Research Interests

My research focuses on networked computer systems, with an emphasis on network architecture and protocol design; network security, management, and measurement; routing; and anti-censorship techniques. The primary goal of my research is to design tools, techniques, and policies to help networks operate better, and to enable users of these networks (both public and private) to experience high availability and good end-to-end performance. The problems that I tackle often involve the intersection of networking technology and policy. I study problems in the pricing and economics of Internet interconnection, global Internet censorship and information control, the security and privacy implications of emerging technologies, and the performance of consumer, commercial, and enterprise networks. My research achieves impact through new design paradigms in network architecture, the release of open-source software systems, and data and evidence that can influence public policy discourse.

Education

Degree	Year	University	Field
Ph.D.	2005	Massachusetts Institute of Technology Cambridge, MA	Computer Science
		Dissertation: Proactive Techniques for Correct and Predictable Inter-	ernet Routing
		Sprowls Honorable Mention for best MIT Ph.D. dissertation in Cor	nputer Science
		Minor in Game Theory	
M.Eng.	2001	Massachusetts Institute of Technology Cambridge, MA	Computer Science
		Dissertation: Adaptive Delivery of Real-Time Streaming Video	
		Advisor: Hari Balakrishnan William A. Martin Memorial Thesis Award (MIT M Eng. thesis aw	and
		wuuam A. Marun Memoriai Tnesis Awara (MIT M.Eng. thesis awa	aru)
S.B.	2000	Massachusetts Institute of Technology Electrical Engineer Cambridge, MA	ring and Computer Science

Employment History

Title	Organization	Years
Neubauer Professor	University of Chicago	July 2019–Present
Professor	Princeton University	January 2015–June 2019
Professor	Georgia Institute of Technology	March 2014–December 2018
Associate Professor	Georgia Institute of Technology	March 2011–March 2014
Assistant Professor	Georgia Institute of Technology	2006–2011
Postdoctoral Researcher	Princeton University	Fall 2005
Research Assistant (Ph.D.)	Massachusetts Institute of Technology	2000–2005
Researcher	AT&T Labs–Research	2001–2005
Technical Associate	Bell Laboratories	1999
Research Intern	Hewlett-Packard Laboratories	1999
Technical Staff	LookSmart, Ltd.	1997

Honors and Awards

National Awards

- ACM Fellow
- NSF Presidential Early Career Award for Scientists and Engineers (PECASE)
- ACM SIGCOMM Rising Star Award
- Technology Review Top Innovators Under 35
- Alfred P. Sloan Fellowship
- NSF CAREER Award
- IBM Faculty Award

University Awards

- John P. Imlay Distinguished Lecture, Georgia Tech
- Hesburgh Teaching Fellow, Georgia Tech
- Georgia Tech College of Computing Outstanding Junior Faculty Research Award
- Georgia Tech Sigma Xi Young Faculty Award
- Georgia Tech Sigma Xi Best Undergraduate Research Advisor

Paper and Publication Awards

- Wall Street Journal Front Page (A1) Feature (August 19, 2019).
- USENIX "Best of the Rest" Paper Award for Best Paper in all USENIX Conferences (2016)
- USENIX Community Contribution Award, USENIX/ACM Symposium on Networked Systems Design and Implementation (2015)
- USENIX "Test of Time" Best Paper Award (2015)
- Internet Research Task Force Applied Networking Research Prize (2012, 2015)
- ACM SIGCOMM Community Award, ACM SIGCOMM Internet Measurement Conference (2013)
- Best Paper, Passive and Active Measurement Conference (2009)
- Best Student Paper, ACM SIGCOMM (2006)
- Best Paper, USENIX Symposium on Networked Systems Design and Implementation (2005)
- Best Student Paper, 11th USENIX Security Symposium (2002)
- Best Student Paper, 10th USENIX Security Symposium (2001)
- PRSA Bronze Anvil Award for Wall Street Journal Editorial Article

Thesis Awards

- George M. Sprowls honorable mention for best Ph.D. thesis in computer science, MIT
- MIT William A. Martin Memorial Thesis Award for Best EECS Master's Thesis

Other Honors

- Panelist for NSF/Discover Magazine Special Issue on "The New Internet"
- U.S. National Academy of Engineering Frontiers of Engineering Symposium
- U.S. National Academy of Science Kavli Frontiers of Science Symposium

Publications

Theses

[1]	Nick Feamster. <i>Proactive Techniques for Correct and Predictable Internet Routing</i> . PhD thesis, February 2006. Winner of the MIT George M. Sprowls Honorable Mention for Best MIT Ph.D. Dissertation in Computer Science.
[2]	Nick Feamster. Adaptive delivery of real-time streaming video. Master's thesis, May 2001. Winner of the MIT EECS William A. Martin Memorial Thesis Award.

Software

My research group regularly releases software and makes a practice of releasing source code with most published papers. As a supplement to the descriptions below, my research group's Github page is available at: https://github.com/noise-lab/.

Ongoing and Maintained Software

- *Netrics*. The Netrics platform is an open-source software framework for computer network measurement and analysis that has been under development since 2021. It supports a variety of network measurement tests, and is designed in an extensible way to make it easy to add new tests. The platform aims to provide robust, granular measurements on internet speed, reliability, local network bandwidth, and utilization. An initial pilot deployment of Netrics platform was deployed in 31 distinct community areas in Chicago in 2023 to measure internet speed, reliability, and equity in Internet performance across the city. The pilot study and deployment demonstrate the feasibility of the observational instrument of this type and pave the way for many of the deployment, logistical, and technical solutions that need to be put in place to deploy it. The software is publicly available on Github: https://github.com/chicago-cdac/nm-exp-active-netrics.
- *netML*. netml is a network anomaly detection tool and library written in Python. We have designed, implemented, and released a public, open-source Python library, netml, that takes network packet traces as input, transforms these packet traces into the various data representations. We have released the open-source code for the library and packaged the library on PyPi for easy installation. The netml library is written in Python and contains two sub-modules: (1) a pcap parser to produce flows using Scapy/dpkt; (2) a novelty detection module that applies the novelty detection algorithms. The netml functionality can be incorporated as a Python library or invoked directly from the command line. The entire library consists of approximately 11,000 lines of Python, with the packet parsing module comprising approximately 3,500 lines of Python, the implementations of various novelty detection modules comprising another 3,000 lines, another 3,000 lines in support of the netml command-line utility, and the rest of the code in support of various utilities (e.g., testing). The library is publicly available on Github: https://github.com/chicago-cdac/netml.
- *pcapML*. pcapML is a system for improving the reproducability of traffic analysis tasks. pcapML leverages the pcapng file format to encode metadata directly into raw traffic captures, removing any ambiguity about which packets belong to any given traffic flow, application, attack, etc., while still being compatiable with popular tools such as tshark and tcpdump. pcapML is publicly available on Github: https://github.com/nprint/pc apml
- *nPrint*. nPrint is a standard data representation for network traffic meant to be directly usable with machine learning algorithms, replacing feature engineering for a wide array of traffic analysis problems. We have also created nPrintML, which integrates nPrint with a fully automated AutoML pipeline. Source code and toolkit available at: https://github.com/nprint/nprint.
- *IoT Inspector.* IoT Inspector is a standalone desktop application that lets users analyze the traffic from home IoT devices. It allows users to determine: what Internet destinations IoT devices are communicating with, when the communication happens, and how many bytes are sent and received over time. These features identify potential problems on a home network, including: security problems (e.g., camera sending out lots of traffic even when not in use); privacy problems (e.g., smart TV contacting advertising or tracking companies as a user watches TV); performance problems (e.g., identifying who is using up the most bandwidth in a home network). More details, including video demonstrations, papers, and source code, are available at https://iot-inspector.princeton.edu. We are working with journalists to have thousands of users around the world to run this software to analyze smart home traffic.
- *NetMicroscope*. We have developed a system that supports passive measurement for a wide variety of services and network scenar- ios based on the above requirements. The system has two components: (1) a packet processing module that measures flow statistics and tracks their state at line rate; ; and (2)'a quality inference module that queries the flow cache to obtain flow statistics and derive the service quality for tracked applications. We have deployed this software in 50 user homes in the United States and France and are working with journalists to publish investigations from the tool, including how video quality relates to access ISP speed.
- Interconnection Measurement Project. Participating Internet Service Providers have installed a common tool to measure traffic at their interconnects, the points where ISPs exchange traffic with the greater Internet. This effort includes multiple ISPs, providing direct information on the capacity and utilization of interconnect links. All data

and visualizations are of ingress capacity and utilization. Across the 1,200+ links included in the data set, which represent the diverse and broadly substitutable routes available for Internet traffic flows, the Project reveals that capacity is roughly 50% utilized during peak periods, and that capacity continues to grow to address continued traffic growth. Further segmentation and analysis of the data is available, which will be regularly refreshed to provide a dynamic picture of how the Internet is evolving.

