Monitoring the health SDG goal: Indicators of overall progress

Life expectancy

Life expectancy at birth⁴ provides an indication of overall mortality of a country's population. In Indonesia, from 2000 (66.3 years) to 2016 (69.3 years), the life expectancy at birth has improved by 3 years.

Healthy life expectancy⁴ reflects overall health of the country's population. In Indonesia, from 2000 (59.4 years) to 2016 (61.7 years), healthy life expectancy has improved by 2.3 years.

Universal health coverage: At the centre of the health goal

The goal of universal health coverage (UHC) is that all people and communities receive the health care they need, without suffering financial hardship. Monitoring UHC requires measuring **health service coverage** and **financial protection** (SDG target 3.8).

HEALTH SERVICE COVERAGE

A summary measure of essential health services coverage, a composite *service coverage index*, is used: 16 indicators are derived from four main areas of work: (1) reproductive, maternal, newborn and child health; (2) infectious diseases; (3) noncommunicable diseases; (4) service capacity, access and health security.

Reproductive, maternal, newborn and child health Latest available data (2010-2017)

Infectious diseases

Noncommunicable diseases

Service capacity, access and health security

UHC services coverage index of essential health services

To provide a summary measure of coverage, an index of national service coverage is computed by averaging service coverage values across the 16 tracer indicators. The UHC coverage index ranges from 0% to 100%, with 100% implying full coverage across a range of services.

UHC services coverage index

FINANCIAL PROTECTION

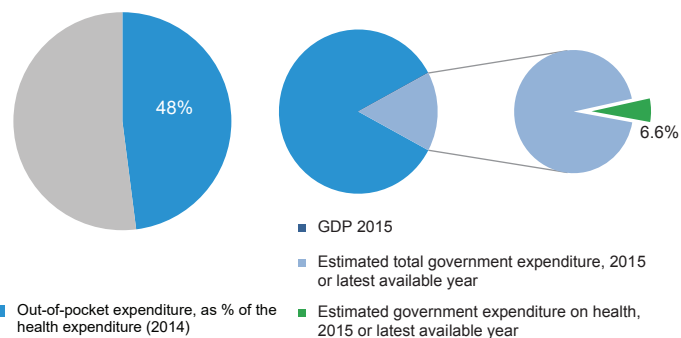

Financial protection is measured through two indicators: (1) impoverishment, and (2) catastrophic health expenditure.

Impoverishment: **0.8%** or **approximately 2 000 000** people are being pushed into poverty because of out-of-pocket health spending³.

Catastrophic expenditure on health: **3.6%** of people spent more than 10% of their household's total expenditure on health care³.

Out-of-pocket expenditure³ In most cases, high percentage of out-of-pocket expenditure out of the total health expenditure is associated with low financial protection

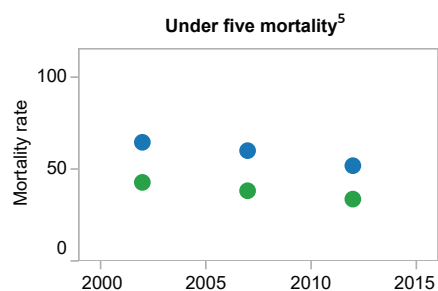

Public spending on health³ is determined by the capacity of the government to raise revenues and allocate it to health.

This profile provides an overview of the current status of achieving better health towards the 13 targets under the Sustainable Development Goal #3 (SDG3): Ensure healthy lives and promote well-being for all at all ages. 25 SDG3 indicators plus other selected health-related indicators are presented where data is available.

