### **Instruction Manual Part 20**

ICD-10 Cause-of-Death Querying, 2010

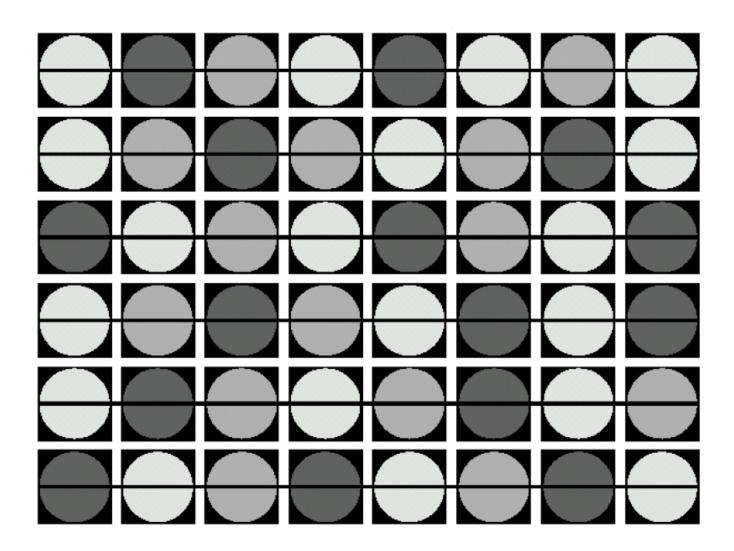

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES Centers for Disease Control and Prevention National Center for Health Statistics

Hyattsville, Maryland December 2009

#### Acknowledgments

This instruction manual update was prepared by the Division of Vital Statistics (DVS) under the general direction of Robert N. Anderson, Ph.D., Chief of the Mortality Statistics Branch (MSB). Donna Glenn and Julia Raynor (DVS) provided review of the **original version of the** instruction manual; Donna L. Hoyert, Ph.D. (MSB) updated the content.

Questions regarding this manual and related processing problems should be directed to the Mortality Statistics Branch, 3311 Toledo Road, Room 7318, Hyattsville, Maryland 20782 or the Mortality Medical Classification Branch, Division of Vital Statistics, National Center for Health Statistics, P.O. Box 12214, Research Triangle Park, North Carolina 27709. Questions concerning interpretation of mortality data should be referred to the Mortality Statistics Branch as well.

- Made changes in Appendix C to reflect the current infrequent and rare cause list in Instruction manual part 2a.
- 2. Added a few infrequent and rare causes from Appendix C to Table 1.
- 3. Made changes in Table 1 related to footnote 2.
- 4. Modified Table 2 to make it consistent with current Instruction manual part 2a section on the interpretation of highly improbable.
- 5. Update url's referenced in the text.

#### **Cause-of-death Querying**

#### I. Introduction

Cause-of-death querying is a process by which the State health department contacts the medical certifier who completed the cause-of-death statement and asks for clarification or further information so that resulting mortality statistics may be as complete and accurate as possible. The purpose of querying is two-fold: 1) to obtain information needed to properly code and classify the cause of death and 2) to educate the certifier about the proper method of completing medical certifications of death. Querying is one of the most important ways to improve the quality of cause-of-death data. It must therefore, be viewed as an integral part of any State's vital statistics activity.

This manual has been revised for use with the 2003 U.S. Standard Certificate of Death and to accommodate some updates to the *International Classification of Diseases (ICD-10)*. The general principles and procedures outlined in this manual are the same as in the previous manual for the Tenth Revision of the ICD. While there are new items on the certificate related to tobacco, pregnancy, and transportation injuries that relate to cause, the suggested queries in this manual are built around the cause-of-death codes. Suggestions intended to minimize item non-response for the tobacco, pregnancy, and transportation items are described in the Edit Specifications for the Death Certificate posted at http://www.cdc.gov/nchs/vital\_certs\_rev.htm.

Querying is an essential part of the vital registration process (1-2), so both local registrars and registration personnel in the State health department should be thoroughly knowledgeable of the laws, procedures, and other requirements for death registration, querying, and death certificate amendment. This manual is for those who have the responsibility for the acceptance and

registration of death certificates, primarily at the State level, and any key staff who have been designated as responsible for communicating with medical certifiers about the accuracy and completeness of the cause-of-death statement. The manual is restricted to the medical certification portion of the record. Querying procedures for the demographic items on the death certificate are addressed in a companion manual entitled "Guidelines for Implementing Field and Query Programs for Registration of Births and Deaths" (Part 18).

Several levels of querying (levels 1 through 6) are offered in this manual; a minimal level of querying (Priority Level 1) is necessary to produce cause-of-death statistics. It is estimated that Level 1 querying would involve about five percent of a State's death records. However, higher levels of querying are desirable to ensure specificity and completeness in the physicians' statements of cause of death. Not every State will be able to devote the same amount of effort to querying; however, it is hoped that each registration area will elect to query at the maximum level consistent with their resources and that all registration areas will query at least at Priority Level 1. We believe that previous versions of this manual were of assistance to the States in developing their own query programs, and we hope that this will as well.

In developing query procedures, consideration must also be given to the various uses of the death certificate. Cause-of-death data are important for statistical uses in the following ways: surveillance, research, design of public health and medical interventions, and funding decisions for research and development. Cause-of-death data also have legal and administrative uses. For example, in the case of accidents, the additional information requested such as the time and place and the manner in which the injury occurred can be important in court cases, insurance claims, etc. The Priority Levels in this manual focus on improving the usefulness of the data for

2

statistical purposes. States may wish to query other items that are legally or administratively important in the particular State.

Normally, cause-of-death queries are directed to the certifier (attending physician, medical examiner, coroner) who originally provided the information in the medical section of the death certificate. However, if the death occurred in a hospital, it is also possible to obtain additional information from the hospital files to further clarify the cause of death. For legal reasons, no changes or additions should be made on the face of the original record without the approval of the legally designated certifier. If the cause-of-death statement is substantially changed, the certifying physician should be encouraged to file an amended certificate. The procedures for filing amended certificates vary by State.

While querying has an immediate goal of clarifying the cause of death for individual records, it has a broader goal of educating physicians on how to complete a medical certification. The following section addresses some basics on medical certification.

#### Basics of medical certification

The medical certification section of the U.S. Standard Certificate of Death (Figure 1) is designed to collect an underlying cause of death; that is, the disease or injury which initiated the train of morbid events leading directly to death or the circumstances of the accident or violence which produced the fatal injury. The certification section of the death certificate follows the format recommended by the World Health Organization in the *International Classification of Diseases* to facilitate reporting of the underlying cause of death by listing the immediate cause of death on the top line of Part I followed by antecedent causes in proper sequence, with the reported underlying cause being the last entry in Part I (Figure 2). Part II (Other Significant Conditions)

allows the physician to list any other medically important disease or condition that was present at the time of death and which may have contributed to death but was not a direct link in the chain of events directly leading to death. Multiple causes of death include each of the causes reported on the death certificate in Parts I or II.

Underlying cause is the item most commonly used in tabulation and analysis. As stated earlier, underlying cause data are important for surveillance, research, design of public health and medical interventions, and funding decisions for research and development. Multiple cause data are an important supplement to underlying cause data and can provide additional analytical information.