Older Projects

• *Project BISmark: An Application Platform for Home Networks.* Project BISmark (Broadband Internet Service Benchmark) is a platform for developing network management applications for home networks. The BISmark firmware is based on OpenWrt, an open-source operating system for home routers. Currently, BISmark includes a suite of passive and active network measurements that allows a home Internet user to continuously monitor various performance metrics, such as upstream and downstream throughput, latency, and packet loss. As of Spring 2013, BISmark is deployed in nearly 300 homes around the world in more than 20 countries. We are currently working both to expand the deployment and to extend the capabilities of the platform, to allow other researchers to use the platform for their own measurements.

See https://projectbismark.net for details.

- *MySpeedTest: A Tool for Mobile Performance Measurement.* Building on the success of BISmark, my students Sachit Muckaden, Abhishek Jain, and I have developed a tool to measure performance from mobile cellular handsets. The application collects a variety of data, including latency and throughput measurements to a variety of servers around the world, hosted by Measurement Lab. The application is now deployed on more than 4,000 handsets in over 130 countries. Some of the most significant deployments are in developing countries, and we are currently collaborating with ResearchICTAfrica, a policy organization in Africa, to study the performance of both fixed and mobile broadband across the continent. Software is available at https://goo.gl/28tx3.
- Sonata: Query-Driven Network Telemetry. Sonata is a query-driven streaming network telemetry system that uses a declarative query interface to drive the joint collection and analysis of network traffic. It takes advantage of two emerging technologies-streaming analytics platforms and programmable network devices—to facilitate query-driven telemetry. Sonata allows operators to directly express queries for a range network telemetry applications using a high level declarative language. Under the hood, Sonata partitions each query into a portion that runs in the switch and another that runs on the streaming analytics platform, iteratively refines the queries to efficiently capture only the traffic that satisfies the respective queries. We have released Sonata open-source on Github (https://github.com/Sonata-Princeton); more details are available at the project page at https: //sonata.cs.princeton.edu/.
- *iSDX: An Industrial-Scale Software Defined Internet Exchange Point.* iSDX (Software-Defined IXP) Software brings the merits of SDN to interdomain routing. Today's networks can only forward traffic based on the destination IP prefixes and routes offered by their immediate neighbors. SDN can give direct control over packet-processing rules that match on multiple header fields and perform a variety of actions. Internet Exchange Points (IXPs) are a compelling place to deploy these changes, given their role in interconnecting many networks and their growing importance in bringing popular content closer to end users.

SDX does more than simply replace an IXP's switches with their OpenFlow counterparts. SDX's capabilities enable new applications, such as application- specific peering—where two networks peer only for (say) streaming video traffic. We also developed new programming abstractions that allow participating networks to create and run these applications and a runtime that both behaves correctly when interacting with BGP and ensures that applications do not interfere with each other. Finally, we also ensured that the system scales, both in terms of table size and computational overhead. We are involved in several trial deployments of the SDX controller at various IXPs around the world, in collaboration with network operators. Software and more information is available through the Open Source SDN website, which is part of the Open Networking Foundation: https://opensourcesdn.org/projects/isdx-a-software-defined-internet-exchange-point/.

• *Bobble: Bursting Online Filter Bubbles.* With students Xinyu Xing, Dan Doozan and colleaguge Wenke Lee, I have designed and developed Bobble, a Chrome extension that allows users to see how their Web searches appear from different vantage points. The filter bubble is a concept developed by Internet activist Eli Pariser in his book to describe a phenomenon in which websites use algorithms to predict what information a user may like to see based on the user's location, search history, etc. As a result, a website may only show information which agrees with the user's past viewpoints. A typical example is Google's personalized search results. To "pop" the bubbles

created by Google search (also called de-personalization), our research group in the Georgia Tech Information Security Center is conducting ground-breaking research and developing software, Filter Bubble. Filter Bubble is a chrome extension that uses hundreds of nodes to distribute a user's Google search queries world wide each time the user performs a Google search. Using Filter Bubble, a user can easily see differences between his and others' Google search returns. The plugin has been installed by more than 100 users around the world and is available at https://bobble.gtisc.gatech.edu/.

- *Appu: Measuring Online Privacy Footprints.* With so many web applications and sites in the current time, it's hard for a user to keep track of where does her personal information reside. With Appu, we aim to make this job easier for the end user. Appu keeps track of personal information such as passwords, username, birthdate, address, credit card numbers, and social security number so that a user can find out all sites that store a particular bit of personal information. In the current beta release, Appu downloads personal information from sites where you have account and also tries to prevent password reuse across websites by warning users about it.
- *Transit Portal.* We developed software for the NSF-Sponsored GENI Project Office that (1) adds facilities and functions to the VINI testbed to enable experiments to carry traffic from real users; and (2) increases the experimental use of the VINI testbed by providing a familiar experiment management facility. The deliverables for this project all comprise software for supporting external connectivity and flexible, facile experimentation on the GENI testbed. The primary deliverables are a BGP session multiplexer—a router based on the Quagga software routing suite, software support for virtual tunnel and node creation, and integration of the above functionality with clearinghouse services developed as part of the ProtoGENI project.

This project contributed to the GENI design and prototyping through BGP mux development integration with ISPs; tunnel and topology establishment and management; ProtoGENI clearinghouse integration; and support for isolation and resource swapout. With researchers at Princeton, we have also built VINI, a large distributed testbed for specifying virtual network topologies and experimenting with routing protocols and architectures in a controlled, realistic emulation environment. This project has since been handed off to Professor Ethan Katz-Bassett at the University of Southern California and is still an actively maintained testbed. See https://peering.usc.edu/ for more details.

- Campus-Wide OpenFlow Deployment: Access and Information Flow Control for Enterprise Networks. Resonance is a system for controlling access and information flow in an enterprise network. Network operators currently use access control systems that are coarse-grained (i.e., it is difficult to apply specialized policy to individual users) and static (i.e., it is difficult to quickly change the extent of a user's access). Towards fixing these problems, we have developed a system that allows network operators to program network policy using a controller that is distinct from the switch itself and can be programmed to implement network-wide policy. We have implemented and deployed this system in an operational network that spans two buildings on the Georgia Tech campus; the network sees regular use, and a deployment in Georgia Tech dormitories or the wireless network is planned for the near future. We first demonstrated the function of this network at the 7th GENI Engineering Conference in March 2010, and recently demonstrated a version on Resonance that facilitates various home network management tasks at the 2011 Open Network Summit. See https://groups.geni.net/geni/wiki/BGPMux for details.
- *rcc: router configuration checker*. Static configuration analysis tool for Border Gateway Protocol (BGP) routing configurations. Downloaded by over 100 network operators and many large, nationwide backbone ISPs around the world.
- NANO: Network Access Neutrality Observatory. The Network Access Neutrality Observatory (NANO) is a system to help users determine whether their traffic is being discriminated against by an access ISP. In contrast to existing systems for detecting network neutrality violations, NANO makes no assumptions about the mechanism for discrimination or the services that the ISP might be discriminated against. NANO has been released in collaboration with Google as part of the Measurement Lab project.
- *Infranet*. System for circumventing Web censorship firewalls (*e.g.*, those in China, Saudi Arabia, etc.). Available on Sourceforge. Featured in articles in *Technology Review*, *New Scientist*, and *Slashdot*. See https://nms.lcs.mit.edu/projects/infranet/.
- *The Datapository*. Originally the "MIT BGP Monitor", the Datapository is growing to support multiple data feeds (*e.g.*, spam, end-to-end measurement probes, traceroutes, Abilene data, etc.). Currently used by researchers at Georgia Tech, Carnegie Mellon, University of Michigan, Princeton, MIT.
- Secure BGP Implementation. Implementation of S-BGP in the Quagga software router. Our implementation was considered by Randy Bush and Geoff Huston for their project to develop a certificate infrastructure for secure

routing protocols.

