

## Cisco VG248 - PBX Interoperability: Digital Sound Voice Server 2110 with Cisco CallManager

### Introduction

- This is an Application Note for Connectivity of Digital Sound Voice Server 2110 PBX with Cisco CallManager using Cisco VG248 as the voice gateway.
- The Network Topology diagram shows the test set-up for end-to-end interoperability between the Cisco CallManager connected to the PBX via the Cisco VG248 as the voice gateway.

### Network Topology

Figure 1. Network Topology

## System Components

### Hardware Requirements

- Cisco Hardware
  - Cisco VG248 voice gateway
  - Cisco CallManager 3.1 (3a)
- Digital Sound Voice Server 2110

### Software Requirements

- Cisco VG248 Software Release 1.2(1)
- InfoMail® 4.3 System
- Cisco Call Manager Software Version 3.1(3a)

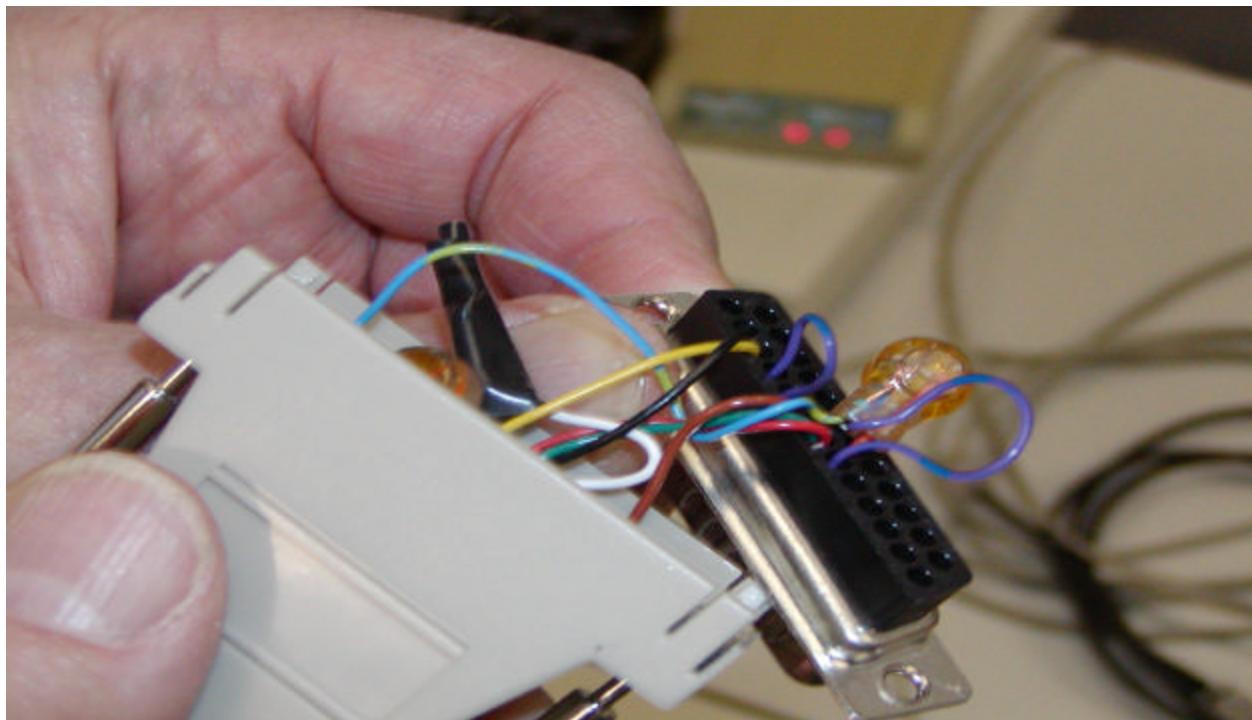

## Configuration

### Cabling

The Digital Sound voicemail will not activate the serial link until it sees DTR as high . The interface to the Digital Sound TTY board is DB25. You will have to modify the connector to show DTR as high.