Equity: Leave no one behind

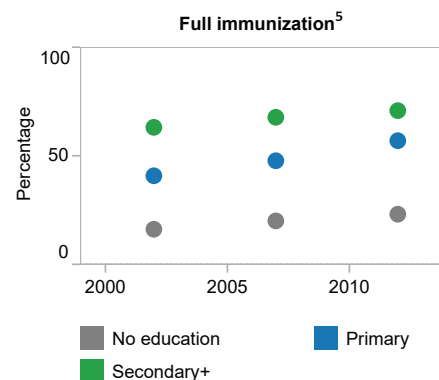

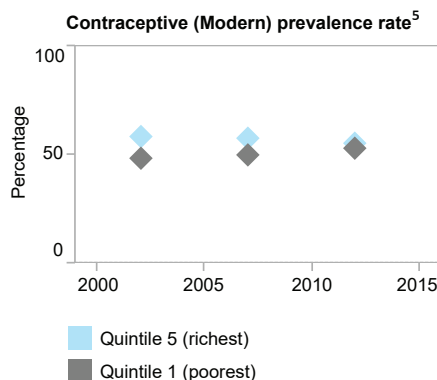

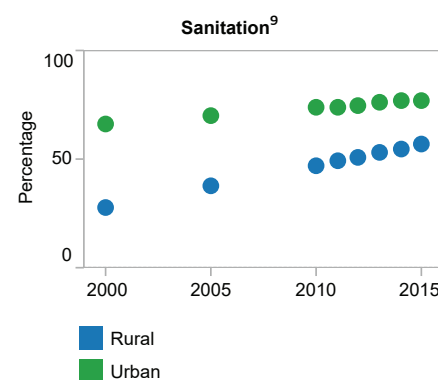

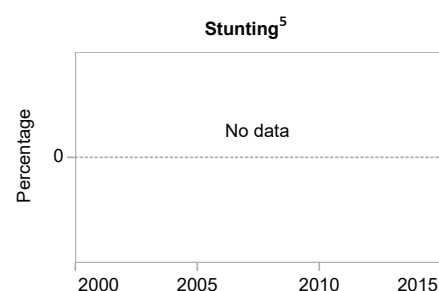

Variation by residence

Variation by wealth

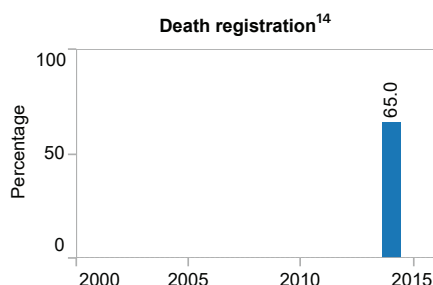

Variation by education

SDGs emphasis on equity

SDG target 17.18 emphasizes the need for disaggregated data. By 2020, enhance capacity-building support to developing countries to increase significantly the availability of high-quality, timely and reliable data disaggregated by income, gender, age, race, location and other characteristics relevant in national contexts.

Strengthening Civil Registration and Vital Statistics (CRVS)

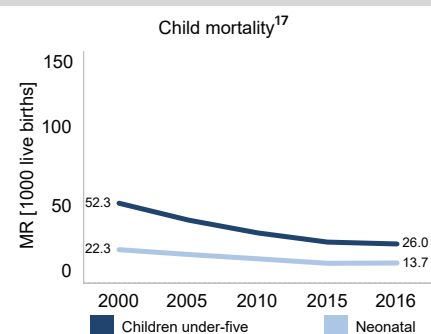

SDG emphasis on mortality statistics

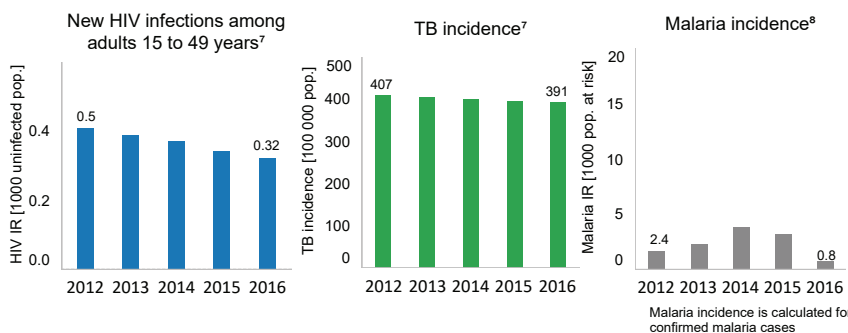

More reliable vital statistics on births, deaths and causes of death from civil registration and vital statistics (CRVS) systems are required for reporting on 14 health-related SDG mortality indicators. Understanding better what people are dying from can lead to stronger health policies and plans, and improve monitoring of the health-related SDGs.

SDG 3: Health targets

Maternal and child mortality (SDG target 3.1, 3.2)

Communicable diseases (SDG target 3.3)

Indicators	Year	Indonesia	Regional estimate
Hepatitis B surface antigen prevalence among children under 5 years (%) ⁴	2015	1.07	0.70
Number of people requiring interventions against neglected tropical diseases ⁴	2016	101,813,236	671,797,672

Noncommunicable diseases and injuries

Indicators	SDG target	Year	Indonesia	Regional estimate
Mortality between 30 and 70 years of age from cardiovascular diseases, cancer, diabetes or chronic respiratory diseases ⁴ (%)	3.4.1	2016	26.4	23.1
Suicide mortality rate ⁴ (per 100 000 population)	3.4.2	2016	3.4	13.2
Total alcohol per capita (age 15+ years) consumption ⁴	3.5.2	2016	0.8	4.5
Mortality rate from road traffic injuries ⁴ (per 100 000 population)	3.6.1	2013	15.3	17

Sexual and reproductive health

Proportion of married or in-union women of reproductive age who have their need for family planning satisfied with modern methods ⁵ (%)	3.7.1	2007-17	77.9	75.1
Adolescent birth rate ¹⁸ (per 1000 women aged 15 to 19 years)	3.7.2	2014	40.1	33.0

Mortality due to environmental pollution

Mortality rate attributed to household and ambient air pollution ⁴ (per 100 000 population)	3.9.1	2016	112.4	164.0
Mortality rate attributed to exposure to unsafe WASH services ⁴ (per 100 000 population)	3.9.2	2016	7.1	15.4
Mortality rate attributed to unintentional poisoning ⁴ (per 100 000 population)	3.9.3	2016	0.4	1.8

Tobacco use

Tobacco use among persons (15+ yrs) and older - Female	3.a.1	2011	4.5	-
Tobacco use among persons (15+ yrs) and older - Male	3.a.1	2011	67.5	-