• *SR-RTP*. Transport protocol for selective retransmission of packets in an MPEG video stream. Incorporated into "Oxygen TV" for MIT Project Oxygen. Some ideas incorporated into the OpenDivX video transport protocol.

Research Proposals and Grants

- IMR: MM-1A: Measuring Internet Access Networks Across Space and Time Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), N. Marwell Amount: \$500,000 for 3 years. Awarded: July 2023.
- [2] SAI: Data-Driven Governance for Broadband Infrastructure Sponsor: National Science Foundation Investigator(s): N. Marwell (PI), N. Feamster Amount: \$750,000 for 3 years. Awarded: July 2023.
- [3] IMR: MT: A Community Platform for Controlled Experiments on Internet Access Networks Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$600,000 for 2 years. Awarded: July 2022.
- [4] SaTC: CORE: Small: Understanding Practical Deployment Considerations for Decentralized, Encrypted DNS

Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$500,000 for 3 years. Awarded: August 2022.

[5] IMR: RI-P: Programmable Closed-loop Measurement Platform for Last-Mile Networks

Sponsor: National Science Foundation Investigator(s): A. Gupta (PI), N. Feamster (PI) Amount: \$100,000 for 1 year. Awarded: August 2022.

- [6] CCRI: Medium: FLOTO: A Discovery Testbed for Measurement of Internet Access Networks Sponsor: National Science Foundation Investigator(s): K. Keahey (PI), N. Feamster Amount: \$1,565,166 for 3 years. Awarded: July 2022.
- [7] Continuously and Automatically Discovering and Remediating Internet-Facing Security Vulnerabilities Sponsor: C3.ai Digital Transformation Institute Investigator(s): N. Feamster (PI), Zakir Durumeric, Prateek Mittal Amount: \$1,000,000 for 1 year. Awarded: March 2022.
- [8] Development of Open-Source Measurement Tests for Broadband Access Networks Sponsor: Comcast Innovation Fund Investigator(s): N. Feamster (PI) Amount: \$50,000 for 1 year Awarded: January 2022.
- [9] CISE-ANR: Modeling Modern Network Traffic: From Data Representation to Automated Machine Learning

Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), Zakir Durumeric, Francesco Bronzino Amount: \$750,000 for 3 years Awarded: October 2021.

- [10] P50 Chicago Chronic Condition Equity Network (C3EN) R01: Voice-Activated Technology to Improve Mobility and Reduce Health Disparities: EngAGEing African American Older Adult-Care Partner Dyads Sponsor: National Institutes of Health Investigator(s): M. Chetty, N. Feamster, L. Hawkley, and M. Huisingh-Scheetz Amount: \$4,100,000 for 5 years. Awarded: August 2021.
- [11] CC* Integration-Large: Democratizing Networking Research in the Era of AI/ML Sponsor: National Science Foundation Investigator(s): A. Gupta (PI), T. Gupta, E. Belding, N. Feamster (PI) Amount: \$999,913 for 2 years. Awarded: August 2021.
- [12] AI-Driven Measurement and Inference for Tracking Nation-State Censorship Sponsor: DARPA AIE Program Investigator(s): N. Feamster (PI) Amount: \$1,500,000 for 2 years. Awarded: August 2021.
- [13] Mapping and Mitigating the Urban Digital Divide Sponsor: data.org Innovation Challenge Investigator(s): N. Feamster (PI) Amount: \$1,200,000 for 2 years. Awarded: January 2021.
- [14] Longitudinal Traffic Ratio Trends in Service Provider Networks Sponsor: Comcast Innovation Fund Investigator(s): N. Feamster (PI) Amount: \$75,000 for 1 year. Awarded: October 2020.
- [15] SaTC-EDU: Training Mid-Career Security Professionals in Machine Learning and Data-Driven Cybersecurity

Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), Y. Chen, B. Ur Amount: \$299,945 for 3 years Awarded: September 2020.

[16] NSF Convergence Accelerator: AI-Enabled, Privacy-Preserving Information Sharing for Securing Network Infrastructure

Sponsor: National Science Foundation Investigator(s): G. Fanti (PI), N. Feamster, M. Reiter, V. Sekar, L. Strahelevitz Amount: *\$968,013 for 3 years. Awarded: September 2020.*

[17] RAPID: Measuring the Effects of the COVID-19 Pandemic on Broadband Access Networks to Inform Robust Network Design

Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$187,395 for 1 year. Awarded: May 2020.

[18] DESTINI: Dynamically Encoding and Stochastically Transmitting Information over Nation-state Infrastructures

Sponsor: DARPA Resilient Anonymous Communications for Everyone (RACE) Investigator(s): N. Feamster (PI), P. Mittal Amount: \$1,800,000 for 4 years. Awarded: November 2018.

- [19] CPS: Medium: Detecting and Controlling Unwanted Data Flows in the Internet of Things Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), S. Kpotufe, A. Narayanan Amount: \$987,000 for 3 years. Awarded: September 2018.
- [20] Artificial Intelligence in the Public Interest Sponsor: MacArthur Foundation Investigator(s): N. Feamster, E. Felten (PI), A. Narayanan Amount: \$750,000 for 3 years. Awarded: September 2017.
- [21] Global Internet Censorship Measurement Consortium Sponsor: Department of State Investigator(s): N. Feamster (PI) Amount: \$300,000 for 2 years. Awarded: August 2017.
- [22] Workshop on Self-Driving Networks Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), J. Rexford Amount: \$49,900 for 1 year. Awarded: July 2017.
- [23] NeTS: Medium: From Packets to Insights: Programmable Streaming Analytics for Networks Sponsor: National Science Foundation Investigator(s): N. Feamster, J. Rexford (PI) Amount: \$1,000,000 for 4 years. Awarded: June 2017.
- [24] CITP Technology Policy Consortium on Internet of Things Security and Privacy Sponsor: Amazon, Microsoft, Comcast, Cisco, CableLabs, Hewlett Foundation Investigator(s): N. Feamster (PI) Amount: \$1.7M for 3 years Awarded: Fall 2016.
- [25] Interconnection Measurement Project Sponsor: Kyrio, Inc. Investigator(s): N. Feamster (PI) Amount: \$200,000 for 2 years. Awarded: March 2016, March 2017.
- [26] Securing the Internet of Things with Traffic Analysis and Software Defined Networking Sponsor: Siemens Corporation Investigator(s): N. Feamster (PI) Amount: \$142,000 for 1 year. Awarded: November 2016
- [27] Detecting Abnormal Activity on the Internet of Things Sponsor: Siebel Energy Institute Investigator(s): N. Feamster (PI) Amount: \$50,000 for 1 year. Awarded: April 2016
- [28] TWC: TTP Option: Towards a Science of Censorship Resistance Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), V. Paxson, P. Gill, J. Crandall, R. Dingledine Amount: \$3,000,000 for 4 years. Awarded: November 2015

