

**CollectionSpace is a web-based,
open-source collections management system
for museums and more.**

CollectionSpace is used and designed by museum collection professionals who work with art, artifacts, objects, and specimens. CollectionSpace manages the day-to-day workflows of a diverse group of museums, galleries, universities, and historical societies. CollectionSpace provides:

- **Fields and workflow procedures for diverse collections including archaeology, art, history, and natural history**
- **Web-based interface with unlimited user accounts**
- **Public Browser for sharing collections with your community**
- **Tools for importing data from CSV worksheets**
- **Native API for data sharing and integrations**

**We are
more than
software.**

**We are a
community.**

Lyrasis serves as the home organization for CollectionSpace, supporting the needs of the collections management community through mission-driven activities, hosting services and software development.

Annual Hosting Services from Lyrasis provide the expertise, infrastructure, tools, and resources so you can take full advantage of CollectionSpace without maintaining hardware and software. Annual hosting fees include:

- **24 x7 server monitoring, backup, and recovery**
- **Free upgrades for all releases**
- **Technical support and ongoing training**
- **Opportunities to participate in discussions around the ongoing development of the software**

For those with existing data, Lyrasis offers data consultation and full data migration services for an additional fee.
