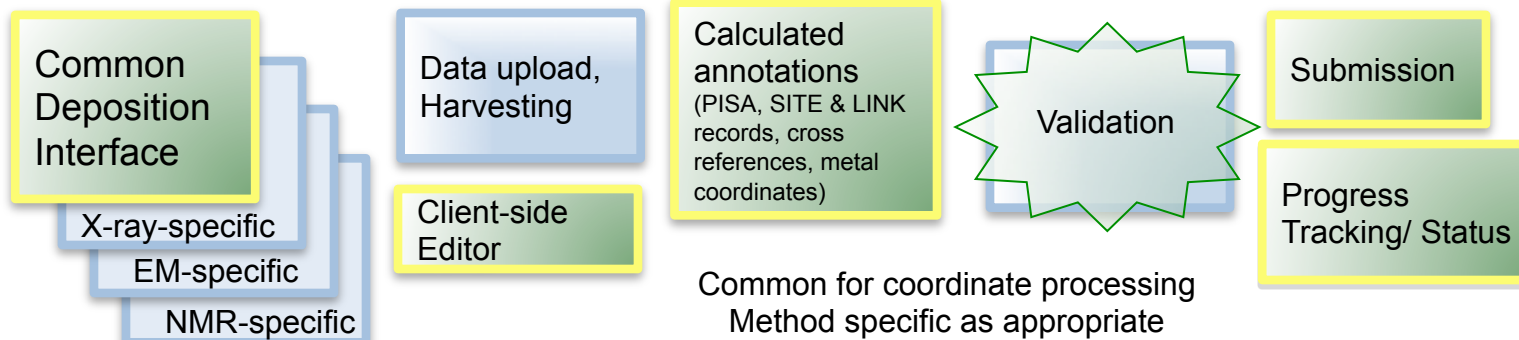

Design Goals: Standardization, Quality and Efficiency

Supporting

- Larger and more complex biological molecules
- Expanded annotation
- Increased throughput: Automation and validation of routine submissions

D&A Annotation Pipeline

Deliverables

Processing Modules Updates

Sequence

2012 Enhancements

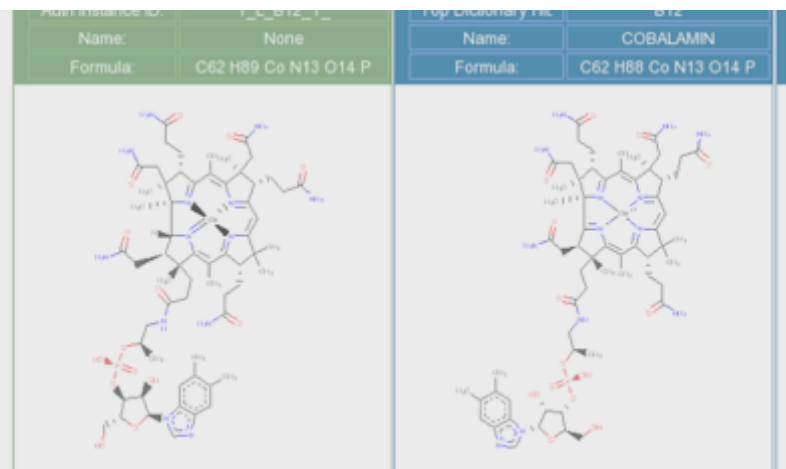

- Chimeric proteins supported
- Enhanced sequence match sorting
- Create new chemical definitions by splitting or merging existing definitions
- Unit and integration testing at all sites

Ligand

2012 Enhancements

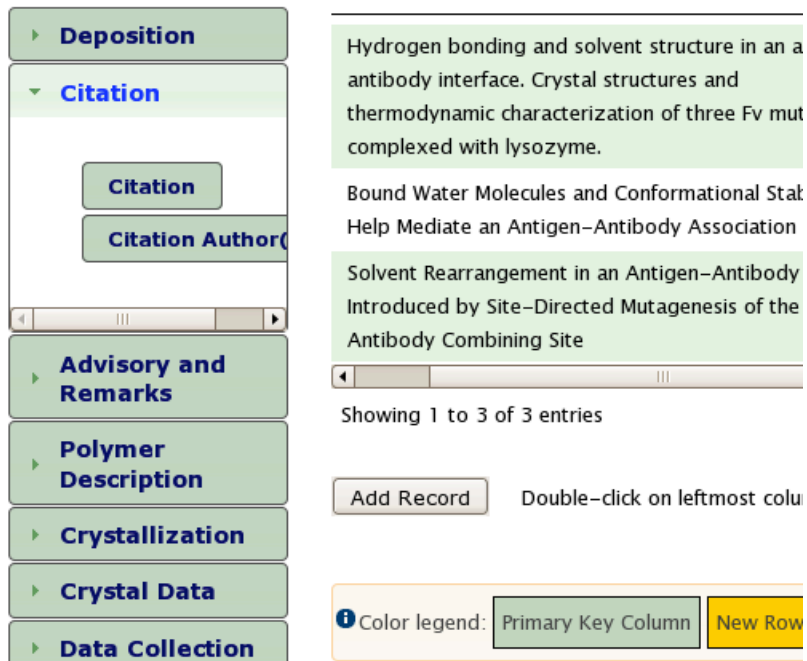

“Productionization”

- Create new chemical definitions by splitting or merging existing definitions
- Integration with Chemical Component Dictionary
- Component archiving User Interface
 - In production at RCSB PDB & PDBj
 - Unit and integration testing at PDBe

2012 Annotation Pipeline Deliverables

Web form data entry and editing

Citation Title

Hydrogen bonding and solvent structure in an antibody interface. Crystal structures and thermodynamic characterization of three Fv mutants complexed with lysozyme.
Bound Water Molecules and Conformational States Help Mediate an Antigen–Antibody Association
Solvent Rearrangement in an Antigen–Antibody Interface Introduced by Site–Directed Mutagenesis of the Antibody Combining Site