It is very important that all physicians, medical examiners, or coroners who may be certifying deaths be properly oriented to the principles of medical certification, the manner in which the statements are to be entered, and the importance of completeness, accuracy, and specificity in

listing the causes of death. Even the most conscientious physician sometimes has a difficult time in distinguishing between those conditions that should be included in the causal chain versus those conditions not in the chain but medically important and relevant. The cause-of-death

#### Figure 3. Completing a cause-of-death statement: Basic concepts

- 1) Deaths known or suspected of having been caused by injury or poisoning should be reported to the medical examiner or coroner, and you will complete the death certificate if the medical examiner or coroner doesn't accept the case.
- 2) The cause-of-death information should be your best medical opinion.
- 3) Only one condition should be listed per line in Part I. Additional lines may be added if necessary.
- 4) Each condition in Part I should cause the one above it.
- 5) Abbreviations and parentheses should be avoided in reporting causes.
- 6) Provide the best estimate of the interval between the presumed onset of each condition and death. The terms "approximately" or "unknown" may be used. Do not leave the interval blank; if unknown, indicate that it is unknown.
- 7) If additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by following the procedures in place in your State.
- 8) Report each disease, abnormality, injury, or poisoning that you believe adversely affected the decedent. A condition can be listed as "probable" even if it has not been definitively diagnosed.
- 9) A complete sequence should be reported in Part I that explains why the patient died. The sequence may be an etiological or pathological sequence as well as a sequence in which an earlier condition is believed to have prepared the way for a subsequent cause by damage to tissues or impairment of function.
- 10) No entry is necessary on lines (b), (c), and (d) if a single cause of death reported on line (a) describes completely the train of events resulting in death.
- 11) If two or more possible sequences resulted in death, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.
- 12) A specific cause of death should be reported in the last entry in Part I so there is no ambiguity about the etiology of this cause.
- 13) Conditions or diseases in Part II should contribute to death but not result in the last entry in Part I.
- 14) Mechanistic terminal events such as respiratory arrest, asystole, cardiac arrest, cardio-respiratory arrest, ventricular fibrillation, and electromechanical dissociation should not be the only condition included in the cause-of-death statement and are unlikely to be the underlying cause.
- 15) Always report an etiology for organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure on the lines beneath it.
- 16) If, in your opinion, the use of alcohol, tobacco, other substance by the decedent, or a recent pregnancy or injury caused or contributed to death, then this condition should be reported.
- 17) A primary site and/or histological type should be specified for neoplasms or specify that site and type are unknown.
- 18) For deaths resulting from injuries, always report the fatal injury event, the trauma, and the impairment of function.
- 19) Injury items (38-43 in Figure 1) should have some sort of entry if the manner has been reported as accident, homicide, or suicide.

certification constitutes a medical-legal opinion, not necessarily an absolute fact, since it is not always possible to make a precise determination of interacting diseases or conditions. Thus, "to the best of my knowledge" is included in the certification statement, since the certifier is considered to be in a better position than anyone else to make a judgment as to the chain of events leading to death, but he/she cannot always be presumed to have a clear cut "absolute answer".

In certifying causes of death, several kinds of errors or oversights are frequently made, often due to the physicians not understanding how to complete the certification of death. One of the most common errors is the listing of causes in incorrect or illogical order, or the listing of more than one disease or condition on the same line. Another frequent error is omitting the interval between onset and death, the hour of death, and whether an autopsy was performed.

#### Completing a cause-of-death statement

Figure 3 shows some basic guidelines to certifying physicians on how to complete a cause-ofdeath statement.

#### Additional Aids

On occasion, it may be beneficial for the certifier physician to discuss medical certification of death with a member of the State health department staff before certifying a cause of death. It is helpful to provide a telephone number and the name of an individual who can provide answers to the certifier's questions. Needless to say, the person to whom such calls are referred must have a familiarity with medical terminology and of the pathology and etiology of morbid conditions.

Additional instructional material on writing cause-of-death statements is available; widespread knowledge and use of these materials by physicians could reduce many reporting problems and

8

the need for extensive querying. The sample letters include a very short reference to the resources, but maximum benefit would probably be gained by providing the certifying physician a packet of instructional material including, at least, items 2, 3, and 4 below:

1. Applicable State resources

2. Instructions for completing the cause-of-death section of the death certificate (laminated plastic card or pocket size folder available from NCHS, also at http://www.cdc.gov/nchs/data/dvs/blue form.pdf)

3. Instructions for completing the cause-of-death section of the death certificate for injury and poisoning (laminated plastic card or pocket size folder available from NCHS, also at <a href="http://www.cdc.gov/nchs/data/dvs/red\_form.pdf">http://www.cdc.gov/nchs/data/dvs/red\_form.pdf</a>)

4. Physicians' Handbook on Medical Certification of Death (available from NCHS, also at <u>http://www.cdc.gov/nchs/data/misc/hb\_cod.pdf</u>)

5. Medical examiners' and coroners' handbook on death registration and fetal death reporting (available from NCHS, also at http://www.cdc.gov/nchs/data/misc/hb\_me.pdf)
6. Possible solutions to common problems in death certification

(http://www.cdc.gov/nchs/about/major/dvs/handbk.htm)

7. Tutorial from the National Association of Medical Examiners **under Death Certificate Completion heading** 

(http://www.thename.org/CauseDeath/COD\_main\_page.htm)

8. *The Medical Cause of Death Manual* (3) edited by Randy Hanzlick: can be ordered from the College of American Pathologists (800-323-4040 ext. 7531 for information and credit card orders). The product code number is B260.

9. *Cause-of-Death Statements and Certification of Natural and Unnatural Deaths* edited by Randy Hanzlick: can be ordered from the College of American Pathologists (800-323-4040 ext. 7531 for information and credit card orders). The product code number is BK7261.

Enlisting the cooperation of the State and local medical societies to conduct some

instructional/educational sessions on completing death certificates should be considered,

especially if a local region makes a disproportionate number of errors. Local medical schools

should also be approached about the possibility of including training on death certification as

part of their curriculum.

Training physicians in the proper completion of a death certificate will work best when the physicians feel that they have a vested interest in the death certification process. One way of

improving the sense of being vested is to explain how the data is used for health programs and

medical research. Training non-physicians in the proper completion of a death certificate may be more challenging since they do not have the medical background that physicians do.

#### II. Who Carries Out the Query

States must decide who can best carry out querying. Historically, nosologists have done the querying, but with the advent of automated processing, fewer States have nosologists. These States must develop different mechanisms for querying, perhaps by training other staff to query. The person who queries records needs to be someone who understands the content and purpose of the querying manual, which in turn implies an understanding of coding rules and medical causality. That person could be an experienced nosologist or a trained statistician or a medical officer with an understanding of how death certificates should be completed. Consideration might be given to identifying a physician on staff in the State health department or under contract who could provide assistance with the querying process. It is critical that the person doing the querying have good communication skills as well as an understanding of why the certificate is being queried (e.g., to obtain more information or to correct obvious inadequacies).

An area for future development is to develop automated procedures for querying. NCHS is incorporating Priority Level 1 queries into the automated mortality medical software, specifically SuperMICAR. Initially, the system will identify the certificate number, the query level, and the recommended letter. The State staff can then pull the record and review the record to determine if a query is needed. Eventually, the automated system will produce a letter that may be used to query the record.

11

#### III. Use of Querying

If employed correctly, the query procedure can be a very effective method of acquainting physicians with the proper methods for certifying a cause of death. Unfortunately, most physicians do not receive training on completing death certificates during their formal education; therefore, querying can help provide them with information to enable them to certify a death correctly. Many common errors or omissions can be avoided by consistent querying, if sufficient explanation is furnished to the certifier to help them modify their approach with future medical certifications.

The design and wording of form letters used in querying is very important, not only for obtaining the necessary information for the death being queried, but to convey to the certifier enough information so that he/she can correctly certify future cases of the same or similar types. Questions in query letters need to be specific enough to indicate what is missing or incorrect and what information is being requested. The more explicit the letter, the better the response that can be expected. Examples illustrating the correct certification of specific causes are shown on the back of the sample form letters in Appendix B; these examples may serve as guides to the certifier.

