WEBINAR

Policies and Partnerships in India's Natural Gas and LNG Sector

ABOUT THE EVENT

Global gas demand is set for recovery in 2024 despite heightened geopolitical uncertainty. Within this, India represents an important market for natural gas as the country transitions towards its cleaner energy targets, impacting global supply and demand dynamics. Understanding trends in India is crucial in shaping regional dynamics and essential for ensuring both its own and wider energy security. In addition, well defined and effective policies and investments in gas infrastructure can foster investments and the development and implementation of new technologies. Thus, comprehending India's gas market is vital for all stakeholders worldwide to navigate the evolving global energy landscape effectively.

The International Energy Agency in association with the Petroleum Planning and Analysis Cell presents a webinar with IEA experts alongside Indian private and public stakeholders as well as international representatives to look at how to manage these changes effectively, such as by providing better guidance, seeking opportunities, and investing at the local level.
