

# Commodity Markets Review

May 10, 2006

DECPG, The World Bank

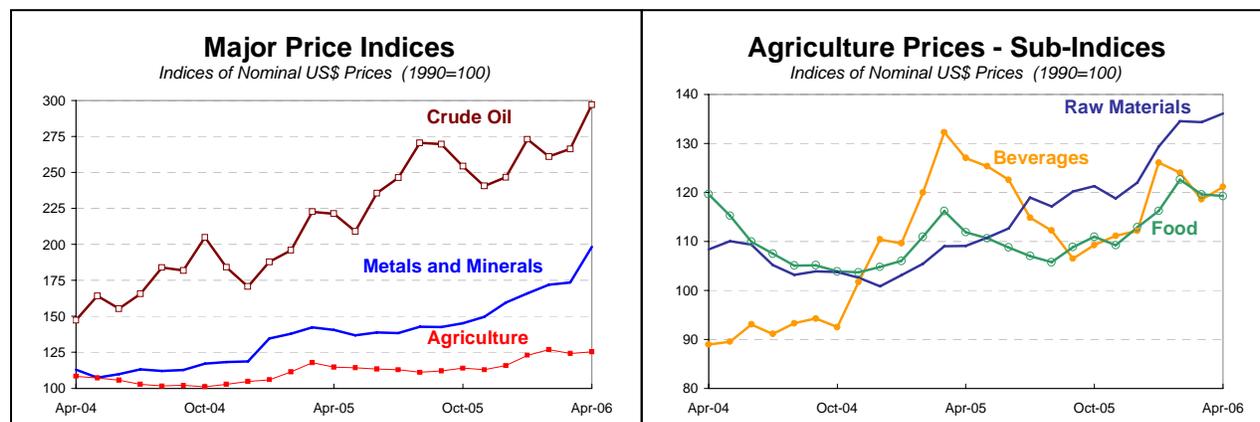

**Copper, nickel and zinc reached all-time highs in May, due to low stocks, capacity constraints and a falling dollar.** Other metals prices are at multi-year highs, with gold approaching \$700/toz on various geopolitical concerns, high oil prices, and the declining dollar. In agriculture, rubber prices are at record highs and sugar prices recently hit 25-year highs, both partly related to high oil prices.

**Crude oil prices reached a nominal record \$72.3/bbl in May,** following a jump of 11.6 percent in April. Prices continue to be supported by fears of supply disruption in a number of oil producing countries, particularly in Iran over the on-going dispute with the UN over its nuclear enrichment program. In Nigeria, more than 0.5 mb/d of production remains shut-in because of civil strife, and Iraq's exports remain below pre-war levels of more than 2 mb/d due to sabotage that has closed its northern export line indefinitely. Exports from the south have rebounded to 1.6 mb/d, the second highest monthly level since the end of the war.

Despite high prices, the crude oil market is well supplied, with large inventories in the U.S. The associated steep contango in futures prices provides a financial incentive to build inventories further. However limited spare capacity of light crude among OPEC members and expectations of supply shortfalls going forward have kept upward pressure on prices.

**Agricultural prices rose 0.8 percent in April,** with the gains concentrated in a few commodities, notably tea, grains and rubber. Tea prices (3-auction average) rose 11.6 percent mainly due to seasonal high prices for new Kolkata premium tea, which jumped 38 percent. Mombasa average prices rose by 7.4 percent following earlier supply shortfalls from drought in Kenya. Sorghum prices rose 5.5 percent on strong import demand and expectations of reduced supply from Australia, Spain and Indonesia. Rubber prices have reached record highs, in part due to the high price for oil which is the main input used to produce synthetic rubber.

**Metals and minerals prices soared 14.2 percent in April** on strong demand, low stocks, supply shortfalls, and weakening dollar. Zinc and copper prices jumped more than 25 percent—and in early May prices were up more than 65 and 75 percent, respectively, year-to-date. Zinc stocks continue to plunge on strong steel demand and limited prospects for new supply this year. Copper inventories are extremely low and falling, reflecting strong demand, and supply continues to be constrained by labor and technical problems. Nickel prices leapt 20 percent on the possibility of a strike in Canada, amid strong demand for stainless steel. Silver prices surged on start-up of an exchange-traded fund, which adds to physical demand.

Prepared in the Development Economics Prospects Group (DECPG) by Donald Mitchell, Shane Streifel, John Baffes and Betty Dow. Katherine Rollins is task assistant. This report is available on <http://decpg.worldbank.org>.

## Major Movers in April<sup>1</sup>

**Zinc** prices soared 27.6 percent on continuing sharp declines in LME inventories, strong demand for galvanized steel, and limited mine supply prospects this year.

**Copper** prices surged 25.2 percent on extremely low and falling inventories, strong demand, and numerous supply constraints, including the Grupo Mexico strike that began in March.

**Silver** prices surged 21.7 percent on strong speculative demand ahead of commencement of Barclay's exchange-traded fund (ETF) on the American Stock Exchange at end-April. This is already adding to physical silver demand.

