**KFF COVID-19 Vaccine Monitor:
Winter 2021 Update On Parents' Views Of Vaccines For
Kids
December 2021**

KFF

METHODOLOGY

This *KFF COVID-19 Vaccine Monitor Poll* was designed and analyzed by public opinion researchers at the Kaiser Family Foundation (KFF). The survey was conducted November 8-23, 2021 via telephone and online among a nationally representative sample of 1,196 parents with a child under the age of 18 in their household. The sample includes 483 parents reached through the November 2021 KFF COVID-19 Vaccine Monitor and 713 who were reached online through a probability-based online panel (SSRS Opinion Panel¹ and Ipsos Knowledge Panel²). The Vaccine Monitor respondents were reached through a random digit dial telephone sample of adults ages 18 and older (including interviews from 139 Hispanic parents and 114 non-Hispanic Black parents), living in the United States. Phone numbers used for the telephone component were randomly generated from cell phone and landline sampling frames, with an overlapping frame design, and disproportionate stratification aimed at reaching Hispanic and non-Hispanic Black respondents as well as those living in areas with high rates of COVID-19 vaccine hesitancy. The sample also included 93 parents reached by calling back respondents that had previously completed an interview on the KFF Tracking poll ($n=52$) or the SSRS Omnibus poll ($n=41$) at least six months ago. See the *November 2021 KFF COVID-19 Vaccine Monitor* for further details on the telephone component.

For the online component, invitations were sent to panel members who previously identified as the parent of a child ages 5 to 17. As with the telephone component, Hispanic and Black respondents were oversampled. The SSRS Opinion Panel and Ipsos Knowledge Panel are nationally representative probability-based web panels. SSRS Probability Panel members are recruited randomly in one of two ways: (a) Through invitations mailed to respondents randomly sampled from an Address-Based Sample (ABS). ABS respondents are randomly sampled by MSG through the U.S. Postal Service's Computerized Delivery Sequence (CDS). (b) from a dual-frame random digit dial (RDD) sample, through the SSRS Omnibus survey platform. Sample for the SSRS Omnibus is obtained through Marketing System Groups (MSG). Ipsos Knowledge Panel members are also recruited using ABS, based on a stratified sample from the CDS.

The combined telephone and online parent samples were weighted to match the sample's demographics to the national parent population using data from the Census Bureau's 2019 U.S. American Community Survey (ACS). Weighting parameters included sex, age, education, marital status, child age, and region, within race-groups. The sample was also weighted to match current patterns of telephone use using data from the January-June 2021 National Health Interview Survey. The weights take into account differences in the probability of selection for each sample type (phone and web). This includes adjustment for the sample design and geographic stratification of the telephone sample, within household probability of selection, and the design of the panel-recruitment procedure.

The margin of sampling error including the design effect for the full sample of parents is plus or minus 4 percentage points. Numbers of respondents and margins of sampling error for key subgroups are shown in the table below. For results based on other subgroups, the margin of sampling error may be higher. Sample sizes and margins of sampling error for other subgroups are available by request. Sampling error is only one of many potential sources of error and there may be other unmeasured error in this or any other public opinion poll. Kaiser Family Foundation public opinion and survey research is a charter member of the [Transparency Initiative of the American Association for Public Opinion Research](#).

This work was supported in part by grants from the Chan Zuckerberg Initiative DAF (an advised fund of Silicon Valley Community Foundation), the Ford Foundation, and the Molina Family Foundation. We value our funders. KFF maintains full editorial control over all of its policy analysis, polling, and journalism activities.

Group	N (unweighted)	M.O.S.E.
Total Parents of Children Under 18 in Household	1,196	± 4 percentage points
Parent Race/Ethnicity		
White, non-Hispanic	418	± 6 percentage points
Black, non-Hispanic	354	± 7 percentage points
Hispanic	367	± 7 percentage points
Child Age Groups		
Parents of children under age 5	436	± 7 percentage points
Parents of children ages 5-11	667	± 5 percentage points
Parents of children ages 12-17	702	± 5 percentage points

Notes for reading the topline:

- Percentages may not always add up to 100 percent due to rounding.
- Values less than 0.5 percent are indicated by an asterisk (*).
- "Vol." indicates a response was volunteered by the respondent, not offered as an explicit choice
- Questions are presented in the order asked; question numbers may not be sequential.

All trends shown in this document come from KFF Health Tracking Polls or KFF COVID-19 Vaccine Monitors

AGE. What is your age?

AGE2. (ASK IF DON'T KNOW OR REFUSED AGE) Could you please tell me if you are between the ages of... (READ LIST)

RECA2 VARIABLE

	Parents 11/21