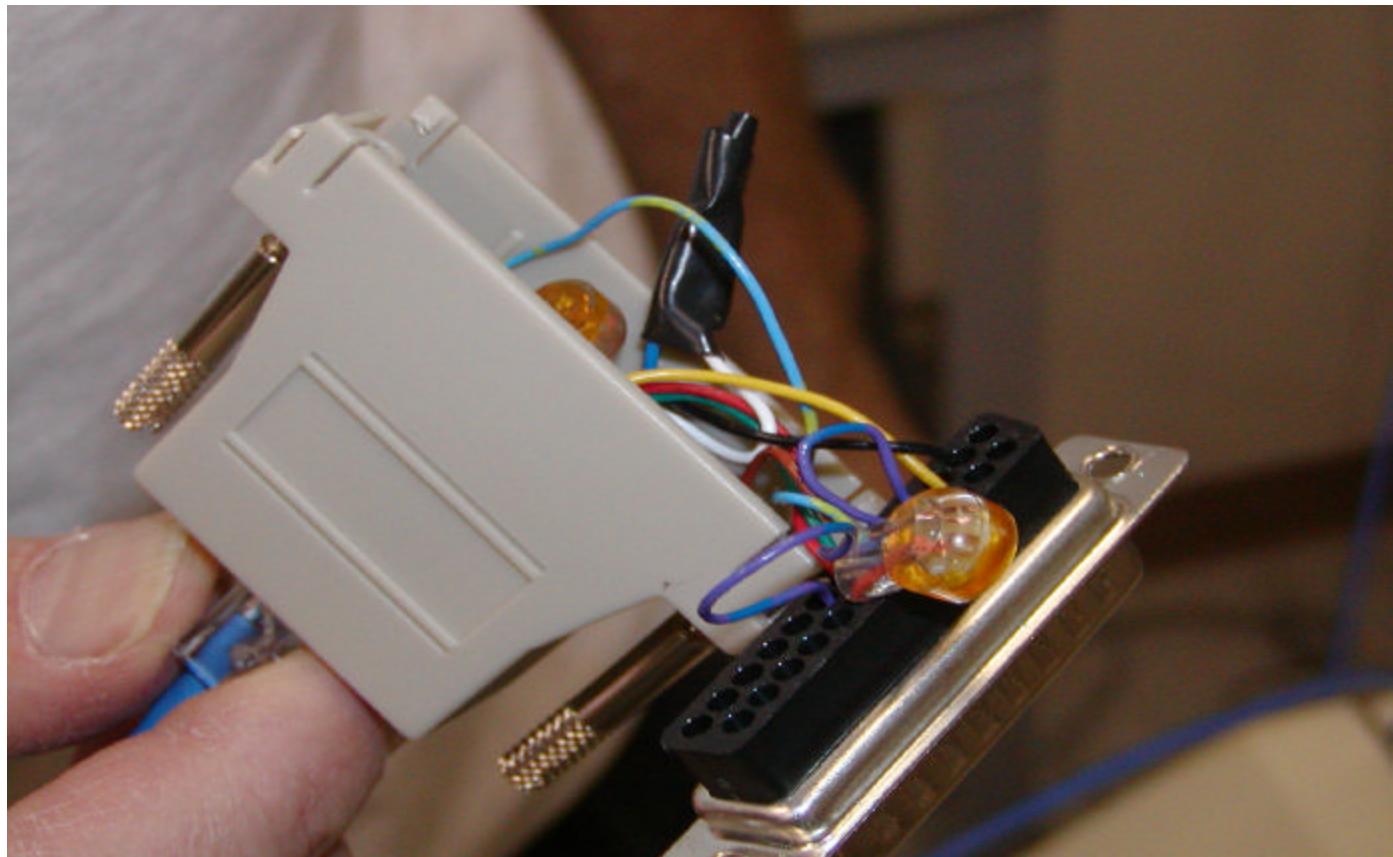

The following photographs show modifications made to the serial link connector.

