### 1. *Gaia* G-band light curves of our candidates

This section presents folded *Gaia* light curves in the *G* band of the 262 candidates with  $\hat{q}_{\min}^{-1\sigma} > 1$ , in descending  $\hat{q}_{\min}$  order. For each candidate, the *Gaia* DR3 identifier (id), together with the *Gaia* period in days and the value of  $\hat{q}_{\min}$ , are given, and a three-harmonics model is plotted with a solid red line.

### 2. Data table of our candidates

Given below a summary table containing results of the analysis performed on our 262 candidates with  $\hat{q}_{\min}^{-1\sigma} > 1$ , in descending  $\hat{q}_{\min}$  order. The table includes the *Gaia* DR3 id, *Gaia* orbital period, reference time  $T_0$  [BJD-2455197.5] which was chosen so that  $a_{2s} = 0$ , average *G* magnitude  $\bar{G}$ , and cosine and sine Fourier coefficients  $a_{ic}, a_{is}$   $\{i = 1, 2, 3\}$  of the three-harmonic model, defined by equation (1), each with its uncertainty. The table also gives the total number of *G*-band FoV transits, the derived mMMR and the lower-percentile mMMR. Additional details are found in the paper, and the table is online available at the CDS.

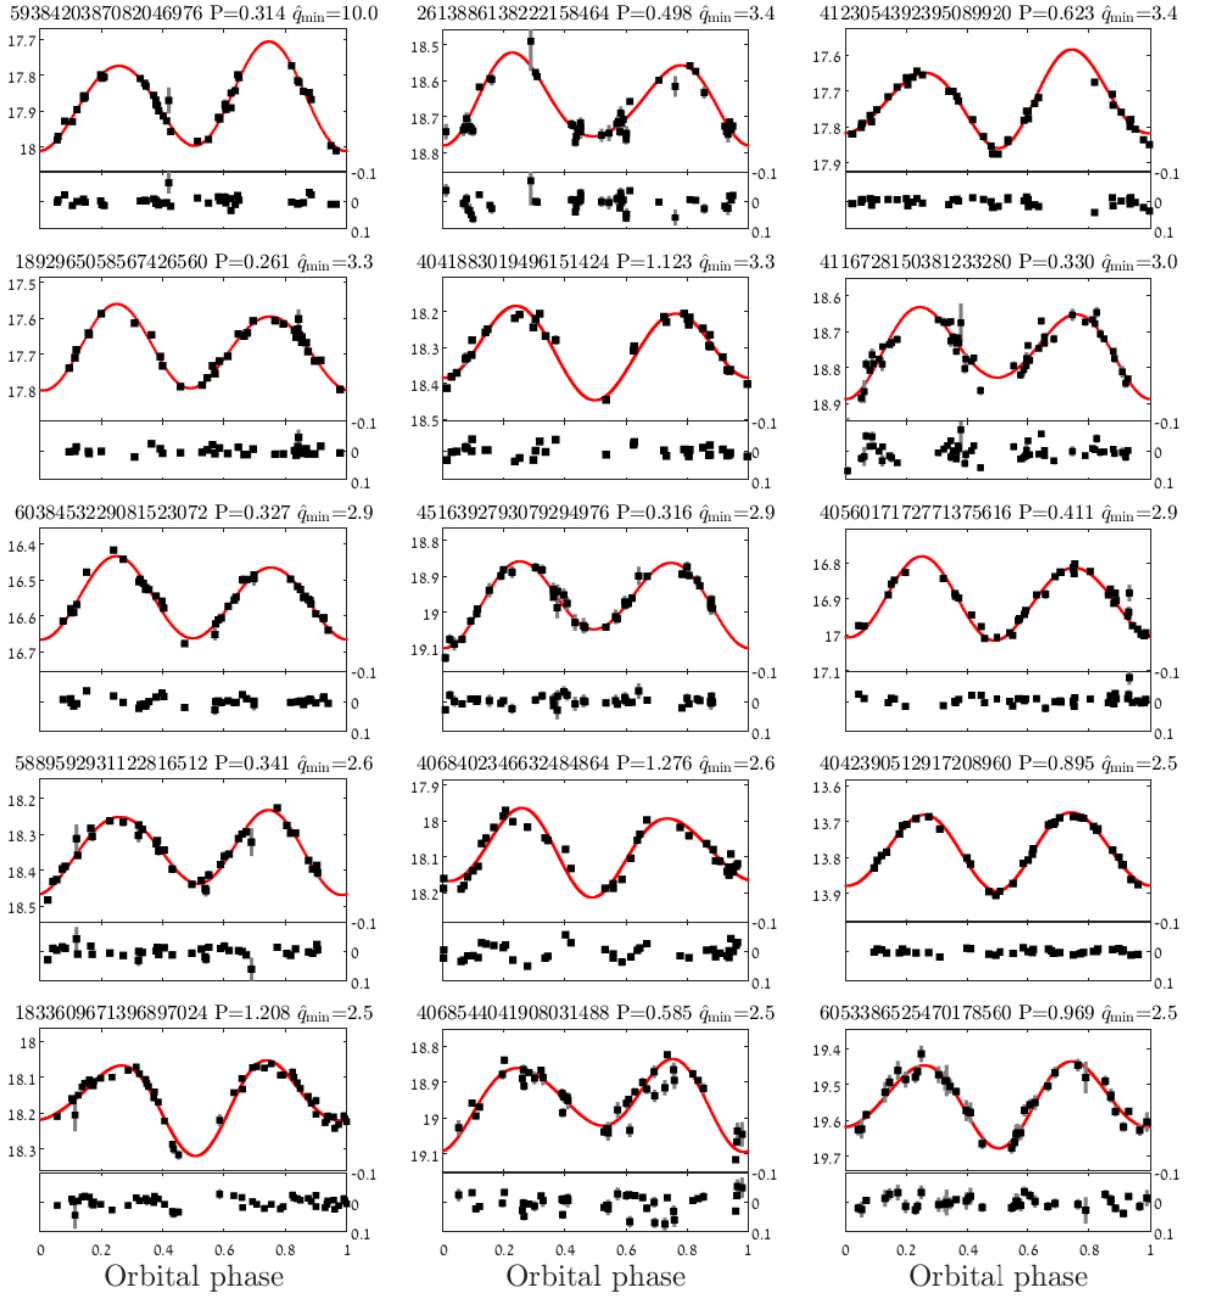

Fig. S1: Folded *Gaia* light curves in the *G* band of the 262 candidates in descending  $\hat{q}_{\min}$  order. For each candidate, the *Gaia* DR3 id, together with the *Gaia* period in days and the value of  $\hat{q}_{\min}$ , are given. The epoch of the second-harmonic minimum corresponds to phases 0 and 0.5, and a three-harmonics model is plotted with a solid red line. All curves are plotted with a mag range of 0.4, for convenience. The residuals are plotted in the lower panels and are shown between -0.1 to 0.1 mag for clarity.