- [29] Software-Defined Security for the Internet of Things Sponsor: Google Faculty Research Award Investigator(s): N. Feamster, J. Rexford Amount: \$100,000 for 1 year. Awarded: August 2015
- [30] Traffic Demand Response to Service-Plan Increases Sponsor: Comcast Tech Research Fund Investigator(s): N. Feamster Amount: \$45,000 for 1 year. Awarded: March 2015
- [31] Software-Defined Networking Sponsor: AT&T Labs – Research Gift Investigator(s): N. Feamster Amount: \$25,000 for 1 year. Awarded: March 2015
- [32] A Software Defined Internet Exchange Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), J. Rexford, S. Shenker Amount: \$500,000 for 3 years. Awarded: August 2014
- [33] Studying and Improving the Performance of Access Networks Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), A. Snoeren Amount: \$281,364 for 3 years. Awarded: August 2014
- [34] EPICA: Empowering People to Overcome Information Controls and Attacks Sponsor: National Science Foundation Investigator(s): W. Lee (PI), N. Feamster, H. Klein, M. Bailey, M. Chetty Amount: \$750,000 for 4 years. Awarded: August 2014
- [35] An Open Platform for Internet Routing Experiments Sponsor: National Science Foundation Investigator(s): N. Feamster, E. Katz-Bassett, D. Choffnes (PI) Amount: \$361,617 for 3 years. Awarded: August 2014
- [36] An Open Observatory for the Internet's Last Mile Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), S. Banerjee, J. Cappos Amount: \$399,879 for 3 years. Awarded: June 2014
- [37] Improving the Performance and Security of Home Networks with Programmable Home Routers Sponsor: Comcast Investigator(s): N. Feamster (PI) Amount: \$65,000 for 1 year Awarded: September 2013
- [38] Demand Characterization and Management for Access Networks Sponsor: Cisco Systems Investigator(s): N. Feamster (PI) and R. Johari Amount: \$99,766 for 1 year Awarded: April 2013

- [39] Personal Information Fusion with In Situ Sensing Infrastructure Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$75,000 for 1 year. Awarded: July 2012
- [40] Characterizing and Exposing Bias in Social and Mainstream Media Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$175,000 for 1 year. Awarded: July 2012

 [41] I-Corps: Helping Users and ISPs Manage Home Networks with BISmark Sponsor: National Science Foundation Investigator(s): N. Feamster (PI) Amount: \$50,000 for 1 year. Awarded: June 2012

- [42] Optimizing Network Support for Cloud Services: From Short-Term Measurements to Long-Term Planning Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), J. Rexford Amount: \$574,996.00 for 4 years. Awarded: April 2012
- [43] Facilitating Free and Open Access to Information on the Internet Sponsor: National Science Foundation Investigator(s): R. Dingledine, N. Feamster (PI), E. Felten, M. Freedman, H. Klein, W. Lee Amount: \$1,500,000 for 4 years Awarded: March 2011
- [44] Measurement Infrastructure for Home Networks
 Sponsor: National Science Foundation
 Investigator(s): K. Calvert, W.K. Edwards, N. Feamster (PI), R. Grinter
 Amount: \$1,200,000 for 4 years
 Awarded: February 2011
- [45] Monitoring Free and Open Access to Information on the Internet Sponsor: Google Focus Grant Investigator(s): N. Feamster and W. Lee Amount: \$1,500,000 for 3 years Awarded: February 2011
- [46] GENI OpenFlow Campus Buildout
 Sponsor: GENI Project Office
 Investigator(s): N. Feamster (PI), Russ Clark
 Amount: \$64,675 for 1 year
 Awarded: October 2010
- [47] Architecting for Innovation
 Sponsor: National Science Foundation
 Investigator(s): H. Balakrishnan, N. Feamster, B. Godfrey, N. McKeown, J. Rexford, S. Shenker (PI)
 Amount: \$200,000 for 1 year
 Awarded: September 2010
- [48] Aster*x: Load-Balancing Web Traffic over Wide-Area Networks Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), Russ Clark Amount: \$75,000 for 1 year Awarded: August 2010

- [49] Network-Wide Configuration Testing and Synthesis Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), A. Akella Amount: \$500,000 for 3 years Awarded: June 2010
- [50] MEDITA Multi-layer Enterprise-wide Dynamic Information-flow Tracking & Assurance Sponsor: National Science Foundation Investigator(s): N. Feamster, A. Orso (PI), M. Prvulovic Amount: \$900,000 for 3 years Awarded: March 2010

[51] Campus Network Access and Admission Control with Openflow Sponsor: National Science Foundation Investigator(s): N. Feamster (PI), R. Clark Amount: \$300,000 for 3 years Awarded: January 2010

- [52] Studying DNS Traffic Patterns Sponsor: Verisign Investigator(s): N. Feamster Amount: \$30,000 for 1 year Awarded: November 2009
- [53] CIFellowship for Cristian Lumezanu
 Sponsor: National Science Foundation
 Investigator(s): C. Lumezanu, N. Feamster (PI)
 Amount: \$140,000 for 1 year
 Awarded: November 2009
- [54] Military Network Protocol Sponsor: DARPA Subcontract Investigator(s): N. Feamster Amount: \$37,000 for 1 year Awarded: November 2009
- [55] Botnet Attribution and Removal: From Axioms to Theories to Practice Sponsor: Office of Naval Research Investigator(s): W. Lee (PI), D. Dagon, J. Giffin, N. Feamster, K. Shin, F. Jahanian, M. Bailey, J. Mitchell, G. Vigna, C. Kruegel Amount: \$7,500,000 for 5 years Awarded: August 2009

[56] Taint-based Information Tracking in Networked Systems Sponsor: National Science Foundation Trusted Computing Program Investigator(s): N. Feamster Amount: \$450,000 for 3 years Awarded: August 2009

- [57] Towards a Market for Internet Connectivity Sponsor: Office of Naval Research Investigator(s): N. Feamster (PI), R. Johari, V. Vazirani Amount: \$350,000 for 1 year Awarded: March 2009
- [58] Bringing Experimenters and External Connectivity to GENI Sponsor: GENI Project Office Investigator(s): N. Feamster

Amount: \$320,000 for 3 years Awarded: September 2008

[59] Routing Without Recomputation

Sponsor: Cisco Systems Investigator(s): N. Feamster Amount: \$96,019 for 1 year Awarded: September 2008

[60] CLEANSE: Cross-Layer Large-Scale Efficient Analysis of Network Activities to Secure the Internet Sponsor: National Science Foundation Cybertrust Program Investigator(s): W. Lee (PI), N. Feamster and others Amount: \$1,200,000 for 5 years Awarded: September 2008

[61] Virtual Center for Network and Security Data Sponsor: Department of Homeland Security Investigator(s): N. Feamster Amount: \$48,000 for 2 years

Awarded: March 2008
[62] Sloan Research Fellowship Sponsor: Alfred P. Sloan Foundation Investigator(s): N. Feamster Amount: \$45,000 for 2 years

Awarded: February 2008

[63] Enabling Security and Network Management Research for Future Networks Sponsor: National Science Foundation CRI-IAD Program Investigator(s): N. Feamster (PI), Z. Mao, W. Lee Amount: \$397,426 for 3 years Awarded: February 2008

[64] SMITE: Scalable Monitoring in the Extreme Sponsor: DARPA BAA 07-52: Scalable Network Monitoring Investigator(s): N. Feamster (PI), W. Lee Amount: \$250,000 for 2 years Awarded: January 2008

[65] Countering Botnets: Anomaly-Based Detection, Comprehensive Analysis, and Efficient Mitigation Sponsor: Department of Homeland Security BAA07-09 Investigator(a): W. Lee (BD), N. Facemeter, J. Ciffin

Investigator(s): W. Lee (PI), N. Feamster, J. Giffin Amount: \$1,050,730 for 2 years Awarded: January 2008

[66] Spam Filtering Research Sponsor: IBM Faculty Award Investigator(s): N. Feamster Amount: \$ 7,500 (unrestricted gift) Awarded: June 2007