**Nickel** prices jumped 20.4 percent on the strong rebound in stainless steel production, low inventories, limited supply growth, and threat of a strike at Inco in Canada.

**Crude oil** prices rose 11.6 percent on concerns about supply disruption in a number of oil producing countries, particularly Iran.

**Tea** prices rose 11.6 percent mainly due to seasonal highs for new Kolkata premium prices which surged by 37.7 percent. Meanwhile, Mombasa average prices rose by 7.4 percent on firm demand, and follows earlier supply shortages due to drought in Kenya.

**Tin** prices increased 11.5 percent on declining inventories and rising demand, although the market is expected to remain in surplus this year. Tin is the one metal in which high prices bring a prompt supply response, mainly from the large number of small producers in Indonesia.

**Gold** prices gained 9.6 percent on the fall in the dollar, geopolitical concerns surrounding Iran's nuclear program, and the effect of higher oil prices on inflation.

**Aluminum** prices rose 7.9 percent due to strong demand, declining inventories, and expectations of government-induced investment constraints on the aluminum sector in China, including restarts of idle capacity.

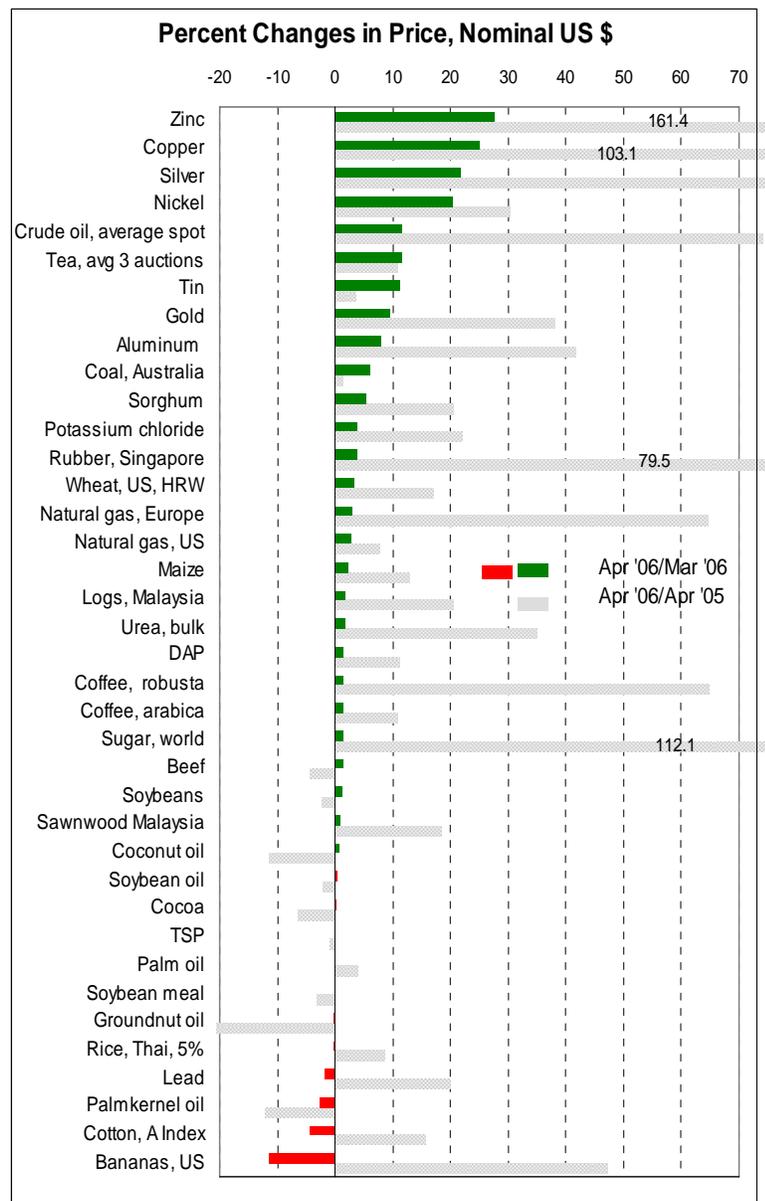

**Coal** prices gained 6.3 percent due to continued strong demand, lower Chinese exports, and numerous supply constraints that are plaguing resource sectors, namely equipment and labor

shortages, as well as weather problems.

**Sorghum** prices rose 5.5 percent on strong import demand and expectations of reduced supply from Australia, Spain and Indonesia.

**Cotton** prices declined 4.3 percent, a reflection of good weather in the U.S. (suggesting a favorable harvest next season) as well as weakening import demand in China, the world's largest cotton consumer.

**Bananas** prices in the U.S. fell 11.5 percent reflecting a downward trend in freight rates and increased exports from Ecuador.

<sup>1</sup> Percent change of average April prices compared to average March 2006 prices in nominal U.S. dollars (graph also includes 12-month changes in grey).