Showing 1 to 3 of 3 entries

Add Record Double-click on leftmost column

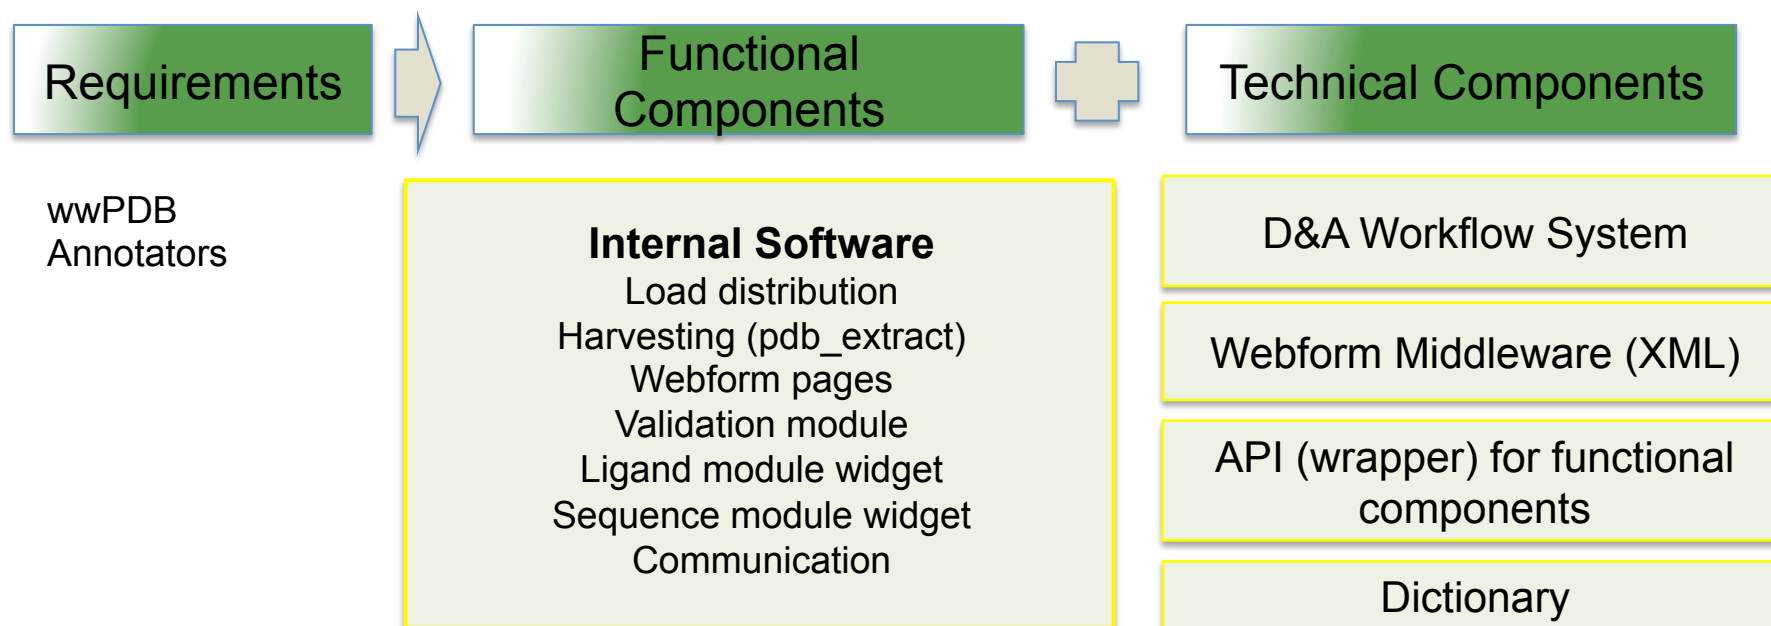

Color legend: Primary Key Column New Row

Annotation Tasks

- Dictionary check: Validation of PDBx, mmCIF, PDBML
- Biological assemblies (PISA)
- Automated annotation
 - Site environment
 - Solvent position
 - Linkage review module
 - Secondary structure

Code was refactored where needed, Middleware & User Interfaces for review and editing were developed

DEPOSITION ID: D000995

All of the C-alpha and C-beta atom coordinates have gone missing in reflections that we misplaced earlier. We are hoping that we will discover the source of super-linearity in the coordinates of a on a 4 Angstrom vector. We agree that the real-space R-value problem will be resolved when we upgrade the operating system.

Showing 1 to 60 of 60 entries

- Look and feel of email
- Linked to web page content

EM V1.0

- Dictionary enhancements soon complete
- EM-specific interfaces being implemented
- Large data file requirements will be supported in the deposition module
- Ready for testing by end 2012

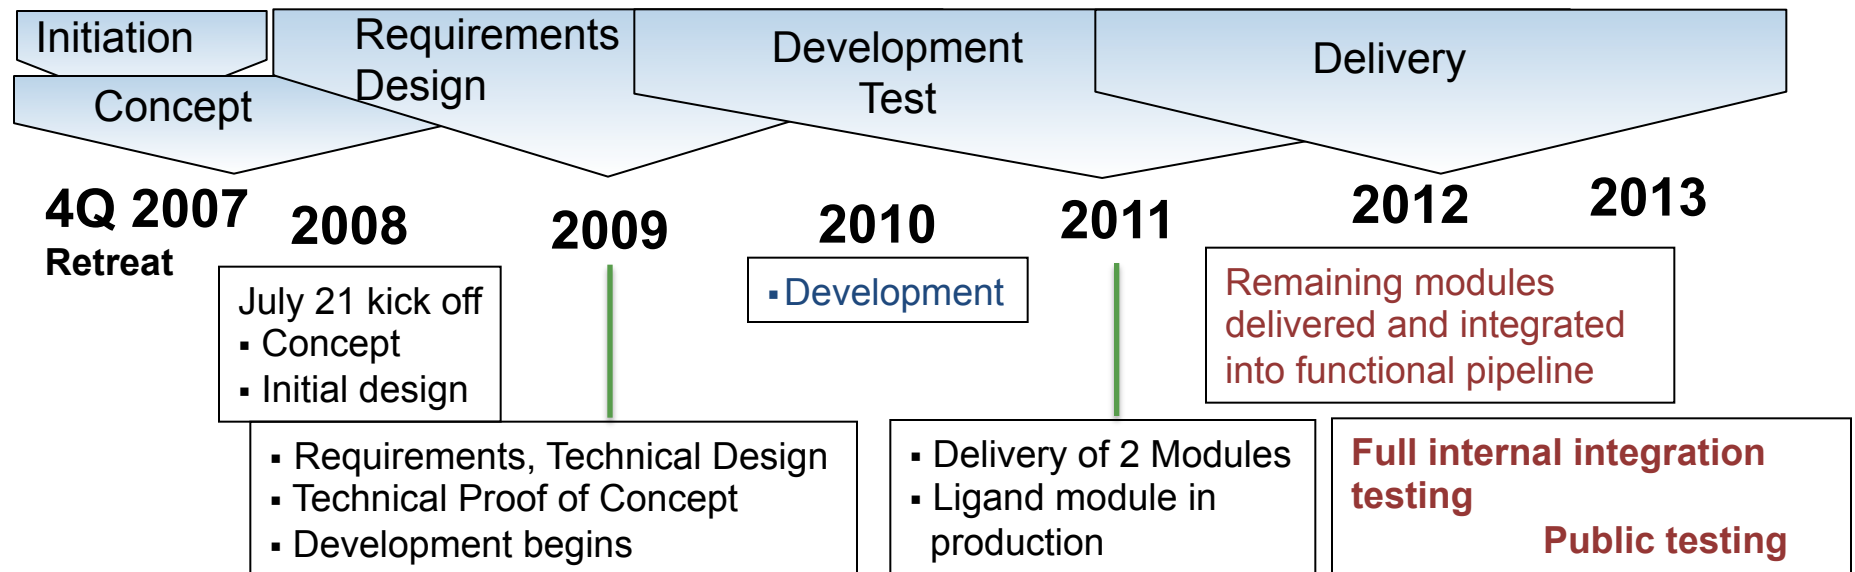

Future

- Additional visualization, data harvesting
- Validation requirements from EM VTF to be supported

NMR V1.0

- Dictionary data items in place
- Data requirements are defined and mapped for chemical shifts
- Integration of software for PDB atom nomenclature correspondence to NMR chemical shifts in place
- D&A NMR user interfaces being implemented
- Common D&A and ADIT-NMR data exchange to be implemented
- Ready for testing by end 2012

wwPDB Common D&A Tool Project

2012 Deliverable: wwPDB Common D&A System Version 1.0

- Able to process a file from deposition through annotation
- Supports all existing D&A processes and procedures
- Offers enhanced user interfaces for functional modules and deposition process (within reason)
- Provides a workflow infrastructure that enables task tracking and automation

