# 1. DEFINITIONS AND ACRONYMS

## DEFINITIONS

### Temporary displaced persons (TDPs)

Persons or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence, in particular as a result of or in order to avoid the effects of armed conflict, situations of generalized violence, violations of human rights or natural hazards and disasters, and who have not crossed the internationally recognized borders of Pakistan.<sup>1</sup>

### External TDPs

Persons or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence and have arrived in another place located outside of their own settlement.<sup>2</sup>

### Internal TDPs

Persons or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence and have arrived in another place located inside their own settlement.<sup>3</sup>

### Returning TDPs

Persons or groups of persons who have been forced or obliged to flee or to leave their homes or places of habitual residence in the assessed locations from which they had previously fled as TDPs.<sup>4</sup>

### Community-Based Organization (CBO)

A non-profit, non-governmental, or charitable organization dedicated to advocating for the needs of the community and supporting the community with those needs.

<sup>4</sup> Ibid.

## 2. KEY FINDINGS

**A significant number of TDPs** (198,289 individuals) **remain displaced in Balochistan**. However, DTM observed a 26 per cent decrease in TDPs compared to the previous round (Round 3).

**The majority of TDPs (77%) are living in temporary structures**, such as tents or emergency shelter.

Following the trend from the previous round (Round 3), **the large majority of the initial 1,319,770 TDPs registered by DTM have returned to their areas of origin** (1,121,481; 85%).

**Seventy-eight per cent of settlements indicated that households practice open defecation**. Exposure to human fecal waste results in the development of chronic disorders, including Environmental Enteric Dysfunction (EED), marked by limited nutrient intake, leading to child stunting and wasting.<sup>5</sup>

One year after the floods, **shelter reconstruction continues to be a significant need**, along with food and access to clean and safe drinking water — consistent with previous rounds.

**A majority of settlements (58%) rely on unimproved water sources** (e.g., lakes, ponds, rivers, open wells, etc.), which highlights the need for clean and safe drinking water in communities.

In the last 12 months, **79 per cent of the assessed settlements received assistance**. The vast majority of the settlements received food (91%), followed by agricultural inputs (47%) and NFIs (emergency shelter kits; 41%).

The majority of settlements in Balochistan rely on farming (75%). The predominant farming practice is **sharecropping (46%), which places farmers in a more precarious and vulnerable position compared to those who own or rent the land they farm**.

- **Significant numbers of TDPs return to areas of origin, but many remain in displacement**

Despite a 26 per cent decrease since the previous assessment (Round 3), Balochistan still hosts a significant number of TDPs. DTM estimated that a total of 198,289 individuals in the nine assessed districts in Balochistan remain displaced as a consequence of the 2022 floods. Jaffarabad (57,808 TDPs), Kachhi (38,205 TDPs) and Nasirabad (32,324 TDPs) are the three districts with the highest number of identified TDPs. However, as in the previous round (Round 3), DTM found that a large majority of the initial 1,319,770 TDPs have returned to their areas of origin (1,121,481; 85%). These findings underscore the importance of humanitarian programs expanding their scope beyond areas hosting TDP populations, incorporating also areas of origin and host populations. This is especially pertinent as TDPs are increasingly looking to remain in the areas where they are displaced.

- **However, significant humanitarian needs, especially on food, shelter, and WASH remain**

Food and nutrition intake continue to improve compared to the previous assessment (Round 3). Nevertheless, many communities continue to grapple with significant food-related needs. Moreover, one year after the floods, a large majority of TDPs (77%) continue to reside in temporary shelters. A substantial number of shelters are still partially damaged or completely destroyed, with only few having been reconstructed in areas hosting TDPs. Equally critical is the persistent high prevalence of open defecation. Exposure to human faecal waste results in the development of chronic disorders, including Environmental Enteric Dysfunction (EED), marked by limited nutrient intake, child stunting and wasting.<sup>5</sup> Furthermore, the floods have damaged several water sources, which remain unrepaired.

### 3. INTRODUCTION

From June to October 2022, storms and heavy monsoon rains in Pakistan caused widespread flooding and landslides across the country. As of 18 November 2022, according to the National Disaster Management Authority (NDMA), up to 33 million people have been affected by the floods and a total of 90 districts have been labelled by the Government of Pakistan as ‘calamity-hit’.<sup>6</sup>

Given the number of calamity-hit districts and the number of affected people, the Government of Pakistan requested IOM’s Displacement Tracking Matrix (DTM) to roll out its Community Needs Identification (CNI) assessment. The data was collected in close coordination with, and following approval from the Provincial Disaster Management Authority (PDMA) of Balochistan.