#### IV. How Much to Query

Querying is a critical part of maintaining and improving data quality. The official responsible for vital registration and vital statistics should make a careful appraisal of the type and extent of querying that has taken place on the cause-of-death statements in his/her own registration area. Then, a better decision can be made about possible revisions in current query procedures and practices. Such decisions should take into account:

1) The importance of querying in improving physicians' practices in completing causeof-death statements

2) The importance of querying in improving the particular death record under review

3) The extent to which staff resources can be devoted to querying versus other office activities

4) The query method that will be most effective in accomplishing 1) and 2) above.

Some records with questionable conditions or situations are easily identified as good candidates for querying or further investigation. Situations that need clarification are described in general terms in the description of the query levels and in specific terms in the four tables of Appendix A. The query manual provides general guidelines to what should be queried but informed judgment must be applied on a case-by-case basis before sending out a query to a physician.

#### V. Levels of Querying

Recognizing that the availability of staff and resources to be utilized for querying varies from State to State, the following levels of querying have been designed to aid decision makers in developing the query program for the specific State vital statistics program. The categories are in priority order ranging from "1" indicating cases that should always be queried, to "6" which is an optional category. To facilitate referencing, Priority Level 1 is subdivided into categories a-g. Those categories requiring no querying are indicated by "0". For systematic data improvement, the manager should elect to query up to the highest Priority Level commensurate with the registration area's needs and resources. Intervening levels should not be skipped. NCHS recommends that every registration area conduct, as a minimum, the Priority Level 1 queries.

Appendix A presents an operationalization of the recommended Priority Levels. Table 1 shows specific ICD-10 categories along with a querying Priority Level and a reference to a sample query letter to use in querying (Appendix B contains the sample query letters). Table 2 presents specific improbable sequences that should always be queried. Table 3 lists recommendations for situations in which the duration for a specified cause is not clear. Table 4 presents selected situations in which the certifier has reported causes in a way that conflict with the format of the medical certification section along with a recommended query level and a reference to a sample query letter. The following examples illustrate how Appendix A may be used.

I (a) Pain in joints (b) (c)

The ICD code for this condition is M25.5. Referring to this category in table 1 of Appendix A, it specifies that a query should be initiated under Priority Level 1c for

conditions coded to M15-M25. Also, it shows that Query Letter No. 8 on page 107 can be used.

I (a) Pharyngeal cancer (b) (c)

This condition would be coded C14.0. Referring to Appendix A, the Priority Level is shown as 5 and Query Letter No. 2 on page 71 could be used. If, however, the State queries only through Priority Level 4, no letter would be initiated in this case.

Appendix A provides guidelines for querying. Automatic or manual screening may be used to identify certificates for possible querying. However, the State should review the certificate more carefully to determine if the record really should be queried. For example, querying is not necessary when terms such as "probable," "unknown etiology," and "unknown site" are stated. In the case of SIDS or SUDI, querying is also not necessary when a complete investigation has been conducted (www.cdc.gov/SIDS/TrainingMaterial.htm

<u>reproductivehealth/SIDS/deathscene.htm</u>) and the National Institute of Child Health and Human Development criteria have been met for diagnosing SIDS. In these cases, it is clear that the physician made an effort to provide a clear and complete etiological sequence.

While the form letters shown in Appendix B are adequate to cover most situations, there may be times when an original letter should be written, or additional statements or questions should be included. When two or more different query levels are applicable for the same record, the attachments for each query level may be used. It may be clearer to keep the questions on separate attachments rather than combining questions from multiple attachments.

Priority Level 1

Priority Level 1 contains the minimum level of querying that all State vital statistics programs should use to promote basic integrity of State and national mortality data. This category is designed to reduce the frequency with which assumptions must be made to properly assign multiple cause or underlying cause-of-death codes because of missing or incorrect information.

## Level 1a: Always query if an infrequent or rare cause appears anywhere in the medical certification section.

Appendix C contains a list of infrequent and rare causes of death in the United States. These causes of death occur rarely and/or present threats to public health in the United States. As a result, each case should be verified to make sure there was no error in certification. When NCHS requests confirmation of a rare cause of death, the VSCP project director should work with staff to verify that the cause-of-death coding is correct and obtain corroboration from the State Health Officer before signing the confirmation letter. A notation of confirmation should also be recorded on the copy of the certificate sent to NCHS. In the absence of this notation, the disease will be coded as stated; the VSCP project officer will be contacted to confirm the accuracy of the certification.

Examples: "Cholera", "plague", "acute poliomyelitis"

See sample query letter number 1.

#### Level 1b: Always query neoplasm for a primary site and to determine if benign or malignant. When a malignant neoplasm is stated to be the underlying cause of death, it is important to determine the primary site.

Example: I (a) Carcinomatosis (b) (c)

Query to determine primary site.

Example: I (a) Breast tumor (b)

(c)

Query to determine if benign or malignant.

See sample query letter number 2.

Level 1c: Always query when the following are reported alone or as the underlying cause on the death certificate:

- conditions that would rarely cause death by themselves (e.g., trivial conditions)
- symptoms and signs
- ill-defined conditions
- mechanisms of death

Example: I (a) Myopia

- (b)
- (c)

Example I (a) Senility

- (b)
- (c)

See sample query letter numbers 4, 6, 8, 9, and 10.

## Level 1d: Always query for the reason for the "surgery or medical care" when the underlying disease or condition is not reported anywhere on the death record.

Example: I (a) Hemorrhage (b) Surgery (c)

In the above example, the disease or condition requiring the surgery should be queried, and also the specific type of surgery performed.

See sample query letter numbers 5 and 10.

## Level 1e: Always query for an external cause when only nature of injuries, that is, codes classifiable to S00-T98, are reported alone on the death certificate.

Example: I (a) Internal injuries (b) (c)

See sample query letter number 10.

Level 1f: Query when the sequence arrangement of the reported entries is questionable. Improbable sequences in part I of the death certificate are shown in tables 2-4 of Appendix A, pages 56-66, and in the instructions on "highly improbable" sequences in section III of the NCHS Instruction manual part 2A.

Example: I (a) Pneumonia

- (b) Hypertension
- (c) Cardiac hypertrophy due to above

In this example, it is difficult to determine the intent of the certifier; therefore, more information is needed.

See sample query letter number 11.

# Level 1g: When any of the selected conditions in Appendix D is reported, whether in part I or part II on the death certificate, and there is no mention of HIV (Human immunodeficiency virus) infection, query for HIV.

See sample query letter number 3.

#### Priority Level 2

Priority Level 2 includes conditions not usually considered as the underlying cause for which querying will help classify the underlying cause of death more specifically.

Example: I (a) Peritonitis (b) (c)

In this example, it is necessary to determine what led to or caused the peritonitis- - was it a ruptured appendix, ruptured peptic ulcer, so-called "spontaneous peritonitis", other?

See sample query letter numbers 4 and 8.

Priority Level 3

Priority Level 3 provides more detailed information that would enable the cause of death to be classified more accurately and to a more detailed ICD category.

Example: I (a) Chronic liver disease (b) (c) In this case, the specific type of disease is needed (alcoholic cirrhosis, biliary cirrhosis, chronic (or recurrent) hepatitis, etc.)

See sample query letter numbers 4, 7, 8, 9, and 10.

Priority Level 4

**Priority Level 4 includes:** 

- those cases in which the certifier may already provide a logical chain of events leading to death but determining the site or location of stated diseases or conditions will lead to a more precise code (see example below).
- entries which are unclear and need further explanation (e.g., situations related to placement and numbering of conditions). For a list of examples, refer to table 4, Appendix A, beginning on page 64.

