Broadcasting Board of Governors

International Broadcasting Bureau

Central Extranet Domain

Privacy Threshold Analysis

July 2009

Summary

Name of system: Central Extranet Domain

Description of system and purpose: The Central Extranet Domain provides a limited suite of application-layer services to users of the public Internet. These services include external file sharing, mail portal, mail relay, name resolution, and certain web services. Some of these services are available to employees and contractors of the International Broadcasting Bureau, who use them when working from locations that are not part of the agency's internal computing internet. Other services are available to the general public and support electronic communication between the agency and its international audiences. Most of the information processed in the Central Extranet Domain is intended for worldwide public dissemination.

In addition, the Central Extranet Domain provides a limited suite of application-layer services to the members of the staff of the Broadcasting Board of Governors, the staff of the International Broadcasting Bureau, and the staffs of corporations that receive grants from the Broadcasting Board of Governors: Radio Free Europe, Radio Free Asia, and the Middle East Television Network. These services include an audience research archive and a document library.
