**Footnotes**

- 1) The figures for 1920-22 to 1990-92 are taken from graduated life tables prepared by the Government Actuary.
- 2) These figures have been extracted from complete ungraduated annual life tables prepared by the Government Actuary's Department up to 1999-2001 and by the Office for National Statistics thereafter.
- 3) These figures have been revised to take account of the mid-year population estimates for 2002-2010 that have been revised in the light of the 2011 Census results.
- 4) The female figures covering 2008-2010 to 2010-2012 were corrected in July 2014 due to an error found in the calculation for infant mortality. This has increased the number of babies surviving from age 0 to age 1, thereby increasing life expectancy at birth by 0.06 in 2010-2012 and 2009-2011 and by 0.01 years in 2008-2010.