Example: I (a) Embolism

(b)

(c)

A specific site is needed (e.g., brain, lung, coronary arteries), as is the source, if known.

See sample query letter numbers 4 and 11.

#### Priority Level 5

Priority Level 5 contains queries which would enable the cause of death to be coded to a more precise subcategory within the three-digit category. This level of detail is frequently required for specified special studies or research projects within a defined reporting area, but may not be necessary for general querying.

Example: I (a) Carcinomatosis (b) Cancer of pancreas (c)

In this case, a query for a more specific site of the pancreas would be in order (e.g., body, head, duct, etc.), as well as a query for the histologic type of tumor, such as "Adenocarcinoma".

See sample query letter numbers 4 and 10.

Priority Level 6

Priority Level 6 reflects the most thorough recommended level of querying. The conditions in this category are queried for the purpose of obtaining even more explicit statements, thus eliminating the necessity of using the assumptions which are allowed under ICD rules.

Example: I (a) Tuberculosis (b) (c)

Tuberculosis of the lung is assumed if not otherwise specified.

Example: I (a) Lupus (b) (c)

Systemic lupus is assumed if not otherwise specified.

See sample query letter numbers 4 and 11.

#### Fetal death

The principles and procedures described in this manual are applicable to fetal deaths. Since many of the same causes may be stated on the fetal death report, the querying priorities in Appendix A may be followed. The cause P95 is invalid for mortality records but is valid for fetal deaths. This cause, P95, is shown in Appendix A for those wanting to use this manual to query fetal deaths. While the causes of many fetal deaths are unknown, it is important to capture results from pathological or histological examinations completed after the fetal death report or certificate was filed and to remind physicians that casual reporting of "unknown" as a cause of fetal death is not acceptable.

#### Sample letters

Guide to Sa	ample Query Lett	ers Shown in Appendix B
Letter number	Query level	General reason for querying
1	1a	Rare causes
2	1b	Cancer
3	1g	HIV (also see Appendix D)
4	1c,2,3,4,5,6	Etiology, for specific site, and type of disease
5	1d	Reason for treatment (medical, surgical, therapy, medicaments)
6	1c	Mental disorders
7	3	Type of drug or exposure
8	1c,2,3	Signs, symptoms, non-specific conditions, trivial conditions, fetal death code P95, mechanism of death, etc.
9	1c,3	Pregnancy-related conditions
10	1c,1d,1e,3,5	Manner of death and external causes
11	1f,4,6	Improbable sequence, duration, placement and numbering of conditions

#### VI. Evaluation of the Query Program

To assure that the desired results are being obtained, a periodic evaluation of the query program should be made. By keeping records of all queries sent out and returned, it is possible to measure the overall effectiveness of the program, and also to pinpoint areas in need of a more concentrated effort.

A rough measure of the improvement in certification may be obtained by comparing the percent of records requiring a query at the beginning of the program with the percent required afer the program has been in effect for several months. Ideally there should be a gradual decline in the proportion of queries needed as the certifiers become educated as to the requirements. However, there will always be a need for education since new physicians will start practicing in the State and physicians who rarely complete a certificate may need assistance. The rate of response to the queries and the time lag involved will also make it possible to determine how much followup is needed, either by mail or by telephone.

A more detailed measure of the effectiveness of the program is made possible by keeping a record of the types of questions asked. This information can reveal which types of situations require the most querying, and also indicates which physicians may require special attention such as a personal visit. This type of information can be very valuable when used in conjunction with a field or training program, especially with the cooperation of the State and/or local medical society In addition, it is helpful to ascertain the impact of querying by measuring the difference in the records over time.

The following are illustrations of the types of information that can be recorded and tabulated periodically for purposes of evaluating the query program:

A. Number and percent of queries sent, showing:

22

- 1. Adequate response
  - A. Changed the underlying cause
  - B. Did not change the underlying cause
  - C. Did not change the underlying cause, but resulted in additional causeof-death information
- 2. Inadequate response (e.g., response doesn't address question)
- 3. No response
- A. Number and percent of follow-up queries, by type of follow up and result.
- B. Number and percent of queries sent, by ICD category and Priority Level.
- C. Number and percent of queries sent, by individual physician, type of certifier, and type of letter.
- D. Number and percent of inadequate or non-responses by type of letter used.
- E. Number and rate of ICD code changes made as a result of queries, by Priority Level.

In Oregon and Washington, systematic evaluation of the State query program has confirmed the

value of an overall program, identified effectiveness of querying specific causes, and helped

refine specific wording that works best in query letters (4-5).

8. When the certifier has numbered part of the causes in Part I.				4				11		145
Example: I(a) 1.Acidosis (b) 2.Coma (c) Cerebral arteriosclerosis										
9. When the causes in Part I are numbered and one of the numbered causes is stated or implied as due to another cause.				4				11		145
Example: I(a) 1.Uremia due to nephritis (b) 2.Hypertension (c) 3.Arteriosclerosis										
10. When the certifier has used arrows to indicate moving conditions from Part I to Part II and more than one condition is entered on the line.				4				11		145
Examples: I(a) ASHD (b) Gen. Art. (c) Parkinson dis. Encephalopathy II										
I(a) Cardiorespiratory failure (b) CVA (c) G.I. hemorrhage gastric ulcer II										

Appendix B Query Letter 1 (Rare Causes)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information	ion about the cause of death that you certified for
, who died	Please answer the questions shown in the attachment.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we wish to ensure that the cause of death is correct. The reported cause is one of the causes that we always try to verify, either because the cause is rarely reported on a death certificate or may present threats to public health in the United States. We appreciate your help in verifying the condition on this death certificate and look forward to your prompt reply.

If you have any questions, please contact \_\_\_\_\_\_.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

## Available Resources to Assist With Medical Certification of Causes of Death

Your State vital statistics office should be able to assist with questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk.htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003 (301-458-4333).

# Query Letter 2 (Neoplasms) (Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_, who died \_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular cancer death, we wish to ensure that sufficient information is available on the nature of the neoplasm. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I. The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print leg bly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary.

•If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 – DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No." •34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify **type of gun** or **type of vehicle** (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in

•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best descr bes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Diss
Abdominal hemorrhage	Cardiac arrest	CO
Adhesions	Cardiac dysrhythmia	Dys
Adult respiratory distress syndrome	Cardiomyopathy	End
Acute myocardial infarction	Cardiopulmonary arrest	End
Altered mental status	Cellulitis	Epic
Anemia	Cerebral edema	Exs
Anoxia	Cerebrovascular accident	Fail
Anoxic encephalopathy	Cerebellar tonsillar herniation	Frac
Arrhythmia	Chronic bedridden state	Gan
Ascites	Cirrhosis	Gas
Aspiration	Coagulopathy	Hea
Atrial fibrillation	Compression fracture	Hen
Bacteremia	Congestive heart failure	Hep
Bedridden	Convulsions	Hep
Biliary obstruction	Decubiti	Hep
Bowel obstruction	Dehydration	Hyp
Brain injury	Dementia (when not	Hyp
Brain stem herniation	otherwise specified)	Hyp
Carcinogenesis	Diarrhea	
-		

sseminated intra vascular oagulopathy srhythmia d-stage liver disease d-stage renal disease idural hematoma sanguination ilure to thrive acture ingrene strointestinal hemorrhage art failure mothorax patic failure patitis patorenal syndrome perglycemia perkalemia , povolemic shock

