

# Commodity Markets Review

December 10, 2007

DECPG, The World Bank

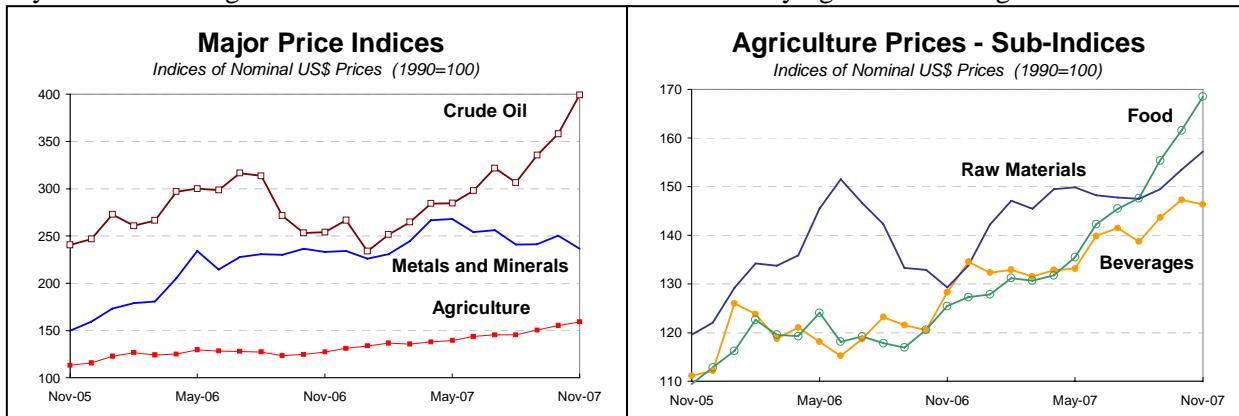

**Non-oil commodity prices fell 0.5 percent in November**, led by a large drop in metals prices on increasing concerns about slowing demand. This was offset by strong gains in most agriculture prices, especially fats and oils, on strong demand for food, feed and bio-fuel. There were also sharp increases in fertilizer prices.

**Crude oil prices surged 11.4 percent in November**, averaging \$91.3/bbl, with U.S. WTI topping \$98/bbl. Prices were driven higher by a tight market for light crude, declining stocks—particularly at Cushing Oklahoma, the delivery point of WTI—as well as the effect of options trading and fears of supply disruption. Prices slid back under \$90/bbl in early December in anticipation of OPEC raising production levels. However, on December 5<sup>th</sup> OPEC decided to leave output targets unchanged on concerns about slowing demand. OPEC meets on February 1<sup>st</sup> and on March 5<sup>th</sup> to reassess the market and adjust production as they deem necessary. OPEC production has been edging higher, mainly from Iraq and Angola.

**Coal prices surged 10.9 percent** on strong Asian demand and over-extended supply chains. Congestion of port and rail services at Newcastle Australia is worsening, and a quota system is proposed for 2008. The emergence of India as a growing importer is redirecting South African exports to Asia, leading European and Moroccan buyers to source higher volumes of U.S. coal.

**Agriculture prices rose 2.5 percent in November**, up for the eighth straight month, led by a 7.5 percent jump in fats & oils prices (which have doubled in the past 18 months). Strong demand for biofuels and lower production of most oilseeds has left the overall fats & oils complex tight. Groundnut, soybean, coconut and palmkernel oils all posted double-digit gains. Fertilizer prices were broadly higher, with particularly sharp gains in DAP and Urea, due to higher energy and crop prices which have driven production costs and demand, respectively, sharply higher. Rubber prices increased 6 percent on higher oil prices and strong demand for industrial tyres.

**Metals and minerals prices fell 5.5 percent in November** on growing concerns about demand. The metals index stood just 1.0 percent above the December 2006 level, largely due to the halving of nickel prices this summer. Zinc prices plunged 15 percent in November (down 1/3 since May) due to large consumer inventories of zinc and galvanized steel, and expectations of large gains in zinc mine supply next year. Copper prices dropped 13 percent on rising inventories and worries about demand. Lead prices fell 10 percent on speculation that suspended production at the Magellan mine in Australia will restart in the first quarter of 2008. Gold and silver prices rose 7 percent on safe-haven buying and the falling dollar.

Prepared in the Development Economics Prospects Group (DECPG) by Shane Streifel, Donald Mitchell, John Baffes and Betty Dow. Katherine Rollins is task assistant. This report is available on <http://decpg.worldbank.org>.

## Major Movers November<sup>1</sup>

**Groundnut oil** prices soared 16.2 percent due to poor crops in U.S., Brazil and China which triggered strong exports from India. The Indian government is considering limiting exports to maintain domestic supplies.

**Fertilizer** prices were sharply higher—**DAP** up 15.4 percent, **Urea** up 13 percent and **TSP** up 5.2 percent—due to higher energy and crop prices which have driven up production costs and demand, respectively.

**Soybean oil** prices increased 13.5 percent on strong buying from China in order to counter shortages in the domestic cooking oil market.

