Salary Report 2019

# What is INOMICS? A foreword

**INOMICS** has been offering students, professors, professionals and recruiters in the economics job market a comprehensive online resource for their academic and career choices since 1998.

In the 21 years that we have been online, we have succeeded in accumulating a unique audience of academics and professionals in economics, business and finance, as well as other disciplines such as marketing, finance & accounting, law, statistics, education and politics.

We represent a unique network of academic, research and private sector institutions interested in recruiting professionals and students in these fields. Through feedback from our users and clients, we know how important it is to have enough information about the job market to make the right career decisions and build recruiting strategies.

In order to collect deeper insights into the job market and to make this information available for INOMICS users, we run a salary survey. This Salary Report has been compiled based on the information collected between years 2016-2018.

We hope that the information presented in this Report will support applicants and jobseekers in making informed career and professional decisions, regardless of their country of residence, educational level or work experience.

If you have any suggestions or comments about this study, please feel free to get in touch with the INOMICS Team and we will be happy to assist you with any queries.

Kind regards,  
Andreas Hoffmann,  
CEO, INOMICS

# 1. Methodology

The INOMICS Salary Report is based on the data that was collected between 2016 and 2018 through the INOMICS Salary Survey. In total, more than 5.000 respondents from over 100 countries took part.

The questions were focused on the demographic profile of the respondents (i.e. age, gender, country of residence), their form of employment (full-time or part-time), their job sector (academic, private or public), and their net annual salary in US dollars.

The survey is ongoing and available online at [inomics.com/salary-survey](https://inomics.com/salary-survey).

This year's report represents the salary trends of Economists working in five countries: Germany, Italy, France, United Kingdom and USA. The average salaries are compared across job sectors, positions and genders.

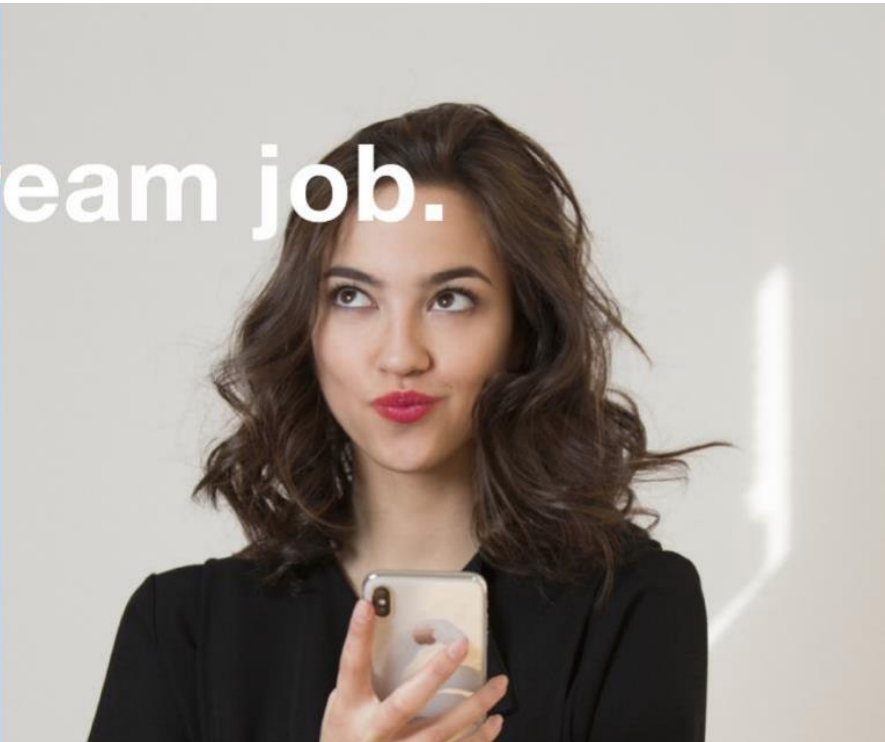

The reported salaries do not take into account such factors as cost of living or possible conversion errors amongst respondents.