Hyponatremia Hypotension Increased intra cranial pressure Intra cranial hemorrhage Malnutrition Metabolic encephalopathy Multi-organ failure Muti-system organ failure Myocardial infarction Necrotizing soft-tissue infection Old age Open (or closed) head injury Paralysis Pancytopenia Perforated gallbladder Pertonitis Pleural effusions Pneumonia

Pulmonary arrest Pulmonary edema Pulmonary embolism Pulmonary insufficiency Renal failure Respiratory arrest Seizures Sepsis Septic shock Shock Starvation Subdural hematoma Subarachnoid hemorrhage Sudden death Thrombocytopenia Uncal herniation Urinary tract infection Ventricular fibrillation Ventricular tachycardia Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

complications of an injury of poisoning (possibly occurring long ago). Ouch cases should be reported to the medical examiner/coroner.								
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma				
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery				
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns				
Drug or alcohol overdose/drug or alcohol abuse	Fracture	Open reduction of fracture	Subarachnoid hemorrhage					

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

## QUERY LETTER 3

(Query for HIV)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for

\_\_\_\_\_, who died \_\_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we are requesting additional information on HIV status. Certain conditions are frequently associated with HIV infection. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program Attachment HIV Query

MANNER OF DEATH         Natural       Homicide         Accident       Pending Investigation         Suicide       Could not be determined				

### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry legible. Use a computer printer with high resolution, typewriter with good black r bbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more poss ble sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is imposs ble to determine the manner of death.

### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if poss ble. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if poss ble. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

which processes such as th	ie ronowing are reported, aut		shology should be reported.	
Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

Asphyxia		Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus		Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking		Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alco	hol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol ab	use

#### ITEM 32 – CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and •often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry legible. Use a computer printer with high resolution, typewriter with good black r bbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more poss ble sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is imposs ble to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contact	cts Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if poss ble. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if poss ble. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

when processes such as the	tonowing are reported, additio		Jy should be reported.	
Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

	coming (peechor) cecaning long a			
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse				

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

## Query Letter 5 (Reason for Treatment)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_\_, who died \_\_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we need to know the condition that required the treatment in order to classify the cause of death correctly in our statistical records. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and •often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary.

•If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site or that the primary site is unknown, 2) benign or malignant, 3) cell type or that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by immediately reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the approximate date. If the date cannot be approximated, enter the date the body is found and identify as date found. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE. WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" **ONLY** when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. DO NOT use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item must be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

### Injury at work

Injury not at work Injury while working or in vocational training on job premises Injury while engaged in personal recreational activity on job premises Injury while on break or at lunch or in parking lot on job premises Injury while a visitor (not on official work business) to job premises Injury while working for pay or compensation, including at home Homemaker working at homemaking activities Injury while working as a volunteer law enforcement official etc. Student in school Injury while traveling on business, including to/from business contacts Working for self for no profit (mowing yard, repairing own roof, hobby) Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify **type of gun** or **type of vehicle** (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.

•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

<u>Rationale</u>: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly decedent** should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported: Abscess Carcinomatosis Disseminated intra vascular Hyponatremia

Cardiac arrest Cardiac dysrhythmia Cardiomyopathy Cardiopulmonary arrest Cellulitis Cerebral edema Cerebrovascular accident Cerebellar tonsillar herniation Chronic bedridden state Cirrhosis Coagulopathy Compression fracture Congestive heart failure Convulsions Decubiti Dehydration Dementia (when not otherwise specified) Diarrhea

coagulopathy Dysrhythmia End-stage liver disease End-stage renal disease Epidural hematoma Exsanguination Failure to thrive Fracture Gangrene Gastrointestinal hemorrhage Heart failure Hemothorax Hepatic failure Hepatitis Hepatorenal syndrome Hyperglycemia Hyperkalemia Hypovolemic shock

Hyponatremia Hypotension Immunosuppression Increased intra cranial pressure Intra cranial hemorrhage Malnutrition Metabolic encephalopathy Multi-organ failure Multi-system organ failure Myocardial infarction Necrotizing soft-tissue infection Old age Open (or closed) head injury Paralysis Pancytopenia Perforated gallbladder Peritonitis Pleural effusions Pneumonia

Pulmonary arrest Pulmonary edema Pulmonary embolism Pulmonary insufficiency Renal failure Respiratory arrest Seizures Sepsis Septic shock Shock Starvation Subdural hematoma Subarachnoid hemorrhage Sudden death Thrombocytopenia Uncal herniation Urinary tract infection Ventricular fibrillation Ventricular tachycardia Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner. Asphyxia Epidural hematoma Hip fracture Pulmonary emboli Seizure disorder Subdural hematoma Exsanguination Hyperthermia Bolus Surgery Choking Fall Thermal burns/chemical burns Hypothermia Sepsis Drug or alcohol overdose/drug or Open reduction of fracture Subarachnoid hemorrhage Fracture alcohol abuse

# Query Letter 6 (Mental Disorders)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_\_, who died \_\_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we need to know whether a specific life threatening condition was associated with the reported mental disorder. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

### ITEM 32 – CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary.

•If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site or that the primary site is unknown, 2) benign or malignant, 3) cell type or that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by immediately reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the approximate date. If the date cannot be approximated, enter the date the body is found and identify as date found. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### **ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?**

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" **ONLY** when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. DO NOT use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item must be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

#### Injury at work

Injury not at work Injury while working or in vocational training on job premises Injury while engaged in personal recreational activity on job premises Injury while on break or at lunch or in parking lot on job premises Injury while a visitor (not on official work business) to job premises Injury while working for pay or compensation, including at home Homemaker working at homemaking activities Injury while working as a volunteer law enforcement official etc. Student in school Injury while traveling on business, including to/from business contacts Working for self for no profit (mowing yard, repairing own roof, hobby) Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify **type of gun** or **type of vehicle** (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.

•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

<u>Rationale</u>: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly decedent** should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported: Abscess Carcinomatosis Disseminated intra vascular Hyponatremia

Cardiac arrest Cardiac dysrhythmia Cardiomyopathy Cardiopulmonary arrest Cellulitis Cerebral edema Cerebrovascular accident Cerebellar tonsillar herniation Chronic bedridden state Cirrhosis Coagulopathy Compression fracture Congestive heart failure Convulsions Decubiti Dehydration Dementia (when not otherwise specified) Diarrhea

coagulopathy Dysrhythmia End-stage liver disease End-stage renal disease Epidural hematoma Exsanguination Failure to thrive Fracture Gangrene Gastrointestinal hemorrhage Heart failure Hemothorax Hepatic failure Hepatitis Hepatorenal syndrome Hyperglycemia Hyperkalemia Hypovolemic shock

Hypotension Immunosuppression Increased intra cranial pressure Intra cranial hemorrhage Malnutrition Metabolic encephalopathy Multi-organ failure Multi-system organ failure Myocardial infarction Necrotizing soft-tissue infection Old age Open (or closed) head injury Paralysis Pancytopenia Perforated gallbladder Peritonitis Pleural effusions Pneumonia

Pulmonary arrest Pulmonary edema Pulmonary embolism Pulmonary insufficiency Renal failure Respiratory arrest Seizures Sepsis Septic shock Shock Starvation Subdural hematoma Subarachnoid hemorrhage Sudden death Thrombocytopenia Uncal herniation Urinary tract infection Ventricular fibrillation Ventricular tachycardia Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner. Asphyxia Epidural hematoma Hip fracture Pulmonary emboli Seizure disorder Subdural hematoma Exsanguination Hyperthermia Bolus Surgery Choking Fall Thermal burns/chemical burns Hypothermia Sepsis Drug or alcohol overdose/drug or Open reduction of fracture Subarachnoid hemorrhage Fracture alcohol abuse

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing causeof-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

# Query Letter 7 (Drugs and Other Agents)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_, who died \_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we need additional information about the drugs associated with the death. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary.