**Figure 2.** Modified Serial Link Connector

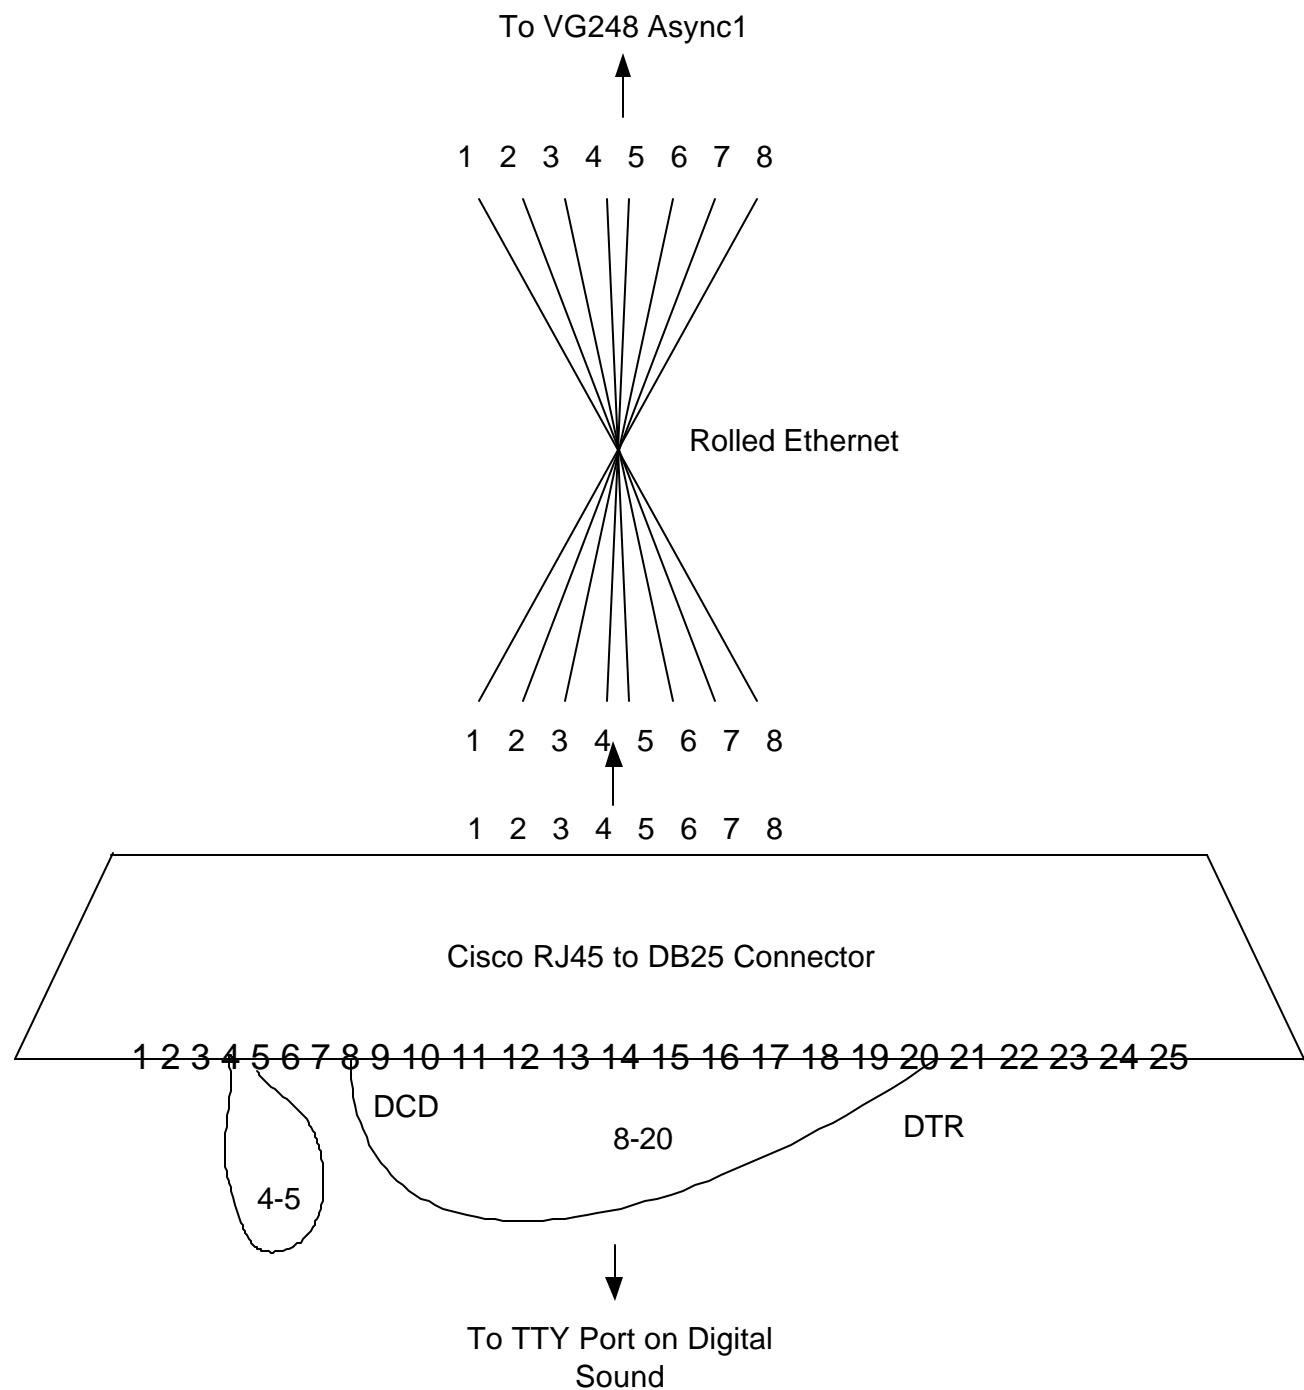

**Figure 3.** Modified Serial Link Connector, Second View

The pinout is as follows:

**Figure 4.** Serial Link Connector Pinout

## Configuring Cisco CallManager

### Cisco CallManager Administration Screen

The screenshot shows the Cisco CallManager 3.1 Administration interface. The title bar reads "Cisco CallManager 3.1 Administration - Cisco CallManager Administration - Microsoft Internet Explorer". The menu bar includes File, Edit, View, Favorites, Tools, and Help. The toolbar has standard icons for Back, Forward, Stop, Refresh, and Search. The address bar shows the URL "http://10.1.132.2/CCNAdmin/main.asp". The links bar contains various links like Back, Home, Logon, Conf, Directory, ESE, evbu, Google, IPxStream, kpw, Maps, Matrix, MCERU, Phone, stacks, and sv. The main content area has a navigation menu with links to System, Route Plan, Service, Feature, Device, User, Application, and Help. Below the menu is the "Cisco CallManager Administration" banner with the tagline "For Cisco IP Telephony Solutions". A yellow sidebar on the left features a cartoon illustration of two people using phones and computers. The central content area displays the "Cisco CallManager 3.1 Administration" title and a "Details" button. A "Microsoft Internet Explorer" dialog box is overlaid on the page, containing a warning message: "When reporting or troubleshooting a problem, please give the following information to Technical Assistance: Cisco CallManager System version: 3.1(3a) Cisco CallManager Administration version: 3.1(0.35)". It also lists Database information: Driver: SQL Server, Server: UCI-MoIP, Database: CCM030, and Database DLL version: DBI: 3.1(0.5143), DBLR: 3.1(0.65003), DBLX: 3.1(0.23083). An "OK" button is at the bottom of the dialog.

This screenshot shows the 'Directory Number Configuration' page in Cisco CallManager 3.1. The main configuration area is for directory number 33702, which is listed as 'Ready'. The 'Directory Number' section shows the number itself and its partition. Below that are 'Directory Number Settings' for various features like voice message boxes and calling search spaces. The 'Call Forward and Pickup Settings' section contains rules for handling calls when the line is busy or no answer. The 'Line Settings for this Device' section specifies the internal caller ID as 'VoiceMail 02'. On the left, a sidebar lists devices using this directory number, specifically 'VGC0943e282f602 (Line 1)'. The bottom of the screen shows the Windows taskbar with icons for Start, Internet, and the current date and time (12:04 PM).