Global Deployment Plan

Depositor Perspective

1. Release for testing by select and representative group of depositors early 2013
2. Iterative development (refinement and debugging) based on feedback
3. Expand user base and continue dual deposition input stream
4. Before the end of 2013 - switch all NEW depositions to new system. Incomplete legacy depositions to be completed in “old” systems

Experience, Expertise and Diverse Skills
representing the broad interests of the wwPDB

Format, Raw Data and Validation

Gerard Kleywegt

Why the PDB Format Must Go

- Problem: PDB format is almost 40 years old and does not support today's science
 - Let alone tomorrow's science...
- Some of the limitations
 - Max 62 chains
 - and that's stretching it
 - Max 99,999 atoms
 - 5 ribosomes in ASU=10 PDB entries!
 - Very short chain, residue and atom names
 - 1, 3, 4 characters, respectively
 - No bond orders or chirality specified for ligands
 - No support for NMR, EM, hybrid methods, ...
 - Meta-data specification cumbersome and inflexible

Towards a “new PDB format”

- 2010 – started process of defining new format, consulting many software developers
- 2011 – agreement to adopt PDBx (mmCIF) as the new format and to phase out the old PDB format
 - Commitments from CCP4, Phenix and Global Phasing (*i.e.*, ~85% of all PDB depositions)
 - Agreement on managing development between these software providers and wwPDB
 - Established working group
 - Projected completion – January 2013

Update on “New PDB Format”

- PDBx/mmCIF Deposition Working Group
 - Goal: support deposition of X-ray structures in PDBx format
 - Participants: developers of major X-ray software packages and wwPDB staff
 - Continued virtual meetings to discuss content and representation issues
 - Paul Adams has replaced Oliver Smart as chair
 - Delivery target early 2013

Format Compatibility Plan

- Adopt a *PDB-friendly* mmCIF/PDBx style
 - All records on a single text line
 - Columns presented in standard column order
 - Tabular presentation with leading record names (e.g. ATOM, CELL, REFIN)
 - Method-independent features in left-most columns (e.g. identifiers & coordinates)
 - Method-specific features in the right-most columns (e.g. ADPs, NMR order/disorder parameters)
 - Continue to support PDB nomenclature semantics (e.g. PDB-style chains, residue numbering and insertion codes)

ATOM	8	C	C	VAL	A	40	24.000	-22.152	24.778	1	1.00	.	56.00

Guiding Principles for Deployment

- Preserve backward compatibility where possible
- Changes that do not fit the within the current PDB format will be implemented only if needed (e.g. to represent a large molecule)
 - Atom serial numbers
 - Chain identifiers
 - Residue names and numbers
- Continue to assign residue-level 3-letter codes even if more descriptive identifiers are adopted (e.g. for monosaccharides)

Future Support for the Current Format

- Web service to create current PDB format data files
- PDB-like report format

Validation of PDBx/mmCIF and PDBML Files

Data type validation tool for PDBML/PDBx

PDBML is validated against PDBML Scheme (pdbx-v40.xsd)

PDBx is validated against dictionary definitions (mmcif_pdbx_v40.dic)

% dictionary.version 4.024
number of categories: 151 → 82

Options for Error messages:

Raw Data Archiving

- Participated in workshops at IUCr Madrid, ACA Boston and ECM Bergen
- Surveyed existing repositories of image data and found usage to be limited
- Converging *communis opinio* suggests image storage at synchrotron sites and institutional repositories where supported
- Assign DOIs to publicly accessible data sets and link DOIs to PDB entries
- Future: unmerged intensities and NOE peak lists

Validation by wwPDB – where are we (heading)?

Questions

- Entry-specific validation (quality control)
 - Is this model ready for archiving and publication?
 - Is this model a faithful, reliable and complete interpretation of the experimental data?
 - Are there any obvious errors/problems?
 - Are the conclusions drawn in the paper justified by the data?
 - Is this model suitable for my application?

- Archive-wide validation
 - What is the best model for this molecule/complex to answer my research question?
 - Which models should I select/omit when mining the PDB?

Validation in a Nutshell

- Compare a model to the experimental data and to the prior knowledge. It should:
 - Reproduce knowledge/information/data used in the construction of the model
 - R, RMSD bond lengths, chirality, ...
 - Predict knowledge/information/data not used in the construction of the model
 - R_{free} , Ramachandran plot, packing quality, ...
 - Global and local
 - Model alone, data alone, fit of model and data
 - ... and if a model fails to do this, there had better be a plausible explanation!

Validation - Outline

- wwPDB strategy for validation
- Implementing the wwPDB X-ray validation pipeline
- Update on wwPDB validation plans for NMR and EM

Validation

wwPDB strategy for validation

Two Major Recent wwPDB Projects

- Development of a new joint wwPDB Deposition and Annotation (D&A) system
 - Will handle X-ray, NMR, EM, ...
 - Will be used at all wwPDB sites
 - Replaces ADIT, AutoDep, EMdep, parts of ADIT-NMR
 - Public release 2013
- Validation using community-recommended methods will be integral part of new D&A
 - 2008: X-ray Validation Task Force (VTF)
 - 2009: NMR VTF
 - 2010: EM VTF
 - Implementation of recommendations in validation-software pipelines

Validation by wwPDB - Advantages

- Applies community-agreed methods uniformly
- Improves the quality and consistency of the PDB archive
- Supports editors and referees
- Helps users assess if an entry is suitable
- Helps users compare related entries
- Enables identification of outliers when mining the PDB
- Stimulates adoption of better protocols by the community

Experimental Data for Structure Papers

We are writing to address the retraction of five papers on structural studies of ATP-binding cassette (ABC) transporters—three in *Science* (G. Chang *et al.*, “Retraction,” Letters, 22 Dec. 2006, p. 1875), one in the *Proceedings of the National Academy of Sciences* (1), and one in the *Journal of Molecular Biology* (2). We have much sympathy for your readers but very little for the magazine. This is not the first time incorrect structures have been published in *Science* (3), and it will not be the last time. We

**Since February 2008,
data deposition
mandatory for PDB!**

Storing diffraction data

SIR — *Nature* must consider structural biology to be of some interest to its readership, as almost every issue contains a new macromolecular structure. We there-

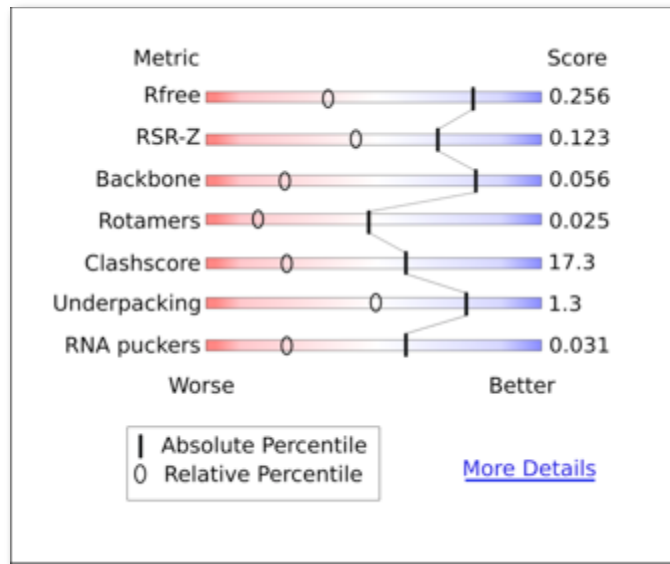

active-site nucleophile called ‘disallowed’ co we would expect up to glycine residues to