•If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

### •Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. DO NOT enter firm or organization names. (For example, enter "factory", not "Standard Manufacturing, Inc.")
•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow: Injury at work

Injury while working or in vocational training on job premises Injury while on break or at lunch or in parking lot on job premises

Injury while working for pay or compensation, including at home

Injury while working as a volunteer law enforcement official etc.

Injury while traveling on business, including to/from business contacts

Injury while a work Injury while a visitor (not on official work business) to job premises Injury while a visitor (not on official work business) to job premises Homemaker working at homemaking activities Student in school Working for self for no profit (mowing yard, repairing own roof, hobby) Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify **type of gun** or **type of vehicle** (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.

•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly decedent** should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry legible. Use a computer printer with high resolution, typewriter with good black r bbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more poss ble sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by immediately reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the approximate date. If the date cannot be approximated, enter the date the body is found and identify as date found. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No." •34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contr bute to this particular death.

### ITEM 36 - IF FEMALE. WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" **ONLY** when it is imposs ble to determine the manner of death.

### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. DO NOT use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. DO NOT enter firm or organization names. (For example, enter "factory", not "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item must be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow: Injury at work

Injury while working or in vocational training on job premises Injury while on break or at lunch or in parking lot on job premises Injury while working for pay or compensation, including at home Injury while working as a volunteer law enforcement official etc. Student in school Injury while traveling on business, including to/from business contacts

#### Injury not at work

Injury while engaged in personal recreational activity on job premises Injury while a visitor (not on official work business) to job premises Homemaker working at homemaking activities Working for self for no profit (mowing yard, repairing own roof, hobby) Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in. •44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The elderly decedent should have a clear and distinct etiological sequence for cause of death, if poss ble. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The infant decedent should have a clear and distinct etiological sequence for cause of death, if poss ble. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be

reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner

complications of an injury of pol	soming (possibly occurring long a	yu). Such cases should be reput	teu to the medical examiner/coro	
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse				

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

# Query Letter 9 (Pregnancy Related)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_, who died \_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In the case of this particular death, we need additional information to properly classify the maternal death. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

#### ITEM 32 – CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and •often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry legible. Use a computer printer with high resolution, typewriter with good black r bbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more poss ble sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."
•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### ITEM 37 - MANNER OF DEATH

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is imposs ble to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if poss ble. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if poss ble. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

complications of an injury of poin	berning (peeelery eeeelining long a	go). Guerreaces chedia se reper		101.
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse				

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

# Query Letter 10 (External Causes)

The following sample query letter consists of a lengthy series of questions even though the attachments have been separated into four. The questions are designed to address a variety of problems in certification. We would suggest that specific query letters list only the questions that are relevant for the specific case. This will improve the appearance of the query letter.

# (Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for

\_\_\_\_\_, who died \_\_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we need additional information to properly classify the death. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question, please contact\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contr buted to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."

•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

#### Injury at work Injury while working or in vocational training on job premises Injury while on break or at lunch or in parking lot on job premises Injury while working for pay or compensation, including at home Injury while working as a volunteer law enforcement official etc. Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business conta

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify **type of gun** or **type of vehicle** (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.

•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly decedent** should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

When processes such as the	c following are reported, add		lology should be reported.	
Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse			-	

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

#### ITEM 32 – CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and •often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contr buted to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 – DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."
•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### ITEM 37 - MANNER OF DEATH

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.
•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

of all injury of polooning (possion	y coourning long ago). Caon caoc			
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse

#### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contr buted to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site or that the primary site is unknown, 2) benign or malignant, 3) cell type or that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 – DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."
•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### ITEM 37 - MANNER OF DEATH

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.
•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

of all injury of polooning (pooolo	y coourning long ago). Caon caoc			
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse

#### ITEM 32 - CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contr buted to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION**. A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print legibly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contributing to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### ITEMS ON WHEN DEATH OCCURRED

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 – DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."
•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### ITEM 37 - MANNER OF DEATH

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item <u>must</u> be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

Injury at work	Injury <u>not</u> at work
Injury while working or in vocational training on job premises	Injury while engaged in personal recreational activity on job premises
Injury while on break or at lunch or in parking lot on job premises	Injury while a visitor (not on official work business) to job premises
Injury while working for pay or compensation, including at home	Homemaker working at homemaking activities
Injury while working as a volunteer law enforcement official etc.	Student in school
Injury while traveling on business, including to/from business contacts	Working for self for no profit (mowing yard, repairing own roof, hobby)
	Commuting to or from work

•42 - Enter the complete address where the injury occurred including zip code.
•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

or an injury or poisorning (possion	ly occurring long ago). Such case	es should be reported to the medic		
Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse				

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

## Query Letter 11 (Format)

(Letterhead)

Dear Doctor \_\_\_\_\_

We are writing this letter to obtain additional information about the cause of death that you certified for \_\_\_\_\_\_, who died \_\_\_\_\_\_.

Accurate cause-of-death information is essential, not only to the family of the decedent, but also for medical research, funding, and resource allocation in our State and at the national level.

In this particular death, we would appreciate your review of the reported sequence of conditions for completeness and logic. In order to classify this death properly in our statistics, would you please supply the information on the attachment? We want to assure you that the information you provide us is confidential and will be handled accordingly.

If you have any question or would like to know more about various methods for certifying a cause-of-death statement, please contact \_\_\_\_\_\_\_\_. Instructions and an example of a properly completed death certificate are provided with the attached material.

We appreciate your attention and prompt reply.

Sincerely,

State Registrar/Vital Statistics Cooperative Program

#### ITEM 32 – CAUSE OF DEATH (See example above)

Accurate cause of death information is important

•to the public health community in evaluating and improving the health of all citizens, and

•often to the family, now and in the future, and to the person settling the decedent's estate.

The cause-of-death section consists of two parts. **Part I** is for reporting a chain of events leading directly to death, with the **immediate cause** of death (the final disease, injury, or complication directly causing death) on line a and the **underlying cause** of death (the disease or injury that initiated the chain of events that led directly and inevitably to death) on the lowest used line. **Part II** is for reporting all other significant diseases, conditions, or injuries that contributed to death but which did not result in the underlying cause of death given in **Part I**. **The cause-of-death information should be YOUR best medical OPINION.** A condition can be listed as "probable" even if it has not been definitively diagnosed.

Take care to make the entry leg ble. Use a computer printer with high resolution, typewriter with good black ribbon and clean keys, or print leg bly using permanent **black** ink in completing the CAUSE OF DEATH Section. **Do not abbreviate** conditions entered in section.

#### Part I (Chain of events leading directly to death)

•Only one cause should be entered on each line. Line (a) MUST ALWAYS have an entry. DO NOT leave blank. Additional lines may be added if necessary. •If the condition on Line (a) resulted from an underlying condition, put the underlying condition on Line (b), and so on, until the full sequence is reported. ALWAYS enter the underlying cause of death on the lowest used line in Part I.

•For each cause indicate the best estimate of the interval between the presumed onset and the date of death. The terms "unknown" or "approximately" may be used. General terms, such as minutes, hours, or days, are acceptable, if necessary. **DO NOT** leave blank.

•The terminal event (for example, cardiac arrest or respiratory arrest) should not be used. If a mechanism of death seems most appropriate to you for line (a), then you must always list its cause(s) on the line(s) below it (for example, cardiac arrest **due to** coronary artery atherosclerosis *or* cardiac arrest **due to** blunt impact to chest).