[67] SCAN: Statistical Collaborative Analysis of Networks Sponsor: National Science Foundation NeTS-NBD Program Investigator(s): N. Feamster (PI), A. Gray, J. Hellerstein, C. Guestrin Amount: \$ 95,000 for 3 years. Awarded: June 2007

[68] Towards an Accountable Internet Architecture

Sponsor: National Science Foundation CyberTrust Program (Team Proposal) Investigator(s): D. Andersen, H. Balakrishnan, N. Feamster (PI), S. Shenker Amount: \$ 300,000 for 3 years. Awarded: May 2007

[69] Fish4Phish: Fishing for Phishing in a Large Pond Sponsor: AT&T Labs—Research Investigator(s): N. Feamster (PI), O. Spatscheck, K. van der Merwe Amount: Funding for summer intern. Awarded: February 2007

[70] Improving Network Operations with a View from the Edge. Sponsor: National Science Foundation CAREER Program Investigator(s): N. Feamster (PI) Amount: \$400,000 for 5 years. Awarded: January 2007

[71] Equipment Donation for Network Operations Research Sponsor: Intel Corporation Investigator(s): N. Feamster Amount: \$30,000 Awarded: October 2006

[72] CABO: Concurrent Architectures are Better than One Sponsor: National Science Foundation NeTS-FIND Program Investigator(s): N. Feamster (PI), L. Gao, J. Rexford Amount: \$ 300,000 for 4 years Awarded: June 2006

[73] Verification and Modeling of Wide-Area Internet Routing Sponsor: Cisco Systems University Research Program Investigator(s): N. Feamster and H. Balakrishnan (PI) Amount: \$ 95,500 for 1 year. Awarded: June 2004

Service

Awards Committees

- ACM Doctoral Dissertation Awards Committee: 2016–2020
- Internet Research Task Force Applied Networking Research Prize: 2015–2020

Organizing Roles

- Co-Organizer, NSF/UChicago/UCSB Internet Frontiers and Opportunities Workshop: 2021
- Founder, Chair, and Steering Committee, USENIX Workshop on Free and Open Communication on the Internet: 2011–Present
- Steering Committee, Internet Engineering Task Force Applied Networking Research Workshop: 2021–Present
- Steering Committee, USENIX Symposium on Networked Systems Design and Implementation (NSDI): 2012–2021
- Steering Committee, ACM SIGCOMM Workshop on Networking Meets AI/ML: 2019-Present
- Steering Committee, ACM SIGCOMM Conference on SDN Research (SOSR): 2012–2016
- Program Committee Co-Chair, Internet Engineering Task Force Applied Networking Research Workshop (ANRW): 2021
- Program Committee Co-Chair, USENIX Symposium on Networked Systems Design and Implementation (NSDI): 2013
- Program Committee Co-Chair, ACM SIGCOMM Internet Measurement Conference (IMC): 2020
- Program Committee Co-Chair, Internet Research Task Force (IRTF) Applied Networking Research Workshop: 2020
- Poster and Demo Committee Co-Chair, ACM SIGCOMM: 2009, 2013
- Program Committee Co-Chair, CoNext Student Workshop: 2006
- General Chair, ACM SIGCOMM Hot Topics in Networking (HotNets): 2019
- Co-organizer, NSF Workshop on Self-Running Networks: 2018
- Co-organizer, NSF/FCC Workshop on Quality of Experience on the Internet: 2016
- Co-organizer, NSF Workshop on Software Defined Infrastructure: 2016
- Co-organizer, Boston Freedom in Online Communications (BFOC) Day: 2013
- Panel Organizer, IEEE Computer and Communications Workshop (CCW): 2011
- Program Committee Co-Chair, ACM SIGCOMM Workshop on Hot Topics in Software Defined Networking (HotSDN): 2012
- Editor, IEEE Journal on Network and Systems Management
- Co-Organizer, DIMACS Workshop Series on Internet Security: 2007
- Organizer, Workshop on Internet Routing Evolution and Design: 2006
- Program Committee Co-Chair, ACM/USENIX Workshop on Networks meet Databases (NetDB): 2007
- Program Committee Co-Chair, Workshop on the Economics of Networked Systems (NetEcon): 2006

Program Committees

- USENIX Security Symposium: 2018, 2019, 2020, 2021
- IEEE Symposium on Security and Privacy: 2006, 2010, 2011, 2012, 2013, 2018, 2019, 2020
- ACM Conference on Computer and Communication Security (CCS): 2008, 2011, 2020, 2022, 2023*
- ISOC Network and Distributed Security Symposium (NDSS): 2011, 2014
- ACM SIGCOMM: 2008, 2013, 2016, 2022, 2023*
- ACM/USENIX Symposium on Networked Systems Design and Implementation (NSDI): 2009, 2012, 2015
- USENIX Technical Conference: 2007, 2009

- ACM SIGCOMM Internet Measurement Conference: 2006, 2008, 2012, 2013, 2020 (Chair), 2022
- ACM SIGCOMM CoNext: 2006, 2007, 2014
- ACM SIGMETRICS: 2008, 2009, 2010
- Internet Research Task Force Applied Networking Research Workshop: 2016, 2017, 2018, 2019, 2020, 2021 (Chair)
- Research Conference on Communication, Information and Internet Policy (TPRC): 2014, 2015
- ACM SIGCOMM Workshop on Hot Topics in Networking (HotNets): 2012, 2022
- USENIX Workshop on Free and Open Communications on the Internet (FOCI): 2012-2023
- USENIX Workshop on Hot Topics in Security (HotSec): 2012
- ACM SIGCOMM First Workshop on Systems and Infrastructure for the Digital Home (HomeSys): 2012
- ACM SIGCOMM Workshop on Medical Communication (MedCOMM): 2012
- ACM SIGCOMM COMSNETS: 2012
- ACM SIGCOMM Workshop on Home Networks (HomeNets): 2011
- Program Committee USENIX Workshop on Large-Scale Exploits and Emergent Threats: 2009, 2010, 2011
- ACM SIGCOMM Poster and Demo Session: 2011
- ACM SIGCOMM Workshop on Internet Network Management: 2006, 2007, 2008, 2009, 2010
- USENIX Workshop on Hot Topics in Management of Internet, Cloud, and Enterprise Networks and Services (HotICE): 2011
- ACM SIGCOMM Workshop on Virtualized Infrastructure Systems and Architectures (VISA): 2010
- ACM SIGCOMM Workshop on Programmable Routers for Extensible Services of Tomorrow (PRESTO): 2008, 2009
- USENIX International Workshop on Real Overlays & Distributed Systems: 2008
- ACM SIGCOMM Workshop on Economics of Networked Systems (NetEcon): 2008
- International World Wide Web Conference (Security/Privacy Track): 2008
- IEEE LAN/MAN Workshop: 2008
- ACM SIGCOMM Student Poster Session: 2007
- ACM SIGMETRICS Workshop on Mining Internet Data (MineNet): 2007
- Conference on Email and Anti-Spam (CEAS): 2007
- USENIX Workshop on Steps to Reduce Unwanted Traffic on the Internet (SRUTI): 2007
- International World Wide Web Conference (Security/Privacy Track): 2007
- North American Network Operators Group (NANOG): 2006–2009
- IEEE Infocom Student Poster Session: 2006
- IEEE International Conference on Internet Surveillance and Protection: 2006
- Workshop on Data and Algorithmic Transparency (DAT): 2016

Early career: External reviewer for *IEEE/ACM Transactions on Networking*, *SIGCOMM* (2002, 2003, 2004, 2006, 2007), *SOSP* (2001, 2003), *ACM SIGPLAN Programming Language Design and Implementation (PLDI)* (2016), *Infocom* (2004, 2006), *HotNets* (2003), *HotOS* (2001), *USENIX Security Symposium* (2002), *ACM Computer Communication Review*, *IEEE Network Magazine*, *IEEE Journal on Selected Areas in Communications*, *Image Communication* (EURASIP), *ASPLOS* (2004), *MobiSys* (2004), *USENIX* (2005, 2006), *NSDI* (2005, 2006), *IPTPS* (2005), *Workshop on Privacy Enhancing Technologies* (2006).