In August 2023, IOM implemented a fourth round of the CNI to provide partners with timely information on the displacement situation, the multisectoral needs of the affected population as well as the recovery needs at the settlement level.<sup>7</sup> For this round, IOM implemented the CNI in nine districts of Balochistan. The CNI was conducted in 3,257 flood-affected settlements or settlements that hosted temporary displaced persons (TDPs) across the nine targeted districts.<sup>8</sup>

### 4. METHODOLOGY

The CNI was conducted through group interviews key informant (KI) interviews and direct observations. The KI interviews were conducted at the settlement level as KIs are able to estimate displacement and return figures at the settlement level.<sup>9</sup> Registration lists, aid distribution lists and other records of displaced populations were also utilized wherever available. Information was triangulated with other KIs such as religious leaders, TDPs, health workers and teachers, and cross-checked through direct observation by DTM enumerators.<sup>10</sup>

A total of 62 enumerators (56 male and 6 female) assessed 3,257 settlements through interviews with 15,050 KIs, of whom 98 per cent were male and two per cent were female. DTM Pakistan will improve female representation in its subsequent assessments. The data collection tool was developed in close coordination with various stakeholders, including humanitarian cluster partners. Data collection was carried out in August 2023.

Please note that the CNI was only conducted in nine districts of Balochistan due to security and operational reasons. Therefore, data should not be generalized, and may not represent a full picture of human mobility, the multisectoral needs of TDPs and recovery needs in Balochistan.

#### TYPE OF KEY INFORMANTS

<sup>6</sup> National Disaster Management Authority (NDMA), 2022. NDMA Daily Situation Report No. 158 (Dated 18 November 2022). Available [here](#).

<sup>7</sup> The previous CNI reports can be accessed here: [CNI Round 1](#), [CNI Round 2](#) and [CNI Round 3 \(Balochistan\)](#).

<sup>8</sup> Due to security reasons, DTM was not able to cover five settlements which were covered during the previous round of data collection (Round 3).

<sup>9</sup> The information gathered represents estimates and perceptions provided by key informants, and should be interpreted accordingly.

<sup>10</sup> The direct observation method includes the cross verification of information provided by key informants through the direct observation by enumerators.

<sup>11</sup> An officially appointed executive officer in a town or village. He or she is responsible for collecting the local revenue and look after all the matters.

## 5. HUMAN MOBILITY OVERVIEW

TOTAL POPULATION <sup>12</sup>		TOTAL TDPs		EXTERNAL TDPs <sup>13</sup>		INTERNAL TDPs <sup>14</sup>		RETURNING TDPs <sup>15</sup>	
Individuals	Households	Individuals	Households	Individuals	Households	Individuals	Households	Individuals	Households
2,674,114	354,554	198,289 (7.4%)	27,916 (7.9%)	4,838 (0.2%)	588 (0.2%)	193,451 (7.2%)	27,328 (7.7%)	1,121,481 (41.9%)	160,374 (45.2%)

### HUMAN MOBILITY OVERVIEW, BY DISTRICT

DISTRICTS	PBS   TOTAL POPULATION <sup>16</sup>	DTM   No. of Cov. SETTLEMENTS	DTM   TOTAL POPULATION	DTM   TOTAL TDPs	DTM   EXTERNAL TDPs	DTM   INTERNAL TDPs	DTM   RETURNING TDPs
Pishin	835,482	347	444,932	4,547	846	3,701	19,264
Jaffarabad	594,558	718	439,933	57,808	80	57,728	374,436

<b>GRAND TOTAL</b>	<b>3,552,915</b>	<b>3,257</b>	<b>2,674,114</b>	<b>198,289</b>	<b>4,838</b>	<b>193,451</b>	<b>1,121,481</b>

#### TOTAL POPULATION

During this assessment, key informants estimated a total population of 2,674,114 individuals or 354,554 households across the nine assessed districts. Pishin district had the highest population with 444,932 individuals, followed by Jaffarabad (439,933 individuals) and Loralai (401,816).

#### TDPs (EXTERNAL AND INTERNAL)

Furthermore, DTM identified a total of 198,289 TDPs, equivalent to 27,916 households, who experienced displacement due to the 2022 floods in the nine target districts in Balochistan.<sup>17</sup> This is a 26 per cent decrease compared to the previous round (Round 3), where DTM recorded 267,189 TDPs. The majority of these TDPs (193,451 individuals or 27,328 households; 98%) had to move within their own settlement (internal TDPs). Only 4,838 individuals or 588 households (2%) were displaced outside of their own settlement (external TDPs). Most internal TDPs were identified in Jaffarabad (57,728 individuals), Kachhi (38,097 individuals) and Nasirabad (31,398 individuals), whereas external TDPs were mostly identified in Killa Saifullah (2,575 individuals), Nasirabad (926 individuals) and Pishin (846 individuals).

#### RETURNING TDPs

DTM enumerators also assessed returning TDPs who were initially displaced due to the floods and then returned to their area of origin. As in the previous round (Round 3), these constitute the majority of TDPs in Balochistan. A total of 1,121,481 returning TDPs or 160,374 returning TDP households were identified during this fourth round of assessment. The districts with the highest number of returning TDPs were Jaffarabad (374,436 returning TDPs), Kachhi (287,501 returning TDPs) and Nasirabad (173,325 returning TDPs).

<sup>12</sup> It should be noted that DTM's assessment was specifically conducted in flood-affected settlements or settlements that hosted TDPs, amounting to a total of 3,257 settlements across the nine districts, according to DTM, whereas PBS data includes all settlements within the nine assessed districts of Balochistan.

<sup>13</sup> Please refer to page 3 for the definition of external TDPs.

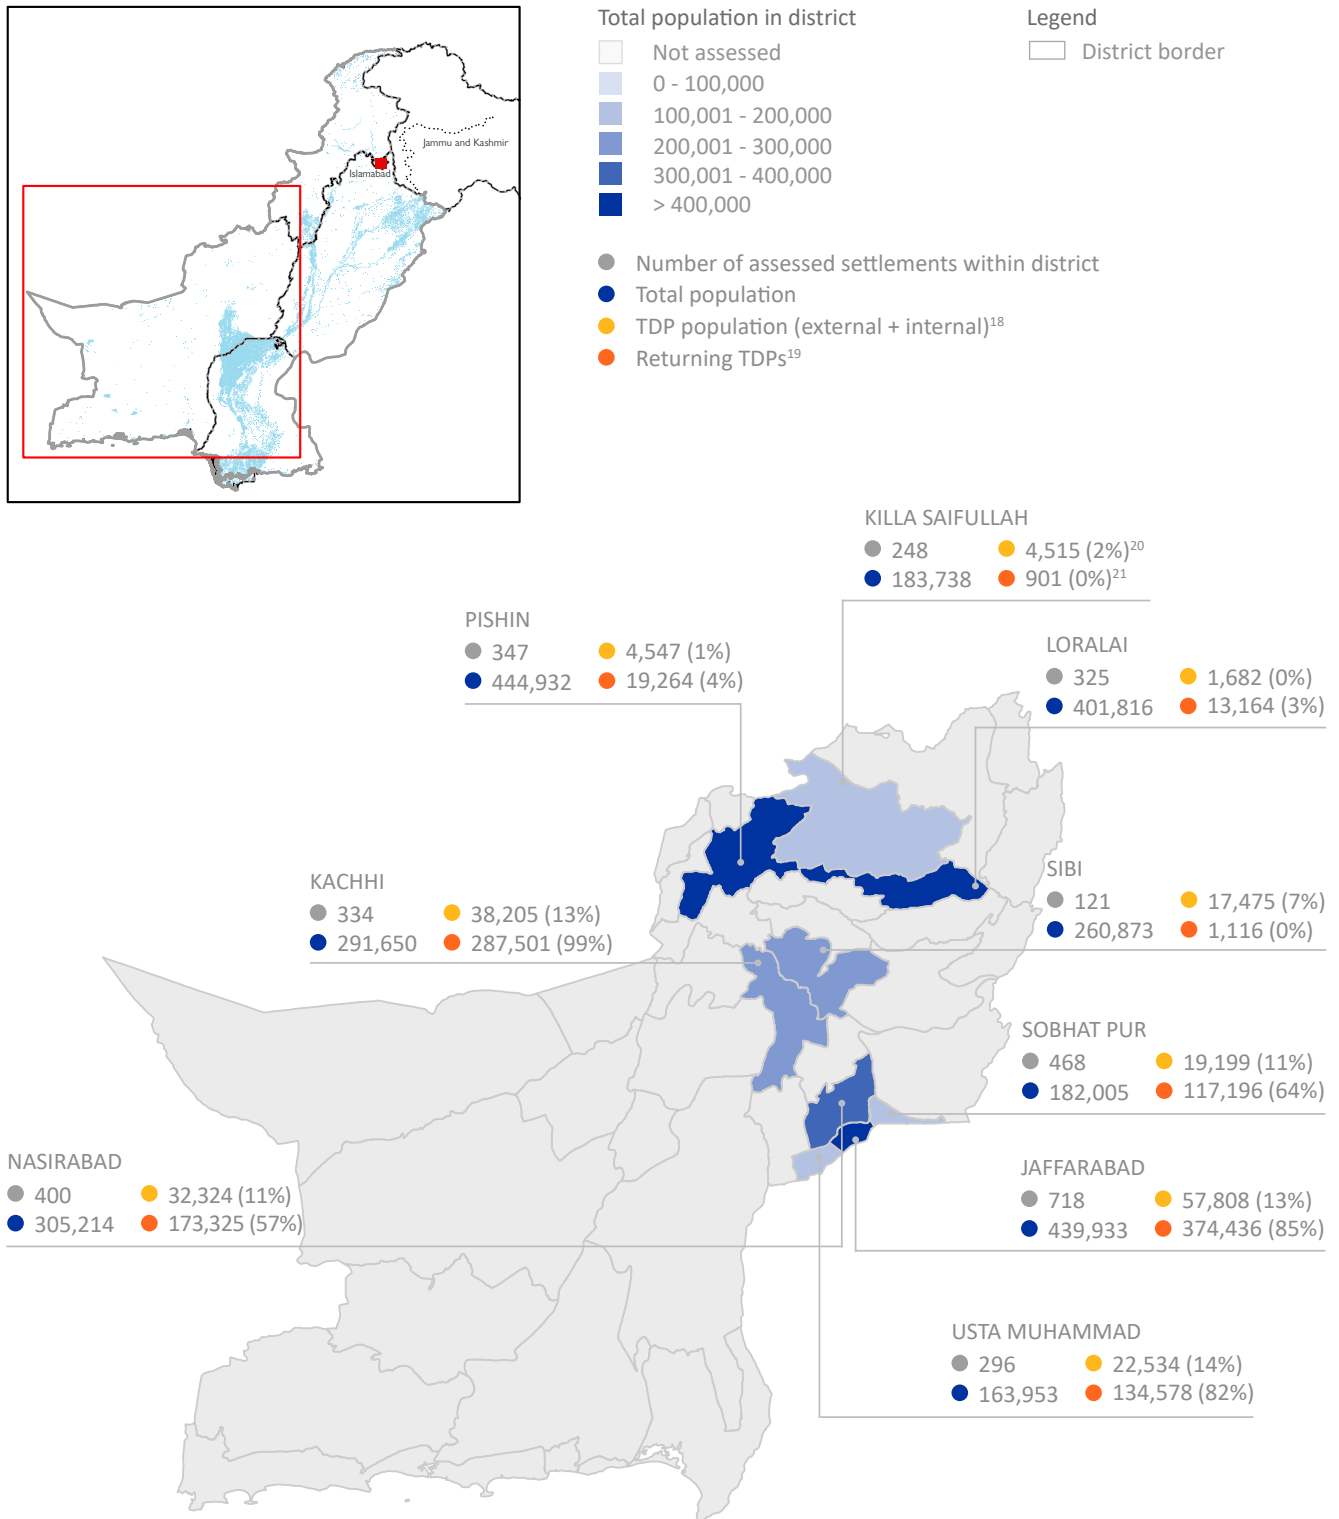

<sup>14</sup> Please refer to page 3 for the definition of internal TDPs.

<sup>15</sup> Please refer to page 3 for the definition of returning TDPs.

<sup>16</sup> Pakistan Bureau of Statistics (PBS) (2023). *Seventh Population and Housing Census 2023. The Digital Census*. Available [here](#).

<sup>17</sup> Please note that 1,024 settlements did not have any TDPs at the time of the assessment.

## TOTAL POPULATION AND ASSESSED SETTLEMENTS, BY DISTRICT

**Disclaimer:** The dotted line represents approximately the line of control in Jammu and Kashmir agreed upon by India and Pakistan. The final status of Jammu and Kashmir has not yet been agreed upon by the parties. The designations employed and the presentation of material on this map do not imply the expression of any opinion whatsoever on the part of IOM or United Nations concerning the legal status of any country, territory, city or area or of its authorities, or concerning the delimitation of its frontiers or boundaries.

<sup>18</sup> Please refer to page 3 for the definition of external and internal TDPs.

<sup>19</sup> Please refer to page 3 for the definition of returning TDPs.

<sup>20</sup> Expressed as a percentage of the total population.

<sup>21</sup> Expressed as a percentage of the total population.

## 6. MOBILITY INTENTIONS

### MOST PREFERRED MOVEMENT INTENTION OF TDPs (N = 105)<sup>22</sup>

Among the 105 surveyed settlements hosting external TDPs (TDPs who are residing outside of their settlement), 41 per cent indicated that the majority of TDPs still express the desire to return to their areas of origin. This marks a decrease compared to the previous round (Round 3) when 52 per cent of settlements reported TDPs have a desire to return.

### MOST PREFERRED MOVEMENT INTENTION OF TDPs, BY DISTRICT (N = 105)

Return was the most preferred option in Loralai (100%), Pishin (100%) and Sibi (100%), while local integration was more preferred in Jaffarabad (100%), Kachhi (100%), Sobhat Pur (100%), Usta Muhammad (100%), Nasirabad (69%) and Killa Saifullah (63%). Nasirabad was the only district where relocation (22%) was identified by key informants as a preferred intention of TDPs.

### FACTORS THAT IMPACT INABILITY TO RETURN TO AREA OF ORIGIN (TOP 4) (Multiple answers, N = 43)<sup>23</sup>

Lack of livelihoods (74%), destroyed houses (67%), loss of assets (49%) and a lack of food (44%) were identified by key informants as the most important factors impacting TDPs' ability to return. These results highlight the need for integrated programming for shelter/housing, livelihoods and agricultural interventions if the remaining TDPs are to return to settlements of origin.

<sup>22</sup> This question only covers settlements that host external TDPs and where TDPs have movement intentions.

<sup>23</sup> This question was only asked if return was selected as the preferred movement intention in the previous question.

## 7. POPULATION DEMOGRAPHICS

AGE AND SEX OF TDPs (N = 1,162)<sup>24</sup>

At the time of the assessment, DTM teams estimated a total of 198,289 TDPs in the nine assessed districts of Balochistan. In addition, key informants were asked to provide the age and sex-disaggregated breakdown of TDPs. The below information is only available for a total of 67,550 TDPs (34% of TDPs in the province).

The age breakdown shows that the majority of the TDP population consists of individuals who are younger than 18 years of age (41,394 individuals or 61%). Within this age group, adolescents (15-17 years) are the biggest group (19,113 individuals or 28%), followed by children (5-14 years) (14,190 or 21%) and infants (0-4 years) (8,091 or 12%). Adults between 18 and 59 years of age consist of 21,033 individuals (31%) and individuals over 60 years of age consist of 5,123 individuals (8%).

According to key informants, the TDP population in Balochistan is 51 per cent female (34,771 individuals) and 49 per cent male (32,779 individuals). This sex parity is consistent across various age brackets for both females and males.

<sup>24</sup> Key informants only provided the sex and age of the TDP population if they had sufficient information available. Therefore, this question was only answered in 1,162 settlements.

## 8. NEEDS IDENTIFICATION

### MOST IMPORTANT NEEDS IN ASSESSED SETTLEMENTS

- Food continues to be a vital necessity in the surveyed settlements (28%). Nevertheless, findings from the food and nutrition section indicate a positive trend towards improved food security.
- One year after the floods, shelter reconstruction remains an important need in a considerable number of settlements (21%). Key informants reported that a total of 20,900 shelters remain fully destroyed. Furthermore, key informants have highlighted several challenges associated with existing shelters, underscoring there are still outstanding needs.
- Clean and safe drinking water (14%) is another important need across the assessed districts. This need is underscored by findings in the water, sanitation and hygiene (WASH) section, which reveal that 58 per cent of the assessed settlements still rely on unimproved water sources.

DTM enumerator collecting data through a group interview with key informants in Sibi, Balochistan © IOM 2023

## 9. ASSISTANCE RECEIVED

### ASSISTANCE SINCE THE 2022 FLOODS

### IF ASSISTANCE WAS RECEIVED, TYPE OF ASSISTANCE RECEIVED (TOP 4) (Multiple answers, N = 2,574)

According to key informants, 79 per cent of assessed settlements (2,574) or 74 per cent of individuals in these settlements received assistance since the floods, which occurred one year prior to this assessment. This trend was consistent across most districts, with the notable exceptions being Loralai and Sibi, where the majority did not receive assistance. Assistance most frequently came in the form of food distributions (91%), agricultural inputs (47%), NFIs (emergency shelter kits; 41%) and medication (33%).

### IF ASSISTANCE WAS RECEIVED, POPULATION GROUPS WHO FACE BARRIERS WHEN ACCESSING ASSISTANCE (Multiple answers, N = 2,574)

### IF ASSISTANCE WAS RECEIVED, FEEDBACK ON ASSISTANCE (N = 2,574)

A large majority of settlements reported that women (79%) and elderly (71%) most commonly face barriers when accessing assistance. Finally, more than half of settlements indicated that the assistance fell short in terms of items or services received (61%).

## 10. SHELTER

### SHELTER BREAKDOWN TDP HOUSEHOLDS, BY DISTRICT

DISTRICTS	TOTAL TDP HOUSEHOLDS	TDP HOUSEHOLDS LIVING IN TENTS OR EMERGENCY SHELTERS	TDP HOUSEHOLD LIVING WITH HOST COMMUNITY	TDP HOUSEHOLDS LIVING IN BUILDINGS <sup>25</sup>
Jaffarabad	7,590	7,179 (95%)	411 (5%)	0 (0%)
Kachhi	5,532	3,976 (72%)	1,546 (28%)	10 (0%)
Nasirabad	4,850	4,585 (95%)	265 (5%)	0 (0%)
Usta Muhammad	2,978	2,877 (97%)	98 (3%)	3 (0%)
Sibi	2,888	0 (0%)	2,888 (100%)	0 (0%)
Sohbat Pur	2,820	2,781 (99%)	39 (1%)	0 (0%)
Pishin	592	19 (3%)	573 (97%)	0 (0%)
Killa Saifullah	497	12 (2%)	136 (27%)	349 (70%)
Loralai	169	13 (8%)	122 (72%)	34 (20%)
<b>GRAND TOTAL</b>	<b>27,916</b>	<b>21,442 (77%)</b>	<b>6,078 (22%)</b>	<b>396 (1%)</b>

### TOP 3 DISTRICTS WITH TDP HOUSEHOLDS LIVING IN TENTS OR EMERGENCY SHELTERS

Overall, in around three-fourths of the assessed settlements (77%), TDP households still lived in tents or emergency shelters, while 22 per cent lived with the host community and one per cent in buildings. However, this varied significantly from district to district. In Sohbat Pur (99%), Usta Muhammad (97%), Nasirabad (95%), Jaffarabad (95%) and Kachhi (72%) a majority of TDP households lived in tents or emergency shelter. In Killa Saifullah (70%), the majority of TDP households lived in buildings, while in Sibi (100%), Pishin (97%) and Loralai (72%), the large majority of TDP households were living with the host community.

### CONCERNS WITH CURRENT SHELTER (Multiple answers, N = 3,257)

<sup>25</sup> Living in buildings means the TDP household is living in an informal or rented building/house.

## 11. SHELTER RECOVERY AND NON-FOOD ITEMS (NFIs)

### MOST IMPORTANT SHELTER RECOVERY NEEDS IN ASSESSED SETTLEMENTS

#### SHELTER CONDITION

At the time of the assessment, a total of 30,205 shelters remained partially damaged and 20,900 completely destroyed in the nine assessed districts of Balochistan. Five per cent of the assessed settlements (168) have

#### SHELTER RECONSTRUCTION

received support to repair or rebuild their shelters. Within these settlements, support was extended to 1,474 (5%) partially damaged shelters, while 1,263 (6%) completely destroyed shelters were reconstructed.

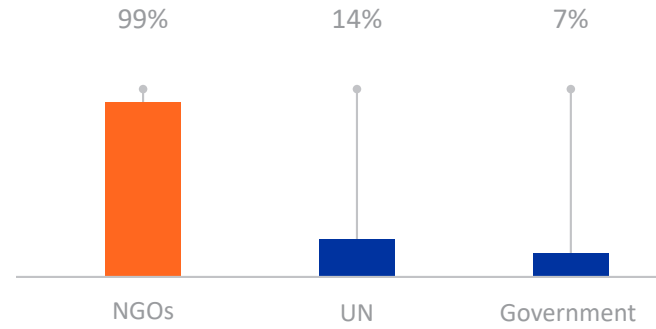

#### IF SUPPORT WAS PROVIDED, TYPE OF SUPPORT

(Multiple answers, N = 168)<sup>27</sup>

#### IF SUPPORT WAS PROVIDED, WHO PROVIDED SUPPORT?

(Multiple answers, N = 168)<sup>28</sup>

#### MOST NEEDED NON-FOOD ITEMS (NFIs)

- Household items
- WASH items
- Emergency shelter
- Hygiene kits

Key informants identified household items, such as mattresses, blankets, clothes and kitchen sets (79%) as the most needed NFIs at the time of the assessment.

<sup>26</sup> Please note that shelters that were either partially or completely destroyed reflect the current count, excluding shelters that had previously suffered partial or complete damage but have since been repaired. On the other hand, shelters that received support encompass all shelters that have been assisted since the onset of the floods, making it a cumulative figure.

<sup>27</sup> This question was only asked when shelters in the settlement received assistance.

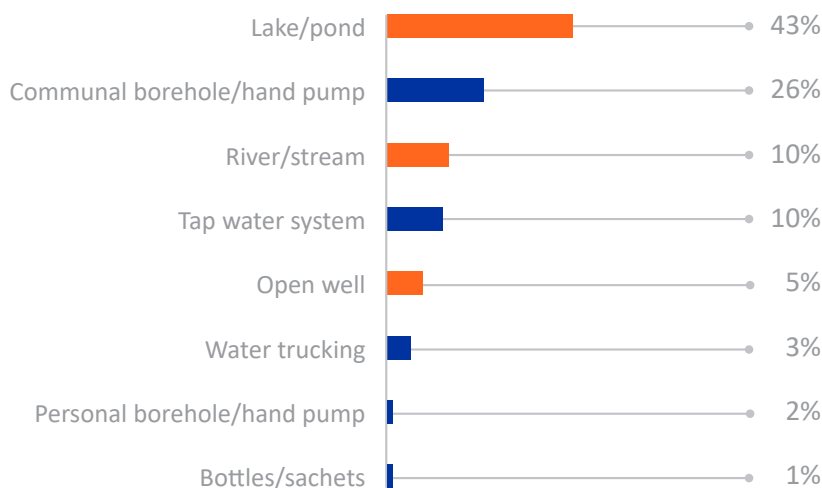

<sup>28</sup> Ibid.

## 12. WATER, SANITATION AND HYGIENE (WASH)

### MOST IMPORTANT WATER NEEDS IN ASSESSED SETTLEMENTS

### MOST COMMON WAY TO COLLECT DRINKING WATER

The most common way to collect drinking water in Balochistan is a lake or pond (43%). Twenty-six per cent of settlements collect drinking water through a communal borehole or hand pump and two per cent through a personal borehole or hand pump. Moreover, an additional 10 per cent of settlements collect their drinking water from a river or stream.

Overall, 58 per cent of assessed settlements in Balochistan indicated that villagers access water through unimproved water sources.

### CHALLENGES WHEN ACCESSING WATER (TOP 10) (Multiple answers, N = 3,257)

Key informants in Balochistan were also asked to identify the most common challenges people in the settlement experience when accessing drinking water. Many of these challenges were related to the quality of the water, such as water having an unusual taste (49%), emitting an odour (40%) and displaying colouration or suspended solids (35%). Additionally, water quantity concerns also emerged as significant challenges, such as an inadequate number of water points (47%) and insufficient storage (39%).

### MOST COMMON WAY TO DEFECCATE

- Open defecation
- Household latrines
- Communal latrines

A majority of assessed settlements indicated that most people defecate in an open area (78%). This is alarming as exposure to human and, by extension, animal faecal waste, results in the development of chronic disorders, including Environmental Enteric Dysfunction (EED), marked by limited nutrient intake, thereby contributing to child stunting and wasting.<sup>30</sup>

Eighteen per cent indicated that most households (146,514) had household latrines at their disposal and four per cent (15,908 households) shared household latrines with other households.

### TOP 3 DISTRICTS WITH POPULATIONS PRACTICING OPEN DEFECCATION

ALL DISTRICTS		① PISHIN		② KACHHI		③ LORALAI	
Households	Individuals	Households	Individuals	Households	Individuals	Households	Individuals
192,132	1,464,264	25,560	243,095	33,838	229,704	25,084	226,491

### CHALLENGES WHEN ACCESSING PLACES TO DEFECCATE (Multiple answers, N = 3,257)

The most important challenges people face when accessing places to defecate included lack of privacy (61%), safety concerns during daytime (55%), nighttime (53%), absence of gender-segregated latrines (38%), unhygienic conditions (30%) and overcrowding (16%). Key informants also identified issues such as distance (13%), a lack of locks on facilities (8%), toilet is full (5%) and facilities being too difficult to reach (2%), however, these were reported in fewer settlements. Three per cent of assessed settlements reported no challenges.

### IS THERE ADEQUATE LIGHTING AVAILABLE IN THE LATRINES?

<sup>30</sup> "EED is a subclinical often asymptomatic disease of the small intestine which alters gut structure due to chronic pathogen contact and ingestion, restricting the body's ability to absorb and use nutrients through the small intestine". World Bank Pakistan (2023), p.4. *Pakistan | Reforms for a Brighter Future: Discussion Note 1 - Reducing Child Stunting*. Available [here](#) (Published on 20 September 2023).

### 13. FOOD AND NUTRITION

#### MOST IMPORTANT FOOD NEEDS IN ASSESSED SETTLEMENTS

While food security has improved compared to previous rounds, a substantial number of settlements in Balochistan continue to grapple with significant food-related needs. Up to the date of assessment, the 2022 floods have destroyed significant areas of agricultural land and crops, thereby impacting the supply of basic food items such as wheat and rice.

This is also highlighted by key informants during this assessment, revealing that 46 per cent of surveyed settlements remain in need of additional atta or wheat flour, while 30 per cent require ghee or cooking oil. Additionally, 10 per cent of assessed settlements have expressed a pressing need for rice as another essential dietary component.

#### MOST COMMON WAY TO ACCESS FOOD

Thirty-nine per cent of settlements indicated that the most common way to access food was to buy it from the market. However, 34 per cent still access food through borrowing.<sup>31</sup> Other ways to access food were selling assets (12%), utilizing savings (7%), food distribution (4%), cash assistance (2%), donations from the host community (1%) and exchanging items (1%).

Almost all the assessed settlements (99%) reported that they have access to a food market in their community.

#### FREQUENCY OF NOTHING TO EAT IN MAJORITY OF HOUSEHOLDS ON A MONTHLY BASIS

Legend: Never (dark blue), Rarely (1 - 2 times) (medium blue), Sometimes (3 - 10 times) (yellow), Often (>10 times) (orange), Do not know (grey)

<sup>31</sup> Borrowing means borrowing money from a formal or informal source to fulfill needs.

Fifty per cent of assessed settlements reported that the majority of households never face the challenge of nothing to eat, marking a substantial improvement compared to the previous round of assessment (Round 3). The proportion of households encountering this challenge "sometimes" or "often" has decreased since the prior assessment, from nine to six per cent.

### SETTLEMENTS WHO RECEIVED FOOD DISTRIBUTION/ASSISTANCE

Eighty per cent of assessed settlements or 72 per cent of individuals in the assessed settlements have received food distribution or assistance since the 2022 floods. This marks an increase from the previous assessment (Round 3), which recorded a rate of 66 per cent of assessed settlements who received food distribution or assistance.

## 14. HEALTH

### MOST IMPORTANT HEALTH NEEDS IN ASSESSED SETTLEMENTS

#### #1 NEED

#### #2 NEED

#### #3 NEED

#### PRIMARY HEALTH CONCERN (TOP 6)

#### DISTANCE TO FUNCTIONING HEALTH FACILITY

Suspected/confirmed malaria was the primary health concern in 73 per cent of assessed settlements, followed by typhoid (7%), hepatitis (7%), diarrhea (6%), scabies (4%) and respiratory infection (2%). It should be noted that the assessment took place during months when malaria is typically more common.

DTM teams also assessed the distance to a functioning health facility (basic health units, dispensary or any other government hospital) that provides primary health care to the settlement.<sup>32</sup> In 44 per cent of settlements key informants reported that the distance to a functioning health facility was five kilometres and above. 13 per cent of settlements reported a distance of less than one kilometre to the nearest health facility.

#### FACTORS PREVENTING MOST PEOPLE FROM ACCESSING HEALTHCARE SERVICES (Multiple answers, N = 3,257)

Key informants also identified factors that prevent most people from accessing healthcare services. Sixty-four per cent of assessed settlements reported the cost of health care as a factor preventing access to healthcare services. Insufficient medication (53%), distance to a health facility (51%), no medication (46%) and lack of medical staff (36%) were other important factors identified by key informants.

<sup>32</sup> Please note that health services are usually provided at the union council level.

## 15. EDUCATION

### MOST IMPORTANT EDUCATION NEEDS IN ASSESSED SETTLEMENTS

#### #1 NEED

#### #2 NEED

#### #3 NEED

#### ACCESS TO PRIMARY SCHOOL FOR CHILDREN<sup>33</sup>

#### SHARE OF CHILDREN ATTENDING PRIMARY SCHOOLS<sup>34</sup>

Ninety-eight per cent of assessed settlements in Balochistan reported that children have access to primary school. On average, 45 per cent of children in the surveyed settlements are attending primary school in Balochistan.

#### MAIN ISSUES WITH ACCESSING EDUCATION SERVICES FOR CHILDREN (Multiple answers, N = 3,257)

Children also experience several issues when accessing education services. The majority of these challenges are related to the limited supply of education, such as a lack of learning supplies (42%), distance (40%) and a lack of teachers (38%). However, some challenges also relate to the demand for education, such as the lack of awareness of the benefits of education (27%).

<sup>33</sup> Access to education means having physical access to education facilities within reasonable distance of the settlement.

<sup>34</sup> Attendance to education means children physically attending classes on a regular basis.

## 16. AGRICULTURE AND LIVELIHOODS

### MOST IMPORTANT AGRICULTURAL RECOVERY NEEDS IN ASSESSED SETTLEMENTS

#### #1 NEED

#### #2 NEED

#### #3 NEED

#### ABILITY OF FARMERS TO RESUME AGRICULTURAL ACTIVITIES SINCE THE FLOODS (N = 2,925)

#### CHALLENGES FACED BY AFFECTED FARMERS SINCE THE FLOODS (Multiple answers, N = 2,925)

DTM enumerators asked key informants additional questions in case the settlement was an agricultural settlement, representing 90 per cent of assessed settlements (2,925). Only 47 per cent of settlements reported that affected farmers were able to fully resume agricultural activities. Moreover, affected farmers have experienced several challenges since the floods, these were mostly a lack of money (90%) and a loss of crops (74%). Lack of seeds or inputs (65%), damage to infrastructure to access their fields (32%) and damage to the irrigation system (26%) were also important challenges.

#### AGRICULTURAL ASSISTANCE TO AFFECTED FARMERS SINCE THE FLOODS (N = 2,925)

#### IF AGRICULTURAL ASSISTANCE WAS PROVIDED, TYPE OF SUPPORT (Multiple answers, N = 1,443)

Fifty per cent of affected farmers in assessed areas received full or partial assistance since the floods. If assistance was provided, most farmers received seeds or inputs (95%). Twenty-five per cent received cash assistance, 18 per cent agricultural training and 10 per cent infrastructure repair.

MAIN OCCUPATION OF HOUSEHOLDS

SHARE OF HOUSEHOLDS WHO CURRENTLY HAVE A SOURCE OF INCOME

#1 Occupation

Key informants reported that farming is the predominant occupation among settlements, comprising 75 per cent of the surveyed settlements. This is an 11 per cent increase compared to the previous round (Round 3). Within this farming community, the majority engage in sharecropping arrangements (46%), with the next significant group being those who cultivate their own land (22%). In approximately seven per cent of surveyed settlements farmers lease their land.

On average, key informants reported that 41 per cent of households in the assessed settlements have a source of income.

**17. ACCOUNTABILITY OF HUMANITARIAN ORGANIZATIONS**

ORGANIZATIONS INFORM THE COMMUNITY THAT ASSISTANCE IS FREE

EXISTENCE OF A SYSTEM IN THE COMMUNITY TO COMPLAIN ABOUT AID WORKERS' BEHAVIOUR

■ Yes ■ No ■ Unknown

■ Yes ■ No ■ Unknown

Key informants were also asked whether organizations inform the community that all services/assistance provided by humanitarian agencies is free of charge and whether there is a system in the community to complain about aid workers' misbehaviour and abuse. Forty-nine per cent of settlements indicated that organizations do not inform the community about free services/assistance and 79 per cent of settlements reported that there was no system/mechanism/focal point in the community to complain about aid workers' behaviour.