• If an organ system failure such as congestive heart failure, hepatic failure, renal failure, or respiratory failure is listed as a cause of death, always report its etiology on the line(s) beneath it (for example, renal failure **due to** Type I diabetes mellitus).

•When indicating neoplasms as a cause of death, include the following: 1) primary site *or* that the primary site is unknown, 2) benign or malignant, 3) cell type *or* that the cell type is unknown, 4) grade of neoplasm, and 5) part or lobe of organ affected. (For example, a primary well-differentiated squamous cell carcinoma, lung, left upper lobe.)

•Always report the fatal injury (for example, stab wound of chest), the trauma (for example, transection of subclavian vein), and impairment of function (for example, air embolism).

#### Part II (Other significant conditions)

•Enter all diseases or conditions contr buting to death that were not reported in the chain of events in Part I and that did not result in the underlying cause of death.

•If two or more possible sequences resulted in death, or if two conditions seem to have added together, report in Part I the one that, in your opinion, most directly caused death. Report in Part II the other conditions or diseases.

#### CHANGES TO CAUSE OF DEATH

Should additional medical information or autopsy findings become available that would change the cause of death originally reported, the original death certificate should be amended by the certifying physician by **immediately** reporting the revised cause of death to the State Vital Records Office.

#### **ITEMS ON WHEN DEATH OCCURRED**

Items 24-25 and 29-31 should always be completed. If the facility uses a separate pronouncer or other person to indicate that death has taken place with another person more familiar with the case completing the remainder of the medical portion of the death certificate, the pronouncer completes Items 24-28. If a certifier completes Items 24-25 as well as items 29-49, Items 26-28 may be left blank.

#### ITEMS 24-25, 29-30 - DATE AND TIME OF DEATH

Spell out the name of the month. If the exact date of death is unknown, enter the **approximate** date. If the date cannot be approximated, enter the date the body is found and identify as **date found**. Date pronounced and actual date may be the same. Enter the exact hour and minutes according to a 24-hour clock; estimates may be provided with "Approx." placed before the time.

#### **ITEMS 33-34 - AUTOPSY**

•33 - Enter "Yes" if either a partial or full autopsy was performed. Otherwise enter "No."
•34 - Enter "Yes" if autopsy findings were available to complete the cause of death; otherwise enter "No". Leave item blank if no autopsy was performed.

#### ITEM 35 - DID TOBACCO USE CONTRIBUTE TO DEATH?

Check "yes" if, in your opinion, the use of tobacco contributed to death. Tobacco use may contribute to deaths due to a wide variety of diseases; for example, tobacco use contributes to many deaths due to emphysema or lung cancer and some heart disease and cancers of the head and neck. Check "no" if, in your clinical judgment, tobacco use did not contribute to this particular death.

#### ITEM 36 - IF FEMALE, WAS DECEDENT PREGNANT AT TIME OF DEATH OR WITHIN PAST YEAR?

This information is important in determining pregnancy-related mortality.

#### **ITEM 37 - MANNER OF DEATH**

•Always check Manner of Death, which is important: 1) in determining accurate causes of death; 2) in processing insurance claims; and 3) in statistical studies of injuries and death.

•Indicate "Pending investigation" if the manner of death cannot be determined whether due to an accident, suicide, or homicide within the statutory time limit for filing the death certificate. This should be changed later to one of the other terms.

•Indicate "Could not be Determined" ONLY when it is impossible to determine the manner of death.

#### ITEMS 38-44 - ACCIDENT OR INJURY - to be filled out in all cases of deaths due to injury or poisoning.

•38 - Enter the exact month, day, and year of injury. Spell out the name of the month. **DO NOT** use a number for the month. (Remember, the date of injury may differ from the date of death.) Estimates may be provided with "Approx." placed before the date.

•39 - Enter the exact hour and minutes of injury or use your best estimate. Use a 24-hour clock.

•40 - Enter the general place (such as restaurant, vacant lot, or home) where the injury occurred. **DO NOT** enter firm or organization names. (For example, enter "factory", **not** "Standard Manufacturing, Inc.")

•41 - Complete if anything other than natural disease is mentioned in Part I or Part II of the medical certification, including homicides, suicides, and accidents. This includes all motor vehicle deaths. The item **must** be completed for decedents ages 14 years or over and may be completed for those less than 14 years of age if warranted. Enter "Yes" if the injury occurred at work. Otherwise enter "No". An injury may occur at work regardless of whether the injury occurred in the course of the decedent's "usual" occupation. Examples of injury at work and injury not at work follow:

#### Injury at work Injury while working or in vocational training on job premises Injury while on break or at lunch or in parking lot on job premises Injury while working for pay or compensation, including at home Injury while working as a volunteer law enforcement official etc. Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business, including to/from business contacts Injury while traveling on business conta

•42 - Enter the complete address where the injury occurred including zip code.

•43 - Enter a brief but specific and clear description of how the injury occurred. Explain the circumstances or cause of the injury. Specify type of gun or type of vehicle (e.g., car, bulldozer, train, etc.) when relevant to circumstances. Indicate if more than one vehicle involved; specify type of vehicle decedent was in.
•44 -Specify role of decedent (e.g. driver, passenger). Driver/operator and passenger should be designated for modes other than motor vehicles such as bicycles. Other applies to watercraft, aircraft, animal, or people attached to outside of vehicles (e.g. surfers).

Rationale: Motor vehicle accidents are a major cause of unintentional deaths; details will help determine effectiveness of current safety features and laws.

#### Common problems in death certification

The **elderly** decedent should have a clear and distinct etiological sequence for cause of death, if possible. Terms such as senescence, infirmity, old age, and advanced age have little value for public health or medical research. Age is recorded elsewhere on the certificate. When a number of conditions resulted in death, the physician should choose the single sequence that, in his or her opinion, best describes the process leading to death, and place any other pertinent conditions in Part II. If after careful consideration the physician cannot determine a sequence that ends in death, then the medical examiner or coroner should be consulted about conducting an investigation or providing assistance in completing the cause of death.

The **infant decedent** should have a clear and distinct etiological sequence for cause of death, if possible. "Prematurity" should not be entered without explaining the etiology of prematurity. Maternal conditions may have initiated or affected the sequence that resulted in infant death, and such maternal causes should be

reported in addition to the infant causes on the infant's death certificate (e.g., Hyaline membrane disease **due to** prematurity, 28 weeks **due to** placental abruption **due to** blunt trauma to mother's abdomen).

When **SIDS** is suspected, a complete investigation should be conducted, typically by a medical examiner or coroner. If the infant is under 1 year of age, no cause of death is determined after scene investigation, clinical history is reviewed, and a complete autopsy is performed, then the death can be reported as Sudden Infant Death Syndrome.