Public Policy Activities

Panels and Leadership Roles

- Director of Research, University of Chicago Data Science Institute: 2021-Present
- Director, University of Chicago Center for Data and Computing: 2019–2021
- Panelist, State of the Net Conference: 2017
- Working Group Co-Chair, Association for Computing Machinery (ACM) Public Policy Council Internet of Things Working Group: 2016–Present
- Testified before General Accountability Office (GAO) panel on Internet of Things Security: 2016
- Community Member, Broadband Internet Technical Advisory Group (https://bitag.org/): 2014-Present
- Advisory Board, Center for Democracy and Technology: 2015–2019
- Director, Princeton University Center for Information Technology Policy: 2015–2018
- Deputy Director, Princeton University Center for Information Technology Policy: 2018–2019
- Co-Editor, Broadband Internet Technical Advisory Group (BITAG) report on Security and Privacy Recommendations for the Internet of Things (IoT): 2016
- Co-Editor, Broadband Internet Technical Advisory Group (BITAG) report on Privacy and Data Retention: 2017–2018
- Commenter and contributor to FCC rulemaking on privacy and ISPs: 2016
- Commenter on FCC rulemaking on net neutrality: 2018
- Advisor to the Federal Communications Commission on Measuring Broadband America Project: 2010–2012

Public Writing and Influence

- Internet Service Providers and Customer Privacy. Over the past two years, through public comments and policy activities, I have served as a technical expert in the technology policy community on Internet data and privacy, through various activities.
 - Filed multiple public comments on the Federal Communications Commission (FCC) Privacy Rulemaking. My comments are cited extensively in the final report, available on the FCC Website. https://ap ps.fcc.gov/edocs_public/attachmatch/FCC-16-148A1.pdf. (My comments and inputs are cited more than 30 times in the rulemaking.)
 - * My letter to FCC Chairman Tom Wheeler: https://goo.gl/Q2UI3n
 - * Public commentary on WC-106, the FCC's notice of proposed rulemaking: https://goo.gl/J2P 397, https://goo.gl/AcU6Dg, https://goo.gl/qaPIuj. I led a group of stakeholders from the research community to preserve a researcher exemption to the FCC's privacy rulemaking, to ensure that researchers would continue to have access to data from Internet service providers to work on topics related to Internet security and performance.
 - I was the co-editor for the ongoing Broadband Internet Technical Advisory Group (BITAG) report on Internet Data Collection, Retention, and Privacy. Press release: https://goo.gl/6rfH5v.
- **Internet of Things Security and Privacy.** I have been actively involved in policymaking activities around security and privacy for the Internet of Things (IoT) at the state and federal levels over the past year. Activities include:
 - Co-editor of the Broadband Internet Technology Advisory Group (BITAG) report on security and privacy recommendations for the Internet of Things:
 - https://bitag.org/report-internet-of-things-security-privacy-recommend ations.php. In addition to the report itself, Jason Livingood and I presented to many policymakers in Washington, D.C., including the current chairwoman of the Federal Trade Commission, Maureen Ohlhausen.
 - Co-editor of the USACM documents (reply comments, etc.) on Internet of Things. (Several documents, such as a response to the NTIA's request for comments, are forthcoming in early 2017.)

University Leadership and Service

Research Director, University of Chicago Data Science Institute

Research and Education Activities

- Launched research initiative for mapping and mitigating the urban digital divide. \$1.2M data.org-funded project to generate and curate "full stack" measurements concerning Internet access, deployability, affordability, and performance.
- Developed new online course sequence, Machine Learning for Cybersecurity, with University of Chicago Office of Continuing and Professional Education (UCPE).

Center Building and Fundraising

- Launched postdoctoral fellows program (6 fellows in first two years).
- Launched Ph.D. Fellows Program (8 fellows in first two years).
- Created Internet of Things Laboratory setup and events.
- Executive and online education program in machine learning and security: design and planning.

Center Activity Support

- Distinguished Speaker Series. Hosted speaker series in Fall 2019, led team to create Distinguished Speaker Series in Spring 2021 on socially responsible machine learning.
- Organized and administered seed grant (2019–2020), developed, organized and administered new Discovery Challenge Grant (2020–2021), for larger center-building activities.
- Served on Data Science Faculty Search Committee (Spring 2020, 2021)
- Organized Seed Grant Speaker Series (Spring 2020)
- Judge for Uncommon Hacks (Spring 2020)

Director, University of Chicago Internet Equity Initiative

Activities

- Launched Internet Equity Initiative (May 2022)
- Secured more than \$2M in new research funding to support center operations (2022)
- Managed the release of a large-scale open-source software package (Netrics), as well as the deployment of this software throughout the City of Chicago.
- Published five papers in top-tier research conferences related to research.
- Project launch included the largest University of Chicago media news story of 2022 (see below for media).

Center Media

- Need for Internet Access Support in Chicago, Video interview with Chicago Tonight and Nicole Marwell (Aired Dec. 22, 2022), https://internetequity.uchicago.edu/resource/need-for-internet-a ccess-support-in-chicago/Internet Disconnect, DSI News (Sept. 13, 2022),

Other Internal Service

- Humanities Dean Search Committee (2022–Present)
- Board of Computing Activities and Services (2022–Present)
- Awards Nominations Committee (2023–Present)
- Data Science Institute Leadership Committee (2021–Present)
- Physical Sciences Division Technical Advisory Committee (2021–2022)
- Ph.D. Admissions Committee (2019–2022)

Activities as Director of Princeton Center for IT Policy

External Events

- Organized IoT security and privacy hackathon in new Princeton Smart Home Lab facility on Prospect Street (2016). Hackathon took place in April 2017.
- Organized Internet speed test hackathon, co-organized with Comcast (November 2016)
- Organized CITP conference on Security and Privacy for the Internet of Things (IoT) (October 2016)
- Organized CITP conference on Internet Interconnection (March 2016)
- Organized CITP conference on Internet Censorship and Information Control (October 2015)
- Organized and hosted joint NSF/FCC conference on Internet Quality of Experience (October 2015)
- Hosted visits for several prominent guest speakers: Matt Devlin, Director of Global Policy at Uber; David Clark, Senior Research Scientist at MIT. (October 2015)
- Organizing first-ever CITP hackathon, in cooperation with Code for Princeton and New Jersey Bike and Walk Coalition. (hackathon in February 2016)

Fundraising Activities and Results

- Engaged in ongoing discussions with Ford Foundation, Open Society Foundation, and MacArthur Foundation in efforts to raise awareness and funding opportunities for CITP. (2016) Made face-to-face visits to MacArthur Foundation (June 2016) and Ford Foundation (February 2017).
- Secured funding on IoT cybersecurity from the Hewlett Foundation and other corporate partners, including Amazon, Cisco, and Comcast. Total funding for CITP IoT cybersecurity is currently \$1.7M, through a combination of gifts and in-kind donations. (2016)
- Secured \$100k funding from CableLabs to support CITP's ongoing work on measurement of Internet interconnection (2016).
- Secured \$300k donation from Microsoft for new CITP seed grant fund, to encourage collaboration between SEAS and WWS researchers. The initial seed grant program is now providing funding for four new cross-disciplinary projects. (2015)
- Secured endowment from Princeton alum Ron Lee: the Jerome Blum Memorial Fund, to support a CITP "on the road" speaker series, for tech policy events around the country. (Current funds transferred to date are approximately \$200k.) (2015)
- Gave outreach/CITP fundraising talks to Intel, Cisco, and Yahoo on SDX and censorship measurement. (November/December 2015)
- Delivered talk to Princeton Development office about CITP and met with development office to prepare materials for next capital campaign. (November 2015)
- With Joanna Huey, prepared CITP annual report, to be used in fundraising activities. (Fall 2015)

Internal Activities

- Reconstituted executive committee and created CITP Advisory Council (required by Nassau Hall, though none had previously existed), including Princeton alums Paul Misener, Nuala O'Connor, Anne-Marie Slaughter. (2016)
- Led a complete redesign of center website. (2016–2019)
- Organized and ran three-day tech policy "boot camp" for 15 Princeton undergraduates, who visited approximately ten different venues in Washington, DC (FCC, FTC, White House, Senator Booker's office, CRA, etc.) (November 2015, November 2016)
- Served on organizing committee for WWS Fung Forum, whose focus for 2016 will be cybersecurity. (Fall 2015– Spring 2017)
- Worked with director of Law and Public Affairs to host a joint CITP/LAPA fellow for 2016–2017.
- Blogging on Freedom to Tinker (three blog posts in 2015, four blog posts in 2016).
- Updated courses in the Technology and Society Certificate program (Fall 2015).

