# Recognizing and Responding to Anaphylaxis

# How to recognize anaphylaxis

Healthcare personnel should consider anaphylaxis when patients present with generalized signs or symptoms such as **hives, serious or life-threatening symptoms** (e.g., hypotension, respiratory distress, or significant swelling of the tongue or lips), or **symptoms that involve more than one body system**.

## **Respiratory:**

- sensation of throat closing
- stridor (highpitched sound while breathing)
- shortness of breath
- wheeze, cough

**Gastrointestinal:** 

- nausea
- vomiting
- diarrhea
- abdominal pain

#### Cardiovascular:

- dizziness
- fainting
- tachycardia (abnormally fast heart rate)
- hypotension (abnormally low blood pressure)

### Skin/mucosal:

- generalized hives
- itching
- swelling of lips, face, or throat

## **Neurological:**

- agitation
- convulsions
- acute change in mental status
- sense of impending doom (a feeling that something bad is about to happen)

# What to do if you suspect anaphylaxis

Assess airway, breathing, and circulation

Administer epinephrine

Call Emergency Medical Services (EMS)

Place in supine position
