

# Total control of your entire workflow

Tetra Pak® PlantMaster is a plant automation solution, specifically designed for food production. It covers your entire operation from raw material intake to packaged and palletised products. Although complex on the inside, it explains everything in one comprehensible, intuitive interface.

## 1. Control

## 2. Connect

## 3. Compare

### CONNECT

With connected machines, Production Control logs and transfers all data in a structured way. This allows you total production management in real-time – regarding food safety and quality as well as process stability and reliability. As the system is open and scalable you can grow it over time with new functionalities and new equipment, from any supplier.

### COMPARE

On top of everything our MES software platform integrates your entire operations, even multiple plants, with your ERP or other business systems. You get the reports you need – paperless of course – as a base for comparison and continuous improvements. Regardless of your level of automation today, what equipment you have, and your role, you will be able to make better decisions in your daily work.

### CONTROL

The base of automation is controlling your equipment. All Tetra Pak solutions have Production Control that secures stability and repeatability in the operation. Everything is built on industry standards, and you can also integrate equipment from other suppliers. This gives you one solid foundation.

## Be ready for the future

Choose Tetra Pak PlantMaster to get a modular, scalable and future-proof solution. Regardless of how far you've come on your automation and digitalisation journey, Tetra Pak PlantMaster will provide a good base for future functions and investments.