Other Teaching Highlights:

- Taught a 20-person course in the University of Chicago Upward Bound program in Summer 2022, Introduction to Computer Networking, which resulted in mentoring a high school student from Walter Payton College Prep on an Advanced Placement Research project.
- Developed new course in Machine Learning for Computer Systems, offered as part of the introductory data science sequence and a computer science elective. The course had large enrollment and very positive reviews. (2022)
- Developed new course in Security, Privacy, and Consumer Protection, to extend offerings in the University of Chicago Masters in Computation and Public Policy Program. (2021)
- Developed new online course sequence, Machine Learning for Cybersecurity, with University of Chicago Office of Continuing and Professional Education (UCPE).
- Developed new course in Internet censorship and online speech, in preparation for new book (CMSC 33260). (2020)
- Developing new ethics modules to teach ethics in undergraduate Princeton computer science courses across the curriculum, to start with Computer Networking (COS 461) and Information Security (COS 432). (2017)
- Developed new course at Woodrow Wilson School on Censorship and Free Expression Online for Woodrow Wilson School Masters in Public Policy program. (2017)
- Completely redesigned course format and assignments for Computer Networking (COS 461) including adding videos to course material, seven new modernized programming assignments, and new in-class activities. With help from Alan Kaplan and an undergraduate, integrated autograding and feedback facilities into programming assignments. (2017)
- Began revisions for a new edition of *Computer Networks*, undergraduate computer networking textbook; next edition due out late 2018. (2017)
- Guest lecture in Woodrow Wilson School of Public Policy graduate course on Security Studies (WWS 550): 2015, 2017
- Prepared and delivered a tutorial to the USENIX Large Installation Systems Administration (LISA) conference on Software Defined Networking in 2015 and 2016.
- Taught a computer science undergraduate honors course to 20 masters students at the University of Cape Town on Measuring Internet Performance in Summer 2016.
- Created the first-ever course on Software Defined Networking (SDN), and delivered it on Coursera to over 50,000 enrolled students.
- Tutorial on network measurement at African Network Operators Group (AfNOG) in Summer 2013.
- Guest lecture on Internet censorship in Georgia Tech CS 4001 in October 2011.
- Tutorial on software-defined networking at African Network Operators Group (AfNOG) in Summer 2011.
- Tutorials on BGP Multiplexer at GENI Experimenters Workshop and GENI Engineering Conference in Summer 2010.
- Tutorial on network security at African Network Operators Group (AfNOG) in Summer 2010.
- Tutorial on Internet routing at Simposio Brasileiro de Redes de Computadores (SBRC) in Summer 2008.
- Lecture for DIMACS Tutorial on Next-Generation Internet Routing Algorithms in August 2007.
- Guest lecture for MIT Course 6.829 (Computer Networking) in Fall 2005.

Curriculum Development

Development of a New Course on Machine Learning for Computer Systems: In 2022, I developed a course that covers the intersection of machine learning and systems, with a focus on applying machine learning to computer systems. The course covered a variety of topics, including the application of machine learning models to security, performance analysis, and prediction problems in systems, as well as data preparation, feature selection, and feature extraction. Additionally, we discussed the design, development, and evaluation of machine learning models and pipelines, and the principles of fairness, interpretability, and explainability of these models. The course also delved into the challenges of testing and debugging machine learning models. While many of the examples we covered were focused on computer networking, the principles and concepts we discussed apply broadly to all computer systems. The course was designed to be a practical, hands-on introduction to machine learning models and concepts, with the goal of allowing students to apply these models to real-world datasets and to help computer systems operate better.

Development of New Course on Security, Privacy, and Consumer Protection: In 2021, I developed a new course on Security, Privacy, and Consumer Protection as part of the University of Chicago Masters of Science in Computation in Public Policy (MSCAPP) program. The course teaches concepts in computer security and privacy, including network security, web privacy and security, online data collection and tracking, privacy law, and consumer protection issues such as network neutrality. The first offering was popular, taken by students in CAPP, computer science, economics, computational social science, and other departments.

Development of New Course on Machine Learning and Public Policy: In 2020 and 2021, I developed a new course on Machine Learning and Public Policy as part of the University of Chicago Masters of Science in Computation in Public Policy (MSCAPP) program. Course development involved the creation of both a completely online course, complete with video lectures (2020) and a hybrid (i.e., half-online) version of the course; and development of a series of public policy-oriented assignments and labs.

Development of New Course in Internet Censorship: In 2020 and 2021, I developed a new course in Internet censorship and online speech, for which I have a book deal with Princeton University Press. The course covered a range of technical topics, from the operation of the Great Firewall and various circumvention tools (Tor, virtual private networks) to legal aspects (e.g., Communications Decency Act, Digital Millennium Copyright Act). In 2021, I developed a series of online lectures for the course, which will be developed into a more significant online offering as part of a global course in the University of Chicago Office of Continuing and Professional Education.

Authorship and Revision of Seminal Textbook in Computer Networking: In 2019, I undertook a large-scale effort to revise the canonical *Computer Networking* textbook, originally authored by Andrew Tanenbaum, now entering its 6th Edition. The book was released in 2020. The book needed significant revision, including updates toe the wireless and cellular technologies (including content on WiFi 6, 6G, etc.), programmable and software defined networking, new transport protocols (e.g., QUIC), and new applications, from streaming video to the Internet of Things (IoT). (The last revision of the textbook was in 2012.)

Integration of Ethics into the Computer Science Curriculum: Many aspects of computer science—ranging from the measurement of Internet censorship to the design of automated algorithms for decision-making—now require some understanding and consideration of ethics. To this end, I am working with experts in ethics to design several modules that teach ethics to undergraduates that are appropriate for the Princeton Computer Science curriculum's courses. These modules were incorporated into Computer Networking (COS 461), and later into Information Security (COS 432) and a new course on fairness in artificial intelligence. Some of these case studies will also be published in columns in *ACM Computer Communications Review (CCR)* and *USENIX*; *login*:.

Assignment Development in Princeton Undergraduate Courses: The undergraduate Computer Networks (COS 461) and Information Security (COS 432) courses had assignments that had not been updated in many years. In each offering of the course in 2016 (Spring 2016 for COS 461 and Fall 2016 for COS 432), I worked with course staff to completely redesign and implement assignments that teach modern course topics. In the Computer Networks course, we modernized the assignments to use commonly used systems programming languages (Go, Python), as well as new Internet measurement assignments written in distributed programming analysis frameworks (e.g., Spark). In COS 432, we modernized the assignments to include hands-on activities on a variety of concepts, including Web security and network security.

Coursera and Online Masters Program Development: I have developed an online Coursera course for the topic of Software Defined Networking (SDN), an emerging topic in computer networking that is reshaping how networks are defined. In the course, students learn about the history of SDN and develop hands-on experience with tools to develop technologies and applications for SDN. The course had approximately 50,00 students enrolled, and had about 4,000 students actively participating on the forums and in lectures. Nearly 1,000 students successfully completed the programming assignments for the course, qualifying as a pass "with distinction". The course reviewed extremely favorably from students, as we have documented here: https://goo.gl/So7Uis. Additionally, the success of the course was covered on many technical forums, including the Mininet blog (https://goo.gl/ZqfL1N), the Packet Pushers blog (https://goo.gl/okzd44), and the sFlow blog (https://goo.gl/qSMCq0). Based on its overwhelming success, the course will be offered again in May 2014.