Mandatory Data Deposition

- This is great news!
 - Data available for all eternity
 - Even after a student/post-doc has left the lab...
 - Calculate maps
 - How credible is the density for a ligand or active site?
 - Are there any unmodelled features in the density?
 - Re-refine models
 - Re-interpret data
 - Validation using data
 - R , R_{free} , real-space fit, k_{sol} , B_{Wilson} , ...
 - Assess outliers identified by coordinate-only validation methods
 - (1) genuine, but unusual feature of the structure?
 - (2) probable error in the model?

wwPDB X-ray VTF

- “Relative” = compared to structures of similar resolution
- Reference values and distributions will be recomputed annually

Report: Read *et al.*, *Structure* 19, 1395 (2011)

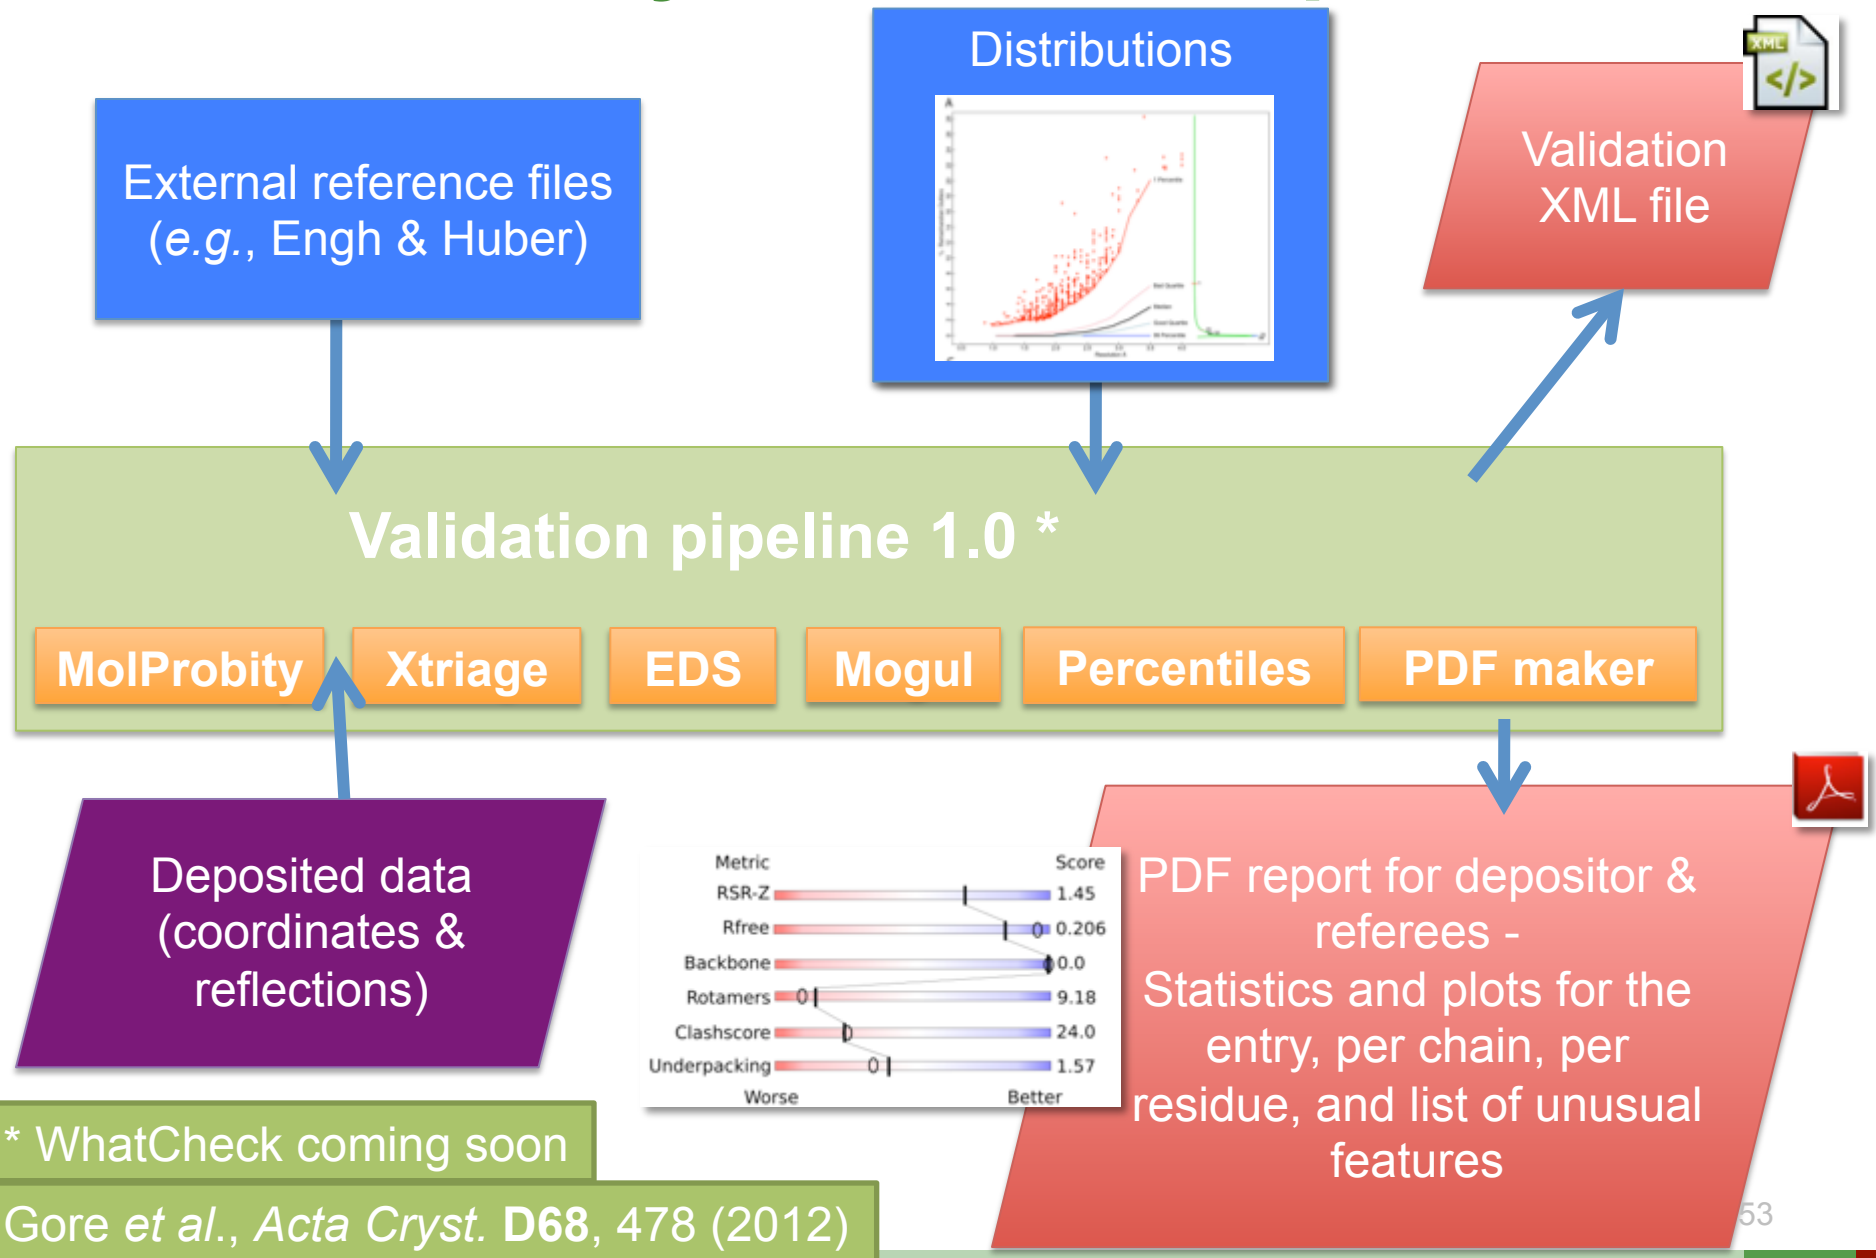

Validation

Implementing the wwPDB X-ray
validation pipeline

wwPDB X-ray Validation Pipeline

3DEM data and
data/model fit

What Does it Mean for a Crystallographer?

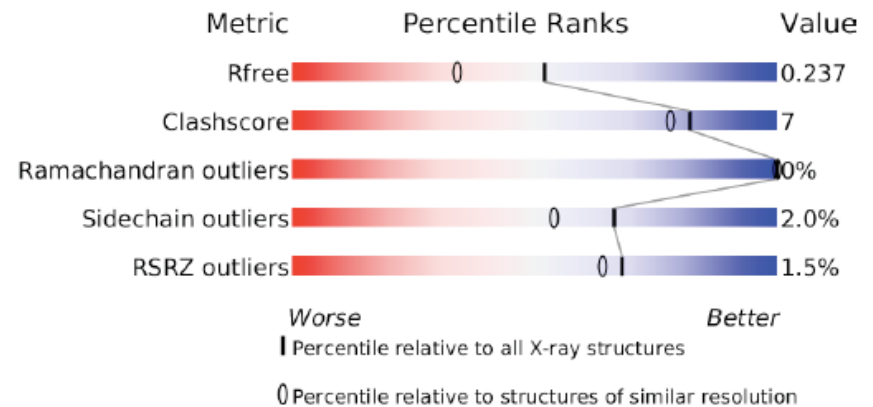

- There will be three uses of the validation pipeline
 - At deposition time
 - Not all checks can be run, e.g. some sequence and ligand checks
 - Report for depositor
 - At annotation time
 - Complete validation report, also suitable for editors/referees
 - Independently of deposition
 - Anonymous web-based server to use on models not (yet) in the PDB
 - Will be developed once the production pipeline is up and running
 - Will not be available as a stand-alone software package

What Will a Validation Report Include?

- Report = summary
 - Gory details in XML file
 - Explanations on web site
- Title page
 - Authors, title, PDB code (if assigned), time-stamp
- Overall quality at-a-glance
 - Slider plots of key statistics
- “Table 1”
 - Key data and refinement stats
- Entry composition
 - Macromolecules (including sequence diagnostics, if available)
 - Ligands (including diagnostics, if available)

1 Overall quality at a glance i

The resolution of this entry is 1.80 Å.

What Will a Validation Report Include?

- Model quality
 - Bond lengths and angles (outlier info, RMS-Z)
 - Chirality, planarity
 - Close contacts (incl. clashscore, worst clashes)
 - Torsion angles (Ramachandran, rotamers for proteins)
 - Ligand geometry (Mogul analysis)
- Model/data fit
 - Macromolecules: RSR, RSR-Z, B-factors, partial occupancies
 - Ligands: same, but RSR-Z undefined
- Residue plots
 - Residues with model-quality outliers (0, 1, 2, >2)
 - Residues with RSR-Z > 2 get a •
 - Unmodeled residues

Residue Plots

- Molecule 1: BOTULINUM NEUROTOXIN TYPE B
Chain A:

- Molecule 2: SYNAPTOBREVIN-II
Chain B:

- Molecule 3: SYNAPTOBREVIN-II
Chain C:

- Molecule 1: MEMBRANE COPPER AMINO OXIDASE
