# SOVIET GENETICS

By

Alan G. Morton, B.Sc., Ph.D.

The need has long been felt for some authoritative account not only of the general biological theory associated with the name of Lysenko, but of the experimental evidence on which this theory is based. Dr. Morton has studied the original Russian sources, including the most recent papers: about 100 Russian papers are cited. The abundant factual material which he quotes must be pondered before any final judgment can be formed on the theories discussed.

## Parasitic Animals

GEOFFREY LAPAGE

An attempt to give, from the biological point of view, an outline of the general principles which govern the lives of parasitic animals, illustrated mainly by reference to those species which attack man or the domesticated animals, with a view to showing the nature and extent of the losses inflicted by parasites on human civilization. A new volume in the Cambridge Library of Modern Science.
