

Mobile Driver's License, Are You Ready to Try it?

Thanks to new technologies and processes, documents and services are becoming more digitized every day.

This phenomenon is clearly observable with the fast growth of digital identities and their acceptance worldwide: Australia and the State of Florida are great examples of this transition to secure digital identity documents.

Using a mobile driver license, or mDL, is no longer a futuristic ideal but has become a reality – with early adopting locations allowing an mDL as a convenient companion for citizens in this digitization of identity documents.

Peace of Mind

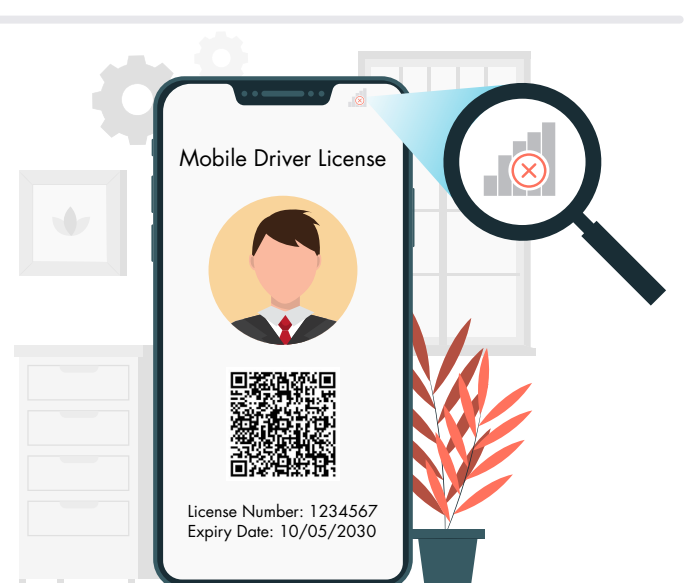

Did you know?

Americans check their phones **96 times a day**, approximately once every 10 minutes. Studies have even shown you're more likely to forget your wallet at home than your cellphone. With an mDL, you never have to worry about forgetting your driver's license ever again!

*New Asurion Research, 2019

Proving your ID with an mDL can be done anywhere, anytime whether you have a network connection or not. With modes for online or offline verification, you don't have to rely on having a network connection to use your mDL.

Access public services as easy as shopping online

Save time!

A mobile driver license enables you to securely prove your identity to access online government platform and services within seconds, making admin red tape as smooth and frictionless as shopping online.

50% less time spent interacting with public administration when using secure digital public services

**McKinsey, Digital Public Services – How to achieve fast transformation at scale - 2020 report*

100 passwords vs 1: the number of passwords the average person is expected to remember in 2021 is actually 100. With an mDL, users can have just 1 password to remember to securely access all participating services.

**NordPass, 2020*

Stay in control of your Information

70% of mDL users feel like they have greater control over their personal information with an mDL

Thales NIST pilots – mDL user perception survey, 2018

Use Cases

More than just a new way to verify your driving privileges, your mobile Driver's License is your new daily companion.

Attest of your legal age

When buying alcohol, confirm that you are at least 21 years old without showing any of your personal information.

Renew your driver license card remotely, using your mDL, and saving yourself a trip to DMV office.

Verify your identity easily when traveling

IDENTITY VERIFIED

Get your identity checked and shop or complete online forms in total security

Successful ID proofing

Checking-in and checking-out has never been so fast

Rely on a personal assistant that could make you save money

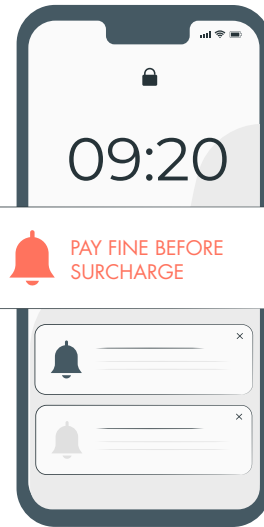

With push notification functionalities, your mDL can send you reminders when your driver license card is up for renewal, be used to report lost or stolen document and becomes your best companion to help you best manage the life cycle of your driver license card. It can even help you save money!

30% of fines end up increased because of late payment

We all have busy schedules and those traffic payment reminders received through the mDL could help save **30% of the cost.**

**EU supreme audit institution report, 2018*

Give it a try

96% of people who have tried a mobile Driver License would use it again

**Thales NIST pilots – mDL perception survey, 2018*

89% of people who have tested a mobile Driver License would like to see it deployed within a year

**Thales NIST pilots – mDL perception survey, 2018*

Digital identities and especially mDLs can be used in-person as well as online, whether it is to identify yourself, buy alcohol or even travel.

More than an accessory, it is a more convenient, cheaper and safer tool to use on a daily basis to make your life easier.

If you are still not convinced, give it a try and you will see: Trying is adopting!