Chain A:

- Molecule 1: CELLULAR RETINOIC ACID BINDING PROTEIN TYPE II
Chain A:

Status and Timeline

- MolProbity, EDS, Mogul, Phenix modules, nucleic-acid validation, symmetry clashes, ligand and sequence validation implemented
 - Archive coverage at present >98% (EDS ~95%)
- Production of XML file and PDF report done
- Contents and presentation/wording details of report fine-tuned with wwPDB partners and wwPDB X-ray VTF
- Integrated into new wwPDB D&A system
- Debugging of the pipeline on-going
- Internal and external testing
- Version 1.0 for public release Q1 2013
- Version 2.0 will include WhatCheck plus changes based on feedback and experience

Validation

Update on wwPDB validation
plans for NMR and EM

What About Other Methods?

- Model validation using same criteria as X-ray
 - MolProbity, WhatCheck, Mogul
- Some special model-related issues per technique
 - X-ray: alternative conformations
 - NMR: ensemble of models; ill-defined regions
 - 3DEM: clashes of rigid-body fitted models; wrong species
- Data quality and model/data-fit assessment will be different for each technique

wwPDB NMR VTF Update

- Report with recommendations in preparation
- Mock-ups and specific questions sent to VTF
- Geometry validation as for X-ray
- Well-defined vs not-well-defined regions
- Treatment of NMR ensembles
- Chemical-shift validation to report completeness, outliers, referencing corrections
- Constraints validation to report number for each category (intra-residue, sequential, intermediate, long-range, inter-chain) and worst violations

NMR Validation Work and Plans

- FindCore (PSVS) and NMRCore (Olderado) algorithms in place for definition of well-defined regions
- Starting adaptation of the X-ray pipeline for NMR entries (MolProbity and Mogul)
- Once the recommendations are finalised
 - Sanity checks on nomenclature for constraints and coordinates (already in place for chemical shifts)
 - Chemical shift report (referencing corrections, outliers, completeness)
 - Calculation of global and per-residue scores for geometry validation (need advice on ensemble representations)
 - Identification of constraint violations
 - Validation of RDCs and other types of experimental restraints

EMDataBank EM VTF Update

- Main recommendations for EM maps
 - Standards for assessing resolution and accuracy of a map need to be developed
 - Structural features in a map should be in accordance with the claimed resolution
- Main recommendations for models fitted into EM maps
 - Criteria for assessing models need to be developed
 - Capability to archive coarse-grained representations of models is needed
- More research and development needed!