**Coconut oil and palmkernel oil** prices (close substitutes) jumped 13.1 percent and 12.1 percent, respectively, due to tightness in the coconut oil market, as well as overall tightness in fats & oils markets due to strong demand for biofuels and lower production of some oils.

**Crude oil** prices leapt 11.4 percent on declining stocks, the exercising of call options, and fears of supply disruption in oil exporting countries.

**Coal** prices climbed 10.9 percent due to strong demand, particularly in India, and worsening infrastructure problems at the Australian port of Newcastle.

**Palm oil** prices increased 8.3 percent on strong import demand from China and India. Palm oil stocks in Indonesia, the world's largest supplier, are at their lowest levels in years, fueling concerns that prices may increase even further.

**Soybean** prices increased 7.5 percent due to higher demand for biodiesel (made from vegetable oils) and for livestock feed in response to higher prices for other feeds such as maize.

**Silver** prices rose 6.9 percent, in tandem with the drivers of gold, as it is often an alternative investment to the yellow metal.

**Gold** prices advanced 6.8 percent to average \$806/toz mainly due to the falling dollar and spiraling oil prices.

**Rubber** prices climbed 6.3 percent on strong demand for tyre production, especially in the U.S. and China.

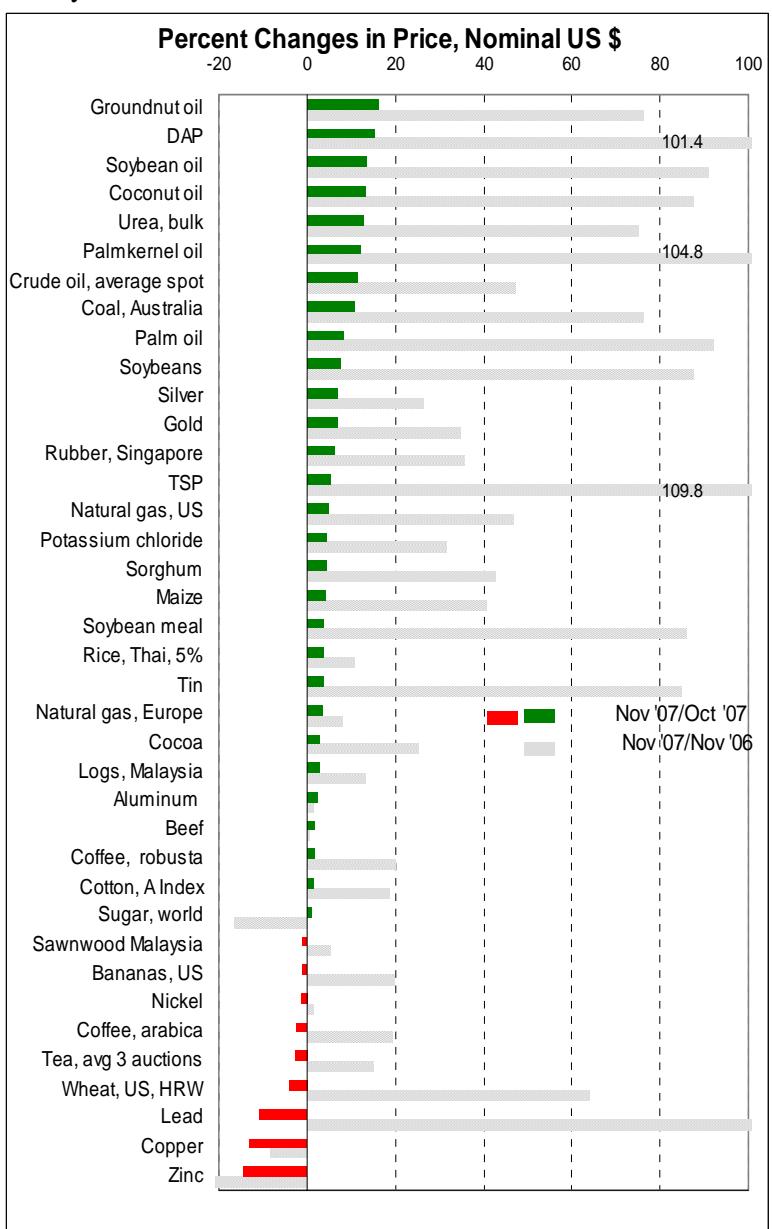

**Natural gas** prices in the U.S. rose 5.0 percent

on higher oil prices and arrival of below normal temperatures, although inventories remain at record levels.

**Lead** prices fell 10.5 percent on rising stocks and expectation that suspended production from the Magellan mine in Australia will be allowed to resume in the first quarter of 2008.

**Copper** prices dropped 13.0 percent on rising inventories and concerns about slowing economic growth and copper demand.

**Zinc** prices plunged 14.6 percent on high consumer stocks of galvanized steel, and anticipation of large zinc supply increases next year.

<sup>1</sup> Percent change of average November prices compared to average October 2007 prices in nominal U.S. dollars (graph also includes 12-month changes in grey).