#### When processes such as the following are reported, additional information about the etiology should be reported:

A h	O construction of the state of	Discount and a distance of the	thur existence in	Dular an environment
Abscess	Carcinomatosis	Disseminated intra vascular	Hyponatremia	Pulmonary arrest
Abdominal hemorrhage	Cardiac arrest	coagulopathy	Hypotension	Pulmonary edema
Adhesions	Cardiac dysrhythmia	Dysrhythmia	Immunosuppression	Pulmonary embolism
Adult respiratory distress syndrome	Cardiomyopathy	End-stage liver disease	Increased intra cranial pressure	Pulmonary insufficiency
Acute myocardial infarction	Cardiopulmonary arrest	End-stage renal disease	Intra cranial hemorrhage	Renal failure
Altered mental status	Cellulitis	Epidural hematoma	Malnutrition	Respiratory arrest
Anemia	Cerebral edema	Exsanguination	Metabolic encephalopathy	Seizures
Anoxia	Cerebrovascular accident	Failure to thrive	Multi-organ failure	Sepsis
Anoxic encephalopathy	Cerebellar tonsillar herniation	Fracture	Multi-system organ failure	Septic shock
Arrhythmia	Chronic bedridden state	Gangrene	Myocardial infarction	Shock
Ascites	Cirrhosis	Gastrointestinal hemorrhage	Necrotizing soft-tissue infection	Starvation
Aspiration	Coagulopathy	Heart failure	Old age	Subdural hematoma
Atrial fibrillation	Compression fracture	Hemothorax	Open (or closed) head injury	Subarachnoid hemorrhage
Bacteremia	Congestive heart failure	Hepatic failure	Paralysis	Sudden death
Bedridden	Convulsions	Hepatitis	Pancytopenia	Thrombocytopenia
Biliary obstruction	Decubiti	Hepatorenal syndrome	Perforated gallbladder	Uncal herniation
Bowel obstruction	Dehydration	Hyperglycemia	Peritonitis	Urinary tract infection
Brain injury	Dementia (when not	Hyperkalemia	Pleural effusions	Ventricular fibrillation
Brain stem herniation	otherwise specified)	Hypovolemic shock	Pneumonia	Ventricular tachycardia
Carcinogenesis	Diarrhea			Volume depletion

If the certifier is unable to determine the etiology of a process such as those shown above, the process must be qualified as being of an unknown, undetermined, probable, presumed, or unspecified etiology so it is clear that a distinct etiology was not inadvertently or carelessly omitted.

The following conditions and types of death might seem to be specific or natural but when the medical history is examined further may be found to be complications of an injury or poisoning (possibly occurring long ago). Such cases should be reported to the medical examiner/coroner.

Asphyxia	Epidural hematoma	Hip fracture	Pulmonary emboli	Subdural hematoma
Bolus	Exsanguination	Hyperthermia	Seizure disorder	Surgery
Choking	Fall	Hypothermia	Sepsis	Thermal burns/chemical burns
Drug or alcohol overdose/drug or	Fracture	Open reduction of fracture	Subarachnoid hemorrhage	
alcohol abuse				

Contact your State vital statistics office for questions related to writing cause-of-death statements. Additional instructional material on writing cause-of-death statements including handbooks, summary instructions, and tutorials are available online at www.thename.org or www.cdc.gov/nchswww/about/major/dvs/handbk htm, or by request from NCHS, Room 7318, 3311 Toledo Road, Hyattsville, Maryland 20782-2003.

## Appendix C Infrequent and Rare Causes of Death

ICD-10	
<u>code</u>	Cause
A00	Cholera
A01	Typhoid and paratyphoid fevers
A05.1	Botulism (including infant and wound botulism)
	Other protozoal intestinal diseases (excluding coccidiosis)
A20	Plague
A21	Tularemia
A22	Anthrax
A23	Brucellosis
A23 A24.0	Glanders
A24.0 A24.14	Melioidosis
A24.14 A25	Rat-bite fever
A27	Leptospirosis
A27 A30	Leprosy <del>[Hansen's disease]</del>
A30 A33	Tetanus neonatorum
A33 A34	Obstetrical tetanus
A34 A35	
A35 A36	Other tetanus (Tetanus)
	Diphtheria Wheeping couch
A37	Whooping cough Bartonellosis
A44	
A49.1	Streptococcus pneumoniae - less than 5 years of age
A65	Nonvenereal syphilis
A66	Yaws
A67	Pinta [carate]
A68	Relapsing fever
A69	Other spirochaetal infection
A70	Chlamydia psittaci infection (ornithosis)
A75	Typhus fever
A77.1	Spotted fever due to Rickettsia conorii (Boutonneuse fever)
A77.2	Spotted fever due to Rickettsia siberica (North Asian tick fever)
A77.3	Spotted fever due to Rickettsia australis (Queensland tick typhus)
A77.8	Other spotted fevers (Other tick-borne rickettsioses)
A77.9	<b>Unspecified</b> Spotted fevers, unspecified (unspecified tick-borne rickettsioses)
A78	Q fever
A79	Other rickettsioses
A80	Acute poliomyelitis
A81	Atypical virus infections of central nervous system
A82	Rabies
A84	Tick-borne viral encephalitis
A85.2	Arthropod-borne viral encephalitis, unspecified (Viral encephalitis
	transmitted by other and unspecified arthropods)
A90	Dengue fever [classical dengue]
A91	Dengue hemorrhagic fever
A92	Other mosquito-borne viral fevers
A93	Other arthropod-borne viral fevers, not elsewhere classified
	(including Oropouche fever, sandfly fever, Colorado tick fever
	and other specified fevers)

# Appendix C Infrequent and Rare Causes of Death

	Infrequent and Rare Causes of Death
ICD-10	
<u>code</u>	Cause
A94	Unspecified arthropod-borne viral fever
A95	Yellow fever
A96	Arenaviral hemorrhagic fever
A98-A99	Other and unspecified viral hemorrhagic fevers (including
	Crimean-Congo, Omsk, Kyasanur Forest, Ebola virus, Hanta virus)
B01	Varicella [chickenpox]
B03	Smallpox
B04	Monkeypox
B05	Measles
B06	Rubella <del>[German measles]</del>
B08.0	Other orthopoxvirus infections (including cowpox and paravaccinia)
B15	Acute hepatitis A – less than 20 years of age
B16	Acute hepatitis B – less than 20 years of age
B26	Mumps
B33.0	Epidemic myalgia (epidemic pleurodynia)
<b>B33.4</b>	Hantavirus (cardio)- pulmonary syndrome [HPS][HCPS]
B50-B54	Malaria
B55	Leishmaniasis
B56	African trypanosomiasis ( <b>trypanosomiasis</b> )
B57	Chagas' disease (including American trypanosomiasis)
B65	Schistosomiasis [bilharziasis]
B66	Other fluke infections (including other trematode infections)
B67	Echinococcosis
B68	Taeniasis
B69	Cysticercosis
B70	Diphyllobothriasis and sparganosis
B71	Other cestode infections
B72	Dracunculiasis (Dracontiasis)
B73	Onchocerciasis
B74	Filariasis (Filarial infection)
J09	Influenza due to <b>certain</b> identified avian influenza virus
P35.0	Congenital rubella syndrome
*U04.9	Severe acute respiratory syndrome [SARS], unspecified
W88-W91	Exposure to radiation
Y36.5	War operation involving nuclear weapons
	Causing adverse effects in therapeutic use:
Y58	Bacterial vaccines
Y59.0	Viral vaccines
Y59.1	Rickettsial vaccines
Y59.2	Protozoal vaccines

- Protozoal vaccines Immunoglobulin Y59.2 Y59.3

## Appendix D ICD-10 Codes Selected for Querying for HIV Under Priority Level 1g

ICD-10 code	Abbreviated title	
A07.2	Cryptosporidiosis	
A07.3	Isosporiasis	
A16.2-A19	Tuberculosis	
A31	Nontuberculous mycobacteriosis	
A42	Actinomycosis	
A43	Nocardidosis	
A812	Progressive multifocal leukoencephalopathy	
B00	Herpes simplex	
B25	Cytomegalovirus	
B37	Candidiasis	
B38	Coccidioidomycosis	
B39	Histoplasmosis	
B44	Aspergillosis	
B45	Cryptococcosis	
B58	Toxoplasmosis	
B59	Pneumocystosis	
C46	Kaposi's sarcoma	
C83, C85	Non-Hodgkin's Lymphoma	
G049	Encephalitis, myelitis, and encephalomyelitis, unspecified	
G934	Encephalopathy, unspecified	
G959	Disease of spinal cord, unspecified	
R64	Cachexia