EM Validation Work and Plans

- D&A 1.0
 - Map visual analysis (Chimera): visual sanity check of the map and map/model overlay
 - Minimal model validation à la X-ray
- Later
 - Harvest more validation-related data (e.g., results of tilt-pair analysis)
 - As new methods are developed and become community-accepted they can be incorporated into the validation pipeline

NMR - BMRB

John Markley

wwpdb.org

Depositions (09/15/11 – 09/14/12)

- 828 new BMRB depositions
 - 62% associated with coordinates
- 556 new combined PDB and BMRB entries
 - 40 new coordinate sets associated with earlier BMRB depositions
 - 498 new depositions through BMRB
 - 28 new depositions through PDBj-BMRB
 - 30 new depositions through PDBe
- BMRB has handled restraint validation with help from European colleagues

Additional Activities

- Participation in the wwPDB common deposition and annotation (D&A) project
 - Interface development
 - NMR mock-up design support
 - Incorporation of NMR-STAR data items into the PDBx dictionary
 - Infrastructure development
 - NetApp data exchange
 - BMRB D&A test platform
 - Software development
 - NMR-STAR/PDBx data conversion
 - Coordinate/chemical shift atom nomenclature checker

Funding Status

- Grant (~70% of previous award) through August 2014
- Funding cuts have reduced staffing by one annotator and two programmers
- We prepared a “white paper” describing the activities of BMRB and its funding requirements, which was approved by the BMRB Advisory Board and sent to representatives of US granting agencies (NIH, NSF, and DOE)
- The white paper elicited little positive support from the granting agencies

Community Support for BMRB

- Editorial in *Nature Structural and Molecular Biology*
 - The Editor (Ines Chen) learned of the funding situation at BMRB and offered to look into writing an editorial
 - The result was an editorial plus 7 pages of testimonials from scientists in the field volunteering their strong support for BMRB
- Editorials in *Nature* and *The Scientist*
- Coverage by science bloggers

FEATURE

In support of the BMRB

The Biological Magnetic Resonance Bank (BMRB) is facing the threat of having its funding discontinued. Concerned about this situation, the editors of *Nature Structural & Molecular Biology* have asked the community why it is important to continue to support the BMRB. We have also asked John Markley, head of the BMRB, to present his case.

A word from the BMRB

Substantial funding is essential for a data bank such as the BMRB. Ideally, the funding should support maintenance activities (data deposition, storage and dissemination), growth of the data bank to track the emergence of new types of data, and development of improved technology to reduce costs and improve the impact of the data bank. The BMRB has played a key part in developing standards for the representation of biomolecular NMR data, and continued efforts in this area are needed as new kinds of data, such as those for small-angle X-ray (or neutron) scattering and cryo-EM, are reported and need to be archived. The BMRB, through its association with the Worldwide Protein Data Bank (wwPDB), is participating in the development of new standards and software for the validation of structures determined by NMR spectroscopy. Opportunities exist for expediting the creation of (more extensive) BMRB depositions through collaboration with instrument manufacturers and software developers. Such developments can facilitate the deposition of peak lists associated with assignments and structure determination, as recommended by our advisory board members. The challenge of the future will be in linking information across different data banks. The wwPDB is leading the way in demonstrating how this can be done.

Most grant regulations now require the timely deposition of experimental results, and an increasing number of journals have data deposition as a requirement for publication. Several growing areas of research are making extensive use of the BMRB. These include investigations

of intrinsically disordered proteins, development of automated analysis of NMR data, solid-state NMR and NMR-based metabolomics.

With the budget cuts that the BMRB has suffered (reduced by 40%, compared to the previous operating budget), we currently are at the minimal level of keeping up with depositions, data validation and data-quality development. In addition, the BMRB is barely managing to meet its obligations as a partner in the wwPDB. We have had to lay off people who were developing new software and functionality. The wwPDB advisory-committee meeting, held at Rutgers University on 1 October 2013, had a session on funding, which enabled us to inform members of the US granting agencies about the impending expiration of remaining funding from the National Library of Medicine in September 2014. To date, no plan has been advanced to keep the BMRB functioning. None of the three agencies has expressed an interest in funding more than a part of the needed budget, so a multi-agency approach appears to be needed. To stimulate this, BMRB staff members prepared a 'whitepaper' (see Supplementary Note), which was approved by its advisory board and then sent to representatives of the US grant agencies (National Institutes of Health (NIH), Department of Energy and National Science Foundation). Given the lead time for applications and review, it appears critical that a funding plan be developed within the coming year.

John L. Markley, University of Wisconsin-Madison, Madison, Wisconsin, USA

Note: Supplementary information is available at <http://www.nature.com/digital/10.1038/nmsb.2371>

Voices from the community

The BMRB is playing a very important part in determining structures and elucidating functions and interactions between biological molecules by NMR. The BMRB unit of Protein Data Bank Japan (BMRB-PDBj) has collected more than 600 chemical-shift data sets produced by RIKEN in the Protein 3000 project. Even if some of the structures themselves might not be that important, the chemical shift data can be used for drug discovery and to understand how they relate to secondary and tertiary structures. That relationship is used in many software tools for NMR data analysis, such as TALOS, SHIFTX and SPARTA. Thus, the chemical shift data are an important outcome of the structural proteomics effort, and this is the reason why the BMRB is a member of the wwPDB. The software programs mentioned above are commonly used by biological NMR researchers around the

world. Personally, I am also using the database and software tools in my own research. I think they are indispensable in biological NMR and related fields.

The BMRB was established by John Markley at the University of Wisconsin-Madison. Now, a network with BMRB-PDBj and the European Bioinformatics Institute (EBI) has been formed, and the BMRB has an essential role in the development and management of the database. To provide a high-quality NMR database to researchers in the life sciences and related fields, the activity at the BMRB should be kept in full swing.

Yohko Akutsu, Institute for Protein Research, Osaka University, Osaka, Japan

Current Plan

- We learned subsequently and indirectly that the NIGMS would accept an “R01” application for BMRB support
 - We intend to submit an application for the February 5, 2013 deadline

