WEEKLY FLOW MONITORING SNAPSHOT

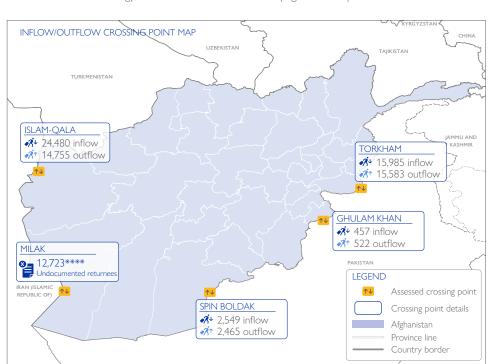

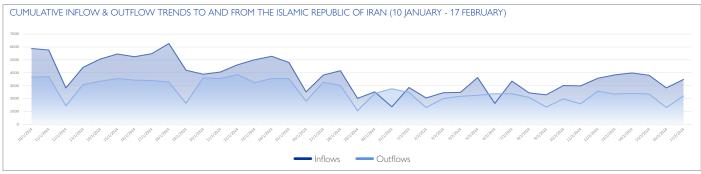

11 - 17 FEBRUARY 2024, DATA UPDATED AS OF 21:00 ON 17 FEB

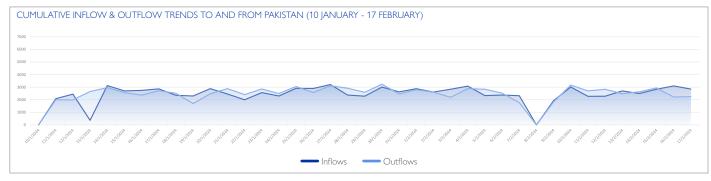

OVERVIEW

In response to recent movements, IOM Afghanistan re-launched its DTM Flow Monitoring activity at the beginning of 2024 to better understand the mobility dynamics at Afghanistan's borders. On 10 January 2024, DTM began deploying field teams at four border crossing points with the Islamic Republic of Iran (IRN) and Pakistan (PAK), expanding to another border crossing point Ghulam Khan as of 11 February (see map below for the locations of all five crossing points), to conduct two interlinked exercises. The first is a headcount of all individuals entering or leaving Afghanistan (including returnees), also called Flow Monitoring Counting (FMC), to gauge flow volume. The second is a survey of randomly selected Afghan national individuals or groups entering or leaving Afghanistan, also called the Flow Monitoring Survey (FMS), to understand the profiles, motivations, and vulnerabilities of the target population. This snapshot provides key findings combining various IOM data sources, including DTM Afghanistan's FMC and FMS activities, DTM Pakistan's Flow Monitoring of Afghan returnees, and IOM Afghanistan's Cross-Border Post-Arrival Humanitarian Assistance (CB-PAHA) program, for the period 11 to 17 February 2024. For more information about methodology, see the the section in the last page of this report titled "IOM INFLOWS."

DISCLAIMER: These maps are for illustration purposes only. The boundaries and names shown and the designations used on these maps do not imply official endorsement or acceptance by the International Organization for Migration.

^{*} More information on the methodology of collecting data on different subsets of inflow groups can be found on the last page of this report in the section titled "IOM INFLOW DATA." ** Documented returnees include Proof of Registration (PoR) holders. Source: IOM DTM Pakistan and UNHCR Pakistan

^{***} This data is collected by IOM CB-PAHA. Individuals receive post-arrival assistance from IOM and support from Border Consortium partners. The Border Consortium is led by IOM. For more information and access to the Consortium dashboard, visit https://afghanistan.iom.int/situation-reports.

^{*****} No data collection due to operational suspensions, the undocumneted returnees data collected by IOM CB-PAHA

^{******} DTM Afghanistan does not collect data on subsets of outflow groups.

