## PrimeGrid's Generalized Fermat Prime Search

On 19 June 2024, 05:29:47 UTC, PrimeGrid's Generalized Fermat Prime Search found the Mega Prime:

10913140524288 + 1

The prime is 3,689,913 digits long and will enter "The Largest Known Primes Database" (<u>https://t5k.org/primes</u>) ranked 11<sup>th</sup> for Generalized Fermat primes and 81st overall.

The discovery was made by Heinrich Podsada of Germany using an NVIDIA GeForce RTX 3070 in an AMD Ryzen 9 5950X 16-Core Processor @ 3.40GHz with 64GB RAM, running Microsoft Windows 11 Professional x64 Edition. This computer took about 50 minutes to complete the probable prime (PRP) test using Genefer23. Heinrich Podsada is a member of the SETI.Germany team.

The PRP was confirmed prime on 20 June 2024 by an AMD Ryzen 9 5950X @ 3.4GHz with 128GB RAM, running Linux Mint 20.3. This computer took about 15 hours, 56 minutes to complete the primality test using LLR.

The credits for the discovery are as follows:

- 1. Heinrich Podsada (Germany), discoverer
- 2. PrimeGrid, et al.
- 3. AthGFNSieve, sieve program developed by David Underbakke
- 4. GFNSvCUDA, sieve program developed by Anand Nair
- 5. Genefer23, probable prime program developed by Yves Gallot
- 6. LLR, primality program developed by Jean Penné

Entry in "The Largest Known Primes Database" can be found here: <u>https://t5k.org/primes/page.php?id=138229</u>

Using a single PC would have taken years to find this prime. So this timely discovery would not have been possible without the hundreds of volunteers who contributed their spare CPU cycles. A special thanks to everyone who offered their advice and/or computing power to the search - especially Yves Gallot, Iain Bethune, David Underbakke, Anand Nair, Mark Rodenkirch and Geoff Reynolds who were major forces in moving the project forward. Also, thank you to all the sievers, especially Honza Cholt and Jim Breslin. A final thanks to Michael Goetz for porting to BOINC.

The Generalized Fermat Prime Search will continue to seek even larger primes. To join the search please visit PrimeGrid: <u>https://www.primegrid.com</u>

## PrimeGrid's Generalized Fermat Prime Search

## About PrimeGrid

PrimeGrid is a distributed computing project, developed by Rytis Slatkevičius and currently managed by Tyler Bredl, Scott Brown, Michael Goetz, Darren Li, Dao Heng Liu, Reginald McLean, Rytis Slatkevičius, Roman Trunov, and Christian Wallbaum.

PrimeGrid utilizes BOINC to search for primes with the primary goal of bringing the excitement of prime finding to the "everyday" computer user. Simply download the software and let your computer do the rest. Participants can choose from a variety of prime forms to search. With a little patience, you may find a large or even recordbreaking prime.

## BOINC

The Berkeley Open Infrastructure for Network Computing (BOINC) is a software platform for distributed computing using volunteered computer resources. It allows users to participate in multiple distributed computing projects through a single program. Currently BOINC is being developed by a team based at the University of California, Berkeley led by David Anderson.

This platform currently supports projects from biology to math to astronomy. For more information, please visit BOINC: <u>https://boinc.berkeley.edu/</u>

For more information about PrimeGrid and a complete list of available prime search projects, please visit: <u>https://www.primegrid.com</u>
