Subject: Change in NWS Dissemination of Harmful Algal Bloom Information
from NWS Beach Hazard Statement for Florida and Texas NWS Offices:
Effective October 3, 2022

Effective Monday, October 3, 2022, at 12:00 AM Eastern Daylight Time
(EDT), 1600 Coordinated Universal Time (UTC), the NWS Weather Forecast
Offices in Florida and Texas will change the way they disseminate Harmful
Algal Bloom (HAB) information during a hazardous event.

In August 2021, the HAB forecast bulletin was replaced by a new dynamic
GIS-based interactive map that is updated several times a day, has an
interactive map and allows for a much more refined HAB forecast
geographically. Because of this, NWS will no longer disseminate HAB
information as part of the Beach Hazard Statement (BHS). NWS has
determined the BHS no longer meets the dissemination needs of the new
higher resolution HAB forecasts because it will warn an entire county,
when only a beach may be affected.

NWS will now utilize Weather Forecast Office (WFO) social media as the
primary dissemination method used during events of high respiratory
irritation predicted for Florida and Texas beaches. The social media
will include a direct link to HAB forecast products.

New higher resolution HAB forecast website:
