KFF COVID-19 Vaccine Monitor
November 2021

KFF

EMBARGOED for use at 5 AM ET Thursday, December 2, 2021

METHODOLOGY

This *KFF COVID-19 Vaccine Monitor* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation (KFF). The survey was conducted November 8-22, 2021, among a nationally representative random digit dial telephone sample of 1,820 adults ages 18 and older (including interviews from 470 Hispanic adults and 452 non-Hispanic Black adults), living in the United States, including Alaska and Hawaii (note: persons without a telephone could not be included in the random selection process). Phone numbers used for this study were randomly generated from cell phone and landline sampling frames, with an overlapping frame design, and disproportionate stratification aimed at reaching Hispanic and non-Hispanic Black respondents as well as those living in areas with high rates of COVID-19 vaccine hesitancy. Stratification was based on incidence of the race/ethnicity subgroups and vaccine hesitancy within each frame. High hesitancy was defined as living in the top 25% of counties as far as the share of the population not intending to get vaccinated based on the U.S. Census Bureau's Household Pulse Survey. The sample also included 342 respondents reached by calling back respondents that had previously completed an interview on the KFF Tracking poll or another SSRS RDD poll at least six months ago. Computer-assisted telephone interviews conducted by landline (192) and cell phone (1,628; including 1,282 who had no landline telephone) were carried out in English and Spanish by SSRS of Glen Mills, PA. To efficiently obtain a sample of lower-income and non-White respondents, the sample also included an oversample of prepaid (pay-as-you-go) telephone numbers (25% of the cell phone sample consisted of prepaid numbers) Both the random digit dial landline and cell phone samples were provided by Marketing Systems Group (MSG). For the landline sample, respondents were selected by asking for the youngest adult male or female currently at home based on a random rotation. If no one of that gender was available, interviewers asked to speak with the youngest adult of the opposite gender. For the cell phone sample, interviews were conducted with the adult who answered the phone. KFF paid for all costs associated with the survey.

The combined landline and cell phone sample was weighted to balance the sample demographics to match estimates for the national population using data from the Census Bureau's 2019 U.S. American Community Survey (ACS), on sex, age, education, race, Hispanic origin, marital status, and region, within race-groups, along with data from the 2010 Census on population density. The sample was also weighted to match current patterns of telephone use using data from the January-June 2021 National Health Interview Survey. The sample is also weighted to account for the possibility of partisan nonresponse based on six months of KFF national polls and this current survey. The weight takes into account the fact that respondents with both a landline and cell phone have a higher probability of selection in the combined sample and also adjusts for the household size for the landline sample, and design modifications, namely, the oversampling of potentially undocumented respondents and of prepaid cell phone numbers, as well as the likelihood of non-response for the re-contacted sample. All statistical tests of significance account for the effect of weighting.

The margin of sampling error including the design effect for the full sample is plus or minus 3 percentage points. Numbers of respondents and margins of sampling error for key subgroups are shown in the table below. For results based on other subgroups, the margin of sampling error may be higher. Sample sizes and margins of sampling error for other subgroups are available by request. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. Kaiser Family Foundation public opinion and survey research is a charter member of the [Transparency Initiative of the American Association for Public Opinion Research](#).

This work was supported in part by grants from the Chan Zuckerberg Initiative DAF (an advised fund of Silicon Valley Community Foundation), the Ford Foundation, and the Molina Family Foundation. We value our funders. KFF maintains full editorial control over all of its policy analysis, polling, and journalism activities.

EMBARGOED for use at 5 AM ET Thursday, December 2, 2021

Group	N (unweighted)	M.O.S.E.
Total	1,820	± 3 percentage points
COVID-19 Vaccination Status		
Have gotten at least one dose of the COVID-19 vaccine	1,321	± 4 percentage points
Have not gotten the COVID-19 vaccine	466	± 6 percentage points
Race/Ethnicity		
White, non-Hispanic	798	± 4 percentage points
Black, non-Hispanic	452	± 6 percentage points
Hispanic	470	± 6 percentage points
Party Identification		
Democrats	562	± 6 percentage points
Republicans	390	± 7 percentage points
Independents	552	± 6 percentage points

Notes for reading the topline:

- Percentages may not always add up to 100 percent due to rounding.
- Values less than 0.5 percent are indicated by an asterisk (*).
- "Vol." indicates a response was volunteered by the respondent, not offered as an explicit choice
- Questions are presented in the order asked; question numbers may not be sequential.

All trends shown in this document come from KFF Health Tracking Polls or KFF COVID-19 Vaccine Monitors except for:
09/20: KFF/The Undefeated Poll on Race and Health (August 20-September 14, 2020)
