

Chrome browser enterprise support

Access to a reliable, fast and secure browsing experience has become more important than ever as the adoption of SaaS apps accelerates and business users become increasingly dependent on their web browser. In fact, 75% of the time cloud workers spend on devices is in the browser or in virtual meetings¹, and 89% of companies anticipate that many to most of their workers will continue to work from home². With the added complexities of distributed working and reliance on web apps, it's critical for IT to ensure users have uninterrupted access.

With over two billion users, Chrome is the world's most popular browser. It's easy for IT to download the Chrome enterprise bundle—providing instant access to hundreds of policies in the cloud and on premises to configure and customize Chrome according to your organization's unique security, user and stability requirements.

However, offering a secure and seamless web browser experience for enterprise can be complex—especially due to the growing mix of operating system versions and physical/virtual desktop environments.

Keep your business users connected to the web and critical apps

Get the assurance of direct access to a dedicated team of Chrome experts, 24/7, via email, phone and online support. This offering helps you avoid potential disruption and user downtime, and give time back to your IT teams by reducing the need to troubleshoot browser issues.

With Chrome Enterprise Support you can:

Seek best practice, guidance and support, including for policy configuration, testing and deployment

Gain simple, efficient fixes so you can focus on other high-impact and strategic activity

Ensure secure access to support resources and services

Address challenges that arise in large, complex environments