Essential medicines and vaccines

Proportion of the population with access to affordable medicines and vaccines on a sustainable basis	3.b.1	-	-	-
Total net official development assistance to medical research and basic health per capita ⁴	3.b.2	2016	0.51	-

Health workforce

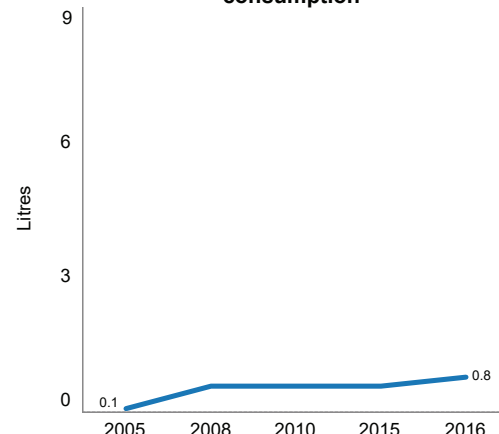

Health worker density ¹³ (per 10 000 population)	3.c.1	2017	24.4	-
---	-------	------	------	---

National and global health risks

International Health Regulations Core Capacity Index ⁹	3.d.1	2017	99	73
---	-------	------	----	----

Note: A dash (-) implies relevant data are not available

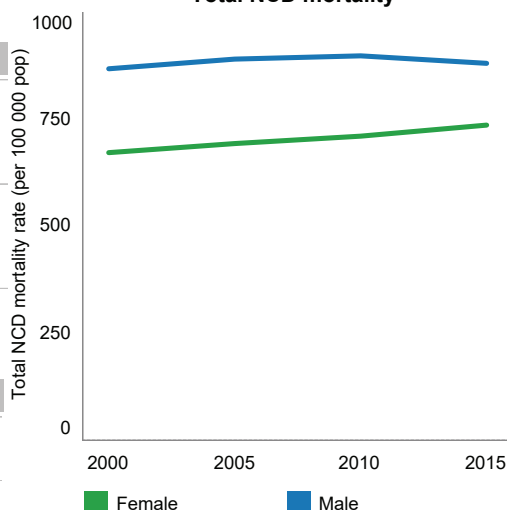

Total alcohol per capita (age 15+ years) consumption⁴

Adolescent birth rate (per 1000 women aged 15 to 19 years)¹⁸

Total NCD mortality⁹

Other health-related SDGs

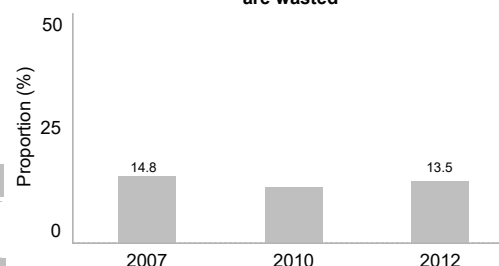

General government health expenditure				
Indicators	SDG target	Year	Indonesia	Regional estimate
General government health expenditure as % of general government expenditure ⁴	1.a	2015	7.4	8.5
Child nutrition				
Children under 5 years who are stunted ⁵	2.2.1	2012	36.4	33.0
Children under 5 years who are wasted ⁵	2.2.2	2012	13.5	15.2
Children under 5 years who are overweight ⁵	2.2.3	2012	11.5	3.4
Drinking water services and sanitation				
Proportion of population using improved drinking water sources ⁴	6.1	2015	-	-
Proportion of population using improved sanitation ⁴	6.2	2015	-	-
Clean household energy				
Proportion of population with primary reliance on clean fuel ⁴	7.1	2016	58	41
Ambient air pollution				
Air pollution level in cities ⁴ (PM 2.5) (µg/m ³)	11.6.2	2016	16.4	57.3
Natural disasters				
Number of deaths by disaster ⁴ (per 100 000 people)	13.1.2	2012-16	<0.1	0.2
Homicide and conflicts				
Mortality rate due to homicide ⁴ (per 100 000 population)	16.1.1	2016	4.5	4.1
Estimated direct deaths from major conflicts ⁴ (per 100 000 population)	16.1.2	2012-16	<0.1	0.1
Birth registration coverage ¹⁴	16.9.1	2016	72.5	-
Cause-of-death data				
Completeness of cause-of-death data ¹⁵ (%)	17.19.2	2007-16	-	10

Note: A dash (-) implies relevant data are not available

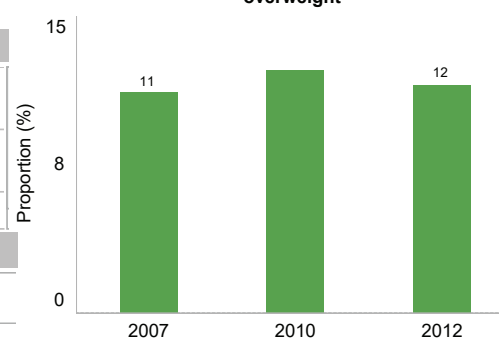

Prevalence of children under 5 years of age who are stunted⁵

Prevalence of children under 5 years of age who are wasted⁵

Prevalence of children under 5 years who are overweight⁵