3D Electron Microscopy, SAS, Hybrid Methods

Helen Berman

wwpdb.org

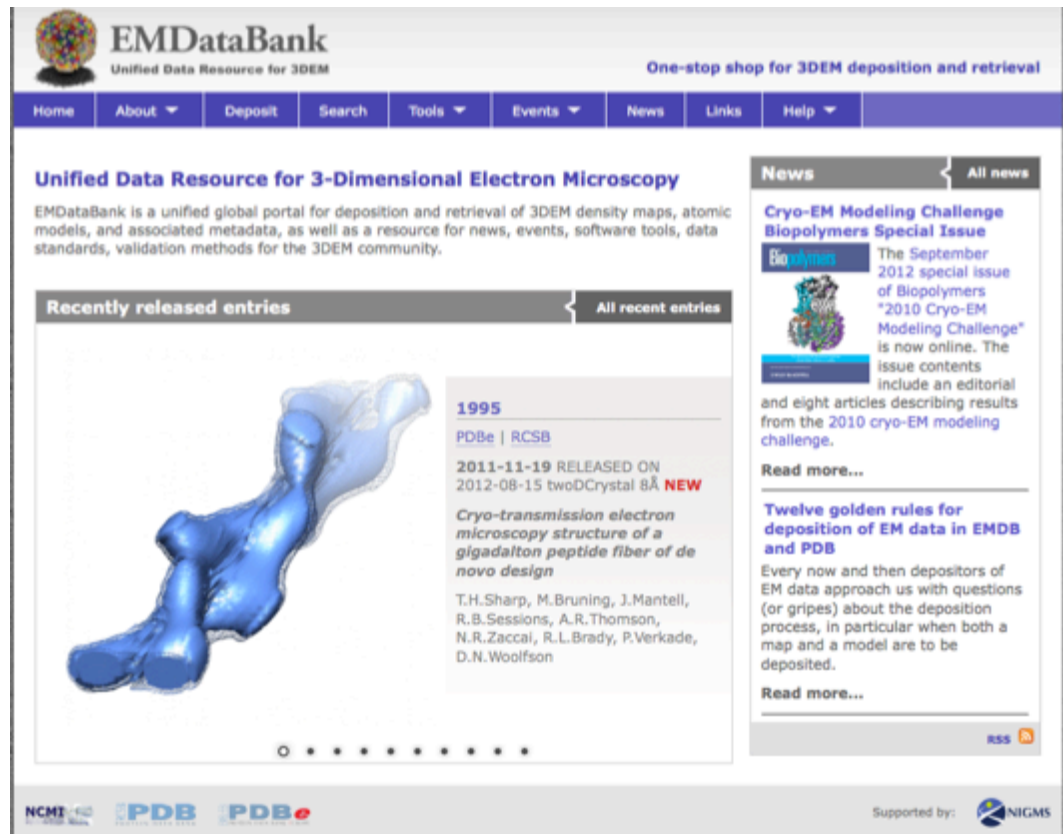

EMDataBank: Unified Data Resource for 3DEM

- Collaborative project between PDBe, RCSB PDB and Baylor-NCMI
- “*One-Stop Shop*” for collection of EM maps and coordinate models
- Standardized map redistribution format
- Cross referencing between maps and models (EMDB \leftrightarrow PDB)

EMDataBank Services

- **Joint map + coordinate deposition**
- News, software list, information about dictionaries, conventions, FAQ, community links
- Search by ID, author, sample type, keyword, deposition date
- Recently released entries
- Map+model 3D java viewer

The screenshot displays the EMDataBank website, which is a unified data resource for 3D electron microscopy. The header includes the EMDataBank logo and the tagline "One-stop shop for 3DEM deposition and retrieval". A navigation menu contains links for Home, About, Deposit, Search, Tools, Events, News, Links, and Help. The main content area features a section titled "Unified Data Resource for 3-Dimensional Electron Microscopy" with a brief description of the service. Below this, there is a "Recently released entries" section. The first entry is a 3D map of a gigadalton peptide fiber, with a release date of 2011-11-19 and a resolution of 8 Å. The entry includes a 3D visualization of the structure and a list of authors: T.H. Sharp, M. Bruning, J. Mantell, R.B. Sessions, A.R. Thomson, N.R. Zaccal, R.L. Brady, P. Verkade, and D.N. Woolfson. To the right of the main content, there is a "News" section with a featured article titled "Cryo-EM Modeling Challenge Biopolymers Special Issue" and another article titled "Twelve golden rules for deposition of EM data in EMDB and PDB". The footer of the page includes logos for NCI, PDB, and NIGMS, along with the text "Supported by: NIGMS".

PDB-EMDB merger: EM to be part of Common D&A Tool

6-March-2012

EM Data Bank joins the PDB archive

The EM Data Bank (EMDB), the primary archive for experimentally-determined maps obtained using three-dimensional electron microscopy methods, has joined the PDB archive (<ftp://ftp.wwpdb.org>), as **announced previously**.

The merger makes 3DEM results available in a single archive, including over 1300 electron microscopy derived maps from EMDb and 400 coordinates for EM map-derived models in PDB. It is also an essential step in the wwPDB's development of a Common Deposition & Annotation Tool that will cover all experimental methods, including hybrid methods.

With the addition of EMDb data, the physical size of the complete wwPDB archive jumps to roughly 180 GB (from its previous 130 GB). Sites that mirror the full wwPDB archive will need to increase storage capacity accordingly.

Summary information regarding the merger and detailed specifications for data access are posted at wwpdb.org/em/.

EMDataBank Project Funding

- Funded by NIH, BBSRC, and EMBL
- Collaborative Grant for 3DEM Validation under review by NIH

Late breaking news!
Grant is in the 5th percentile!!

EMData Bank

Wah Chiu PI, Helen Berman and Gerard Kleywegt coPIs

Specific Aims

1. Establish map-validation methods

- Use representative raw image datasets from both our laboratory and broad group of collaborators

2. Establish model-validation methods

- Use map and model data from EMDB and PDB and community-contributed data

3. Define standards for 3DEM data exchange and archiving

- Continue development of 3DEM terms in the EMDB data model and PDBx by adding metadata relevant to the validation procedures established above
- Establish an agreed upon data exchange file format for maps, and develop or modify software converters to support the new and current data formats

4. Facilitate the dissemination of 3DEM validation standards

5. Integrate 3DEM data standards and map and model validation into the wwPDB pipeline

- The map validation metadata and map-derived model-validation procedures developed through this project will be integrated into the wwPDB D&A system

SAXS/SANS Task Force

■ Members

- Jill Trehwella (Chair, University of Sydney)
- Dmitri Svergun (European Molecular Biology Laboratory-Hamburg)
- John Tainer (The Scripps Research Institute)
- Wayne Hendrickson (Columbia University)
- Mamoru Sato (Yokohama City University)
- Torsten Schwede (University of Basel)

SAS Committee Charge

- Should the PDB accept (some types of) models based on SAS studies ?
- If so, which types of models should be included (and which should not)?
- What are the minimum requirements for these models?
- What are the requirements regarding the supporting experimental data that need to be deposited?
- What validation procedures should be applied in the deposition and annotation process?

Preliminary Recommendations

- Develop an international repository for SAS data
- Standard dictionary required for definition of terms involved in data collection
- Shape and atomistic models based on SAS data should be archived
- Criteria for assessment of the uniqueness and quality of models needs to be defined
- Models derived from diverse hybrid data should be archived
- There is a need for key people involved in the different wwPDB VTFs to come together to discuss what the PDB should be archiving

Hybrid Methods

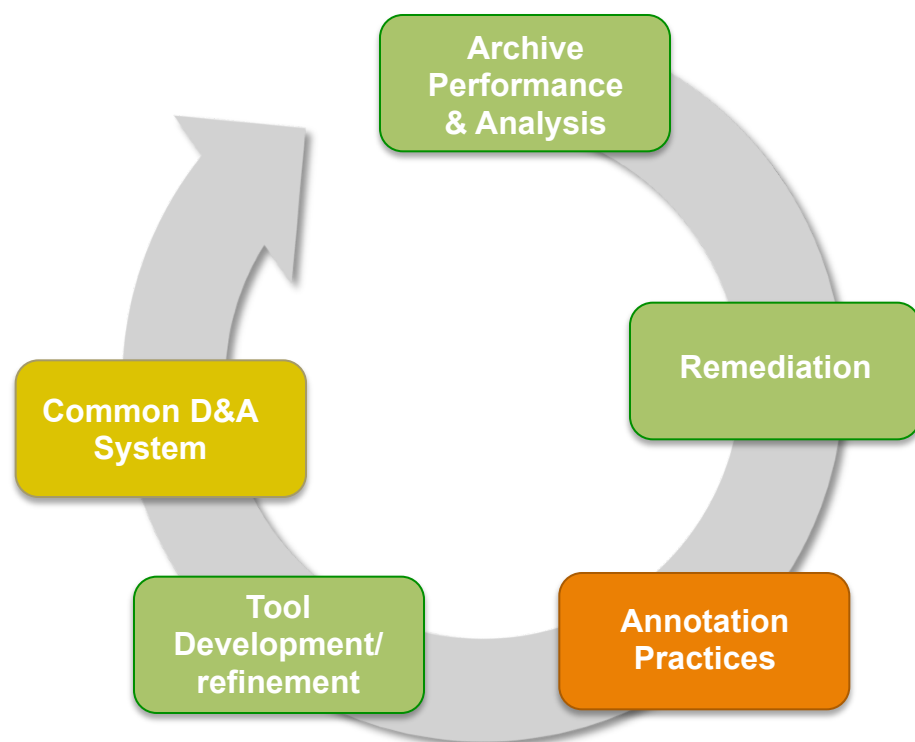

- Meeting planned for 2013
- Include representatives from the different task forces