Georgia Tech Online Masters Program: I served on the committee to develop a Master of Science in Computer Science degree based on Massive Open Online Course (MOOC) offerings and took an active role in ensuring the creation of the online degree at Georgia Tech. As of October 2013, I am currently working with Udacity and Georgia Tech to create the first online graduate course in computer networking, which will launch in January 2014 and become an integral part of the Georgia Tech online degree program.

CS 7001 Introduction to Graduate Studies: With Professor Alex Gray, I have developed a new course syllabus and structure to CS 7001 around the larger goal of introducing new students to *how to do great research* as soon as their first term at Georgia Tech. In contrast with previous terms, where CS 7001 consisted of faculty "advertisements" for their research and projects consisted of short "mini-projects" where little research could be accomplished in a short time span of 3 weeks, we have improved the syllabus by bringing in faculty members to talk about research philosophy, exciting new directions, etc. We have also given the students the option to do a research project that is a term-long project in conjunction with CS 8903; our goal is to give students the flexibility to select meaningful research problems based on their research assistantships while helping them learn the skills required for writing papers, finding and evaluating research ideas, and performing other tasks associated with doing great research. Alex Gray and I wrote a conference paper on our development of this course, which appeared at *ACM SIGCSE 2008*. We have developed a website for the course, greatresearch.org, which makes the material generally available for use at other universities and by other researchers. **The website and blog have more than 25,000 views since its launch in mid-August 2013, and it has been receiving about 10,000 views every month.**

CS 6250 Graduate Computer Networking: In Fall 2011, I redesigned the graduate computer networking course to focus more on current technologies and hands-on assignments. Conventional networking courses treat today's protocols and mechanisms as fixed artifacts, rather than as part of a continually evolving system. To prepare students to think critically about Internet architecture, Jennifer Rexford and I created a graduate networking course that combines "clean slate" networking research with hands-on experience in analyzing, building, and extending real networks. My goal was to prepare students to create and explore new architectural ideas, while teaching them the platforms and tools needed to evaluate their designs in practice. The course, with offerings at both Georgia Tech and Princeton, focuses on network management as a concrete way to explore different ways to split functionality across the end hosts, network elements, and management systems. I have refined the course in Fall 2011 to include more hands-on assignments ad refactored the course around networking problems in different types of networks: transit networks, home networks, content hosting networks, and mobile and wireless networks. **Our work on the course received the best paper at the** *ACM SIGCOMM Workshop on Networking Education (NetEd)* in 2011.

College of Computing Research Day and Seminar Series: In addition to the course itself, to fulfill some of the functions of the former 7001 course, Alex Gray and I financed and organized a college-wide seminar series and research day in Fall 2009 and again in Spring 2011. Throughout the term, faculty speakers from across the college gave one-hour talks about their research; we raised money from Yahoo to support this event. The research day brings together students and faculty from around the college to see talks, demonstrations, and posters from around the college to exchange ideas.

CS 8803 Next-Generation Networking: I developed a new graduate course that gives students practical experience with a variety of tools for next-generation networking, ranging from the Click software router to the OpenFlow switch framework. The course also teaches students about the state of the art in networking research—students read papers about research and industry trends and do a course project that incorporates aspects of these new technologies. This

course relates to the larger nationwide effort on Global Environment for Network Innovations (GENI), which is building infrastructure for researchers to provide the next generation of networking protocols and technologies.

Postdoctoral Researchers

Current

- Jonatas Marques. Fall 2023 Present. Publications: [41] First job: Professor at IIT Delhi.
- Arjun Nitin Bhagoji. Fall 2020 Present

Completed

- **Tarun Mangla**. *Fall 2020 Fall 2023*. Publications: [44], [46], [50], [54] *First job: Professor at IIT Delhi.*
- Jamie Saxon. Fall 2020 Fall 2022. Publications: [51], [54], [56] First job: Research Scientist at Mapbox.
- **Paul Schmitt**. *Fall 2017 Spring 2021*. Publications: [52], [55], [56], [57], [58], [60], [63], [66], [70], [73], [166], [168] *First job: Research Assistant Professor at USC/ISI*
- Kevin Borgolte. Fall 2018 Spring 2020. Publications: [60], [61], [66], [168], [170], [172], First job: Assistant Professor at TU Delft
- Danny Huang. Fall 2017 Spring 2020. Publications: [5], [59], [64], [69], [71], [175] First job: Assistant Professor at New York University
- **Philipp Winter**. Fall 2015 Spring 2017. Publications: [77], [86], [91], [100] First job: Research Scientist at Center for Applied Internet Data Analysis (CAIDA). Now at Brave.
- Roya Ensafi. Fall 2015 Spring 2017. Publications: [12], [13], [79], [81], [83], [91] First job: Assistant Professor at University of Michigan
- Dave Levin. Fall 2012 Fall 2014. Publications: [105], [188], [189] First job: Assistant Professor at University of Maryland
- **Cristian Lumezanu**. Fall 2010 Fall 2012. Publications: [123], [125], [129] First job: Researcher at NEC Research Labs
- Nazanin Magharei. Fall 2010 Fall 2012. Publications: [21], [120] First job: Software Engineer at Cisco

Expert Engagements

- 2017–2023: ClearPlay, Inc. v. Dish Network Corp.
 U.S. District Court, District of Utah Central Division, Case No. 2:14-cv-00191
 Performed detailed code review on the technical operation of functionality to automatically skip certain portions of a video stream (e.g., containing advertisements), on behalf of ClearPlay (expert for plaintiff, represented by Beus Gilbert). [Reports, deposition, trial. Won \$469 million by jury verdict, reversed in JMOL.]
- 2019: Sony Music Entertainment et al. vs. Cox Communcations Inc. et al. U.S. District Court, Eastern District of Virginia, Case No. 1:18-cv00950 Retained as a consulting and testifying expert to investigate the technical accuracy of copyright infringement detection tools. (expert for defendant, represented by Winston and Strawn) [Deposition, testimony, trial to verdict.]
- 2018: *Confidential Matter* Retained as a consulting and testifying expert to evaluate code misappropriation for an online reputation system. (expert for plaintiff, represented by Beus Gilbert) [Settled before litigation.]
- 2017–2019: People by Schneiderman vs. Charter
 U.S. District Court, District of Columbia, Case No. 1:16-cv00759
 Retained as a consulting and testifying expert to analyze the accuracy of network speed testing tools.
 (expert for defendant, represented by Latham and Watkins) [Settled before reports.]
- 2018–2019: *Trend Micro vs. Security Profiling, LLC.* Case IPR 2017-02193

Testifying expert for Security Profiling, assessing the validity of patents involving network intrusion detection and firewall systems.

(expert for defendant, represented by Meagher Emanuel). [Settled after expert reports.]

- 2017: *Finjan, Inc. v. Symantec Corp.* U.S. District Court, District of Northern California, Case No. 4:14-cv-02998
 Retained as a consulting expert to explain the technical operation of Infranet censorship circumvention software on behalf of Symantec mechanisms for embedding data within HTTP messages. (expert for defendant, represented by Quinn Emmanuel) [Settled.]
- 2016–2017: *Confidential Matter* Retained as a consulting expert to analyze mobile phone traffic and records. (expert for defendant, represented by Yukevich Cavenaugh) [Settled.]
- 2013: *Confidential Matter* Retained as a consulting expert to research the use of Flash cookies on a website. [Settled.]
- 2006: Confidential Matter

Retained as a consulting expert in a prior art research matter involving client puzzles, hashes, and related technologies. [Settled.]