♪ INFLOWS

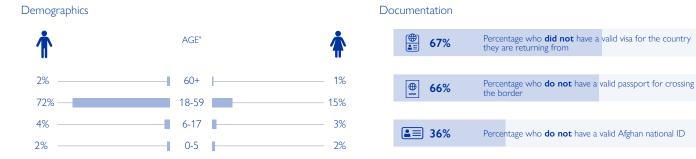

FMC TOTAL INDIVIDUALS: 43,471

FMS TOTAL RESPONDENTS: 3,625

The following analysis compiles responses from 3,625 total Afghan nationals (1,972 at the border with the Islamic Republic of Iran, 1,653 at the border with Pakistan) interviewed by DTM Afghanistan during its FMS activity among individuals and groups entering Afghanistan.

Entering Afghanistan with the intention to transit to a third country was very uncommon; the intended destination of almost all respondents arriving from the Islamic Republic of Iran or Pakistan was Afghanistan. While movements from Iran were mainly characterized by deportees and those traveling for economic reasons, movements from Pakistan involved voluntary returns and family-related visits. Male respondents arriving from the Islamic Republic of Iran were more likely than female respondents to cite deportation for their reason for travel (77% versus 63%, respectively). Meanwhile, female respondents arriving from both the Islamic Republic of Iran and Pakistan were much more like to respond that they returned voluntary/spantneously (37% and 83%, respectively) compared to male respondents (23% and 84%, respectively).

• A↑ OUTFLOWS

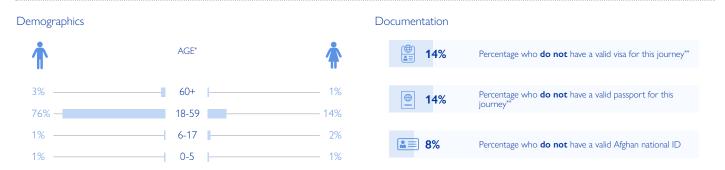

FMC TOTAL INDIVIDUALS: 33,325

FMS TOTAL RESPONDENTS: 1,776

The following analysis compiles responses from 1,776 total Afghan nationals (531 at the border with the Islamic Republic of Iran, 1,245 at the border with Pakistan) interviewed by DTM Afghanistan during its FMS activity among individuals and groups leaving Afghanistan.

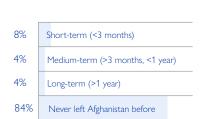

Possessing travel documents, including a passport and visa, was relatively common among those leaving Afghanistan. This stands in contrast with the majority of those arriving to Afghanistan, who were not carrying travel documents. The majority of those going abroad reported that this was their first time leaving Afghanistan. Most respondents going to the Islamic Republic of Iran intended to stay there for a year or less, while most going to Pakistan planned shorter trips; the majority intended to stay less than three months. These intentions reflect respondents' reasons for migration. While family-related visits were a common reason to leave Afghanistan for both those going to Pakistan and those going to the Islamic Republic of Iran, accessing healthcare, which can often constitute a shorter visit, was more common among the former, whereas economic motivations, likely related to employment, were more common among the latter.

IOM INFLOW DATA

DTM Afghanistan, DTM Pakistan, and IOM Afghanistan's Cross Border Post-Arrival Humanitarian Assistance (CB-PAHA) program use different methodologies to collect data on various demographic subsets of individuals entering Afghanistan (inflows). The following flow chart illustrates the relationships between the subsets and how IOM coordinates its various activities and methodologies to develop more robust and comprehensive databases on movements into Afghanistan.

DATA ON ASSISTED AFGHAN RETURNEES

IOM Afghanistan's CB-PAHA program collects information on undocumented Afghan returnees who pass through reception centers near the border and receive assistance from IOM and Border Consortium partners. The Border Consortium is led by IOM. For more information and access to the Consortium dashboard, visit https://afghanistan.iom.int/situation-reports.

CUMULATIVE TRENDS: NUMBER OF RETURNEES ASSISTED BY IOM (10 JANUARY - 17 FEBRUARY)