Remediation

- Informs all processes
- Improves consistency in entry and archive annotation
- Enhances chemistry representation

Better query capability

Latest remediation release: July 2011

Better Annotation of Biologically Interesting Molecules

2011 remediation of inhibitors and antibiotics informed the development of an annotation system that supports

- Searches of small molecules and peptides against the new Biologically Interesting molecule Reference Dictionary (BIRD)
- 2D and 3D views
- Comparative analysis of structures
- Building new BIRD definitions
- Use of existing templates to maintain consistency in the data presentation

Target

Hit

Remediation 2013

- Transformation of non-standard crystal frames
- Recalculation of full B factors
- Transformation of dissociated assemblies
- X-ray multiple models

Remediation 2014

- Carbohydrates
 - Data analysis completed
- Protein modifications
 - Data analysis completed
- New amino acids – selenocysteine and pyrrolysine

Carbohydrate Remediation

Issues

- Multiple representations in naming and linking
- Non-standard nomenclature and incomplete linkages
- Representation of branched polymers

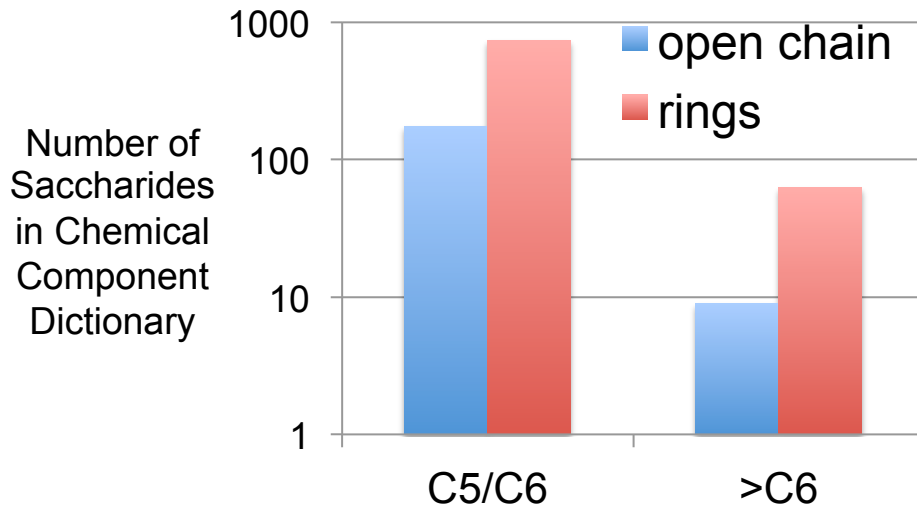

Goal

- Represent data consistently within the archive, in agreement with glycobiology community standards
- Enable searches for carbohydrates in the PDB archive

Plan

- Identify and analyze carbohydrate-containing entries
- Create standard representation for branched polymers
- Incorporate standard nomenclature
- Create a strategy for remediation

Carbohydrate Remediation Scope

Carbohydrate Remediation Plan

- Represent carbohydrate molecules as polymers of monosaccharides as appropriate
- Adopt glycobiology community standard nomenclature (LINUCS and IUPAC)

LINUCS: `[] [b-D-GlcpNAc] { [(3+1)] [a-L-Fucp] { } [(4+1)] [b-D-Galp] { [(2+1)] [a-L-Fucp] { } } }`

PDB ID: 2wmg

Protein Modifications

Issue

- Inconsistent annotation of PMs in the archival files results in the inability to search for these important structures

Goal

- To identify, classify, and represent all natural protein modifications consistently within the PDB archive and mutually mapped to UniProtKB

Scope

- Chemically modified ribosomal protein including post-translation

Remediated Data

Carbohydrates

Protein modifications

Sequence Processing

Ligand Processing

Manual and Automated Annotation

Validation

Putting it all together

2013 is the start of the big
transition

Coordinated Transition

Deposition & Annotation

1. Annotation running at all sites
2. Deposition alpha-2 stage at all sites
3. Deposition functional at all sites
4. Old Deposition system operation as normal
5. Old Deposition system – no new depositions allowed
6. Old annotation system still active
7. Old weekly release
8. New weekly release

Format

1. PDBx Working Group to finalize work
2. Release example new style mmCIF files for ribosomes
3. Start accepting new style format depositions
4. Release server to produce best-effort PDB-format files
5. Community outreach about format developments
6. Stop supplying PDB files in ftp archive

wwPDB Website(s)

1. Announce upcoming changes to the world
2. Unveil new pdb.org website and ftp site
3. Unveil expanded wwpdb.org

Archive

1. Reformat PDBx/mmCIF data files in archive to conform to new style guidelines
2. Remediate “low-hanging fruit”
3. Remediation of carbohydrates and PTMs
4. Introduce versioned entries

wwPDB Organizational Update

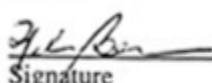

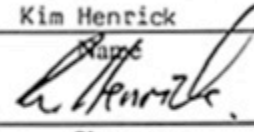

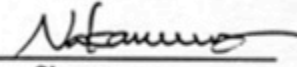

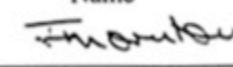

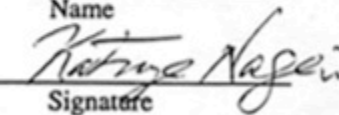

Gerard Kleywegt

wwPDB Organisation

- Original wwPDB charter expires in 2013

Effective Date July 1, 2003

By signing this agreement, all members agree to accept the terms contained within.

RCSB	MSD	PDBj
Helen M. Berman	Kim Henrick	Haruki Nakamura
Name	Name	Name
		
Signature	Signature	Signature
June 30, 2003	June 19, 2003	June 9, 2003
Date	Date	Date
Institutional Official	Institutional Official	Institutional Official
Michael E. Breton	Janet Thornton	Katsuya Nagai
Name	Name	Name
		
Signature	Signature	Signature
6-30-03	June 19, 2003	June 9, 2003
Date	Date	Date

wwPDB Organisation

- New wwPDB charter 2013
 - Separate principles and implementation details
 - Principles in charter – about wwPDB
 - Updated from 2003 text and circumstances
 - To be signed by PIs and heads of parent institutes
 - Covers 2013-2023, with review possible in 2018
 - Details in appendix – about PDB
 - Updated from 2003 text and circumstances
 - To be signed by PIs
 - Can be modified at any time by mutual agreement

wwPDB Organisation

- wwPDB Advisory Committee
 - “Re-form and reform” in 2013
 - New Terms of Reference to specify:
 - Remit/scope of advice
 - Meetings/reports
 - Membership – who/how long/chair
 - Representatives of wwPDB partners
 - Community representatives
 - Geographical representatives
 - Observers
 - Funding agencies, publishers, *etc.*; wwPDB staff

Discussion Points

- New Terms of Reference
- New wwPDB charter
- Transition strategy
