

ONESOURCE Analyzer Suite

The ONESOURCE Analyzer Suite supports long-range planning with visibility into duty rates and other charges, risk factors, and regulatory requirements around the world.

The Challenge

Companies need to find the most cost-efficient sourcing strategy for products and raw materials. This requires a full assessment of regulatory requirements, duties and taxes, risk factors, and savings opportunities, such as preferential duty rates.

Navigating through this assessment manually can take days or weeks, especially if you're considering multiple trade lanes at once. And that's assuming you have accurate trade data to begin with. If you're manually researching the regulatory data for multiple sourcing locations, your information may already be out of date by the time you collect and analyze it.

The Solution

The Thomson Reuters ONESOURCE™ Analyzer Suite allows you to perform analysis on company-specific data regarding importing and exporting within your potential trade lanes. The ONESOURCE Analyzer Suite encompasses three analysis tools, which can be implemented separately — Trade Lane Analyzer, Duty and Tax Analyzer, and Tariff Analyzer. You can use these tools to research duty rates, estimate duty and tax cost, visualize “what if” scenarios for multiple trade lanes, and plan new import and export strategies.

On a single platform, you can view and compare:

- HS numbers and descriptions for 210+ countries and territories in both English and the native language
- All charges, including main/preferential duty rates, ADD/CVD, customs fees, VAT/GST, excise, and more
- Potential free trade agreements
- Import/export controls (PGA/OGA)
- Import/export volumes
- Corruption Perception Index and possible sanctions
- Sample documents such as import/export commercial documents, sample certificates, and details of trade agreements

The Benefits

The ONESOURCE Analyzer Suite supports long-range planning with visibility into duty rates and other charges, risk factors, and regulatory requirements around the world.

The Features

With the ONESOURCE Analyzer Suite, companies can:

- Leverage up-to-date regulatory data for 210+ countries and territories worldwide
- Research costs by origin and destination country in order to choose the most strategic, cost-effective trade lane
- Consider preferential duty and ADD/CVD rates before sourcing decisions are made
- Customize duty and tax calculations with company-specific shipment information such as broker fees, transportation costs, insurance, assists, and more
- Determine the impact of additional charges, antidumping duties, sanctions, import/export controls, and VAT rates that may differ based on the subcountry or type of product being imported
- Research import/export volumes to evaluate new markets
- View the commercial documents required for transportation, customs, or financial purposes
- Analyze risks with trade through potential sanctions and country threat information

The ONESOURCE Analyzer Suite allows you to perform analysis on company-specific data regarding importing and exporting within your potential trade lanes.
